Is it too fanciful to hear a trace of regretful over-compensation in Tate’s account of his ‘accomplishment’? In ‘hindsight’, perhaps the trick will be in preserving the spirit of Tate’s ethical intuition – his acknowledgement that “*tis more difficult to save than ’tis to Kill*” – against the formal reconciliation that he finally opts for. Yet the admission of ‘probable means’ remains improbable. Faced with discordancy Tate opts for resolution, but the trace of protestation – “*tis more difficult to save...to bring the Action to the last Extremity, and then by probable means to recover All*” – almost saves Tate’s wishful thinking as a wishful need, acknowledging a part of truth which exceeds his grasp yet remains tantalising within reach. I would want to re-style Tate’s ‘improvement’ of *Lear* as a comedy finally recast as a drama of misrecognition, where, to read Tate in the spirit of Gillian Rose reading Hegel,

*the drama of misrecognition ... ensues at every stage and transition of the work – a ceaseless comedy, according to which our aims and outcomes constantly mismatch each other, and provoke yet another revised aim, action and discordant outcome.*<sup>68</sup>

If we accept the comic possibility of the impossible recursion that admits that it is more difficult to save than it is to kill, even as Tate would rather save us from doing so, then it – the comic possibility – still potentially saves us. For then we uphold ‘ceaseless comedy’ against mere comic closure. And if we do not, we deny any attempt to imagine it otherwise.

In some ways *Lear*’s aesthetic, like Beckett’s and Adorno’s, still undoubtedly presents us with a universe of greys. And this means that those who survive are left to express the unimaginable. In this respect art and philosophy can only offer some small consolation, so that, as Adorno observes,

Perennial suffering has as much right to expression as a tortured man has to scream; hence it may have been wrong to say that after Auschwitz you could no longer write poems.<sup>69</sup>

To which *Lear* responds:

Howl, howl, howl, howl! (5.3.255)

Yet only once the formal propriety of *Lear*'s comedy is measured in the totality of its non-fulfilment can a responsible criticism also then begin to contemplate things as they actually 'are'. The trick of course will be in preserving this ethical demand without reconciling ourselves to the barbarism which would deny vulnerability (even in its partial admission of truth) and then merely confirm *Lear* as a formal comedy and have done with the rest.

## Notes

- 1 Maurice Blanchot, *The Writing of the Disaster*, trans. Ann Smock (Lincoln and London, 1995), p. 4.
- 2 Indeed, as I have argued elsewhere, it is precisely in escaping 'reasonable explanation' that Shakespeare's open-ended resistance to conceptual control might finally prove to be a far more crucial resource for critical thought, providing a form of access to the 'literary conditions' of philosophical questioning itself. See John J. Jougin, 'Philosophical Shakespeares: an introduction', in John J. Jougin, ed., *Philosophical Shakespeares* (London and New York, 2000), pp. 1–17.

- 7 See Philip Armstrong, 'Uncanny Spectacles: Psychoanalysis and the Texts of *King Lear*', *Textual Practice*, 8: 3 (1994), 414–34; p. 416. I'm grateful to Armstrong for alerting me to Bradley's comments. As Armstrong's essay demonstrates there is a clear link to psychoanalytic theory here, particularly in relation to the play's staging of 'excessive affect'. I do not pursue that line of enquiry myself, although I will want to follow Armstrong in touching briefly upon Freud's sense of the 'uncanny'. For the time being though I would want to note that a more explicit link could be established between psychoanalytical criticism and the province of aesthetics; Freud himself makes the connection clear enough when he argues in the opening lines of his essay that: 'aesthetics is understood to mean not merely the theory of beauty but the theory of the qualities of feeling'; see Sigmund Freud, 'The Uncanny', in James Strachey, ed., *Complete Psychological Works*, vol. 17, Standard Edition (London, 1963), pp. 217–56, p. 219.

- 24 Theodor W. Adorno, *Negative Dialectics*, trans. E. B. Ashton (London, 1990), p. 363.
- 25 *Ibid.*
- 26 William Shakespeare, *King Lear*, ed. Foakes, 1.4.221–2. All subsequent quotations from the play are taken from this edition.
- 27 Francis Barker, *The Culture of Violence: Essays on Tragedy and History* (Manchester, 1993), p. 15.
- 28 Though of course, 'historicizing' *Lear*'s percipient untimeliness presents us with another set of problems. In 'coming after' we are clearly confronted with a memory which refuses sequential narrativization. As such, we are confronted with what Lyotard terms an 'improper achronological effect', one which is nonetheless entirely contemporary in that it results from the *continued shock* of 'unassimilated traumatic experience'; see Jean-François Lyotard, *Heidegger and 'The Jews'*, trans. Andreas Michel and Mark Roberts (Minneapolis, 1990), p. 16. For a fuller explication of Lyotard, to which I am directly indebted here, compare Nicola King, "We come after": Remembering the Holocaust', in Roger Luckhurst and Peter Marks, eds., *Literature and the Contemporary: Fictions and Theories of the Present* (Harlow, 1999), pp. 94–108, p. 97; I am also grateful to King for suggesting the epigraph for this section of the paper.
- 29 See Simon Critchley, *Very Little ... Almost Nothing* (London and New York, 1997), pp. 1–28, esp. p. 2, I am indebted here and above to Critchley for providing some key distinctions concerning the problem of nihilism.
- 30 Friedrich Nietzsche, *The Will to Power*, trans. W. Kaufmann and R. J. Hollingdale (New York, 1968), p. 13; also cited by Critchley in *Very Little*, pp. 7–8.
- 31 See Critchley, *Very Little*, *passim*.
- 32 For a fuller exposition see Roger Luckhurst, 'Memory Recovered/Recovered Memory', in Luckhurst and Marks, eds., *Literature and the Contemporary*, pp. 80–93, esp. 86–7.
- 33 Foakes, in Foakes, ed., *King Lear*, p. 2.
- 34 Again compare Critchley, *Very Little*, p. 23.
- 35 Cavell, *Disowning Knowledge*, pp. 116–17, also cited in Richard Halpern, *Shakespeare Among the Moderns* (Ithaca and London, 1997), p. 108. Elsewhere in the *Lear* essay of course Cavell draws a rather different distinction between spectatorship and character and the ability of the theatre to disclose the uneven (and potentially redemptive relationship) between the theatricalization and literalization of our relations with others. What though, I wonder, would Cavell make of Levring's *The King is Alive* which, in self-consciously aping the so called reality-TV format of survival shows like *Big Brother* and *Survivor*, is already all too literally implicated in dramatizing the theatricalization of its relationships with others. This makes for a particularly complex turn of Cavell's sense of the theatricalization of existence which I have not got time to examine here.
- 36 Halpern, *Shakespeare Among the Moderns*, p. 108.
- 37 Halpern, *Shakespeare Among the Moderns*, p. 108.
- 38 Cavell, *Disowning Knowledge*, pp. 116–17.
- 39 Halpern, *Shakespeare Among the Moderns*, p. 108.
- 40 Although Halpern insists that 'Cavell's use of "we" ... both indicts him as an individual and absolves him as a mere participant in a generalized abdication', see Halpern, *Shakespeare Among the Moderns*, p. 109.

- 69 Adorno, *Negative Dialectics*, p. 362.

# CHAPTER 10

## Theory in Practice *Allegories of Reading in Alice Munro's “Carried Away”*

*Miriam Marty Clark*

The Post-Structuralist and deconstructive approach to literature pays attention more to multiplicity than to singularity, the highly specific plurality of meanings than to meaning's universality, and the webbed texture of discourses than to the unity of a single text or discourse. Noting that Alice Munro's fiction interrupts the placid illusion of realism whereby we assume words equal things, Miriam Marty Clark describes the complexity of Munro's fiction, the way she draws our attention to the instability of representation rather than to its certainty of success. The figure for complexity in the fiction is the library, a place of endless reference from book to book that allows us to imagine a simple accessible version of truth regarding our lives but does not necessarily guarantee its safe delivery.

Much has already been said about the relation – “intimate and profound” (Blodgett 1) – of Alice Munro’s art to life. In finely layered, minutely observed stories which she herself calls “autobiographical in form” (*Lives* n. pag.), Munro tracks a long, recursive passage out of girlhood in small towns along the Ottawa Valley of Canada. Marking at every turn the tangled connection between past and present, she plots the bitterness and satisfactions of family love, the inscrutability of private lives, and the stubborn calculus of social relations not only in fictional towns like Jubilee and Hanratty but later in Toronto and Vancouver, in affluent suburbs and middle-class marriages.

Hers is a fiction, as Ajay Heble points out, that continues both to invite and to sustain reading within a realist tradition. In the last decade, however, a growing body of critical work has focused attention on the ways in which Munro’s stories problematize the very mode they inhabit, undoing the illusion of transparency and advancing in reflexive, opaque, often difficult ways on the unstable worlds of narrative, memory, and writing

*Original publication details:* Miriam Marty Clark, “Allegories of Reading in Alice Munro’s ‘Carried Away.’” *Contemporary Literature* 37.1, pp. 49–61. University of Wisconsin Press, 1996. Reproduced with permission from the University of Wisconsin Press.

itself. Ildikó de Papp Carrington's extensive tracking of Munro's allusions and metaphors, James Carscallen's elaboration of patterns (of names, of symbols, of tropes) across volumes, Magdalene Redekop's identification of suppressed maternal imagery, E. D. Blodgett's reasoning about narrative strategies and narrative selves, Heble's own persuasive argument for language's dual nature as "a form of representation" in Munro's work but also as a "system of signs" (5) – all emphasize in new ways the multiplicity and complexity of the stories. At the same time, most of these accounts acknowledge as both the first and the final pleasure of Munro's fiction what Redekop calls simply "a pleasure of recognition" (3), the undiminished if not uncomplicated presence of life in art.

In this essay, however, I want to trace a different and neglected relation, of books to books, considering how Munro's fiction is "linked," in Foucault's productive terms, "to the vast world of print and develops within the recognizable institution of writing" (91). The stories in *Friend of My Youth* (1990) and *Open Secrets* (1994) dismantle – not for the first time in Munro's career but more extensively than before – the foundations of realist narrative, figuring or disclosing the many texts in the one and so refiguring the linked practices of writing and reading. The terms of these later stories shift markedly from work to text, from memory and expressive evocation to language, from readerliness toward writerliness. In this essay I want to describe that shift more fully, turning finally to one story, "Carried Away," which addresses allegorically the politics of the library and the ethics of reading.

The vast world of print, the lively and troubling presence of the library, is manifest in Munro's fiction from early on: nowhere is the irreducible plurality of narrative fully suppressed or long hidden from view. Carrington has established Munro's recurrent allusiveness to Homer, the Bible, Shakespeare, Hardy, and others, arguing finally that these references serve to dramatize and master fundamental ambivalences within the stories (*Controlling*). But "allusion" does not adequately describe these stories' lodgings at the intersection of many texts or their abundant furnishings in books, letters, scandalous doggerel, and best-loved verses. All of Munro's towns have libraries, "Walls of printed pages, evidence of so many created worlds" (99), Del Jordan thinks in *Lives of Girls and Women*; they have newspapers, Great Books groups, and encyclopedia salesmen marketing Knowledge to wartime farmers flush with cash.

And the stories are often *about* readers. They are the young protagonists of Munro's female bildungsromans – Del of *Lives of Girls and Women*, Rose of *The Beggar Maid* – reading everything in the library, intuiting the future in girls' magazines and old medical texts, in Brontë novels and lines by Tennyson. Later, they are Rose and her friend Jocelyn on the maternity ward in "Mischief" (*Beggar*), reading Gide and Santayana to distinguish themselves from the gabbling housewives around them. They are middle-aged women on the verge of feminist awakening, taking courses, opening bookstores, growing fat on dusty Russian novels, on "skimpy-looking books by Czechs or Japanese or Rumanians" (*Friend* 112), and on rows of Penguin paperbacks.

But if books are accorded a central place in Munro's towns – in the library, the schoolroom, and the church – the place of reading is nevertheless marginal. Reading occupies a space normally taken up in adults by sexual passion, domestic responsibility, and economic productivity. "She ... had outgrown the habit," Del says of her friend Naomi; "This was the normal thing in Jubilee; reading books was something like chewing gum, a habit to be abandoned when the seriousness and satisfactions of adult life took over. It persisted mostly in unmarried ladies, would have been shameful in a man" (*Lives* 99). The habit hangs on in librarians and teachers, like "dry and wooden and innocent" Miss Farris (*Lives* 102) and ineffectual Arthur Comer, living vicariously through histories and mysteries in "Something I've Been Meaning to Tell You" (*Something*). It persists in

eccentrics like Rose's father, who repairs furniture and has a shed full of books, and Del's mother, for whom the Great Books discussion group is one way of reckoning her own lost possibilities. For women who take up reading in the course of self-awakening, the practice gives way soon enough, of necessity, to real work, editing or teaching or producing television.

Even for the young, reading never has the pure purposefulness of silence, exile, and cunning. It isn't only that it smacks of peculiarity, uselessness, memory work. To read seriously is to stand both within and outside culture, at the center and at the margins. To take to heart the texts taught in school, to advance in earnest on the shelves of books in the Town Hall library, is to enter into a complicated and sometimes oppositional relation to the community that has established those institutions and authorizes reading. And the books that offer a way out of the ungrammatical, unilluminated world of home always threaten to turn with unwelcome irony or incomprehension on the familiar. Reading Katherine Mansfield's "The Garden Party" for a school assignment, for example, Rose becomes as enraged by Mansfield's uncomprehending treatment of the poor as she is irritated by her stepmother's stupidity about literature.

Furthermore, other texts come into characters' lives and into the stories themselves with less than epiphanic clarity. Like all allusions, these carry their own libidinal energies, their own troubling imperatives and interrogations; they trail multiple hermeneutic possibilities and unrestricted powers of foretelling and explaining. A performance of *The Pied Piper* in "Changes and Ceremonies" (*Lives*) is no mere fairy tale but provides occasion for an upwelling of adolescent sexual fervor, the transformation of childish boy-girl hostility into the "anarchy" and "mystery" of sexual feeling. At the same time, the operetta based on Browning's poem carries a darker plot of money and social class, only barely glimpsed by the narrator and never smoothly folded into the "meaning" of the story. The unresolved, unaddressed, almost unacknowledged tale of exploited labor and its fearful consequences (the piper, unpaid by the mayor and the corporation of Hamlin, leads the children of the town away forever) stands as a troubling remainder, a lingering disequilibrium.

For readers of, as well as readers in, these stories, other texts have increasingly this kind of anarchic force, a power to create gaps and uncertainties, to proliferate meanings and unravel the very processes of meaning-making and realist representation. In some early stories Munro's impulse seems to be to circumscribe closely the symbolic operations of other texts, their convergences, their inscription and thematization as acts of reading. They are ritualized as ceremony, drama, rhyme; they are enshrined in fancy bindings or housed in libraries where they operate under special regulations. "PENALTY FOR IMPROPER USE \$100" the sign in the Jubilee public library warns (*Lives* 98), not far from the table where Del Jordan and her friend linger over suggestive passages in a favorite historical romance. Other texts are preemptively interpreted, or moved, with all their polyvalences and hermeneutic possibilities, outside the plot, so that what happens to people "in stories" is distinct from, even if it bears an ironic or illuminating resemblance to, what happens to people in the "real world" Munro defines. Even so, the boundaries prove illusory, easily breached as the energies of other texts flow relentlessly back across them into the stories.

But Munro's more recent fiction foregrounds and thematizes its own plurality, addressing itself directly to prior texts and other discourses. Her mode of address is by turns archaeological and allegorical: in the one, prior texts are excavated and considered – as fossils, as fragments – at the site of the story; in the other, the act of reading becomes

itself the subject of narration. In the stories of *Friend of My Youth*, Munro strips away some of the thick description of character and community that marked her earlier work and makes an archaeological exploration of the discursive and textual character of her narratives and of the multiple acts of narration within them. In other texts – Hardy novels, forgotten letters, small-town papers – she locates the unstable, discursive, and infinitely regressive infrastructures of her stories, denaturalizing realist representation and deconstructing its premises from within. “Meneseteung,” a writer’s story, and a reader’s, is only one such exploration and figuration. The story moves away from, rather than toward, a coherent narrative of the life of Almeda Joynt Roth, a nineteenth-century “poetess” and madwoman. Prowling in what are simultaneously the foundations and the ruins of the realist text, her narrator – a would-be biographer – sifts through the documents, both actual and imaginary, out of which such a story might be made. These include the newspaper (an insinuating weekly, the *Vidette*), a book of poems, an autobiographical preface, a photograph, a note, a tombstone. Almeda Roth appears first, last, and only as text; the story begins when the narrator comes upon the book of poems and ends as she clears the overgrown tombstone marked simply “Meda.”

Working from reports in the *Vidette*, the narrator recuperates and parodies the language of the nineteenth century and the small frontier town; she draws on the language of the poetess with its high tones and its barely repressed sexual yearnings. Out of these she writes the story of Almeda, her brief courtship in middle age by Jarvis Poulter, a salt producer, and her descent into madness. Hers is a madness of textuality, a breakdown into words and the pure inescapableness of words:

Almeda in her observations cannot escape words. She may think she can, but she can’t. Soon this glowing and swelling begins to suggest words – not specific words but a flow of words somewhere, just about ready to make themselves known to her. Poems, even. Yes, again, poems. Or one poem. Isn’t that the idea – one very great poem that will contain everything and, oh, that will make all the other poems, the poems she has written, inconsequential, mere trial and error, mere rags? Stars and flowers and birds and trees and angels in the snow and dead children at twilight – that is not the half of it. You have to get in the obscene racket of Pearl Street and the polished toe of Jarvis Poulter’s boot and the plucked-chicken haunch with its blue-black flower. Almeda is a long way now from human sympathies or fears or cozy household considerations.

Almeda does not, the narrator concludes, mistake this flux for reality, “and neither does she mistake anything else for reality, and that is how she knows that she is sane” (*Friend* 70).

By showing a character constructed out of the discourses of the past and particularly the discourses of gender, Munro moves representation, if not subjectivity itself, out of the realm of nature and experience and into the realm of discursive practice. Nowhere is the language of gender construction more forcefully at work than in the obituaries of Almeda Roth and Jarvis Poulter, which the narrator places side by side near the end of the story. Almeda’s emphasizes her qualities of sensitivity, eloquence, “pride,” “daintiness,” “decorum,” duty, womanliness, charity, and “unfailing … faith” (71). Jarvis’s, on the other hand, emphasizes his “industry,” “productivity,” and “employment to our town” (72). Here, as elsewhere, the effect is political as the narrator excavates from the realist text buried narratives of gender, class struggle, and economic violence.

In “Carried Away,” Munro turns from the archaeological to the allegorical in her exploration of the politics of reading and the practices of realist writing. At the outset a brief synopsis of the story’s fairly complicated plot may be helpful. Set in Carstairs,

Ontario, at the height of industrial capitalism, between 1917 and the mid-1950s, "Carried Away" begins when Louisa, once a traveling saleswoman but now the town librarian, starts receiving romantic letters from Jack Agnew, a soldier off to war. Jack identifies himself to her as a reader – first of Zane Grey, later of what he calls "History and Travel" books – and he tells Louisa that he has watched and admired her in the library, that he daydreams about her at her work. "*I think of you up on a stool at the Library reaching to put a book away,*" he writes, "*and I come up and put my hands on your waist and lift you down, and you turning around inside my arms as if we agreed about everything*" (Open 11). Though she can't remember or picture him, Louisa responds to his letters, sends him the photograph he asks for, and waits hopefully for his return.

In the story's second section, Louisa tells a salesman named Jim Frahey about the letters. We learn from her account that when Jack came home after the war he married someone else, saying nothing to Louisa but leaving on her desk at the library a scrap of paper on which he had written the words, "*I was engaged before I went overseas.*" "No name," Munro notes, "not his or hers" (18). Jim offers his own affable interpretation – that, thinking he might never return from the war, Jack Agnew "got a little carried away" (18) – and then he takes Louisa upstairs to bed, where she gives up her virginity.

The third section of the story recounts Jack's death in a grisly accident in the saw-milling operation at Doud's organ and piano factory where he worked. The section is told from the point of view of Arthur Doud, owner of the factory and son of the man who founded not only Doud's but the Carstairs public library. It is Arthur who takes charge after Jack is decapitated. He picks up the severed head, carrying it back to the body and calling (irrationally, he later thinks) for the doctor. Later he visits the widow, who asks him to return Jack's library books – borrowed but not checked out. In the library Arthur meets Louisa, whose unresolved interest in Jack (only ever known to her as text – letter and newspaper) is revealed in the questions she asks Arthur about the circumstances surrounding the accident. Never a reader himself, Arthur begins coming to the library many evenings after Jack's death, adopting Jack's faintly voyeuristic attitude toward the librarian. Eventually, almost inexplicably, Arthur and Louisa marry. Together they raise a son and run the factory through the depression into the prosperous mid-century.

At this point the story takes a remarkable turn. Many years later, after Arthur's death, Louisa encounters Jack Agnew – alive and well! – at a city park where a union rally is being held. They give radically divergent accounts of the past: in hers (which is also, at this point, ours) he dies spectacularly; in his, he has become a prominent labor organizer and a public figure. Munro herself has commented on this divergence, noting that initially she "had a pretty realistic story going about World War I, small-town industry, the kind of accidents they had, the boss, the workers. But all the time I felt a parallel story going in which the accident never happened and another reality developed" ("Contributors" 371).

I want to argue that what this story generates is not parallel realities but two simultaneous and ultimately irreconcilable allegories of reading. In one, Jack Agnew is the figure of the reader. His borrowing is unauthorized, his gaze illicit, his use of the library both politically and erotically charged. Under the beneficent portrait of old Mr. Doud, he finds not the cultural legacy that the Douds – like their Carnegie counterparts – had envisioned but the language of class struggle and the seeds of revolution in books like H. G. Wells's *Mankind in the Making*, Bertrand Russell's *The Practice and Theory of*

*Bolshevism*, and G. K. Chesterton's *What's Wrong with the World*, which ends with an unflinchingly revolutionary proposition. "Because there should be a redistribution of property," Chesterton writes, "there shall be a revolution" (214).

Jack's origins are not working class but precapitalist. His father is a fisherman and a gardener, a "lone wolf" (5) uninvolved in the accelerating production (of organs and pianos, then of player pianos, then bowling alley lanes and radar cases, too) and consumption (of washing machines and new cars and kitchen appliances) in which the town is caught up between the wars. He lives by agricultural time and his own rhythms and so stands in striking contrast to those who, like his son, are governed by the posted rules (the story lists them) and the factory whistle, which blows at six "for many to get up," then again "for work to start at seven and at twelve for dinnertime and at one in the afternoon for work to recommence, and then at five-thirty for the men to lay down their tools and go home" (25).

For all his reading, Jack Agnew lives by the factory whistle and dies by the machine. His decapitation literalizes the fragmentation and alienation of life under a rationalized labor process, the mutilation of the laborer into a fragment of a man. It figures the estrangement of intellectual life – the life of the reader and the revolutionary – from the life of the body, its labor and its wages. When his blood pours mightily onto the sawdust floor of the factory, the names and dark energies of the revolutionary texts seem to pour with it.

After Jack's death, Arthur Doud becomes a reader himself – "almost accidentally," he remarks, as if by contact with the dead man's head and his unreturned library books. In Arthur, however, reading is a bourgeois practice; it soothes and confirms rather than incites. He spends his evenings in the library reading the same magazines that come to his home, satisfied and peaceful beneath his father's gaze. "*A Believer*," the inscription below the portrait notes without irony, "*in Progress, Culture, and Education*" (28).

In the end, Jack's spilled blood forms an underground tide, a narrative energy which cannot be stemmed but wells up with a force that literally ruptures the story with Jack's reappearance. The repressed and appropriated energies of revolution return to compel the narrative out of linear time, to reverse its irreversible premise, to force a rereading and a rewriting of the past. These energies are powerful enough to disrupt both realist practice and the practices that have governed reading and interpretation into the twentieth century.

At the same time, a second allegory unfolds under the sign of the book. Its governing metaphor is not the decapitation (with its significant echo in Louisa's loss of maidenhead) but the library, which functions to organize and reproduce culture and to authorize reading. "*My name is Jack Agnew*," the first letter from overseas reads, "*and my card is in the drawer*" (4).

For Louisa, books are commodities before they are a library. "*There is no interesting story*," she tells Jack. "*My parents are both dead. My father worked for Eaton's in Toronto in the Furniture Department, and after his death my mother worked there too in Linens. And I also worked there for a while in Books. Perhaps you could say Eaton's was our Douds*" (5). Jim Frahey, who after Jack's seductions and betrayals is the one to take Louisa to bed, also deals in books as commodities. He "sold typewriters and office equipment and books," Munro writes, "and all sorts of stationery supplies" (13).

As commodities, books take their place wholly within capitalist modes of production and consumption. They anticipate – as the piano factory does, metaphorically – the incorporation of aesthetic production into commodity production generally, which

Fredric Jameson takes as the tendency of modernism and the settled circumstance of postmodernism. Arthur Doud's first romantic considerations of Louisa (which contrast strikingly with Jack Agnew's fantasy of intellectual and erotic union in the library) turn in part on hiring and wages. For Arthur, attractiveness is also construed as commodity; "style" and "looking well" can be bought by a shrewd consumer, even one on a librarian's wage. "She was not a young woman anymore," he thinks, "but she maintained an eye-catching style. He remembered that years ago when they had hired her, he had thought that she got herself up very soberly. Her hair was not bobbed in those days. ... He tried to think how much she was paid. Not much, certainly. She kept herself looking well on it. And where did she live? In one of the boarding houses – the one with the schoolteachers? No, not there. She lived in the Commercial Hotel" (35).

If books, as commodities, find their quarter in the Commercial Hotel, the library has its proper lodging in the Town Hall, where capitalism and civic duty conspire to create a place in which reading is authorized and writing – even writing about revolution and the redistribution of property – is rendered harmless under headings of Fiction and Non Fiction, History and Travel. Beneath the pink-cheeked portrait of the library's founder, the great civilizing influence of capital is extended and class struggle is transformed into True Friendship with the Working Man.

With Jack's death, Arthur Doud assumes the mantle of the reader. He reauthorizes reading, returning the stolen books and establishing a presence of his own, "genial," he thinks, "reassuring, and, above all, natural" (31). At the same time he domesticates into bourgeois marriage with Louisa the erotic energies circulating at the library. The surplus – the erotic, the revolutionary, the hidden and spilled – funds a renegotiation of patriarchal power for postwar capitalism. If his father operated with a kind of heroic paternalism, by "whims and decrees" (31), Arthur comes during those evenings at the library to see himself not as the impostor he once feared being but as a new kind of man, a public servant: dignified, fair, and philanthropic. He also becomes, not coincidentally, an exemplary consumer. After thinking about the town's demands – for hockey uniforms and war memorials, road maintenance and Sunday School buildings – Arthur notes:

Expectations at home were not lacking either. Bea [Arthur's daughter] was agitating to go away to private school and Mrs. Feare had her eye on some new mixing apparatus for the kitchen, also a new washing machine. All the trim on the house was due to be painted this year. All that wedding-cake decoration that consumed paint by the gallon. And in the midst of this what had Arthur done but order himself a new car – a Chrysler sedan.

It was necessary – he had to drive a new car. He had to drive a new car, Bea had to go away to school, Mrs. Feare had to have the latest, and the trim had to be as fresh as Christmas snow. Else they would lose respect, they would lose confidence, they would start to wonder if things were going downhill. And it could be managed, with luck it could all be managed. (32)

The same surplus reads out quite differently, and more dramatically, as female hysteria. The unauthorized and the anarchic, read under the sign of the feminine as erotic desire – evoked by Jack's letters and frustrated by his death, then repressed, domesticated – emerge with dizzying force twice in Louisa's life, once just after her encounter with Jim Frarey and a second time, many years later. The first time, Munro writes that Louisa "felt herself whirling around in an irresistible way, as if the mattress had turned into a child's top and was carrying her off" (20).

The second time, the experience begins with anxiety, “a faintly sickening, familiar agitation” (43) after a visit to a doctor in the city. Soon Louisa is disoriented, confused. Jack Agnew appears, not dead at all but white-haired and wrinkled, a union man (martyrdom being modulated into trade unionism in this gesture) and famous, to make a puzzling pronouncement: “Love never dies” (48). Jim Frarey appears too, from the back, in a crowd of Mennonites. “Oh, what kind of a trick was being played on her, or what kind of trick was she playing on herself!” Munro writes.

She was dizzy and humiliated. She would not have it. . . .

No wonder she was feeling clammy. She had gone under a wave, which nobody else had noticed. You could say anything you liked about what had happened – but what it amounted to was going under a wave. She had gone under and through it and was left with a cold sheen on her skin, a beating in her ears, a cavity in her chest, and revolt in her stomach. It was anarchy she was up against – a devouring muddle. Sudden holes and impromptu tricks and radiant vanishing consolations. (49–50)

Carrington has recently made a convincing case for this scene as a hallucination, the “psychological aftermath” of the factory accident (“What’s in a Title?” 555). I want to go further, to suggest again that this is only one of the two stories unfolding in Munro’s text. This one marks as female and symptomatic – and so appropriates, explains, and contains – the anarchic force which both drives and violently ruptures narrative in that other, simultaneous, allegory of reading.

Finally, nothing more fully activates the plurality of these readings of reading than this, that while one of the two allegories splits the narrative irretrievably open – and not into epiphanic clarity but into a devouring muddle several paragraphs before the end of the story – the other continues, acknowledging reading’s powers and subverting its dangers by renaming them. It preserves the linear integrity of the narrative and pushes toward closure under a Hardy-esque rubric (invoked early in the story and late) of accident or fate. “She believed,” Munro writes of Louisa at the end, “in the swift decision, the unforeseen intervention, the uniqueness of her fate” (51).

Closure is a less interesting matter here, it seems to me, than reading’s end. To be the reader in this text is to occupy the space where repression and anarchy contend. Once the narrative is no longer suspended between allegories of reading, it vacates its ethical premises and recedes in the final paragraphs of the story toward one-dimensionality. Hysteria subsides into nostalgia as Louisa envisions the solid houses and mature trees of long ago, the blinkered horses pulling sleighs out from the city into the blankness of the country. Fate moves forward, unresisted, toward death.

“There is no document of civilization,” Walter Benjamin contends in a well-known formulation, “which is not at the same time a document of barbarism” (256);<sup>1</sup> cultural treasures – borne forward from generation to generation, whether in martial triumph or enlightened philanthropy – are inevitably, often invisibly, tainted by oppression and anonymous toil. For a sustained moment in “Carried Away,” Munro brings both civilization and the barbarism that is its dark other, its necessary condition, fully into view. At the same time, perhaps paradoxically, she preserves from earlier stories a sense of the liberatory and subversive power of books and reading. In a crucial instant the continuum of history and its expression as narrative are briefly, lavishly ruptured, laying bare the nature of the library and all the acts of reading it shelters and signifies.

### Note

- 1 This statement appears in "Theses on the Philosophy of History" (1940), as cited. Benjamin makes the same observation in his essay "Eduard Fuchs, Collector and Historian" (1937), published in *One-Way Street*, trans. Edmund Jephcott and Kingsley Shorter (London: NLB, 1979) 349–86.

# CHAPTER 1

## Introduction

### *Strangers to Ourselves: Psychoanalysis*

*Julie Rivkin and Michael Ryan*

A picture of the human mind as a unified whole that can achieve full awareness of itself has been central to Western thought since the seventeenth century. The “cogito” or thinking self defines our humanity and our civility, our difference from animals chained to blind nature and uncontrollable instincts. In the early part of the twentieth century, the assurance of that self-description was disturbed by Sigmund Freud’s book, *The Interpretation of Dreams* (1900), which described a discovery that would become the centerpiece of a new discipline called psychoanalysis. His discovery was that the human mind contains a dimension that is only partially accessible to consciousness and then only through indirect means such as dreams or neurotic symptoms. The “unconscious,” as he called it, is a repository of repressed desires, feelings, memories, and instinctual drives, many of which, according to Freud, have to do with sexuality and violence. In subsequent books and studies such as *Beyond the Pleasure Principle*, “A Case of Infantile Neurosis,” *Three Essays on Sexuality*, *The Ego and the Id*, and *The Psychopathology of Everyday Life*, Freud argued that our mental lives derive largely from biological drives, that the highest achievements and ideals of civilization are inseparable from instinctual urges towards pleasure, constancy, and the release of excitation and energy. As each child grows and enters first the family then society, he or she learns to repress those instinctual drives and the conscious desires they instigate and to mold aggressive and sexual impulses as well as an initially grandiose sense of self to the demands of life with others. Repression is essential to civilization, the conversion of animal instinct into civil behavior, but such repression creates what might be called a second self, a stranger within, a place where all that cannot for one reason or another be expressed or realized in civil life takes up residence. This, for Freud, explains why people experience what he calls “uncanny” feelings of doubleness that consist of a sense that something strange coexists with what is most familiar inside ourselves. It also explains why we compulsively repeat certain gestures, desires, experiences, and self-induced situations that might be quite distressing but also compellingly unavoidable. We cannot help but do so because they are brought about by forces and drives within ourselves over which we exercise very little conscious control because they arise from something or somewhere that is beyond our control – the unconscious.

Freud discovered the unconscious by studying patients with neurotic symptoms which pointed towards unresolved conflicts between unconscious inclinations or feelings and the repressive demands of the ego or conscious self. He noticed that such patients engaged in behavior that frequently embodied desires or fears (persistent phobic anxiety about animals, for example) whose repetitiveness suggested that the patient was in the grip of something outside his awareness or her control. Freud borrowed from his teacher Josef Breuer a method of analysis whereby patients would say whatever came to their minds regardless of how seemingly meaningless or unpertinent. In this way, he found that patients divulged thoughts and feelings that had been kept repressed in the unconscious and hidden from the patient's own conscious view. One patient, for example, experienced a recurring fear of animals that turned out, through his free associations or thoughts, to refer to his childhood fear of his father, something he had repressed and forgotten.

In studying his patients, Freud realized that the unconscious often expresses itself in the form of dreams, since at night during sleep the vigilance of the repressive ego in regard to unconscious desire is stilled. Dreams, Freud found, express wishes or desires that cannot find expression in waking life precisely because they are at odds with the requirements of the ego, which itself merely registers the requirements of the larger society. Unconscious wishes can find expression in dreams because dreams distort the unconscious material and make it appear different from itself and more acceptable to consciousness. The "dream work" displaces unacceptable material onto acceptable images, condenses several different though related unconscious elements into a single image, and turns drives into their opposites, so that they can elude censorship. A dream about not being able to serve a smoked salmon dinner to a friend might turn out to have nothing to do with dining but instead might refer to a wish not to help the friend gain weight and become more attractive to one's husband, who that very day, before the dream, mentioned how attractive he found the friend to be precisely because of her plumpness.

A similar process is at work, Freud discovered, in neurotic symptoms. They frequently displace desires, or anxieties, or drive energies that are unconscious onto expressive activities or compulsive thoughts. Such symptoms perform a variety of translative procedures on unconscious material, from compromise formation (the construction of an indirect expression that allows release of unacceptable drive energy while nonetheless honoring the imperatives of repression) to inversion (the conversion into its opposite of a desire or impulse). For example, someone raised in a strongly religious way that proscribes sexual activity may perform forbidden sexual acts ritualistically so as to seem to be respecting the norm while nonetheless attaining satisfaction. Or someone who feels great animosity towards a cold and distant mother may convert that feeling into its opposite, a fantasy that all women are themselves hostile and therefore unworthy of his love.

Other important terms in the study of symptom formation are fixation, splitting, introjection, and projection. Anxiety about entry into an adult world perceived as threatening of a too-fragile sense of self or anxiety that awakens either troubling memories or drive energies will propel some people to fixate at an early state of development. They will remain attached to early forms of emotional life and sexual activity that are usually surpassed in the transition to adulthood. In some instances, for example, people who fear the passage to genital sexuality will continue to find gratification from other parts of their bodies or other activities than genital sex. Splitting is a way of dealing with anxiety

by dividing the object of anxiety in two, one bearing all the negative feeling while the other embodies all the positive feelings one wishes to substitute for the anxieties the object or situation provokes. Children may, for example, direct all of their aggression or hostility towards one parent while idealizing the other, and such splitting may be as much a response to the trajectory of their own drive energies as to external parental behavior. Finally, introjection and projection are terms used to describe how the self shapes itself by adapting models from outside itself and externalizes its own feelings by assigning them to others. If introjection brings in something from someone else, creating an ideal of that person within oneself, projection throws out something from within oneself and makes it seem as if it is a trait of someone else.

Freud spent most of his life studying the boundary and the dynamic movements between the conscious self or ego and the unconscious, which he later came to call the id. The id is the site of the energy of the mind, energy that Freud characterized as a combination of sexual libido and other instincts, such as aggression, that propel the human organism through life, moving it to grow, develop, and eventually to die. That primary process of life is entirely irrational, and it cannot distinguish images and things, reasonable objects and unreasonable or socially unacceptable ones. It is the secondary processes of the mind, lodged in the ego and superego or conscience, that bring reason, order, logic, and social acceptability to the otherwise uncontrolled and potentially harmful realm of the biological drives. But, according to Freud, the drives of the unconscious, though repressed, can never be quelled entirely. They emerge in dreams, and, when the rational part of the mind fails to handle them successfully, in the seemingly irrational behavior that is neurotic symptomatology (the fears, unjustified anxieties, and compulsive behaviors that indicate something out of joint in a personality). When conscious control breaks down altogether and drives and unconscious content are expressed directly, without any mediation by consciousness, one is in the realm of psychosis or schizophrenia, which Freud distinguished from neurosis by saying that neurosis maintains the relationship to an external reality while in psychosis that relationship breaks down altogether.

Freud insisted that sexuality was evident throughout life, from childhood on. The energy of sexuality is far from exclusively genital; it can also be anal or oral, Freud noted, and it can also be displaced onto fetish objects or substitutes that replace early desired objects with ones that avoid anxiety or are responses to trauma. In one famous case study, Freud analyzed an obsessional neurotic (known as the “Wolf Man” because of a dream he had about wolves in a tree staring at him) who developed a sexually invested fondness for military dress and regimen in response to early traumatic experiences regarding his sexual identity. His anxiety provoked him to displace his sexual drive away from human objects and onto fetish substitutes.

At the core of Freud’s sexual theory is the so-called “Oedipus Complex,” something Freud believed all children experience as a rite of passage to adult gender identity. As befitting his time, Freud was primarily concerned with the Oedipal trajectory of the male child (hence Oedipus rather than, say, Clytemnestra or Medea). All male children, Freud argued, experience an early attachment to the mother that is sexual in nature. Only the father’s intervention, separating mother from child, prevents incest. All civilization is founded on the prohibition expressed in the father’s intervention. The male child learns to give up his initial “pre-Oedipal” desire for and attachment to the mother; instead, he identifies with the father (instead of longing to be the father with his mother) and learns to desire other women than the mother. He becomes an adult

male heterosexual (Freud's implicit norm). Similarly, the female child experiences an early desire for the father which takes the form of a simultaneous desire to *be* her mother, to take her place as the father's sexual object, but she too learns to relinquish that desire and to identify with her mother and to seek other objects outside the family. The crucial process in gender formation is identification, the molding of a self from equations made between oneself and external objects through the internalization of images or models of those objects.

Psychoanalytic theory after Freud divides into two strands, one called object relations, the other neo-Freudianism. While object relations theory favors a model that does without instincts almost altogether and concentrates instead on the way the self interacts with its social world, especially the initial world of primary caretakers such as the mother, neo-Freudian theory in the work of Jacques Lacan especially argues that the instinctual drives and the unconscious are more essential to psychoanalytic work than the ego, which Lacan sees as a mirage that can never fully know and master the unconscious.

The theory of identification, which places greater emphasis on social relations at the expense of the instinctual drives, was especially appealing to the object relations school of psychoanalysis that came into being after World War II in Britain and America and is associated with such names as Melanie Klein, R. W. D. Fairbairn, D. W. Winnicott, and Margaret Mahler. It is concerned less with the battle between the ego and the instinctual drives, a notion that some of the theorists reject outright, than it is with the way the relations between the child and its objects, especially the mother, during the pre-Oedipal period, shape its personality. The contours of self-identity are given or shaped by that primary relationship, by whether or not it is distant, cold, and frustrating, for example, or overwhelming and engulfing. The child's ability to separate successfully from its primary unity with the mother by building self-boundaries and appropriate mental representations of an external object world will determine what kind of personality he or she will possess – be it one yearning for fusion with objects that never fully satisfy its yearning or one dominated by a feeling of being compelled to flee from relationships that threaten to overwhelm its fragile self-boundaries.

Unlike Freud, object relations theorists consider the ego to be a major part of (if not the entire) personality. How it manages to construct an internal world for itself made up of introjected fantasy objects or projections of destructive feelings onto the world during the "pre-Oedipal" stage of development is more important for such theorists than the later Oedipal stage of passage into adult gender identity. Some consider the original separation from the mother to be a primary frustration or basic fault that can never be assuaged; life's longings are defined by its schema. Others like Margaret Mahler see the relation to the mother more positively as providing a "beacon" that allows the child to emerge into the world from a primary symbiotic state. And others like Melanie Klein see the child constructing a world for itself through fantasies that allow it to distinguish its destructive from its affectionate feelings through introjection/projection and the splitting between good and bad internal objects. For a child, the mother consists of "part objects" like the breast or the face. Ultimately, the child learns to engage in "reparation," the restoration of whole objects and good relations that its own destructive impulses sundered during the process of separation, individuation, and growth. While object relations theory has been criticized for at times advancing an overly optimistic picture of "adaptation" of a debatably coherent "self" to an unproblematic "environment," it has also inspired such pathbreaking work as Klaus Theweleit's *Male*

*Fantasies*, a study of pre-Nazi literature that locates the origins of Nazism in a particular psychological formation that perceived women, communists, and Jews as external equivalents of internal boundary-threatening urges that had to be either violently expelled or regimented.

Neo-Freudianism enjoyed great popularity in France in the 1960s and 1970s and continues to be a viable school of literary criticism. In the 1950s and 1960s, Jacques Lacan developed a structuralist theory of psychoanalysis based on the linguistic theory of Saussure. Against object relations theory, Lacan argues that the ego is constructed through imaginary percepts and narcissistic fantasies, and it remains blind to its determination by the drives, the unconscious, and its placement and construction in/by language. Before language assigns us an “I,” we possess no sense of self. It is language that gives us identity. The unified self posited by object relations theory is an illusion. The child begins as fragmented drives, percepts, and attachments that eventually congeal into an imaginary identity at the “mirror stage” of development. It is through the child’s original symbiotic relationship with the mother that he/she develops a false narcissistic sense of unity. The child assumes the mother is himself, and his primary desire is for her desire (of him). Desire and its realization only appear immediate, however, and what Lacan calls the Real, an impossible wholeness of self, plenitude of desire satisfaction (*jouissance*), and continuity of signifier and signified or word and object, is never possible. The mother is a congeries of part objects (*l’objet petit a*) and partial fulfillments like the breast, and the whole we imaginarily seek and imagine we have when we construct egos for ourselves or seek desired objects that embody our fantasies of wholeness is merely a way of concealing from ourselves the initial fissure or *béance* that separation from the mother installs permanently within our being. Indeed, our being is not founded on the mythic identity of the ego; rather it is founded on what Lacan calls our initial lack-of-being (*manque-à-être*), the initial experience of being ripped out of an original imaginary fullness of being and separated from the object – the mother – that provided us with it. More real is our overdetermination by the drives, the unconscious, and the Symbolic Order of our culture, the social languages that identify us and lend us identities, all of which exceed consciousness and never assume the form of knowable or conscious identity (which, for Lacan, is always fantasmatic). Our identity is given to us from outside, and we are constitutively alienated. The imaginary or narcissistic character of all desire merely conceals this basic fault, this radical alterity or otherness, in human existence.

The mirror stage of dyadic symbiosis with the mother must be left behind as the child develops and enters that social world. The shattering of it occurs when the child is confronted with the father’s “no,” which is to say, with the incest taboo that declares the mother an inappropriate object. The bar forbidding access to the mother is akin to the bar that separates signifier from signified or word from thing. Within language, we have no access to real objects. So also, children have no access to the real mother after a certain point in development. They only have signifiers of her which they can either accept realistically or which they can overvalue and fetishize (developing neurotic symptoms in consequence). If a child accepts separation from the mother (the Law of the Father), s/he (though mostly “he,” one always suspects, with Lacan) then learns to accept his/her place in the Symbolic Order, that symbolic language which assigns social roles and dictates proper behavior in society. That order is like a language, since it is defined as relations between terms (mother/father, mother/son, etc.) and by a lexicon that assigns meaning or identity according to the binary opposition of presence or

absence (of terms). With the initiation of the Symbolic, the original desire for the mother is repressed, and Lacan compares this to the way the signified is made absent by the signifier, and is always beneath the bar in Saussure's algorithm: S/s. The acceptance of repression and the entry into the Symbolic is itself comparable to language in that once one learns to name something, one accepts separation from it; by naming, one sacrifices the object, since the presence of the sign/word is the absence of the signified thing. The naming of objects separates one from them. The arrival of the Symbolic and the shattering of the Imaginary thus consists of the installation of a combined linguistic/psychological separation of the child both from its initial object, the mother, and from the undifferentiated matter of natural existence. We learn to be social, to have social identities, by learning to say no, to sacrifice or give up both the initial contact one has with the natural world and with one's first human objects. The mother's body is barred, and the desire for it is placed under the bar of the signifier and enters the unconscious. The small "o" other or initial object becomes the large "O" Other of the symbolic unconscious; it acquires meaning as what one cannot have and as that whose absence dictates the form of all subsequent desires, all the signifiers we pursue as hoped-for fillers for an initial unfillable absence. That bar can never be crossed, and all our desires throughout life will consist of attempts to come to terms with this separation, our "lack-of-being." The other side of the bar can enter our consciousness only in the form of substitutes, as metaphors that can indicate it only as/in its absence because the unconscious can never be present to the mind (except through substitute signifiers). Similarly, all desire is inherently metaphoric, inherently a matter of a substitute object that stands in for the initially absent mother object, and because no metaphor can embody what we ultimately desire when we desire anything, we are condemned to slide along a chain of signifiers each of which is a metonymy, a part standing in for the whole we (always) miss. Thus, unlike object relations theory, which assumes a whole self is possible that would be transparent to itself and would be defined by a healthy ego, Lacan thinks that we are constitutively split from ourselves and that we can never possibly attain wholeness in the world of objects. That is a delusion of the ego (and of ego psychology, he would add, somewhat polemically). What we can learn is to accept frustration and to come to acknowledge the lack that defines our being. We exist in a chain of signifiers of desires that never arrive at the Real, the ever-absent cause of desire which is the undifferentiatedness of nature, something we can never have access to from within society except through signifiers that distance it (substitute for it) as they name it.

Psychoanalytic literary criticism begins with Freud himself, whose "The Uncanny," in part a reading of Hoffman's horror story "The Sandman," can be said to inaugurate the critical genre. Freud notices that literary texts are like dreams; they embody or express unconscious material in the form of complex displacements and condensations. The same rule that he prescribes for dream interpretation, however, also applies to literature: it is not a direct translation of the unconscious into symbols that "stand for" unconscious meanings. Rather, literature displaces unconscious desires, drives, and motives into imagery that might bear no resemblance to its origin but that nonetheless permits it to achieve release or expression. Literature, as fiction, might even be said to demonstrate these very processes of representation-through-indirection at work. For Freud in "The Uncanny," fear of castration takes the form not of a literal image, but of a metaphoric substitute that displaces the protagonist's anxiety onto a fear of losing his eyes, a fear that is available for interpretation only because language displays the latent connection.

Freud and many later psychoanalytic critics were concerned with what they thought was the primary anxiety of patriarchal culture, the male child's fears as he moves from presexual childhood to sexual adulthood, a trajectory that necessarily crosses the sexual relationship between his mother and his father. All of Nathaniel Hawthorne's fiction, for example, might be read in this light as embodying the Oedipal conflict between a son and a threatening father (as between Reverend Dimmesdale and Chillingsworth in *The Scarlet Letter*). As object relations theory shifts attention towards the pre-Oedipal realm, however, so also does later psychoanalytic criticism focus more on the relational dynamics of psychosexual development and on children's relations to their mothers in patrocentric cultures that assign child-rearing work to women. Klaus Theweleit in *Male Fantasies*, for example, studies the representations of violence against women in literature by German ex-soldiers from World War I who would eventually become major supporters of Nazism and interprets them as expressions of hostility against mothers. The literary works are characterized by images of fear in regard to women perceived as being too powerful, fear that is displaced onto anxieties about having one's self-boundaries overwhelmed by a "red flood" of Bolshevism. Nazism would be the German response to that political threat of communist revolution, an erection of a rigid social order that was the equivalent of the psychological defense these males constructed to guard themselves against personal dissolution, what Theweleit calls "body armor." Theweleit sees the relation to the mother as more determining of these men's psychological identities than that to the father, who tends to be a peripheral figure in the literature. At stake in the literature is not an ego that does battle with a paternal superego or with unconscious urges for pleasure that meet repression; rather the literature depicts a self that never fully formed, never acquired a healthy relation to the world, because of abusive child-rearing practices in German society at the time. It is this that accounts for the enormous representational violence against women who might be construed as similarly maternal and similarly abusive of self-identity.

Lacanian criticism shifts attention to language and sees it and the unconscious as almost identical. Human desire is carried by signifiers which stand in for a lack that can never be filled in. It is in the signifiers then, in language itself, that the unconscious, what of the unconscious one can know, resides. Processes of signification of the kind that are frozen temporarily in works of literature constitute the human subject and determine the shape of its life – whether one neurotically and repetitively pursues the same signifier of a possibly completely fulfilled desire (a particular kind of sexual partner) or whether one renounces such pursuits and accommodates oneself to a more mundane destiny, for example. Such fulfillment is, of course, for Lacan, an impossibility; so literature always enacts the way the chain of signifiers simply eternally displaces an end to signification, the arrival of a real referent that would be the fulfillment of desire and the end of its displacement along a chain.

For example, Hemingway's novel *A Farewell to Arms* hinges on a play on words in the title. About a wounded soldier who has an affair with a nurse who dies in the end while giving birth to their child (itself stillborn), *Arms* is about both bodily "arms" (as in the sexual embrace) and military "arms" (as in the guns that wound Jake, the hero). He wishes to escape from the military into the arms of the maternal Catherine, but he is obliged to say farewell to her arms in the end. The novel maps out the trajectory of development as Lacan describes it: the male child must learn to renounce the imaginary moment of fulfilled desire with the mother in order to accept separation and to enter the Symbolic Order. The bifurcating meanings of "arms" indicate a split in the narrative

subject (the narrator shifts from “we” to “I” throughout) that testifies to the split within all human subjectivity between the conscious self and the unconscious that determines that self and between the desiring self and the ultimately impossible fulfillment of that desire (in a return to the mother’s arms). The imaginary identity (of self/(m)other) must be given up, and separation (the duality of meaning implied by the fact that one can only have metaphors and not real things or complete fulfillment) accepted.<sup>1</sup>

# CHAPTER 2

## The Interpretation of Dreams

*Sigmund Freud*

When it was published in 1900, Freud's *Interpretation of Dreams* launched an entirely new idea and a new discipline of human knowledge. The idea was that the mind harbors wishes or desires that lie outside awareness but that nevertheless manifest themselves at night in dreams. Dreams, when read or interpreted as a rebus or puzzle, instead of being taken literally, turn out to be translations into semi-conscious form of unconscious material. Such material is generally in the unconscious because it has been repressed, or driven from consciousness by a mental censor that judges what is fit for expression. Things unfit for expression (at the time of Freud's work) were ideas or desires having to do, for example, with sexuality. But not all dreams were of a sexual character. In the central dream analyzed in this selection, Freud, for example, has a dream that expresses an egotistical wish that his work be properly recognized.

### The Dream of the Botanical Monograph

*I had written a monograph on a certain plant. The book lay before me and I was at the moment turning over a folded colored plate. Bound up in each copy there was a dried specimen of the plant, as though it had been taken from a herbarium.*

#### Analysis

That morning I had seen a new book in the window of a book-shop, bearing the title *The Genus Cyclamen* – evidently a *monograph* on that plant.

Cyclamens, I reflected, were my wife's favorite flowers and I reproached myself for so rarely remembering to bring her flowers, which was what she liked. – The subject of “bringing

*Original publication details:* Sigmund Freud, from *The Interpretation of Dreams*, trans. James Strachey, pp. 169–173, 277–292, 295–296, 302–309. Basic Books, Inc., 1956. Reproduced with permission from Basic Books.

*flowers*" recalled an anecdote which I had recently repeated to a circle of friends and which I had used as evidence in favor of my theory that forgetting is very often determined by an unconscious purpose and that it always enables one to deduce the secret intentions of the person who forgets. A young woman was accustomed to receiving a bouquet of flowers from her husband on her birthday. One year this token of his affection failed to appear, and she burst into tears. Her husband came in and had no idea why she was crying till she told him that to-day was her birthday. He clasped his hand to his head and exclaimed: "I'm so sorry, but I'd quite forgotten. I'll go out at once and fetch *your flowers*." But she was not to be consoled; for she recognized that her husband's forgetfulness was a proof that she no longer had the same place in his thoughts as she had formerly. — This lady, Frau L., had met my wife two days before I had the dream, had told her that she was feeling quite well and enquired after me. Some years ago she had come to me for treatment.

I now made a fresh start. Once, I recalled, I really *had* written something in the nature of a *monograph on a plant*, namely a dissertation on the *coca-plant*, which had drawn Karl Koller's attention to the anaesthetic properties of cocaine. I had myself indicated this application of the alkaloid in my published paper, but I had not been thorough enough to pursue the matter further. This reminded me that on the morning of the day after the dream — I had not found time to interpret it till the evening — I had thought about cocaine in a kind of daydream. If ever I got glaucoma, I had thought, I should travel to Berlin and get myself operated on, incognito, in my friend's [Fliess's] house, by a surgeon recommended by him. The operating surgeon, who would have no idea of my identity, would boast once again of how easily such operations could be performed since the introduction of cocaine; and I should not give the slightest hint that I myself had had a share in the discovery. This phantasy had led on to reflections of how awkward it is, when all is said and done, for a physician to ask for medical treatment for himself from his professional colleagues. The Berlin eye-surgeon would not know me, and I should be able to pay his fees like anyone else. It was not until I had recalled this daydream that I realized that the recollection of a specific event lay behind it. Shortly after Koller's discovery, my father had in fact been attacked by glaucoma; my friend Dr Königstein, the ophthalmic surgeon, had operated on him; while Dr Koller had been in charge of the cocaine anaesthesia and had commented on the fact that this case had brought together all of the three men who had had a share in the introduction of cocaine.

My thoughts then went on to the occasion when I had last been reminded of this business of the cocaine. It had been a few days earlier, when I had been looking at a copy of a *Festschrift* in which grateful pupils had celebrated the jubilee of their teacher and laboratory director. Among the laboratory's claims to distinction which were enumerated in this book I had seen a mention of the fact that Koller had made his discovery there of the anaesthetic properties of cocaine. I then suddenly perceived that my dream was connected with an event of the previous evening. I had walked home precisely with Dr Königstein and had got into conversation with him about a matter which never fails to excite my feelings whenever it is raised. While I was talking to him in the entrance-hall, Professor Gärtner [Gardener] and his wife had joined us; and I could not help congratulating them both on their *blooming* looks. But Professor Gärtner was one of the authors of the *Festschrift* I have just mentioned, and may well have reminded me of it. Moreover, the Frau L., whose disappointment on her birthday I described earlier, was mentioned — though only, it is true, in another connection — in my conversation with Dr Königstein.

I will make an attempt at interpreting the other determinants of the content of the dream as well. There was a *dried specimen of the plant* included in the monograph, as

though it had been a *herbarium*. This led me to a memory from my secondary school. Our headmaster once called together the boys from the higher forms and handed over the school's herbarium to them to be looked through and cleaned. Some small worms – book-worms – had found their way into it. He does not seem to have had much confidence in my helpfulness, for he handed me only a few sheets. These, as I could still recall, included some Crucifers. I never had a specially intimate contact with botany. In my preliminary examination in botany I was also given a Crucifer to identify – and failed to do so. My prospects would not have been too bright, if I had not been helped out by my theoretical knowledge. I went on from the Cruciferae to the Compositae. It occurred to me that artichokes were Compositae, and indeed I might fairly have called them *my favorite flowers*. Being more generous than I am, my wife often brought me back these favorite flowers of mine from the market.

I saw the monograph which I had written *lying before me*. This again led me back to something. I had had a letter from my friend [Fliess] in Berlin the day before in which he had shown his power of visualization; "I am very much occupied with your dream-book. *I see it lying finished before me and I see myself turning over its pages.*" How much I envied him his gift as a seer! If only I could have seen it lying finished before me!

*The folded colored plate.* While I was a medical student I was the constant victim of an impulse only to learn things out of *monographs*. In spite of my limited means, I succeeded in getting hold of a number of volumes of the proceedings of medical societies and was enthralled by their *colored plates*. I was proud of my hankering for thoroughness. When I myself had begun to publish papers, I had been obliged to make my own drawings to illustrate them and I remembered that one of them had been so wretched that a friendly colleague had jeered at me over it. There followed, I could not quite make out how, a recollection from very early youth. It had once amused my father to hand over a book with *colored plates* (an account of a journey through Persia) for me and my eldest sister to destroy. Not easy to justify from the educational point of view! I had been five years old at the time and my sister not yet three; and the picture of the two of us blissfully pulling the book to pieces (leaf by leaf, like an *artichoke*, I found myself saying) was almost the only plastic memory that I retained from that period of my life. Then, when I became a student, I had developed a passion for collecting and owning books, which was analogous to my liking for learning out of monographs: *a favorite hobby*. (The idea of "*favorite*" had already appeared in connection with cyclamens and artichokes.) I had become a *bookworm*. I had always, from the time I first began to think about myself, referred this first passion of mine back to the childhood memory I have mentioned. Or rather, I had recognized that the childhood scene was a "screen memory" for my later bibliophile propensities.

And I had early discovered, of course, that passions often lead to sorrow. When I was seventeen I had run up a largish account at the bookseller's and had nothing to meet it with; and my father had scarcely taken it as an excuse that my inclinations might have chosen a worse outlet. The recollection of this experience from the later years of my youth at once brought back to my mind the conversation with my friend Dr Königstein. For in the course of it we had discussed the same question of my being blamed for being too much absorbed in my *favorite hobbies*.

For reasons with which we are not concerned, I shall not pursue the interpretation of this dream any further, but will merely indicate the direction in which it lay. In the course of the work of analysis I was reminded of my conversation with Dr Königstein, and I was brought to it from more than one direction. When I take into account the

topics touched upon in that conversation, the meaning of the dream becomes intelligible to me. All the trains of thought starting from the dream – the thoughts about my wife's and my own favorite flowers, about cocaine, about the awkwardness of medical treatment among colleagues, about my preference for studying monographs and about my neglect of certain branches of science such as botany – all of these trains of thought, when they were further pursued, led ultimately to one or other of the many ramifications of my conversation with Dr Königstein. Once again the dream, like the one we first analyzed – the dream of Irma's injection – turns out to have been in the nature of a self-justification, a plea on behalf of my own rights. Indeed, it carried the subject that was raised in the earlier dream a stage further and discussed it with reference to fresh material that had arisen in the interval between the two dreams. Even the apparently indifferent form in which the dream was couched turns out to have had significance. What it meant was: "After all, I'm the man who wrote the valuable and memorable paper (on cocaine)," just as in the earlier dream I had said on my behalf: "I'm a conscientious and hard-working student." In both cases what I was insisting was: "I may allow myself to do this." ...

### The Dream-work

Every attempt that has hitherto been made to solve the problem of dreams has dealt directly with their *manifest* content as it is presented in our memory. All such attempts have endeavored to arrive at an interpretation of dreams from their manifest content or (if no interpretation was attempted) to form a judgement as to their nature on the basis of that same manifest content. We are alone in taking something else into account. We have introduced a new class of psychical material between the manifest content of dreams and the conclusions of our enquiry: namely, their *latent* content, or (as we say) the "dream-thoughts," arrived at by means of our procedure. It is from these dream-thoughts and not from a dream's manifest content that we disentangle its meaning. We are thus presented with a new task which had no previous existence: the task, that is, of investigating the relations between the manifest content of dreams and the latent dream-thoughts, and of tracing out the processes by which the latter have been changed into the former.

The dream-thoughts and the dream-content are presented to us like two versions of the same subject-matter in two different languages. Or, more properly, the dream-content seems like a transcript of the dream-thoughts into another mode of expression, whose characters and syntactic laws it is our business to discover by comparing the original and the translation. The dream-thoughts are immediately comprehensible, as soon as we have learnt them. The dream-content, on the other hand, is expressed as it were in a pictographic script, the characters of which have to be transposed individually into the language of the dream-thoughts. If we attempted to read these characters according to their pictorial value instead of according to their symbolic relation, we should clearly be led into error. Suppose I have a picture-puzzle, a rebus, in front of me. It depicts a house with a boat on its roof, a single letter of the alphabet, the figure of a running man whose head has been conjured away, and so on. Now I might be misled into raising objections and declaring that the picture as a whole and its component parts are nonsensical. A boat has no business to be on the roof of a house, and a headless man cannot run. Moreover, the man is bigger than the house; and if the whole picture is intended to represent a landscape, letters of the alphabet are out of place in it since such objects do not occur in nature.

But obviously we can only form a proper judgement of the rebus if we put aside criticisms such as these of the whole composition and its parts and if, instead, we try to replace each separate element by a syllable or word that can be represented by that element in some way or other. The words which are put together in this way are no longer nonsensical but may form a poetical phrase of the greatest beauty and significance. A dream is a picture-puzzle of this sort and our predecessors in the field of dream-interpretation have made the mistake of treating the rebus as a pictorial composition: and as such it has seemed to them nonsensical and worthless.

### The work of condensation

The first thing that becomes clear to anyone who compares the dream-content with the dream-thoughts is that a work of *condensation* on a large scale has been carried out. Dreams are brief, meagre and laconic in comparison with the range and wealth of the dream-thoughts. If a dream is written out it may perhaps fill half a page. The analysis setting out the dream-thoughts underlying it may occupy six, eight or a dozen times as much space. This relation varies with different dreams; but so far as my experience goes its direction never varies. As a rule one underestimates the amount of compression that has taken place, since one is inclined to regard the dream-thoughts that have been brought to light as the complete material, whereas if the work of interpretation is carried further it may reveal still more thoughts concealed behind the dream. I have already had occasion to point out that it is in fact never possible to be sure that a dream has been completely interpreted. Even if the solution seems satisfactory and without gaps, the possibility always remains that the dream may have yet another meaning. Strictly speaking, then, it is impossible to determine the amount of condensation.

There is an answer, which at first sight seems most plausible, to the argument that the great lack of proportion between the dream-content and the dream-thoughts implies that the psychical material has undergone an extensive process of condensation in the course of the formation of the dream. We very often have an impression that we have dreamt a great deal all through the night and have since forgotten most of what we dreamt. On this view, the dream which we remember when we wake up would only be a fragmentary remnant of the total dream-work; and this, if we could recollect it in its entirety, might well be as extensive as the dream-thoughts. There is undoubtedly some truth in this: there can be no question that dreams can be reproduced most accurately if we try to recall them as soon as we wake up and that our memory of them becomes more and more incomplete towards evening. But on the other hand it can be shown that the impression that we have dreamt a great deal more than we can reproduce is very often based on an illusion, the origin of which I shall discuss later. Moreover the hypothesis that condensation occurs during the dream-work is not affected by the possibility of dreams being forgotten, since this hypothesis is proved to be correct by the quantities of ideas which are related to each individual piece of the dream which has been retained. Even supposing that a large piece of the dream has escaped recollection, this may merely have prevented our having access to another group of dream-thoughts. There is no justification for supposing that the lost pieces of the dream would have related to the same thoughts which we have already reached from the pieces of the dream that have survived.<sup>1</sup>

In view of the very great number of associations produced in analysis to each individual element of the content of a dream, some readers may be led to doubt whether, as

a matter of principle, we are justified in regarding as part of the dream-thoughts all the associations that occur to us during the subsequent analysis – whether we are justified, that is, in supposing that all these thoughts were already active during the state of sleep and played a part in the formation of the dream. Is it not more probable that new trains of thought have arisen in the course of the analysis which had no share in forming the dream? I can only give limited assent to this argument. It is no doubt true that some trains of thought arise for the first time during the analysis. But one can convince oneself in all such cases that these new connections are only set up between thoughts which were already linked in some other way in the dream-thoughts. The new connections are, as it were, loop-lines or short-circuits, made possible by the existence of other and deeper-lying connecting paths. It must be allowed that the great bulk of the thoughts which are revealed in analysis were already active during the process of forming the dream; for, after working through a string of thoughts which seem to have no connection with the formation of a dream, one suddenly comes upon one which is represented in its content and is indispensable for its interpretation, but which could not have been reached except by this particular line of approach. I may here recall the dream of the botanical monograph, which strikes one as the product of an astonishing amount of condensation, even though I have not reported its analysis in full.

How, then, are we to picture psychical conditions during the period of sleep which precedes dreams? Are all the dream-thoughts present alongside one another? or do they occur in sequence? or do a number of trains of thought start out simultaneously from different centers and afterwards unite? There is no need for the present, in my opinion, to form any plastic idea of psychical conditions during the formation of dreams. It must not be forgotten, however, that we are dealing with an *unconscious* process of thought, which may easily be different from what we perceive during purposive reflection accompanied by consciousness.

The unquestionable fact remains, however, that the formation of dreams is based on a process of condensation. How is that condensation brought about?

When we reflect that only a small minority of all the dream-thoughts revealed are represented in the dream by one of their ideational elements, we might conclude that condensation is brought about by *omission*: that is, that the dream is not a faithful translation or a point-for-point projection of the dream-thoughts, but a highly incomplete and fragmentary version of them. This view, as we shall soon discover, is a most inadequate one. But we may take it as a provisional starting-point and go on to a further question. If only a few elements from the dream-thoughts find their way into the dream-content, what are the conditions which determine their selection?

In order to get some light on this question we must turn our attention to those elements of the dream-content which must have fulfilled these conditions. And the most favorable material for such an investigation will be a dream to the construction of which a particularly intense process of condensation has contributed. I shall accordingly begin by choosing for the purpose the dream which I have already recorded.

### **The dream of the botanical monograph**

**Content of the Dream.** – *I had written a monograph on an (unspecified) genus of plants. The book lay before me and I was at the moment turning over a folded colored plate. Bound up in the copy there was a dried specimen of the plant.*

The element in this dream which stood out most was the *botanical monograph*. This arose from the impressions of the dream-day: I had in fact seen a monograph on the genus Cyclamen in the window of a book-shop. There was no mention of this genus in the content of the dream; all that was left in it was the monograph and its relation to botany. The “botanical monograph” immediately revealed its connection with the *work upon cocaine* which I had once written. From “cocaine” the chains of thought led on the one hand to the *Festschrift* and to certain events in a University laboratory, and on the other hand to my friend Dr Königstein, the eye-surgeon, who had had a share in the introduction of cocaine. The figure of Dr Königstein further reminded me of the interrupted conversation which I had had with him the evening before and of my various reflections upon the payment for medical services among colleagues. This conversation was the actual currently active instigator of the dream; the monograph on the cyclamen was also a currently active impression, but one of an indifferent nature. As I perceived, the “botanical monograph” in the dream turned out to be an “intermediate common entity” between the two experiences of the previous day: it was taken over unaltered from the indifferent impression and was linked with the psychically significant event by copious associative connections.

Not only the compound idea, “botanical monograph,” however, but each of its components, “botanical” and “monograph” separately, led by numerous connecting paths deeper and deeper into the tangle of dream-thoughts. “Botanical” was related to the figure of Professor Gärtner [Gardener], the *blooming* looks of his wife, to my patient *Flora* and to the lady [Frau L.] of whom I had told the story of the forgotten flowers. Gärtner led in turn to the laboratory and to my conversation with Königstein. My two patients [Flora and Frau L.] had been mentioned in the course of this conversation. A train of thought joined the lady with the flowers to my wife’s *favorite flowers* and thence to the title of the monograph which I had seen for a moment during the day. In addition to these, “botanical” recalled an episode at my secondary school and an examination while I was at the University. A fresh topic touched upon in my conversation with Dr Königstein – my favorite hobbies – was joined, through the intermediate link of what I jokingly called *my favorite flower*, the artichoke, with the train of thought proceeding from the forgotten flowers. Behind “artichokes” lay, on the one hand, my thoughts about Italy and, on the other hand, a scene from my childhood which was the opening of what have since become my intimate relations with books. Thus “botanical” was a regular nodal point in the dream. Numerous trains of thought converged upon it, which, as I can guarantee, had appropriately entered into the context of the conversation with Dr Königstein. Here we find ourselves in a factory of thoughts where, as in the “weaver’s masterpiece,” –

Ein Tritt tausend Fäden regt,  
Die Schiffllein herüber hinüber schiessen,  
Die Fäden ungeschen fliessen,  
Ein Schlag tausend Verbindungen schlägt.<sup>2</sup>

So, too, “monograph” in the dream touches upon two subjects: the one-sidedness of my studies and the costliness of my favorite hobbies.

This first investigation leads us to conclude that the elements “botanical” and “monograph” found their way into the content of the dream because they possessed copious contacts with the majority of the dream-thoughts, because, that is to say, they constituted

“nodal points” upon which a great number of the dream-thoughts converged, and because they had several meanings in connection with the interpretation of the dream. The explanation of this fundamental fact can also be put in another way: each of the elements of the dream’s content turns out to have been “overdetermined” – to have been represented in the dream-thoughts many times over.

We discover still more when we come to examine the remaining constituents of the dream in relation to their appearance in the dream-thoughts. The *colored plate* which I was unfolding led to a new topic, my colleagues’ criticisms of my activities, and to one which was already represented in the dream, my favorite hobbies; and it led, in addition, to the childhood memory in which I was pulling to pieces a book with colored plates. The *dried specimen of the plant* touched upon the episode of the herbarium at my secondary school and specially stressed that memory.

The nature of the relation between dream-content and dream-thoughts thus becomes visible. Not only are the elements of a dream determined by the dream-thoughts many times over, but the individual dream-thoughts are represented in the dream by several elements. Associative paths lead from one element of the dream to several dream-thoughts, and from one dream-thought to several elements of the dream. Thus a dream is not constructed by each individual dream-thought, or group of dream-thoughts, finding (in abbreviated form) separate representation in the content of the dream – in the kind of way in which an electorate chooses parliamentary representatives; a dream is constructed, rather, by the whole mass of dream-thoughts being submitted to a sort of manipulative process in which those elements which have the most numerous and strongest supports acquire the right of entry into the dream-content – in a manner analogous to election by *scrutin de liste*. In the case of every dream which I have submitted to an analysis of this kind I have invariably found these same fundamental principles confirmed: the elements of the dream are constructed out of the whole mass of dream-thoughts and each one of those elements is shown to have been determined many times over in relation to the dream-thoughts.

It will certainly not be out of place to illustrate the connection between dream-content and dream-thoughts by a further example, which is distinguished by the specially ingenious interweaving of their reciprocal relations. It is a dream produced by one of my patients – a man whom I was treating for claustrophobia. It will soon become clear why I have chosen to give this exceptionally clever dream-production the title of

### A lovely dream

*He was driving with a large party to X Street, in which there was an unpretentious inn. (This is not the case.) There was a play being acted inside it. At one moment he was audience, at another actor. When it was over they had to change their clothes so as to get back to town. Some of the company were shown into rooms on the ground floor and others into rooms on the first floor. Then a dispute broke out. The ones up above were angry because the ones down below were not ready, and they could not come downstairs. His brother was up above and he was down below and he was angry with his brother because they were so much pressed. (This part was obscure.) Moreover, it had been decided and arranged even when they first arrived who was to be up above and who was to be down below. Then he was walking by himself up the rise made by X Street in the direction of town. He walked with such difficulty and so laboriously*

*that he seemed glued to the spot. An elderly gentleman came up to him and began abusing the King of Italy. At the top of the rise he was able to walk much more easily.*

His difficulty in walking up the rise was so distinct that after waking up he was for some time in doubt whether it was a dream or reality.

We should not think very highly of this dream, judging by its manifest content. In defiance of the rules, I shall begin its interpretation with the portion which the dreamer described as being the most distinct.

The difficulty which he dreamt of and probably actually experienced during the dream – the laborious climbing up the rise accompanied by dyspnoea – was one of the symptoms which the patient had in fact exhibited years before and which had at that time been attributed, along with certain other symptoms, to tuberculosis. (The probability is that this was hysterically simulated.) The peculiar sensation of inhibited movement that occurs in this dream is already familiar to us from dreams of exhibiting and we see once more that it is material available at any time for any other representational purpose. The piece of the dream-content which described how the climb began by being difficult and became easy at the end of the rise reminded me, when I heard it, of the masterly introduction to Alphonse Daudet's *Sappho*. That well-known passage describes how a young man carries his mistress upstairs in his arms; at first she is as light as a feather, but the higher he climbs the heavier grows her weight. The whole scene foreshadows the course of their love-affair, which was intended by Daudet as a warning to young men not to allow their affections to be seriously engaged by girls of humble origin and a dubious past.<sup>3</sup> Though I knew that my patient had been involved in a love-affair which he had recently broken off with a lady on the stage, I did not expect to find my guess at an interpretation justified. Moreover the situation in *Sappho* was the reverse of what it had been in the dream. In the dream the climbing had been difficult to begin with and had afterwards become easy; whereas the symbolism in the novel only made sense if something that had been begun lightly ended by becoming a heavy burden. But to my astonishment my patient replied that my interpretation fitted in very well with a piece he had seen at the theater the evening before. It was called *Rund um Wien* [Round Vienna] and gave a picture of the career of a girl who began by being respectable, who then became a *demi-mondaine* and had *liaisons* with men in high positions and so “*went up in the world*,” but who ended by “*coming down in the world*.” The piece had moreover reminded him of another, which he had seen some years earlier, called *Von Stufe zu Stufe* [*Step by Step*], and which had been advertised by a poster showing a staircase with a flight of steps.

To continue with the interpretation. The actress with whom he had had this latest, eventful *liaison* had lived in X Street. There is nothing in the nature of an inn in that street. But when he was spending part of the summer in Vienna on the lady's account he had put up [German “*abgestiegen*,” literally “*stepped down*”] at a small hotel in the neighborhood. When he left the hotel he had said to his cab-driver: “Anyhow I'm lucky not to have picked up any vermin.” (This, incidentally, was another of his phobias.) To this the driver had replied: “How could anyone put up at such a place! It's not a hotel, it's only an *inn*.”

The idea of an inn at once recalled a quotation to his mind:

Bei einem *Wirte* wundermild,  
Da war ich jüngst zu Gaste.<sup>4</sup>

The host in Uhland's poem was an *apple-tree*; and a second quotation now carried on his train of thought:

- FAUST:      (*mit der Jüngen tanzend*):  
                 Einst hatt' ich einen schönen Traum;  
                 Da sah ich einen Apfelbaum,  
                 Zwei schöne Äpfel glanzten dran,  
                 Sie reizten mich, ich stieg hinan.  
 DIE SCHÖNE:    Der Äpfelchen begehrst ihr sehr,  
                 Und schon vom Paradiese her.  
                 Von Freuden fühl' ich mich bewegt,  
                 Dass auch mein Garten solche trägt.<sup>5</sup>

There cannot be the faintest doubt what the apple-tree and the apples stood for. Moreover, lovely breasts had been among the charms which had attracted the dreamer to his actress.

The context of the analysis gave us every ground for supposing that the dream went back to an impression in childhood. If so, it must have referred to the wet-nurse of the dreamer, who was by then a man almost thirty years old. For an infant the breasts of his wet-nurse are nothing more nor less than an inn. The wet-nurse, as well as Daudet's *Sappho*, seem to have been allusions to the mistress whom the patient had recently dropped.

The patient's (elder) brother also appeared in the content of the dream, the brother being up *above* and the patient himself *down below*. This was once again the *reverse* of the actual situation; for, as I knew, the brother had lost his social position while the patient had maintained his. In repeating the content of the dream to me, the dreamer had avoided saying that his brother was up above and he himself "on the ground floor." That would have put the position too clearly, since here in Vienna if we say someone is "*on the ground floor*" we mean that he has lost his money and his position – in other words, that he has "*come down in the world*." Now there must have been a reason for some of this part of the dream being represented by its *reverse*. Further, the reversal must hold good of some other relation between dream-thoughts and dream-content as well; and we have a hint of where to look for this reversal. It must evidently be at the end of the dream, where once again there was a *reversal* of the difficulty in going upstairs as described in *Sappho*. We can then easily see what reversal is intended. In *Sappho* the man carried a woman who was in a sexual relation to him; in the dream-thoughts the position was *reversed*, and a woman was carrying a man. And since this can only happen in childhood, the reference was once more to the wet-nurse bearing the weight of the infant in her arms. Thus the end of the dream made a simultaneous reference to *Sappho* and to the wet-nurse.

Just as the author of the novel, in choosing the name "*Sappho*," had in mind an allusion to Lesbian practices, so too the pieces of the dream that spoke of people "*up above*" and "*down below*" alluded to phantasies of a sexual nature which occupied the patient's mind and, as suppressed desires, were not without a bearing on his neurosis. (The interpretation of the dream did not itself show us that what were thus represented in the dream were phantasies and not recollections of real events; an analysis only gives us the *content* of a thought and leaves it to us to determine its reality. Real and imaginary events appear in dreams at first sight as of equal validity; and that is so not only in dreams but in the production of more important psychical structures.)

A "large party" meant, as we already know, a secret. His brother was simply the representative (introduced into the childhood scene by a "retrospective phantasy") of all

his later rivals for a woman's affection. The episode of the gentleman who abused the King of Italy related once again, via the medium of a recent and in itself indifferent experience, to people of lower rank pushing their way into higher society. It was just as though the child at the breast was being given a warning parallel to the one which Daudet had given to young men.<sup>6</sup>

To provide a third opportunity for studying condensation in the formation of dreams, I will give part of the analysis of another dream, which I owe to an elderly lady undergoing psycho-analytic treatment. As was to be expected from the severe anxiety-states from which the patient suffered, her dreams contained a very large number of sexual thoughts, the first realization of which both surprised and alarmed her. Since I shall not be able to pursue the interpretation of the dream to the end, its material will appear to fall into several groups without any visible connection.

### The May-beetle<sup>7</sup> dream

**Content of the Dream.** – *She called to mind that she had two may-beetles in a box and that she must set them free or they would suffocate. She opened the box and the may-beetles were in an exhausted state. One of them flew out of the open window; but the other was crushed by the casement while she was shutting it at someone's request. (Signs of disgust.)*

**Analysis.** – Her husband was temporarily away from home, and her fourteen-year-old daughter was sleeping in the bed beside her. The evening before, the girl had drawn her attention to a moth which had fallen into her tumbler of water; but she had not taken it out and felt sorry for the poor creature next morning. The book she had been reading during the evening had told how some boys had thrown a cat into boiling water, and had described the animal's convulsions. These were the two precipitating causes of the dream – in themselves indifferent.

She then pursued the subject of *cruelty to animals* further. Some years before, while they were spending the summer at a particular place, her daughter had been very cruel to animals. She was collecting butterflies and asked the patient for some *arsenic* to kill them with. On one occasion a moth with a pin through its body had gone on flying about the room for a long time; another time some caterpillars which the child was keeping to turn into chrysalises starved to death. At a still more tender age the same child used to tear the wings off *beetles* and butterflies. But to-day she would be horrified at all these cruel actions – she had grown so kind-hearted.

The patient reflected over this contradiction. It reminded her of another contradiction, between appearance and character, as George Eliot displays it in *Adam Bede*: one girl who was pretty, but vain and stupid, and another who was ugly, but of high character; a nobleman who seduced the silly girl, and a working man who felt and acted with true nobility. How impossible it was, she remarked, to recognize that sort of thing in people! Who would have guessed, to look at *her*, that she was tormented by sensual desires?

In the same year in which the little girl had begun collecting butterflies, the district they were in had suffered from a serious plague of *may-beetles*. The children were furious with the beetles and *crushed* them unmercifully. At that time my patient had seen a man who tore the wings off may-beetles and then ate their bodies. She herself had been born in *May* and had been married in *May*. Three days after her marriage she had written to her parents at home saying how happy she was. But it had been far from true.

The evening before the dream she had been rummaging among some old letters and had read some of them – some serious and some comic – aloud to her children. There had been a most amusing letter from a piano-teacher who had courted her when she was a girl, and another from an admirer of *noble birth*.<sup>8</sup>

She blamed herself because one of her daughters had got hold of a “bad” book by Maupassant.<sup>9</sup> The *arsenic* that the girl had asked for reminded her of the *arsenic pills* which restored the Duc de Mora’s youthful strength in [Daudet’s] *Le Nabab*.

“Set them free” made her think of a passage in the *Magic Flute*:

Zur Liebe kann ich dich nicht zwingen,  
Doch geb ich dir *die Freiheit* nicht.<sup>10</sup>

“May-beetles” also made her think of Kätkchen’s words:

Verliebt ja wie ein *Käfer* bist du mir.<sup>11</sup>

And in the middle of all this came a quotation from *Tannhäuser*:

Weil du von *böser Lust* beseelt ...<sup>12</sup>

She was living in a perpetual worry about her absent husband. Her fear that something might happen to him on his journey was expressed in numerous waking phantasies. A short time before, in the course of her analysis, she had lighted among her unconscious thoughts upon a complaint about her husband “growing senile.” The wishful thought concealed by her present dream will perhaps best be conjectured if I mention that, some days before she dreamt it, she was horrified, in the middle of her daily affairs, by a phrase in the imperative mood which came into her head and was aimed at her husband: “Go and hang yourself!” It turned out that a few hours earlier she had read somewhere or other that when a man is hanged he gets a powerful erection. The wish for an erection was what had emerged from repression in this horrifying disguise. “Go and hang yourself!” was equivalent to: “Get yourself an erection at any price!” Dr Jenkins’s arsenic pills in *Le Nabab* fitted in here. But my patient was also aware that the most powerful aphrodisiac, cantharides (commonly known as “Spanish flies”), was prepared from *crushed beetles*. This was the drift of the principal part of the dream’s content.

The opening and shutting of *windows* was one of the main subjects of dispute between her and her husband. She herself was aerophilic in her sleeping habits; her husband was aerophobic. *Exhaustion* was the chief symptom which she complained of at the time of the dream....

The work of condensation in dreams is seen at its clearest when it handles words and names. It is true in general that words are treated in dreams as though they were concrete things, and for that reason they are apt to be combined in just the same way as presentations of concrete things. Dreams of this sort offer the most amusing and curious neologisms.

On one occasion a medical colleague had sent me a paper he had written, in which the importance of a recent physiological discovery was, in my opinion, overestimated, and in which, above all, the subject was treated in too emotional a manner. The next night I dreamt a sentence which clearly referred to this paper: “*It’s written in a positively norek-dal style.*” The analysis of the word caused me some difficulty at first. There could be no doubt that it was a parody of the [German] superlatives “*kolossal*” and “*pyramidal*”;

but its origin was not so easy to guess. At last I saw that the monstrosity was composed of the two names "Nora" and "Ekdal" – characters in two well-known plays of Ibsen's. [*A Doll's House* and *The Wild Duck*.] Some time before, I had read a newspaper article on Ibsen by the same author whose latest work I was criticizing in the dream....

## VI

Early this morning, between dreaming and waking, I experienced a very nice example of verbal condensation. In the course of a mass of dream-fragments that I could scarcely remember, I was brought up short, as it were, by a word which I saw before me as though it were half written and half printed. The word was "*erzefilisch*," and it formed part of a sentence which slipped into my conscious memory apart from any context and in complete isolation: "That has an *erzefilisch* influence on the sexual emotions." I knew at once that the word ought really to have been "*erzieherisch*" ["educational"]. And I was in doubt for some time whether the second "e" in "*erzefilisch*" should not have been an "i."<sup>13</sup> In that connection the word "*syphilis*" occurred to me and, starting to analyze the dream while I was still half asleep, I racked my brains in an effort to make out how that word could have got into my dream, since I had nothing to do with the disease either personally or professionally. I then thought of "*erzehlerisch*" [another nonsense word], and this explained the "e" of the second syllable of "*erzefilisch*" by reminding me that the evening before I had been asked by our governess [*Erzieherin*] to say something to her on the problem of prostitution, and had given her Hesse's book on prostitution in order to influence her emotional life – for this had not developed quite normally; after which I had talked [*erzählt*] a lot to her on the problem. I then saw all at once that the word "*syphilis*" was not to be taken literally, but stood for "poison" – of course in relation to sexual life. When translated, therefore, the sentence in the dream ran quite logically: "My talk [*Erzählung*] was intended to have an educational [*erzieherisch*] influence on the emotional life of our governess [*Erzieherin*]; but I fear it may at the same time have had a poisonous effect." "*Erzefilisch*" was compounded from "*erzäh-*" and "*erzieh-*."

The verbal malformations in dreams greatly resemble those which are familiar in paranoia but which are also present in hysteria and obsessions. The linguistic tricks performed by children, who sometimes actually treat words as though they were objects and moreover invent new languages and artificial syntactic forms, are the common source of these things in dreams and psycho-neuroses alike.

The analysis of the nonsensical verbal forms that occur in dreams is particularly well calculated to exhibit the dream-work's achievements in the way of condensation. The reader should not conclude from the paucity of the instances which I have given that material of this kind is rare or observed at all exceptionally. On the contrary, it is very common. But as a result of the fact that dream-interpretation is dependent upon psycho-analytic treatment, only a very small number of instances are observed and recorded and the analyses of such instances are as a rule only intelligible to experts in the pathology of the neuroses. Thus a dream of this kind was reported by Dr von Karpinska (1914) containing the nonsensical verbal form: "*Svingnum elvi*." It is also worth mentioning those cases in which a word appears in a dream which is not in itself meaningless but which has lost its proper meaning and combines a number of other meanings to which it is related in just the same way as a "meaningless" word would be. This is what occurred,

for instance, in the ten-year-old boy's dream of a "category" which was recorded by Tausk (1913). "Category" in that case meant "female genitals" and to "categorate" meant the same as "to micturate."

Where spoken sentences occur in dreams and are expressly distinguished as such from thoughts, it is an invariable rule that the words spoken in the dream are derived from spoken words remembered in the dream-material. The text of the speech is either retained unaltered or expressed with some slight displacement. A speech in a dream is often put together from various recollected speeches, the text remaining the same but being given, if possible, several meanings, or one different from the original one. A spoken remark in a dream is not infrequently no more than an allusion to an occasion on which the remark in question was made.<sup>14</sup>

### The work of displacement

In making our collection of instances of condensation in dreams, the existence of another relation, probably of no less importance, had already become evident. It could be seen that the elements which stand out as the principal components of the manifest content of the dream are far from playing the same part in the dream-thoughts. And, as a corollary, the converse of this assertion can be affirmed: what is clearly the essence of the dream-thoughts need not be represented in the dream at all. The dream is, as it were, differently centered from the dream-thoughts – its content has different elements as its central point. Thus in the dream of the botanical monograph, for instance, the central point of the dream-content was obviously the element "botanical"; whereas the dream-thoughts were concerned with the complications and conflicts arising between colleagues from their professional obligations, and further with the charge that I was in the habit of sacrificing too much for the sake of my hobbies. The element "botanical" had no place whatever in this core of the dream-thoughts, unless it was loosely connected with it by an antithesis – the fact that botany never had a place among my favorite studies. In my patient's *Sappho* dream the central position was occupied by climbing up and down and being up above and down below; the dream-thoughts, however, dealt with the dangers of sexual relations with people of an inferior social class. So that only a single element of the dream-thoughts seems to have found its way into the dream-content, though that element was expanded to a disproportionate extent. Similarly, in the dream of the may-beetles, the topic of which was the relations of sexuality to cruelty, it is true that the factor of cruelty emerged in the dream-content; but it did so in another connection and without any mention of sexuality, that is to say, divorced from its context and consequently transformed into something extraneous. Once again, in my dream about my uncle, the fair beard which formed its center-point seems to have had no connection in its meaning with my ambitious wishes which, as we saw, were the core of the dream-thoughts. Dreams such as these give a justifiable impression of "displacement." In complete contrast to these examples, we can see that in the dream of Irma's injection the different elements were able to retain, during the process of constructing the dream, the approximate place which they occupied in the dream-thoughts. This further relation between the dream-thoughts and the dream-content, wholly variable as it is in its sense or direction, is calculated at first to create astonishment. If we are considering a psychical process in normal life and find that one out of its several component ideas has been picked out and has acquired a special degree of vividness in consciousness, we usually regard this effect

as evidence that a specially high amount of psychical value – some particular degree of interest – attaches to this predominant idea. But we now discover that, in the case of the different elements of the dream-thoughts, a value of this kind does not persist or is disregarded in the process of dream-formation. There is never any doubt as to which of the elements of the dream-thoughts have the highest psychical value; we learn that by direct judgement. In the course of the formation of a dream these essential elements, charged, as they are, with intense interest, may be treated as though they were of small value, and their place may be taken in the dream by other elements, of whose small value in the dream-thoughts there can be no question. At first sight it looks as though no attention whatever is paid to the psychical intensity<sup>15</sup> of the various ideas in making the choice among them for the dream, and as though the only thing considered is the greater or less degree of multiplicity of their determination. What appears in dreams, we might suppose, is not what is *important* in the dream-thoughts but what occurs in them several times over. But this hypothesis does not greatly assist our understanding of dream-formation, since from the nature of things it seems clear that the two factors of multiple determination and inherent psychical value must necessarily operate in the same sense. The ideas which are most important among the dream-thoughts will almost certainly be those which occur most often in them, since the different dream-thoughts will, as it were, radiate out from them. Nevertheless a dream can reject elements which are thus both highly stressed in themselves and reinforced from many directions, and can select for its content other elements which possess only the second of these attributes.

In order to solve this difficulty we shall make use of another impression derived from our enquiry [in the previous section] into the overdetermination of the dream-content. Perhaps some of those who have read that enquiry may already have formed an independent conclusion that the overdetermination of the elements of dreams is no very important discovery, since it is a self-evident one. For in analysis we start out from the dream-elements and note down all the associations which lead off from them; so that there is nothing surprising in the fact that in the thought-material arrived at in this way we come across these same elements with peculiar frequency. I cannot accept this objection; but I will myself put into words something that sounds not unlike it. Among the thoughts that analysis brings to light are many which are relatively remote from the kernel of the dream and which look like artificial interpolations made for some particular purpose. That purpose is easy to divine. It is precisely *they* that constitute a connection, often a forced and far-fetched one, between the dream-content and the dream-thoughts; and if these elements were weeded out of the analysis the result would often be that the component parts of the dream-content would be left not only without overdetermination but without any satisfactory determination at all. We shall be led to conclude that the multiple determination which decides what shall be included in a dream is not always a primary factor in dream-construction but is often the secondary product of a psychical force which is still unknown to us. Nevertheless multiple determination must be of importance in choosing what particular elements shall enter a dream, since we can see that a considerable expenditure of effort is used to bring it about in cases where it does not arise from the dream-material unassisted.

It thus seems plausible to suppose that in the dream-work a psychical force is operating which on the one hand strips the elements which have a high psychical value of their intensity, and on the other hand, by *means of overdetermination*, creates from elements of low psychical value new values, which afterwards find their way into the dream-content. If that is so, a *transference and displacement of psychical intensities* occurs in the process of

dream-formation, and it is as a result of these that the difference between the text of the dream-content and that of the dream-thoughts comes about. The process which we are here presuming is nothing less than the essential portion of the dream-work; and it deserves to be described as "dream-displacement." Dream-displacement and dream-condensation are the two governing factors to whose activity we may in essence ascribe the form assumed by dreams.

Nor do I think we shall have any difficulty in recognizing the psychical force which manifests itself in the facts of dream-displacement. The consequence of the displacement is that the dream-content no longer resembles the core of the dream-thoughts and that the dream gives no more than a distortion of the dream-wish which exists in the unconscious. But we are already familiar with dream-distortion. We traced it back to the censorship which is exercised by one psychical agency in the mind over another. Dream-displacement is one of the chief methods by which that distortion is achieved. *Is fecit cui profuit.*<sup>16</sup> We may assume, then, that dream-displacement comes about through the influence of the same censorship – that is, the censorship of endopsychic defence.<sup>17</sup>

The question of the interplay of these factors – of displacement, condensation and overdetermination – in the construction of dreams, and the question which is a dominant factor and which a subordinate one – all of this we shall leave aside for later investigation. But we can state provisionally a second condition which must be satisfied by those elements of the dream-thoughts which make their way into the dream: *they must escape the censorship imposed by resistance.* And henceforward in interpreting dreams we shall take dream-displacement into account as an undeniable fact.

## Notes

- 1 The occurrence of condensation in dreams has been hinted at by many writers. Du Prel has a passage in which he says it is absolutely certain that there has been a process of condensation of the groups of ideas in dreams. (C. Du Prel, *Die Philosophie der Mystik* (Leipzig, 1885), p. 85.)
- 2 [“... a thousand threads one treadle throws, / Where fly the shuttles hither and thither, / Unseen the threads are knit together, / And an infinite combination grows.” Goethe, *Faust*, Part I [Scene 4] (Bayard Taylor’s translation).]
- 3 [Footnote added 1911:] What I have written below in the section on symbolism about the significance of dreams of climbing throws light upon the imagery chosen by the novelist.
- 4 [Literally: “I was lately a guest at an *inn* with a most gentle host.” (Uhland, *Wanderlieder*, 8, “Einkehr.”)]
- 5 [“FAUST (*dancing with the Young Witch*): *A lovely dream* once came to me, / And I beheld an *apple-tree*, / On which two lovely apples shone; / They charmed me so, I *climbed thereon*. THE LOVELY WITCH: Apples have been desired by you, / Since first in Paradise they grew; / And I am moved with joy to know / That such within my garden grow.” Goethe, *Faust*, Part I [Scene 21, Walpurgisnacht] (Bayard Taylor’s translation, slightly modified).]
- 6 The imaginary nature of the situation relating to the dreamer’s wet-nurse was proved by the objectively established fact that in his case the wet-nurse had been his mother. I may recall in this connection the anecdote of the young man who regretted that he had not made better use of his opportunities with his wet-nurse. A regret of the same kind was no doubt the source of the present dream.
- 7 [The commoner English equivalent for the German “*Maikäfer*” is “cockchafer.” For the purposes of this dream, however, a literal translation is to be preferred.]
- 8 This had been the true instigator of the dream.
- 9 An interpolation is required at this point: “books of that kind are *poison* to a girl.” The patient herself had dipped into forbidden books a great deal when she was young.

- 10 [Fear not, to love I'll ne'er compel thee; Yet 'tis too soon to *set thee free*. (Sarastro to Pamina in the *Finale* to Act I. – E. J. Dent's translation.)]
- 11 ["You are madly in love with me." Literally: "You are in love with me like a *beetle*." From Kleist's *Käthchen von Heilbronn*, IV, 2.] – A further train of thought led to the same poet's *Penthesilea*, and to the idea of *cruelty* to a lover.
- 12 [Literally: "Because thou wast inspired by such *evil pleasure*." This is presumably a recollection of the opening phrase of the Pope's condemnation reported by Tannhäuser in the last scene of the opera. The actual words are: "Hast du so böse Lust getheilt" – "Since thou hast shared such evil pleasure."]
- 13 [This ingenious example of condensation turns upon the pronunciation of the second syllable – the stressed syllable – of the nonsense word. If it is "ze," it is pronounced roughly like the English "say," thus resembling the second syllable of "*erzählen*" and of the invented "*erzehlerisch*." If it is "zi," it is pronounced roughly like the English "tsee," thus resembling the second syllable of "*erzieherisch*," as well as (less closely) the first syllable of "syphilis."]
- 14 [*Footnote added 1909:*] Not long ago I found a single exception to this rule in the case of a young man who suffered from obsessions while retaining intact his highly developed intellectual powers. The spoken words which occurred in his dreams were not derived from remarks which he had heard or made himself. They contained the undistorted text of his obsessional thoughts, which in his waking life only reached his consciousness in a modified form.
- 15 *Psychical* intensity or value or the degree of interest of an idea is of course to be distinguished from *sensory* intensity or the intensity of the image presented.
- 16 [The old legal tag: "He did the deed who gained by it."]
- 17 [*Footnote added 1909:*] Since I may say that the kernel of my theory of dreams lies in my derivation of dream-distortion from the censorship, I will here insert the last part of a story from *Phantasien eines Realisten* [*Phantasies of a Realist*] by "Lynkeus" (Vienna, 2nd edition, 1900 [1st edition, 1899]), in which I have found this principal feature of my theory once more expounded. The title of the story is "Träumen wie Wachen" ["Dreaming like Waking"]:

"About a man who has the remarkable attribute of never dreaming nonsense....

"This splendid gift of yours, for dreaming as though you were waking, is a consequence of your virtues, of your kindness, your sense of justice, and your love of truth; it is the moral serenity of your nature which makes me understand all about you."

"But when I think the matter over properly," replied the other, "I almost believe that everyone is made like me, and that no one at all ever dreams nonsense. Any dream which one can remember clearly enough to describe it afterwards – any dream, that is to say, which is not a fever-dream – must *always* make sense, and it cannot possibly be otherwise. For things that were mutually contradictory could not group themselves into a single whole. The fact that time and space are often thrown into confusion does not affect the true content of the dream, since no doubt neither of them are of significance for its real essence. We often do the same thing in waking life. Only think of fairy tales and of the many daring products of the imagination, which are full of meaning and of which only a man without intelligence could say: 'This is nonsense, for it's impossible.'"

"If only one always knew how to interpret dreams in the right way, as you have just done with mine!" said his friend.

"That is certainly no easy task; but with a little attention on the part of the dreamer himself it should no doubt always succeed. – You ask why it is that for the most part it does *not* succeed? In you other people there seems always to be something that lies concealed in your dreams, something unchaste in a special and higher sense, a certain secret quality in your being which it is hard to follow. And that is why your dreams so often seem to be without meaning or even to be nonsense. But in the deepest sense this is not in the least so; indeed, it cannot be so at all – for it is always the same man, whether he is awake or dreaming."

# CHAPTER 3

## The Uncanny

*Sigmund Freud*

In this famous essay from 1914, Freud attempts to account for strange coincidences in life (such as repeatedly returning to the same place without seeming to intend to do so). These "uncanny" moments, he argues, are in fact manifestations of the work of our unconscious mind. We are two people – our conscious self and the "other" self that prompts and inspires us to actions that often seem against our better, more rational will. That other self is as much us as us. It is driven by feelings, yearnings, and needs that result from our past experiences, experiences that necessarily get erased from consciousness and pass into unconsciousness as we move through life. Those records remain, and they remain active if they have not been dealt with properly. You did not fulfill a dream in your youth? A feeling of frustration and yearning in that regard may continue to drive you later in life. And often, you will have no clue where it's coming from. It just happens. Such, according to Freud, is the uncanny work of the unconscious. That is why he was attracted to stories of possession, doubles, and automatons. Often, we ourselves are our own double; we are possessed (by ourselves); and we behave as if part of us were on automatic pilot, driving us forward, apparently outside and often against our conscious will.

### I

IT is only rarely that a psycho-analyst feels impelled to investigate the subject of aesthetics, even when aesthetics is understood to mean not merely the theory of beauty but the theory of the qualities of feeling. He works in other strata of mental life and has little to do with the subdued emotional impulses which, inhibited in their aims and dependent on a host of concurrent factors, usually furnish the material for the study of aesthetics. But it does occasionally happen that he has to interest himself in some particular province of that subject; and this province usually proves to be a rather remote one, and one which has been neglected in the specialist literature of aesthetics.

*Original publication details:* Sigmund Freud, "The Uncanny" from *The Standard Edition of the Complete Psychological Works*, trans. James Strachey, pp. 217–252. Hogarth Press, 1955.

Reproduced with permission from The Random House Group Ltd, Perseus Books and Marsh Agency on behalf of Sigmund Freud Copyrights.

The subject of the ‘uncanny’<sup>1</sup> is a province of this kind. It is undoubtedly related to what is frightening – to what arouses dread and horror; equally certainly, too, the word is not always used in a clearly definable sense, so that it tends to coincide with what excites fear in general. Yet we may expect that a special core of feeling is present which justifies the use of a special conceptual term. One is curious to know what this common core is which allows us to distinguish as ‘uncanny’ certain things which lie within the field of what is frightening.

As good as nothing is to be found upon this subject in comprehensive treatises on aesthetics, which in general prefer to concern themselves with what is beautiful, attractive and sublime – that is, with feelings of a positive nature – and with the circumstances and the objects that call them forth, rather than with the opposite feelings of repulsion and distress. I know of only one attempt in medico-psychological literature, a fertile but not exhaustive paper by Jentsch (1906). But I must confess that I have not made a very thorough examination of the literature, especially the foreign literature, relating to this present modest contribution of mine, for reasons which, as may easily be guessed, lie in the times in which we live;<sup>2</sup> so that my paper is presented to the reader without any claim to priority.

In his study of the ‘uncanny’ Jentsch quite rightly lays stress on the obstacle presented by the fact that people vary so very greatly in their sensitivity to this quality of feeling. The writer of the present contribution, indeed, must himself plead guilty to a special obtuseness in the matter, where extreme delicacy of perception would be more in place. It is long since he has experienced or heard of anything which has given him an uncanny impression, and he must start by translating himself into that state of feeling, by awakening in himself the possibility of experiencing it. Still, such difficulties make themselves powerfully felt in many other branches of aesthetics; we need not on that account despair of finding instances in which the quality in question will be unhesitatingly recognized by most people.

Two courses are open to us at the outset. Either we can find out what meaning has come to be attached to the word ‘uncanny’ in the course of its history; or we can collect all those properties of persons, things, sense-impressions, experiences and situations which arouse in us the feeling of uncanniness, and then infer the unknown nature of the uncanny from what all these examples have in common. I will say at once that both courses lead to the same result: the uncanny is that class of the frightening which leads back to what is known of old and long familiar. How this is possible, in what circumstances the familiar can become uncanny and frightening, I shall show in what follows. Let me also add that my investigation was actually begun by collecting a number of individual cases, and was only later confirmed by an examination of linguistic usage. In this discussion, however, I shall follow the reverse course.

The German word ‘*unheimlich*’ is obviously the opposite of ‘*heimlich*’ [‘homely’], ‘*heimisch*’ [‘native’] – the opposite of what is familiar; and we are tempted to conclude that what is ‘uncanny’ is frightening precisely because it is *not* known and familiar. Naturally not everything that is new and unfamiliar is frightening, however; the relation is not capable of inversion. We can only say that what is novel can easily become frightening and uncanny; some new things are frightening but not by any means all. Something has to be added to what is novel and unfamiliar in order to make it uncanny.

On the whole, Jentsch did not get beyond this relation of the uncanny to the novel and unfamiliar. He ascribes the essential factor in the production of the feeling of uncanniness to intellectual uncertainty; so that the uncanny would always, as it were, be something one does not know one’s way about in. The better orientated in his environment a person

is, the less readily will he get the impression of something uncanny in regard to the objects and events in it.

It is not difficult to see that this definition is incomplete, and we will therefore try to proceed beyond the equation ‘uncanny’ = ‘unfamiliar’. We will first turn to other languages. But the dictionaries that we consult tell us nothing new, perhaps only because we ourselves speak a language that is foreign. Indeed, we get an impression that many languages are without a word for this particular shade of what is frightening.

I should like to express my indebtedness to Dr. Theodor Reik for the following excerpts: –

LATIN:	(K. E. Georges, <i>Deutschlateinisches Wörterbuch</i> , 1898). An uncanny place: <i>locus suspectus</i> ; at an uncanny time of night: <i>intempesta nocte</i> .
GREEK:	(Rost's and Schenkl's Lexikons). <i>ξένος</i> (i.e. strange, foreign).
ENGLISH:	(from the dictionaries of Lucas, Bellows, Flügel and Muret-Sanders). Uncomfortable, uneasy, gloomy, dismal, uncanny, ghastly; (of a house) haunted; (of a man) a repulsive fellow.
FRENCH:	(Sachs-Villatte). <i>Inquiétant, sinistre, lugubre, mal à son aise</i> .
SPANISH:	(Tollhausen, 1889). <i>Sospechoso, de mal agüero, lugubre, siniestro</i> .

The Italian and Portuguese languages seem to content themselves with words which we should describe as circumlocutions. In Arabic and Hebrew ‘uncanny’ means the same as ‘daemonic’, ‘gruesome’.

Let us therefore return to the German language. In Daniel Sanders's *Wörterbuch der Deutschen Sprache* (1860, I, 729), the following entry, which I here reproduce in full, is to be found under the word ‘heimlich’. I have laid stress on one or two passages by italicizing them.<sup>3</sup>

*Heimlich*, adj., subst. *Heimlichkeit* (pl. *Heimlichkeiten*): I. Also *heimelich*, *heimelig*, belonging to the house, not strange, familiar, tame, intimate, friendly, etc.

(a) (Obsolete) belonging to the house or the family, or regarded as so belonging (cf. Latin *familiaris*, familiar): *Die Heimlichen*, the members of the household; *Der heimliche Rat* (Gen. xli, 45; 2 Sam. xxiii. 23; 1 Chron. xii. 25; Wisd. viii. 4), now more usually *Geheimer Rat* [Privy Councillor].

(b) Of animals: tame, companionable to man. As opposed to wild, e.g. ‘Animals which are neither wild nor *heimlich*’, etc. ‘Wild animals ... that are trained to be *heimlich* and accustomed to men.’ ‘If these young creatures are brought up from early days among men they become quite *heimlich*, friendly’ etc. – So also: ‘It (the lamb) is so *heimlich* and eats out of my hand.’ ‘Nevertheless, the stork is a beautiful, *heimlich* bird.’

(c) Intimate, friendlily comfortable; the enjoyment of quiet content, etc., arousing a sense of agreeable restfulness and security as in one within the four walls of his house.<sup>4</sup> ‘Is it still *heimlich* to you in your country where strangers are felling your woods?’ ‘She did not feel too *heimlich* with him.’ ‘Along a high, *heimlich*, shady path ..., beside a purling, gushing and babbling woodland brook.’ ‘To destroy the *Heimlichkeit* of the home.’ ‘I could not readily find another spot so intimate and *heimlich* as this.’ ‘We pictured it so comfortable, so nice, so cosy and *heimlich*.’ ‘In quiet *Heimlichkeit*, surrounded by close walls.’ ‘A careful housewife, who knows how to make a pleasing *Heimlichkeit* (*Häuslichkeit* [domesticity]) out of the smallest means.’ ‘The man who till recently had been so strange to him now seemed to him all the more *heimlich*.’ ‘The protestant land-owners do not feel ... *heimlich* among their catholic inferiors.’ ‘When it grows *heimlich* and still, and the evening quiet alone watches over your cell.’ ‘Quiet, lovely and *heimlich*, no place more fitted for their rest.’ ‘He did not feel at all *heimlich* about it.’ – Also, [in compounds] ‘The place was so peaceful, so lonely, so

shadily-*heimlich*.' 'The in- and outflowing waves of the current, dreamy and lullaby-*heimlich*.' Cf. in especial *Unheimlich* [see below]. Among Swabian Swiss authors in especial, often as a trisyllable: 'How *heimelich* it seemed to Ivo again of an evening, when he was at home.' 'It was so *heimelig* in the house.' 'The warm room and the *heimelig* afternoon.' 'When a man feels in his heart that he is so small and the Lord so great – that is what is truly *heimelig*.' 'Little by little they grew at ease and *heimelig* among themselves.' 'Friendly *Heimeligkeit*.' 'I shall be nowhere more *heimelich* than I am here.' 'That which comes from afar ... assuredly does not live quite *heimelig* (*heimatlich* [at home], *freundnachbarlich* [in a neighbourly way]) among the people.' 'The cottage where he had once sat so often among his own people, so *heimelig*, so happy.' 'The sentinel's horn sounds so *heimelig* from the tower, and his voice invites so hospitably.' 'You go to sleep there so soft and warm, so wonderfully *heim'ligr.*' – *This form of the word deserves to become general in order to protect this perfectly good sense of the word from becoming obsolete through an easy confusion with II [see below].* Cf: "The Zecks [a family name] are all 'heimlich'." (in sense II) " 'Heimlich'? ... What do you understand by 'heimlich'?" "Well, ... they are like a buried spring or a dried-up pond. One cannot walk over it without always having the feeling that water might come up there again." "Oh, we call it 'unheimlich'; you call it 'heimlich'. Well, what makes you think that there is something secret and untrustworthy about this family?"' (Gutzkow).

(d) Especially in Silesia: gay, cheerful; also of the weather.

II. Concealed, kept from sight, so that others do not get to know of or about it, withheld from others. To do something *heimlich*, i.e. behind someone's back; to steal away *heimlich*; *heimlich* meetings and appointments; to look on with *heimlich* pleasure at someone's discomfiture; to sigh or weep *heimlich*; to behave *heimlich*, as though there was something to conceal; *heimlich* love-affair, love, sin; *heimlich* places (which good manners oblige us to conceal) (1 Sam. v. 6). 'The *heimlich* chamber' (privy) (2 Kings x. 27.). Also, 'the *heimlich* chair'. 'To throw into pits or *Heimlichkeiten*'. – 'Led the steeds *heimlich* before Laomedon.' – 'As secretive, *heimlich*, deceitful and malicious towards cruel masters ... as frank, open, sympathetic and helpful towards a friend in misfortune.' 'You have still to learn what is *heimlich* holiest to me.' 'The *heimlich* art' (magic). 'Where public ventilation has to stop, there *heimlich* machinations begin.' 'Freedom is the whispered watchword of *heimlich* conspirators and the loud battle-cry of professed revolutionaries.' 'A holy, *heimlich* effect.' 'I have roots that are most *heimlich*, I am grown in the deep earth.' 'My *heimlich* pranks.' 'If he is not given it openly and scrupulously he may seize it *heimlich* and unscrupulously.' 'He had achromatic telescopes constructed *heimlich* and secretly.' 'Henceforth I desire that there should be nothing *heimlich* any longer between us.' – To discover, disclose, betray someone's *Heimlichkeiten*; 'to concoct *Heimlichkeiten* behind my back'. 'In my time we studied *Heimlichkeit*.' 'The hand of understanding can alone undo the powerless spell of the *Heimlichkeit* (of hidden gold).' 'Say, where is the place of concealment ... in what place of hidden *Heimlichkeit*?' 'Bees, who make the lock of *Heimlichkeiten*' (i.e. sealing-wax). 'Learned in strange *Heimlichkeiten*' (magic arts).

For compounds see above, Ic. Note especially the negative 'un-': eerie, weird, arousing gruesome fear: 'Seeming quite *unheimlich* and ghostly to him.' 'The *unheimlich*, fearful hours of night.' 'I had already long since felt an *unheimlich*, even gruesome feeling.' 'Now I am beginning to have an *unheimlich* feeling.' ... 'Feels an *unheimlich* horror.' '*Unheimlich* and motionless like a stone image.' 'The *unheimlich* mist called hill-fog.' 'These pale youths are *unheimlich* and are brewing heaven knows what mischief?' "*Unheimlich*" is the name for everything that ought to have remained ... secret and hidden but has come to light' (Schelling). – 'To veil the divine, to surround it with a certain *Unheimlichkeit*.' – *Unheimlich* is not often used as opposite to meaning II (above).

What interests us most in this long extract is to find that among its different shades of meaning the word '*heimlich*' exhibits one which is identical with its opposite, '*unheimlich*'.

What is *heimlich* thus comes to be *unheimlich*. (Cf. the quotation from Gutzkow: ‘We call it “*unheimlich*”; you call it “*heimlich*”.’) In general we are reminded that the word ‘*heimlich*’ is not unambiguous, but belongs to two sets of ideas, which, without being contradictory, are yet very different: on the one hand it means what is familiar and agreeable, and on the other, what is concealed and kept out of sight.<sup>5</sup> ‘*Unheimlich*’ is customarily used, we are told, as the contrary only of the first signification of ‘*heimlich*’, and not of the second. Sanders tells us nothing concerning a possible genetic connection between these two meanings of *heimlich*. On the other hand, we notice that Schelling says something which throws quite a new light on the concept of the *Unheimlich*, for which we were certainly not prepared. According to him, everything is *unheimlich* that ought to have remained secret and hidden but has come to light.

Some of the doubts that have thus arisen are removed if we consult Grimm’s dictionary. (1877, 4, Part 2, 873 ff.)

We read:

*Heimlich*; adj. and adv. *vernaculus, occultus*; MHG. *heimelich, heimlich*.

(P. 874.) In a slightly different sense: ‘I feel *heimlich*, well, free from fear.’ ...

[3] (b) *Heimlich* is also used of a place free from ghostly influences ... familiar, friendly, intimate.

(P. 875: β) Familiar, amicable, unreserved.

4. *From the idea of ‘homely’, ‘belonging to the house’, the further idea is developed of something withdrawn from the eyes of strangers, something concealed, secret; and this idea is expanded in many ways ...*

(P. 876.) ‘On the left bank of the lake there lies a meadow *heimlich* in the wood.’ (Schiller, *Wilhelm Tell*, I. 4.)... Poetic licence, rarely so used in modern speech ... *Heimlich* is used in conjunction with a verb expressing the act of concealing: ‘In the secret of his tabernacle he shall hide me *heimlich*.’ (Ps. xxvii. 5.) ... *Heimlich* parts of the human body, *pudenda* ... ‘the men that died not were smitten on their *heimlich* parts.’ (1 Samuel v. 12.) ...

(c) Officials who give important advice which has to be kept secret in matters of state are called *heimlich* councillors; the adjective, according to modern usage, has been replaced by *geheim* [secret] ... ‘Pharaoh called Joseph’s name “him to whom secrets are revealed”’ (*heimlich* councillor). (Gen. xli. 45.)

(P. 878.) 6. *Heimlich*, as used of knowledge – mystic, allegorical: a *heimlich* meaning, *mysticus, divinus, occultus, figuratus*.

(P. 878.) *Heimlich* in a different sense, as withdrawn from knowledge, unconscious ... *Heimlich* also has the meaning of that which is obscure, inaccessible to knowledge ... ‘Do you not see? They do not trust us; they fear the *heimlich* face of the Duke of Friedland.’ (Schiller, *Wallensteins Lager*, Scene 2.)

9. *The notion of something hidden and dangerous, which is expressed in the last paragraph, is still further developed, so that ‘heimlich’ comes to have the meaning usually ascribed to ‘unheimlich’.* Thus: ‘At times I feel like a man who walks in the night and believes in ghosts; every corner is *heimlich* and full of terrors for him’. (Klinger, *Theater*, 3. 298.)

Thus *heimlich* is a word the meaning of which develops in the direction of ambivalence, until it finally coincides with its opposite, *unheimlich*. *Unheimlich* is in some way or other a sub-species of *heimlich*. Let us bear this discovery in mind, though we cannot yet rightly understand it, alongside of Schelling’s<sup>6</sup> definition of the *Unheimlich*. If we go on to examine individual instances of uncanniness, these hints will become intelligible to us.

## II

When we proceed to review the things, persons, impressions, events and situations which are able to arouse in us a feeling of the uncanny in a particularly forcible and definite form, the first requirement is obviously to select a suitable example to start on. Jentsch has taken as a very good instance 'doubts whether an apparently animate being is really alive; or conversely, whether a lifeless object might not be in fact animate'; and he refers in this connection to the impression made by wax-work figures, ingeniously constructed dolls and automata. To these he adds the uncanny effect of epileptic fits, and of manifestations of insanity, because these excite in the spectator the impression of automatic, mechanical processes at work behind the ordinary appearance of mental activity. Without entirely accepting this author's view, we will take it as a starting-point for our own investigation because in what follows he reminds us of a writer who has succeeded in producing uncanny effects better than anyone else.

Jentsch writes: 'In telling a story, one of the most successful devices for easily creating uncanny effects is to leave the reader in uncertainty whether a particular figure in the story is a human being or an automaton, and to do it in such a way that his attention is not focused directly upon his uncertainty, so that he may not be led to go into the matter and clear it up immediately. That, as we have said, would quickly dissipate the peculiar emotional effect of the thing. E. T. A. Hoffmann has repeatedly employed this psychological artifice with success in his fantastic narratives.'

This observation, undoubtedly a correct one, refers primarily to the story of 'The Sand-Man' in Hoffmann's *Nachtstücke*,<sup>7</sup> which contains the original of Olympia, the doll that appears in the first act of Offenbach's opera, *Tales of Hoffmann*. But I cannot think – and I hope most readers of the story will agree with me – that the theme of the doll Olympia, who is to all appearances a living being, is by any means the only, or indeed the most important, element that must be held responsible for the quite unparalleled atmosphere of uncanniness evoked by the story. Nor is this atmosphere heightened by the fact that the author himself treats the episode of Olympia with a faint touch of satire and uses it to poke fun at the young man's idealization of his mistress. The main theme of the story is, on the contrary, something different, something which gives it its name, and which is always re-introduced at critical moments: it is the theme of the 'Sand-Man' who tears out children's eyes.

This fantastic tale opens with the childhood recollections of the student Nathaniel. In spite of his present happiness, he cannot banish the memories associated with the mysterious and terrifying death of his beloved father. On certain evenings his mother used to send the children to bed early, warning them that 'the Sand-Man was coming'; and, sure enough, Nathaniel would not fail to hear the heavy tread of a visitor, with whom his father would then be occupied for the evening. When questioned about the Sand-Man, his mother, it is true, denied that such a person existed except as a figure of speech; but his nurse could give him more definite information: 'He's a wicked man who comes when children won't go to bed, and throws handfuls of sand in their eyes so that they jump out of their heads all bleeding. Then he puts the eyes in a sack and carries them off to the half-moon to feed his children. They sit up there in their nest, and their beaks are hooked like owls' beaks, and they use them to peck up naughty boys' and girls' eyes with.'

Although little Nathaniel was sensible and old enough not to credit the figure of the Sand-Man with such gruesome attributes, yet the dread of him became fixed in his heart. He determined to find out what the Sand-Man looked like; and one evening, when

the Sand-Man was expected again, he hid in his father's study. He recognized the visitor as the lawyer Coppelius, a repulsive person whom the children were frightened of when he occasionally came to a meal; and he now identified this Coppelius with the dreaded Sand-Man. As regards the rest of the scene, Hoffmann already leaves us in doubt whether what we are witnessing is the first delirium of the panic-stricken boy, or a succession of events which are to be regarded in the story as being real. His father and the guest are at work at a brazier with glowing flames. The little eavesdropper hears Coppelius call out: 'Eyes here! Eyes here!' and betrays himself by screaming aloud. Coppelius seizes him and is on the point of dropping bits of red-hot coal from the fire into his eyes, and then of throwing them into the brazier, but his father begs him off and saves his eyes. After this the boy falls into a deep swoon; and a long illness brings his experience to an end. Those who decide in favour of the rationalistic interpretation of the Sand-Man will not fail to recognize in the child's phantasy the persisting influence of his nurse's story. The bits of sand that are to be thrown into the child's eyes turn into bits of red-hot coal from the flames; and in both cases they are intended to make his eyes jump out. In the course of another visit of the Sand-Man's, a year later, his father is killed in his study by an explosion. The lawyer Coppelius disappears from the place without leaving a trace behind.

Nathaniel, now a student, believes that he has recognized this phantom of horror from his childhood in an itinerant optician, an Italian called Giuseppe Coppola, who at his university town, offers him weather-glasses for sale. When Nathaniel refuses, the man goes on: 'Not weather-glasses? not weather-glasses? also got fine eyes, fine eyes!' The student's terror is allayed when he finds that the proffered eyes are only harmless spectacles, and he buys a pocket spy-glass from Coppola. With its aid he looks across into Professor Spalanzani's house opposite and there spies Spalanzani's beautiful, but strangely silent and motionless daughter, Olympia. He soon falls in love with her so violently that, because of her, he quite forgets the clever and sensible girl to whom he is betrothed. But Olympia is an automaton whose clock-work has been made by Spalanzani, and whose eyes have been put in by Coppola, the Sand-Man. The student surprises the two Masters quarrelling over their handiwork. The optician carries off the wooden eyeless doll; and the mechanician, Spalanzani, picks up Olympia's bleeding eyes from the ground and throws them at Nathaniel's breast, saying that Coppola had stolen them from the student. Nathaniel succumbs to a fresh attack of madness, and in his delirium his recollection of his father's death is mingled with this new experience. 'Hurry up! hurry up! ring of fire!' he cries. 'Spin about, ring of fire – Hurrah! Hurry up, wooden doll! lovely wooden doll, spin about – .' He then falls upon the professor, Olympia's 'father', and tries to strangle him.

Rallying from a long and serious illness, Nathaniel seems at last to have recovered. He intends to marry his betrothed, with whom he has become reconciled. One day he and she are walking through the city market-place, over which the high tower of the Town Hall throws its huge shadow. On the girl's suggestion, they climb the tower, leaving her brother, who is walking with them, down below. From the top, Clara's attention is drawn to a curious object moving along the street. Nathaniel looks at this thing through Coppola's spy-glass, which he finds in his pocket, and falls into a new attack of madness. Shouting 'Spin about, wooden doll!' he tries to throw the girl into the gulf below. Her brother, brought to her side by her cries, rescues her and hastens down with her to safety. On the tower above, the madman rushes round, shrieking 'Ring of fire, spin about!' – and we know the origin of the words. Among the people who begin to gather below there

comes forward the figure of the lawyer Coppelius, who has suddenly returned. We may suppose that it was his approach, seen through the spy-glass, which threw Nathaniel into his fit of madness. As the onlookers prepare to go up and overpower the madman, Coppelius laughs and says: 'Wait a bit; he'll come down of himself.' Nathaniel suddenly stands still, catches sight of Coppelius, and with a wild shriek 'Yes! "Fine eyes – fine eyes!"' flings himself over the parapet. While he lies on the paving-stones with a shattered skull the Sand-Man vanishes in the throng.

This short summary leaves no doubt, I think, that the feeling of something uncanny is directly attached to the figure of the Sand-Man, that is, to the idea of being robbed of one's eyes, and that Jentsch's point of an intellectual uncertainty has nothing to do with the effect. Uncertainty whether an object is living or inanimate, which admittedly applied to the doll Olympia, is quite irrelevant in connection with this other, more striking instance of uncanniness. It is true that the writer creates a kind of uncertainty in us in the beginning by not letting us know, no doubt purposely, whether he is taking us into the real world or into a purely fantastic one of his own creation. He has, of course, a right to do either; and if he chooses to stage his action in a world peopled with spirits, demons and ghosts, as Shakespeare does in *Hamlet*, in *Macbeth* and, in a different sense, in *The Tempest* and *A Midsummer-Night's Dream*, we must bow to his decision and treat his setting as though it were real for as long as we put ourselves into his hands. But this uncertainty disappears in the course of Hoffmann's story, and we perceive that he intends to make us, too, look through the demon optician's spectacles or spy-glass – perhaps, indeed, that the author in his very own person once peered through such an instrument. For the conclusion of the story makes it quite clear that Coppola the optician really *is* the lawyer Coppelius<sup>8</sup> and also, therefore, the Sand-Man.

There is no question therefore, of any intellectual uncertainty here: we know now that we are not supposed to be looking on at the products of a madman's imagination, behind which we, with the superiority of rational minds, are able to detect the sober truth; and yet this knowledge does not lessen the impression of uncanniness in the least degree. The theory of intellectual uncertainty is thus incapable of explaining that impression.

We know from psycho-analytic experience, however, that the fear of damaging or losing one's eyes is a terrible one in children. Many adults retain their apprehensiveness in this respect, and no physical injury is so much dreaded by them as an injury to the eye. We are accustomed to say, too, that we will treasure a thing as the apple of our eye. A study of dreams, phantasies and myths has taught us that anxiety about one's eyes, the fear of going blind, is often enough a substitute for the dread of being castrated. The self-blinding of the mythical criminal, Oedipus, was simply a mitigated form of the punishment of castration – the only punishment that was adequate for him by the *lex talionis*. We may try on rationalistic grounds to deny that fears about the eye are derived from the fear of castration, and may argue that it is very natural that so precious an organ as the eye should be guarded by a proportionate dread. Indeed, we might go further and say that the fear of castration itself contains no other significance and no deeper secret than a justifiable dread of this rational kind. But this view does not account adequately for the substitutive relation between the eye and the male organ which is seen to exist in dreams and myths and phantasies; nor can it dispel the impression that the threat of being castrated in especial excites a peculiarly violent and obscure emotion, and that this emotion is what first gives the idea of losing other organs its intense colouring. All further doubts are removed when we learn the details of their 'castration complex' from the analysis of neurotic patients, and realize its immense importance in their mental life.

Moreover, I would not recommend any opponent of the psycho-analytic view to select this particular story of the Sand-Man with which to support his argument that anxiety about the eyes has nothing to do with the castration complex. For why does Hoffmann bring the anxiety about eyes into such intimate connection with the father's death? And why does the Sand-Man always appear as a disturber of love? He separates the unfortunate Nathaniel from his betrothed and from her brother, his best friend; he destroys the second object of his love, Olympia, the lovely doll; and he drives him into suicide at the moment when he has won back his Clara and is about to be happily united to her. Elements in the story like these, and many others, seem arbitrary and meaningless so long as we deny all connection between fears about the eye and castration; but they become intelligible as soon as we replace the Sand-Man by the dreaded father at whose hands castration is expected.<sup>9</sup>

We shall venture, therefore, to refer the uncanny effect of the Sand-Man to the anxiety belonging to the castration complex of childhood. But having reached the idea that we can make an infantile factor such as this responsible for feelings of uncanniness, we are encouraged to see whether we can apply it to other instances of the uncanny. We find in the story of the Sand-Man the other theme on which Jentsch lays stress, of a doll which appears to be alive. Jentsch believes that a particularly favourable condition for awakening uncanny feelings is created when there is intellectual uncertainty whether an object is alive or not, and when an inanimate object becomes too much like an animate one. Now, dolls are of course rather closely connected with childhood life. We remember that in their early games children do not distinguish at all sharply between living and inanimate objects, and that they are especially fond of treating their dolls like live people. In fact, I have occasionally heard a woman patient declare that even at the age of eight she had still been convinced that her dolls would be certain to come to life if she were to look at them in a particular, extremely concentrated, way. So that here, too, it is not difficult to discover a factor from childhood. But, curiously enough, while the Sand-Man story deals with the arousing of an early childhood fear, the idea of a 'living doll' excites no fear at all; children have no fear of their dolls coming to life, they may even desire it. The source of uncanny feelings would not, therefore, be an infantile fear in this case, but rather an infantile wish or even merely an infantile belief. There seems to be a contradiction here; but perhaps it is only a complication, which may be helpful to us later on.

Hoffmann is the unrivalled master of the uncanny in literature. His novel, *Die Elixire des Teufels* [*The Devil's Elixir*], contains a whole mass of themes to which one is tempted to ascribe the uncanny effect of the narrative;<sup>10</sup> but it is too obscure and intricate a story for us to venture upon a summary of it. Towards the end of the book the reader is told the facts, hitherto concealed from him, from which the action springs; with the result, not that he is at last enlightened, but that he falls into a state of complete bewilderment. The author has piled up too much material of the same kind. In consequence one's grasp of the story as a whole suffers, though not the impression it makes. We must content ourselves with selecting those themes of uncanniness which are most prominent, and with seeing whether they too can fairly be traced back to infantile sources. These themes are all concerned with the phenomenon of the 'double', which appears in every shape and in every degree of development. Thus we have characters who are to be considered identical because they look alike. This relation is accentuated by mental processes leaping from one of these characters to another – by what we should call telepathy –, so that the one possesses knowledge, feelings and experience in common with the other. Or it is marked by the fact that the subject identifies himself with someone else, so that he is in

doubt as to which his self is, or substitutes the extraneous self for his own. In other words, there is a doubling, dividing and interchanging of the self. And finally there is the constant recurrence of the same thing<sup>11</sup> – the repetition of the same features or character-trait or vicissitudes, of the same crimes, or even the same names through several consecutive generations.

The theme of the ‘double’ has been very thoroughly treated by Otto Rank (1914). He has gone into the connections which the ‘double’ has with reflections in mirrors, with shadows, with guardian spirits, with the belief in the soul and with the fear of death; but he also lets in a flood of light on the surprising evolution of the idea. For the ‘double’ was originally an insurance against the destruction of the ego, an ‘energetic denial of the power of death’, as Rank says; and probably the ‘immortal’ soul was the first ‘double’ of the body. This invention of doubling as a preservation against extinction has its counterpart in the language of dreams, which is fond of representing castration by a doubling or multiplication of a genital symbol.<sup>12</sup> The same desire led the Ancient Egyptians to develop the art of making images of the dead in lasting materials. Such ideas, however, have sprung from the soil of unbounded self-love, from the primary narcissism which dominates the mind of the child and of primitive man. But when this stage has been surmounted, the ‘double’ reverses its aspect. From having been an assurance of immortality, it becomes the uncanny harbinger of death.

The idea of the ‘double’ does not necessarily disappear with the passing of primary narcissism, for it can receive fresh meaning from the later stages of the ego’s development. A special agency is slowly formed there, which is able to stand over against the rest of the ego, which has the function of observing and criticizing the self and of exercising a censorship within the mind, and which we become aware of as our ‘conscience’. In the pathological case of delusions of being watched, this mental agency becomes isolated, dissociated from the ego, and discernible to the physician’s eye. The fact that an agency of this kind exists, which is able to treat the rest of the ego like an object – the fact, that is, that man is capable of self-observation – renders it possible to invest the old idea of a ‘double’ with a new meaning and to ascribe a number of things to it – above all, those things which seem to self-criticism to belong to the old surmounted narcissism of earliest times.<sup>13</sup>

But it is not only this latter material, offensive as it is to the criticism of the ego, which may be incorporated in the idea of a double. There are also all the unfulfilled but possible futures to which we still like to cling in phantasy, all the strivings of the ego which adverse external circumstances have crushed, and all our suppressed acts of volition which nourish in us the illusion of Free Will.<sup>14</sup> [Cf. Freud, 1901b, Chapter XII (B).]

But after having thus considered the *manifest* motivation of the figure of a ‘double’, we have to admit that none of this helps us to understand the extraordinarily strong feeling of something uncanny that pervades the conception; and our knowledge of pathological mental processes enables us to add that nothing in this more superficial material could account for the urge towards defence which has caused the ego to project that material outward as something foreign to itself. When all is said and done, the quality of uncanniness can only come from the fact of the ‘double’ being a creation dating back to a very early mental stage, long since surmounted – a stage, incidentally, at which it wore a more friendly aspect. The ‘double’ has become a thing of terror, just as, after the collapse of their religion, the gods turned into demons.<sup>15</sup>

The other forms of ego-disturbance exploited by Hoffmann can easily be estimated along the same lines as the theme of the ‘double’. They are a harking-back to particular

phases in the evolution of the self-regarding feeling, a regression to a time when the ego had not yet marked itself off sharply from the external world and from other people. I believe that these factors are partly responsible for the impression of uncanniness, although it is not easy to isolate and determine exactly their share of it.

The factor of the repetition of the same thing will perhaps not appeal to everyone as a source of uncanny feeling. From what I have observed, this phenomenon does undoubtedly, subject to certain conditions and combined with certain circumstances, arouse an uncanny feeling, which, furthermore, recalls the sense of helplessness experienced in some dream-states. As I was walking, one hot summer afternoon, through the deserted streets of a provincial town in Italy which was unknown to me, I found myself in a quarter of whose character I could not long remain in doubt. Nothing but painted women were to be seen at the windows of the small houses, and I hastened to leave the narrow street at the next turning. But after having wandered about for a time without enquiring my way, I suddenly found myself back in the same street, where my presence was now beginning to excite attention. I hurried away once more, only to arrive by another *détour* at the same place yet a third time. Now, however, a feeling overcame me which I can only describe as uncanny, and I was glad enough to find myself back at the piazza I had left a short while before, without any further voyages of discovery. Other situations which have in common with my adventure an unintended recurrence of the same situation, but which differ radically from it in other respects, also result in the same feeling of helplessness and of uncanniness. So, for instance, when, caught in a mist perhaps, one has lost one's way in a mountain forest, every attempt to find the marked or familiar path may bring one back again and again to one and the same spot, which one can identify by some particular landmark. Or one may wander about in a dark, strange room, looking for the door or the electric switch, and collide time after time with the same piece of furniture – though it is true that Mark Twain succeeded by wild exaggeration in turning this latter situation into something irresistibly comic.<sup>16</sup>

If we take another class of things, it is easy to see that there, too, it is only this factor of involuntary repetition which surrounds what would otherwise be innocent enough with an uncanny atmosphere, and forces upon us the idea of something fateful and inescapable when otherwise we should have spoken only of 'chance'. For instance, we naturally attach no importance to the event when we hand in an overcoat and get a cloak-room ticket with the number, let us say, 62; or when we find that our cabin on a ship bears that number. But the impression is altered if two such events, each in itself indifferent, happen close together – if we come across the number 62 several times in a single day, or if we begin to notice that everything which has a number – addresses, hotel rooms, compartments in railway trains – invariably has the same one, or at all events one which contains the same figures. We do feel this to be uncanny. And unless a man is utterly hardened and proof against the lure of superstition, he will be tempted to ascribe a secret meaning to this obstinate recurrence of a number; he will take it, perhaps, as an indication of the span of life allotted to him.<sup>17</sup> Or suppose one is engaged in reading the works of the famous physiologist, Hering, and within the space of a few days receives two letters from two different countries, each from a person called Hering, though one has never before had any dealings with anyone of that name. Not long ago an ingenious scientist (Kammerer, 1919) attempted to reduce coincidences of this kind to certain laws, and so deprive them of their uncanny effect. I will not venture to decide whether he has succeeded or not.

How exactly we can trace back to infantile psychology the uncanny effect of such similar recurrences is a question I can only lightly touch on in these pages; and I must refer the reader instead to another work,<sup>18</sup> already completed, in which this has been gone into in detail, but in a different connection. For it is possible to recognize the dominance in the unconscious mind of a 'compulsion to repeat' proceeding from the instinctual impulses and probably inherent in the very nature of the instincts – a compulsion powerful enough to overrule the pleasure principle, lending to certain aspects of the mind their daemonic character, and still very clearly expressed in the impulses of small children; a compulsion, too, which is responsible for a part of the course taken by the analyses of neurotic patients. All these considerations prepare us for the discovery that whatever reminds us of this inner 'compulsion to repeat' is perceived as uncanny.

Now, however, it is time to turn from these aspects of the matter, which are in any case difficult to judge, and look for some undeniable instances of the uncanny, in the hope that an analysis of them will decide whether our hypothesis is a valid one.

In the story of 'The Ring of Polycrates',<sup>19</sup> the King of Egypt turns away in horror from his host, Polycrates, because he sees that his friend's every wish is at once fulfilled, his every care promptly removed by kindly fate. His host has become 'uncanny' to him. His own explanation, that the too fortunate man has to fear the envy of the gods, seems obscure to us; its meaning is veiled in mythological language. We will therefore turn to another example in a less grandiose setting. In the case history of an obsessional neurotic,<sup>20</sup> I have described how the patient once stayed in a hydropathic establishment and benefited greatly by it. He had the good sense, however, to attribute his improvement not to the therapeutic properties of the water, but to the situation of his room, which immediately adjoined that of a very accommodating nurse. So on his second visit to the establishment he asked for the same room, but was told that it was already occupied by an old gentleman, whereupon he gave vent to his annoyance in the words: 'I wish he may be struck dead for it.' A fortnight later the old gentleman really did have a stroke. My patient thought this an 'uncanny' experience. The impression of uncanniness would have been stronger still if less time had elapsed between his words and the untoward event, or if he had been able to report innumerable similar coincidences. As a matter of fact, he had no difficulty in producing coincidences of this sort; but then not only he but every obsessional neurotic I have observed has been able to relate analogous experiences. They are never surprised at their invariably running up against someone they have just been thinking of, perhaps for the first time for a long while. If they say one day 'I haven't had any news of so-and-so for a long time', they will be sure to get a letter from him the next morning, and an accident or a death will rarely take place without having passed through their mind a little while before. They are in the habit of referring to this state of affairs in the most modest manner, saying that they have 'presentiments' which 'usually' come true.

One of the most uncanny and wide-spread forms of superstition is the dread of the evil eye, which has been exhaustively studied by the Hamburg oculist Seligmann (1910–11). There never seems to have been any doubt about the source of this dread. Whoever possesses something that is at once valuable and fragile is afraid of other people's envy, in so far as he projects on to them the envy he would have felt in their place. A feeling like this betrays itself by a look<sup>21</sup> even though it is not put into words; and when a man is prominent owing to noticeable, and particularly owing to unattractive, attributes, other people are ready to believe that his envy is rising to a more than usual degree of intensity and that this intensity will convert it into effective action. What is feared is thus a secret

intention of doing harm, and certain signs are taken to mean that that intention has the necessary power at its command.

These last examples of the uncanny are to be referred to the principle which I have called 'omnipotence of thoughts', taking the name from an expression used by one of my patients.<sup>22</sup> And now we find ourselves on familiar ground. Our analysis of instances of the uncanny has led us back to the old, animistic conception of the universe. This was characterized by the idea that the world was peopled with the spirits of human beings; by the subject's narcissistic overvaluation of his own mental processes; by the belief in the omnipotence of thoughts and the technique of magic based on that belief; by the attribution to various outside persons and things of carefully graded magical powers, or '*mana*'; as well as by all the other creations with the help of which man, in the unrestricted narcissism of that stage of development, strove to fend off the manifest prohibitions of reality. It seems as if each one of us has been through a phase of individual development corresponding to this animistic stage in primitive men, that none of us has passed through it without preserving certain residues and traces of it which are still capable of manifesting themselves, and that everything which now strikes us as 'uncanny' fulfils the condition of touching those residues of animistic mental activity within us and bringing them to expression.<sup>23</sup>

At this point I will put forward two considerations which, I think, contain the gist of this short study. In the first place, if psycho-analytic theory is correct in maintaining that every affect belonging to an emotional impulse, whatever its kind, is transformed, if it is repressed, into anxiety, then among instances of frightening things there must be one class in which the frightening element can be shown to be something repressed which *recurs*. This class of frightening things would then constitute the uncanny; and it must be a matter of indifference whether what is uncanny was itself originally frightening or whether it carried some *other* affect. In the second place, if this is indeed the secret nature of the uncanny, we can understand why linguistic usage has extended *das Heimliche* ['homely'] into its opposite, *das Unheimliche*; for this uncanny is in reality nothing new or alien, but something which is familiar and old-established in the mind and which has become alienated from it only through the process of repression. This reference to the factor of repression enables us, furthermore, to understand Schelling's definition of the uncanny as something which ought to have remained hidden but has come to light.

It only remains for us to test our new hypothesis on one or two more examples of the uncanny.

Many people experience the feeling in the highest degree in relation to death and dead bodies, to the return of the dead, and to spirits and ghosts. As we have seen some languages in use to-day can only render the German expression 'an *unheimlich* house' by 'a *haunted* house'. We might indeed have begun our investigation with this example, perhaps the most striking of all, of something uncanny, but we refrained from doing so because the uncanny in it is too much intermixed with what is purely gruesome and is in part overlaid by it. There is scarcely any other matter, however, upon which our thoughts and feelings have changed so little since the very earliest times, and in which discarded forms have been so completely preserved under a thin disguise, as our relation to death. Two things account for our conservatism: the strength of our original emotional reaction to death and the insufficiency of our scientific knowledge about it. Biology has not yet been able to decide whether death is the inevitable fate of every living being or whether it is only a regular but yet perhaps avoidable event in life.<sup>24</sup> It is true that the statement 'All men are mortal' is paraded in text-books of logic as an example of a general proposition;

but no human being really grasps it, and our unconscious has as little use now as it ever had for the idea of its own mortality.<sup>25</sup> Religions continue to dispute the importance of the undeniable fact of individual death and to postulate a life after death; civil governments still believe that they cannot maintain moral order among the living if they do not uphold the prospect of a better life hereafter as a recompense for mundane existence. In our great cities, placards announce lectures that undertake to tell us how to get into touch with the souls of the departed; and it cannot be denied that not a few of the most able and penetrating minds among our men of science have come to the conclusion, especially towards the close of their own lives, that a contact of this kind is not impossible. Since almost all of us still think as savages do on this topic, it is no matter for surprise that the primitive fear of the dead is still so strong within us and always ready to come to the surface on any provocation. Most likely our fear still implies the old belief that the dead man becomes the enemy of his survivor and seeks to carry him off to share his new life with him. Considering our unchanged attitude towards death, we might rather enquire what has become of the repression, which is the necessary condition of a primitive feeling recurring in the shape of something uncanny. But repression is there, too. All supposedly educated people have ceased to believe officially that the dead can become visible as spirits, and have made any such appearances dependent on improbable and remote conditions; their emotional attitude towards their dead, moreover, once a highly ambiguous and ambivalent one, has been toned down in the higher strata of the mind into an unambiguous feeling of piety.<sup>26</sup>

We have now only a few remarks to add – for animism, magic and sorcery, the omnipotence of thoughts, man's attitude to death, involuntary repetition and the castration complex comprise practically all the factors which turn something frightening into something uncanny.

We can also speak of a living person as uncanny, and we do so when we ascribe evil intentions to him. But that is not all; in addition to this we must feel that his intentions to harm us are going to be carried out with the help of special powers. A good instance of this is the '*Gettatore*',<sup>27</sup> that uncanny figure of Romanic superstition which Schaeffer, with intuitive poetic feeling and profound psycho-analytic understanding, has transformed into a sympathetic character in his *Josef Montfort*. But the question of these secret powers brings us back again to the realm of animism. It was the pious Gretchen's intuition that Mephistopheles possessed secret powers of this kind that made him so uncanny to her.

Sie fühlt dass ich ganz sicher ein Genie,  
Vielleicht sogar der Teufel bin.<sup>28</sup>

The uncanny effect of epilepsy and of madness has the same origin. The layman sees in them the working of forces hitherto unsuspected in his fellow-men, but at the same time he is dimly aware of them in remote corners of his own being. The Middle Ages quite consistently ascribed all such maladies to the influence of demons, and in this their psychology was almost correct. Indeed, I should not be surprised to hear that psycho-analysis, which is concerned with laying bare these hidden forces, has itself become uncanny to many people for that very reason. In one case, after I had succeeded – though none too rapidly – in effecting a cure in a girl who had been an invalid for many years, I myself heard this view expressed by the patient's mother long after her recovery.

Dismembered limbs, a severed head, a hand cut off at the wrist, as in a fairy tale of Hauff's,<sup>29</sup> feet which dance by themselves, as in the book by Schaeffer which I mentioned above – all these have something peculiarly uncanny about them, especially when, as in the last instance, they prove capable of independent activity in addition. As we already know, this kind of uncanniness springs from its proximity to the castration complex. To some people the idea of being buried alive by mistake is the most uncanny thing of all. And yet psycho-analysis has taught us that this terrifying phantasy is only a transformation of another phantasy which had originally nothing terrifying about it at all, but was qualified by a certain lasciviousness – the phantasy, I mean, of intra-uterine existence.<sup>30</sup>

There is one more point of general application which I should like to add, though, strictly speaking, it has been included in what has already been said about animism and modes of working of the mental apparatus that have been surmounted; for I think it deserves special emphasis. This is that an uncanny effect is often and easily produced when the distinction between imagination and reality is effaced, as when something that we have hitherto regarded as imaginary appears before us in reality, or when a symbol takes over the full functions of the thing it symbolizes, and so on. It is this factor which contributes not a little to the uncanny effect attaching to magical practices. The infantile element in this, which also dominates the minds of neurotics, is the over-accentuation of psychical reality in comparison with material reality – a feature closely allied to the belief in the omnipotence of thoughts. In the middle of the isolation of war-time a number of the English *Strand Magazine* fell into my hands; and, among other somewhat redundant matter, I read a story about a young married couple who move into a furnished house in which there is a curiously shaped table with carvings of crocodiles on it. Towards evening an intolerable and very specific smell begins to pervade the house; they stumble over something in the dark; they seem to see a vague form gliding over the stairs – in short, we are given to understand that the presence of the table causes ghostly crocodiles to haunt the place, or that the wooden monsters come to life in the dark, or something of the sort. It was a naïve enough story, but the uncanny feeling it produced was quite remarkable.

To conclude this collection of examples, which is certainly not complete, I will relate an instance taken from psycho-analytic experience; if it does not rest upon mere coincidence, it furnishes a beautiful confirmation of our theory of the uncanny. It often happens that neurotic men declare that they feel there is something uncanny about the female genital organs. This *unheimlich* place, however, is the entrance to the former *Heim* [home] of all human beings, to the place where each one of us lived once upon a time and in the beginning. There is a joking saying that 'Love is home-sickness'; and whenever a man dreams of a place or a country and says to himself, while he is still dreaming: 'this place is familiar to me, I've been here before', we may interpret the place as being his mother's genitals or her body.<sup>31</sup> In this case too, then, the *unheimlich* is what was once *heimisch*, familiar; the prefix '*un*' ['un-'] is the token of repression.<sup>32</sup>

### III

In the course of this discussion the reader will have felt certain doubts arising in his mind; and he must now have an opportunity of collecting them and bringing them forward.

It may be true that the uncanny [*unheimlich*] is something which is secretly familiar [*heimlich-heimisch*], which has undergone repression and then returned from it, and that everything that is uncanny fulfils this condition. But the selection of material on this basis does not enable us to solve the problem of the uncanny. For our proposition is clearly not convertible. Not everything that fulfils this condition – not everything that recalls repressed desires and surmounted modes of thinking belonging to the prehistory of the individual and of the race – is on that account uncanny.

Nor shall we conceal the fact that for almost every example adduced in support of our hypothesis one may be found which rebuts it. The story of the severed hand in Hauff's fairy tale certainly has an uncanny effect, and we have traced that effect back to the castration complex; but most readers will probably agree with me in judging that no trace of uncanniness is provoked by Herodotus's story of the treasure of Rhampsinitus, in which the master-thief, whom the princess tries to hold fast by the hand, leaves his brother's severed hand behind with her instead. Again, the prompt fulfilment of the wishes of Polycrates undoubtedly affects us in the same uncanny way as it did the king of Egypt; yet our own fairy stories are crammed with instantaneous wish-fulfilments which produce no uncanny effect whatever. In the story of 'The Three Wishes', the woman is tempted by the savoury smell of a sausage to wish that she might have one too, and in an instant it lies on a plate before her. In his annoyance at her hastiness her husband wishes it may hang on her nose. And there it is, dangling from her nose. All this is very striking but not in the least uncanny. Fairy tales quite frankly adopt the animistic standpoint of the omnipotence of thoughts and wishes, and yet I cannot think of any genuine fairy story which has anything uncanny about it. We have heard that it is in the highest degree uncanny when an inanimate object – a picture or a doll – comes to life; nevertheless in Hans Andersen's stories the household utensils, furniture and tin soldiers are alive, yet nothing could well be more remote from the uncanny. And we should hardly call it uncanny when Pygmalion's beautiful statue comes to life.

Apparent death and the re-animation of the dead have been represented as most uncanny themes. But things of this sort too are very common in fairy stories. Who would be so bold as to call it uncanny, for instance, when Snow-White opens her eyes once more? And the resuscitation of the dead in accounts of miracles, as in the New Testament, elicits feelings quite unrelated to the uncanny. Then, too, the theme that achieves such an indubitably uncanny effect, the unintended recurrence of the same thing, serves other and quite different purposes in another class of cases. We have already come across one example in which it is employed to call up a feeling of the comic; and we could multiply instances of this kind. Or again, it works as a means of emphasis, and so on. And once more: what is the origin of the uncanny effect of silence, darkness and solitude? Do not these factors point to the part played by danger in the genesis of what is uncanny, notwithstanding that in children these same factors are the most frequent determinants of the expression of fear [rather than of the uncanny]? And are we after all justified in entirely ignoring intellectual uncertainty as a factor, seeing that we have admitted its importance in relation to death?

It is evident therefore, that we must be prepared to admit that there are other elements besides those which we have so far laid down as determining the production of uncanny feelings. We might say that these preliminary results have satisfied *psycho-analytic* interest in the problem of the uncanny, and that what remains probably calls for an *aesthetic* enquiry. But that would be to open the door to doubts about what exactly is the value of

our general contention that the uncanny proceeds from something familiar which has been repressed.

We have noticed one point which may help us to resolve these uncertainties: nearly all the instances that contradict our hypothesis are taken from the realm of fiction, of imaginative writing. This suggests that we should differentiate between the uncanny that we actually experience and the uncanny that we merely picture or read about.

What is *experienced* as uncanny is much more simply conditioned but comprises far fewer instances. We shall find, I think, that it fits in perfectly with our attempt at a solution, and can be traced back without exception to something familiar that has been repressed. But here, too, we must make a certain important and psychologically significant differentiation in our material, which is best illustrated by turning to suitable examples.

Let us take the uncanny associated with the omnipotence of thoughts, with the prompt fulfilment of wishes, with secret injurious powers and with the return of the dead. The condition under which the feeling of uncanniness arises here is unmistakable. We – or our primitive forefathers – once believed that these possibilities were realities, and were convinced that they actually happened. Nowadays we no longer believe in them, we have *surmounted* these modes of thought; but we do not feel quite sure of our new beliefs, and the old ones still exist within us ready to seize upon any confirmation. As soon as something *actually happens* in our lives which seems to confirm the old, discarded beliefs we get a feeling of the uncanny; it is as though we were making a judgement something like this: 'So, after all, it is *true* that one can kill a person by the mere wish!' or, 'So the dead *do* live on and appear on the scene of their former activities!' and so on. Conversely, anyone who has completely and finally rid himself of animistic beliefs will be insensible to this type of the uncanny. The most remarkable coincidences of wish and fulfilment, the most mysterious repetition of similar experiences in a particular place or on a particular date, the most deceptive sights and suspicious noises – none of these things will disconcert him or raise the kind of fear which can be described as 'a fear of something uncanny'. The whole thing is purely an affair of 'reality-testing', a question of the material reality of the phenomena.<sup>33</sup>

The state of affairs is different when the uncanny proceeds from repressed infantile complexes, from the castration complex, womb-phantasies, etc.; but experiences which arouse this kind of uncanny feeling are not of very frequent occurrence in real life. The uncanny which proceeds from actual experience belongs for the most part to the first group [the group dealt with in the previous paragraph]. Nevertheless the distinction between the two is theoretically very important. Where the uncanny comes from infantile complexes the question of material reality does not arise; its place is taken by psychical reality. What is involved is an actual repression of some content of thought and a return of this repressed content, not a cessation of *belief in the reality* of such a content. We might say that in the one case what had been repressed is a particular ideational content, and in the other the belief in its (material) reality. But this last phrase no doubt extends the term 'repression' beyond its legitimate meaning. It would be more correct to take into account a psychological distinction which can be detected here, and to say that the animistic beliefs of civilized people are in a state of having been (to a greater or lesser extent) *surmounted* [rather than repressed]. Our conclusion could then be stated thus: an uncanny experience occurs either when infantile complexes which have been repressed are once more revived by some impression, or when primitive beliefs which have been surmounted seem once more to be confirmed. Finally, we must not let our predilection

for smooth solutions and lucid exposition blind us to the fact that these two classes of uncanny experience are not always sharply distinguishable. When we consider that primitive beliefs are most intimately connected with infantile complexes, and are, in fact, based on them, we shall not be greatly astonished to find that the distinction is often a hazy one.

The uncanny as it is depicted in *literature*, in stories and imaginative productions, merits in truth a separate discussion. Above all, it is a much more fertile province than the uncanny in real life, for it contains the whole of the latter and something more besides, something that cannot be found in real life. The contrast between what has been repressed and what has been surmounted cannot be transposed on to the uncanny in fiction without profound modification; for the realm of phantasy depends for its effect on the fact that its content is not submitted to reality-testing. The somewhat paradoxical result is that *in the first place a great deal that is not uncanny in fiction would be so if it happened in real life; and in the second place that there are many more means of creating uncanny effects in fiction than there are in real life.*

The imaginative writer has this licence among many others, that he can select his world of representation so that it either coincides with the realities we are familiar with or departs from them in what particulars he pleases. We accept his ruling in every case. In fairy tales, for instance, the world of reality is left behind from the very start, and the animistic system of beliefs is frankly adopted. Wish-fulfilments, secret powers, omnipotence of thoughts, animation of inanimate objects, all the elements so common in fairy stories, can exert no uncanny influence here; for, as we have learnt, that feeling cannot arise unless there is a conflict of judgement as to whether things which have been 'surmounted' and are regarded as incredible may not, after all, be possible; and this problem is eliminated from the outset by the postulates of the world of fairy tales. Thus we see that fairy stories, which have furnished us with most of the contradictions to our hypothesis of the uncanny, confirm the first part of our proposition – that in the realm of fiction many things are not uncanny which would be so if they happened in real life. In the case of these stories there are other contributory factors, which we shall briefly touch upon later.

The creative writer can also choose a setting which though less imaginary than the world of fairy tales, does yet differ from the real world by admitting superior spiritual beings such as daemonic spirits or ghosts of the dead. So long as they remain within their setting of poetic reality, such figures lose any uncanniness which they might possess. The souls in Dante's *Inferno*, or the supernatural apparitions in Shakespeare's *Hamlet*, *Macbeth* or *Julius Caesar*, may be gloomy and terrible enough, but they are no more really uncanny than Homer's jovial world of gods. We adapt our judgement to the imaginary reality imposed on us by the writer, and regard souls, spirits and ghosts as though their existence had the same validity as our own has in material reality. In this case too we avoid all trace of the uncanny.

The situation is altered as soon as the writer pretends to move in the world of common reality. In this case he accepts as well all the conditions operating to produce uncanny feelings in real life; and everything that would have an uncanny effect in reality has it in his story. But in this case he can even increase his effect and multiply it far beyond what could happen in reality, by bringing about events which never or very rarely happen in fact. In doing this he is in a sense betraying us to the superstitiousness which we have ostensibly surmounted; he deceives us by promising to give us the sober truth, and then after all overstepping it. We react to his inventions as we would have reacted to

real experiences; by the time we have seen through his trick it is already too late and the author has achieved his object. But it must be added that his success is not unalloyed. We retain a feeling of dissatisfaction, a kind of grudge against the attempted deceit. I have noticed this particularly after reading Schnitzler's *Die Weissagung* [*The Prophecy*] and similar stories which flirt with the supernatural. However, the writer has one more means which he can use in order to avoid our recalcitrance and at the same time to improve his chances of success. He can keep us in the dark for a long time about the precise nature of the presuppositions on which the world he writes about is based, or he can cunningly and ingeniously avoid any definite information on the point to the last. Speaking generally, however, we find a confirmation of the second part of our proposition – that fiction presents more opportunities for creating uncanny feelings than are possible in real life.

Strictly speaking, all these complications relate only to that class of the uncanny which proceeds from forms of thought that have been surmounted. The class which proceeds from repressed complexes is more resistant and remains as powerful in fiction as in real experience, subject to one exception. The uncanny belonging to the first class – that proceeding from forms of thought that have been surmounted – retains its character not only in experience but in fiction as well, so long as the setting is one of material reality; but where it is given an arbitrary and artificial setting in fiction, it is apt to lose that character.

We have clearly not exhausted the possibilities of poetic licence and the privileges enjoyed by story-writers in evoking or in excluding an uncanny feeling. In the main we adopt an unvarying passive attitude towards real experience and are subject to the influence of our physical environment. But the story-teller has a *peculiarly* directive power over us; by means of the moods he can put us into, he is able to guide the current of our emotions, to dam it up in one direction and make it flow in another, and he often obtains a great variety of effects from the same material. All this is nothing new, and has doubtless long since been fully taken into account by students of aesthetics. We have drifted into this field of research half involuntarily, through the temptation to explain certain instances which contradicted our theory of the causes of the uncanny. Accordingly we will now return to the examination of a few of those instances.

We have already asked why it is that the severed hand in the story of the treasure of Rhampsinitus has no uncanny effect in the way that the severed hand has in Hauff's story. The question seems to have gained in importance now that we have recognized that the class of the uncanny which proceeds from repressed complexes is the more resistant of the two. The answer is easy. In the Herodotus story our thoughts are concentrated much more on the superior cunning of the master-thief than on the feelings of the princess. The princess may very well have had an uncanny feeling, indeed she very probably fell into a swoon; but we have no such sensations, for we put ourselves in the thief's place, not in hers. In Nestroy's farce, *Der Zerrissene* [*The Torn Man*], another means is used to avoid any impression of the uncanny in the scene in which the fleeing man, convinced that he is a murderer, lifts up one trapdoor after another and each time sees what he takes to be the ghost of his victim rising up out of it. He calls out in despair, 'But I've only killed *one* man. Why this ghastly multiplication?' We know what went before this scene and do not share his error, so what must be uncanny to him has an irresistibly comic effect on us. Even a 'real' ghost, as in Oscar Wilde's *Canterville Ghost*, loses all power of at least arousing *gruesome* feelings in us as soon as the author begins to amuse himself by being ironical about it and allows liberties to be taken with it. Thus we

see how independent emotional effects can be of the actual subject-matter in the world of fiction. In fairy stories feelings of fear – including therefore uncanny feelings – are ruled out altogether. We understand this, and that is why we ignore any opportunities we find in them for developing such feelings.

Concerning the factors of silence, solitude and darkness, we can only say that they are actually elements in the production of the infantile anxiety from which the majority of human beings have never become quite free. This problem has been discussed from a psycho-analytic point of view elsewhere.<sup>34</sup>

## Notes

- 1 [The German word, translated throughout this paper by the English ‘uncanny’, is ‘*unheimlich*’, literally ‘unhomely’. The English term is not, of course, an exact equivalent of the German one.]
- 2 [An allusion to the first World War only just concluded.]
- 3 [In the translation which follows in the text above, a few details, mainly giving the sources of the quotations, have been omitted. For purposes of reference, we reprint in an Appendix the entire extract from Sanders’s Dictionary exactly as it is given in German in Freud’s original paper except that a few minor misprints have been put right.]
- 4 [It may be remarked that the English ‘canny’, in addition to its more usual meaning of ‘shrewd’, can mean ‘pleasant’, ‘cosy’.]
- 5 [According to the Oxford English Dictionary, a similar ambiguity attaches to the English ‘canny’, which may mean not only ‘cosy’ but also ‘endowed with occult or magical powers’.]
- 6 [In the original version of the paper (1919) only, the name ‘Schleiermacher’ was printed here, evidently in error.]
- 7 Hoffmann’s *Sämtliche Werke*, Grisebach Edition, 3. [A translation of ‘The Sand-Man’ is included in *Eight Tales of Hoffmann*, translated by J. M. Cohen, London, Pan Books, 1952.]
- 8 Frau Dr. Rank has pointed out the association of the name with ‘*coppella*’=crucible, connecting it with the chemical operations that caused the father’s death; and also with ‘*coppo*’=eye-socket. [Except in the first (1919) edition this footnote was attached, it seems erroneously, to the first occurrence of the name Coppelius on this page.]
- 9 In fact, Hoffmann’s imaginative treatment of his material has not made such wild confusion of its elements that we cannot reconstruct their original arrangement. In the story of Nathaniel’s childhood, the figures of his father and Coppelius represent the two opposites into which the father-imago is split by his ambivalence; whereas the one threatens to blind him – that is, to castrate him –, the other, the ‘good’ father, intercedes for his sight. The part of the complex which is most strongly repressed, the death-wish against the ‘bad’ father, finds expression in the death of the ‘good’ father, and Coppelius is made answerable for it. This pair of fathers is represented later, in his student days, by Professor Spalanzani and Coppola the optician. The Professor is in himself a member of the father-series, and Coppola is recognized as identical with Coppelius the lawyer. Just as they used before to work together over the secret brazier, so now they have jointly created the doll Olympia; the Professor is even called the father of Olympia. This double occurrence of activity in common betrays them as divisions of the father-imago: both the mechanician and the optician were

the father of Nathaniel (and of Olympia as well). In the frightening scene in childhood, Coppelius, after sparing Nathaniel's eyes, had screwed off his arms and legs as an experiment; that is, he had worked on him as a mechanician would on a doll. This singular feature, which seems quite outside the picture of the Sand-Man, introduces a new castration equivalent; but it also points to the inner identity of Coppelius with his later counterpart, Spalanzani the mechanician, and prepares us for the interpretation of Olympia. This automatic doll can be nothing else than a materialization of Nathaniel's feminine attitude towards his father in his infancy. Her fathers, Spalanzani and Coppola, are, after all, nothing but new editions, reincarnations of Nathaniel's pair of fathers. Spalanzani's otherwise incomprehensible statement that the optician has stolen Nathaniel's eyes (see above), so as to set them in the doll, now becomes significant as supplying evidence of the identity of Olympia and Nathaniel. Olympia is, as it were, a dissociated complex of Nathaniel's which confronts him as a person, and Nathaniel's enslavement to this complex is expressed in his senseless obsessive love for Olympia. We may with justice call love of this kind narcissistic, and we can understand why someone who has fallen victim to it should relinquish the real, external object of his love. The psychological truth of the situation in which the young man, fixated upon his father by his castration complex, becomes incapable of loving a woman, is amply proved by numerous analyses of patients whose story, though less fantastic, is hardly less tragic than that of the student Nathaniel.

Hoffmann was the child of an unhappy marriage. When he was three years old, his father left his small family, and was never united to them again. According to Grisebach, in his biographical introduction to Hoffmann's works, the writer's relation to his father was always a most sensitive subject with him.

- 10 [Under the rubric 'Varia' in one of the issues of the *Internationale Zeitschrift für Psychoanalyse* for 1919 (5, 308), the year in which the present paper was first published, there appears over the initials 'S.F.' a short note which it is not unreasonable to attribute to Freud. Its insertion here, though strictly speaking irrelevant, may perhaps be excused. The note is headed: 'E. T. A. Hoffmann on the Function of Consciousness' and it proceeds: 'In *Die Elixire des Teufels* (Part II, p. 210, in Hesse's edition) – a novel rich in masterly descriptions of pathological mental states – Schönfeld comforts the hero, whose consciousness is temporarily disturbed, with the following words: "And what do you get out of it? I mean out of the particular mental function which we call consciousness, and which is nothing but the confounded activity of a damned toll-collector – excise-man – deputy-chief customs officer, who has set up his infamous bureau in our top storey and who exclaims, whenever any goods try to get out: 'Hi! hi! exports are prohibited ... they must stay here ... here, in this country. . . .''']
- 11 [This phrase seems to be an echo from Nietzsche (e.g. from the last part of *Also Sprach Zarathustra*). In Chapter III of *Beyond the Pleasure Principle* (1920g), Standard Ed., 18, 22, Freud puts a similar phrase 'the perpetual recurrence of the same thing' into inverted commas.]
- 12 [Cf. *The Interpretation of Dreams*, Standard Ed., 5, 357.]
- 13 I believe that when poets complain that two souls dwell in the human breast, and when popular psychologists talk of the splitting of people's egos, what they are thinking of is this division (in the sphere of ego-psychology) between the critical agency and the rest of the ego, and not the antithesis discovered by psycho-analysis between the ego and what is unconscious and repressed. It is true that the distinction between these two antitheses is to some extent effaced by the circumstance that foremost among the things that are rejected by the criticism of the ego are derivatives of the repressed. – [Freud had already discussed this critical agency at length in Section III of his paper on narcissism (1914c), and it was soon to be further expanded into the 'ego-ideal' and 'super-ego' in Chapter XI of his *Group Psychology* (1921c) and Chapter III of *The Ego and the Id* (1923b) respectively.]
- 14 In Ewers's *Der Student von Prag*, which serves as the starting-point of Rank's study on the 'double', the hero has promised his beloved not to kill his antagonist in a duel. But on his way to the duelling-ground he meets his 'double', who has already killed his rival.
- 15 Heine, *Die Götter im Exil*.

- 32 [See Freud’s paper on ‘Negation’ (1925h).]
- 33 Since the uncanny effect of a ‘double’ also belongs to this same group it is interesting to observe what the effect is of meeting one’s own image unbidden and unexpected. Ernst Mach has related two such observations in his *Analyse der Empfindungen* (1900, 3). On the first occasion he was not a little startled when he realized that the face before him was his own. The second time he formed a very unfavourable opinion about the supposed stranger who entered the omnibus, and thought ‘What a shabby-looking school-master that man is who is getting in?’ – I can report a similar adventure. I was sitting alone in my *wagon-lit* compartment when a more than usually violent jolt of the train swung back the door of the adjoining washing-cabinet, and an elderly gentleman in a dressing-gown and a travelling cap came in. I assumed that in leaving the washing-cabinet, which lay between the two compartments, he had taken the wrong direction and come into my compartment by mistake. Jumping up with the intention of putting him right, I at once realized to my dismay that the intruder was nothing but my own reflection in the looking-glass on the open door. I can still recollect that I thoroughly disliked his appearance. Instead, therefore, of being *frightened* by our ‘doubles’, both Mach and I simply failed to recognize them as such. Is it not possible, though, that our dislike of them was a vestigial trace of the archaic reaction which feels the ‘double’ to be something uncanny?
- 34 [See the discussion of children’s fear of the dark in Section V of the third of Freud’s *Three Essays* (1905d), Standard Ed., 7, 224 n.]

# CHAPTER 4

## Group Psychology and the Analysis of the Ego

*Sigmund Freud*

In this essay from 1921, Freud put forth an important concept for later psychoanalysis – identification. The child's ability to internalize representations of caregivers and others in its immediate social environment lies at the heart of later object relations theory. It seeks to account for the social character of the self, the way it is built up from relations with others. Freud here also hints at a more sociological version of the very dubious ideas of "castration" and of "castration complex," ideas that mistakenly turn historically specific and local cultural anecdotes about threats issued to children into psychological and anthropological principles. In that sociological account, what Freud calls "castration anxiety" would be seen as a misinterpretation or misnaming of an anxiety any young person feels as he or she undergoes the passage into sexual adulthood. The anxiety over loss has to do more with an anxiety over being able to fulfill the demands of the social ideal of adult sexual identity. One way of achieving an adult identity is to identify with the father or mother and to attempt to emulate them.

Identification is known to psycho-analysis as the earliest expression of an emotional tie with another person. It plays a part in the early history of the Oedipus complex. A little boy will exhibit a special interest in his father; he would like to grow like him and be like him, and take his place everywhere. We may say simply that he takes his father as his ideal. This behavior has nothing to do with a passive or feminine attitude towards his father (and towards males in general); it is on the contrary typically masculine. It fits in very well with the Oedipus complex, for which it helps to prepare the way.

*Original publication details:* Sigmund Freud, "Group Psychology and the Analysis of the Ego" from *The Standard Edition of the Complete Psychological Works*, trans. James Strachey. Hogarth Press, 1922, 1959. Copyright © 1922, 1959 by the Institute of Psycho-Analysis and Angela Richards. Copyright © 1959 by Sigmund Freud Copyrights Ltd. Copyright © 1959 by James Strachey. Reproduced with permission from Random House Group Ltd, W.W. Norton & Company, Inc. and the Marsh Agency on behalf of Sigmund Freud Copyrights.

At the same time as this identification with his father, or a little later, the boy has begun to develop a true object-cathexis towards his mother according to the attachment [anaclitic] type. He then exhibits, therefore, two psychologically distinct ties: a straightforward sexual object-cathexis towards his mother and an identification with his father which takes him as his model. The two subsist side by side for a time without any mutual influence or interference. In consequence of the irresistible advance towards a unification of mental life, they come together at last; and the normal Oedipus complex originates from their confluence. The little boy notices that his father stands in his way with his mother. His identification with his father then takes on a hostile coloring and becomes identical with the wish to replace his father in regard to his mother as well. Identification, in fact, is ambivalent from the very first; it can turn into an expression of tenderness as easily as into a wish for someone's removal. It behaves like a derivative of the first, *oral* phase of the organization of the libido, in which the object that we long for and prize is assimilated by eating and is in that way annihilated as such. The cannibal, as we know, has remained at this standpoint; he has a devouring affection for his enemies and only devours people of whom he is fond.<sup>1</sup>

The subsequent history of this identification with the father may easily be lost sight of. It may happen that the Oedipus complex becomes inverted, and that the father is taken as the object of a feminine attitude, an object from which the directly sexual instincts look for satisfaction; in that event the identification with the father has become the precursor of an object-tie with the father. The same holds good, with the necessary substitutions, of the baby daughter as well.

It is easy to state in a formula the distinction between an identification with the father and the choice of the father as an object. In the first case one's father is what one would like to *be*, and in the second he is what one would like to *have*. The distinction, that is, depends upon whether the tie attaches to the subject or to the object of the ego. The former kind of tie is therefore already possible before any sexual object-choice has been made. It is much more difficult to give a clear meta-psychological representation of the distinction. We can only see that identification endeavors to mold a person's own ego after the fashion of the one that has been taken as a model.

Let us disentangle identification as it occurs in the structure of a neurotic symptom from its rather complicated connections. Supposing that a little girl (and we will keep to her for the present) develops the same painful symptom as her mother – for instance, the same tormenting cough. This may come about in various ways. The identification may come from the Oedipus complex; in that case it signifies a hostile desire on the girl's part to take her mother's place, and the symptom expresses her object-love towards her father, and brings about a realization, under the influence of a sense of guilt, of her desire to take her mother's place: "You wanted to be your mother, and now you *are* – anyhow so far as your sufferings are concerned." This is the complete mechanism of the structure of a hysterical symptom. Or, on the other hand, the symptom may be the same as that of the person who is loved; so, for instance, Dora<sup>2</sup> imitated her father's cough. In that case we can only describe the state of things by saying that *identification has appeared instead of object-choice, and that object-choice has regressed to identification*. We have heard that identification is the earliest and original form of emotional tie; it often happens that under the conditions in which symptoms are constructed, that is, where there is repression and where the mechanisms of the unconscious are dominant, object-choice is turned back into identification – the ego assumes the characteristics of the object. It is noticeable that in these identifications the ego sometimes copies the person who is not

loved and sometimes the one who is loved. It must also strike us that in both cases the identification is a partial and extremely limited one and only borrows a single trait from the person who is its object.

There is a third particularly frequent and important case of symptom formation, in which the identification leaves entirely out of account any object-relation to the person who is being copied. Supposing, for instance, that one of the girls in a boarding school has had a letter from someone with whom she is secretly in love which arouses her jealousy, and that she reacts to it with a fit of hysterics; then some of her friends who know about it will catch the fit, as we say, by mental infection. The mechanism is that of identification based upon the possibility or desire of putting oneself in the same situation. The other girls would like to have a secret love affair too, and under the influence of a sense of guilt they also accept the suffering involved in it. It would be wrong to suppose that they take on the symptom out of sympathy. On the contrary, the sympathy only arises out of the identification, and this is proved by the fact that infection or imitation of this kind takes place in circumstances where even less pre-existing sympathy is to be assumed than usually exists between friends in a girls' school. One ego has perceived a significant analogy with another upon one point – in our example upon openness to a similar emotion; an identification is thereupon constructed on this point, and, under the influence of the pathogenic situation, is displaced on to the symptom which the one ego has produced. The identification by means of the symptom has thus become the mark of a point of coincidence between the two egos which has to be kept repressed.

What we have learned from these three sources may be summarized as follows. First, identification is the original form of emotional tie with an object; secondly, in a regressive way it becomes a substitute for a libidinal object-tie, as it were by means of introjection of the object into the ego; and thirdly, it may arise with any new perception of a common quality shared with some other person who is not an object of the sexual instinct. The more important this common quality is, the more successful may this partial identification become, and it may thus represent the beginning of a new tie.

### Notes

# CHAPTER 5

## The Mirror Stage as Formative of the Function of the I as Revealed in Psychoanalytic Experience

*Jacques Lacan*

Jacques Lacan's *Ecrits* (1966) was the most influential work of Structuralist psychoanalysis. Lacan's work constitutes a rebuke to ego or self psychology and a return to Freud's belief in the power of the unconscious in human life. Yet his work also rewrites Freud in important ways. He inserts the self into culture. We are all shaped by the Symbolic Order into which we are born, an order that determines our gender identity and our place in our families. When we learn to make symbols, we also learn to separate from our ambient childhood world of objects and achieve an independent selfhood that is experienced as loss. That lack can never be filled, and all human desire circulates around it, yearning to hark back to the lost unity. Lacan calls such yearning and the kind of consciousness it provokes the Imaginary. It is the narcissistic part of the mind that defines ego activity. Lacan placed great emphasis on Freud's contention that the ego deludes itself into thinking it controls the mind. What the ego cannot reach or know is the Real, the realm of the drives, the instincts, and the unconscious processes that shape our selves but that cannot be known by a mind that constitutes itself as the effacement of such determination. In this famous essay from 1949, Lacan describes his concept of the self as a delusory construct plagued in its very constitution by imaginary identifications with a spurious sense of wholeness or unity. Lacan's polemic is directed against those ego psychologists who were just beginning in England and America to explore the possibility that psychoanalysis should focus on the whole complex of the self in its social setting rather than on the dynamic interrelations between consciousness and the unconscious.

# CHAPTER 6

## Transitional Objects and Transitional Phenomena<sup>1</sup>

*D.W. Winnicott*

D. W. Winnicott was an English psychoanalyst who specialized in object relations theory. His books include *Playing and Reality* (1971) and *The Child and the Family* (1957).

### A Study of the First *Not-me* Possession<sup>2</sup>

#### Introduction

IT IS WELL KNOWN that infants as soon as they are born tend to use fist, fingers, thumbs in stimulation of the oral erotogenic zone, in satisfaction of the instincts at that zone, and also in quiet union. It is also well known that after a few months infants of either sex become fond of playing with dolls, and that most mothers allow their infants some special object and expect them to become, as it were, addicted to such objects.

There is a relationship between these two sets of phenomena that are separated by a time interval, and a study of the development from the earlier into the later can be profitable, and can make use of important clinical material that has been somewhat neglected.

#### The First Possession

Those who happen to be in close touch with mothers' interests and problems will be already aware of the very rich patterns ordinarily displayed by babies in their use of the first *Not-Me* possession. These patterns, being displayed, can be subjected to direct observation.

There is a wide variation to be found in a sequence of events which starts with the new-born infant's fist-in-mouth activities, and that leads eventually on to an attachment to a teddy, a doll or soft toy, or to a hard toy.

*Original publication details:* D.W. Winnicott, "Transitional Objects and Transitional Phenomena" from *Playing and Reality*, pp. 229–242. Basic Books, 1980. Reproduced with permission from Taylor & Francis.

It is clear that something is important here other than oral excitement and satisfaction, although this may be the basis of everything else. Many other important things can be studied, and they include:

The nature of the object.

The infant's capacity to recognize the object as *Not-Me*.

The place of the object – outside, inside, at the border.

The infant's capacity to create, think up, devise, originate, produce an object.

The initiation of an affectionate type of object relationship.

I have introduced the terms 'transitional object' and 'transitional phenomena' for designation of the intermediate area of experience, between the thumb and the teddy bear, between the oral eroticism and true object relationship, between primary creative activity and projection of what has already been introjected, between primary unawareness of indebtedness and the acknowledgement of indebtedness ('Say: ta!').

By this definition an infant's babbling or the way an older child goes over a repertoire of songs and tunes while preparing for sleep come within the intermediate area as transitional phenomena, along with the use made of objects that are not part of the infant's body yet are not fully recognized as belonging to external reality.

It is generally acknowledged that a statement of human nature is inadequate when given in terms of interpersonal relationships, even when the imaginative elaboration of function, the whole of fantasy both conscious and unconscious, including the repressed unconscious, is allowed for. There is another way of describing persons that comes out of the researches of the past two decades, that suggests that of every individual who has reached to the stage of being a unit (with a limiting membrane and an outside and an inside) it can be said that there is an *inner reality* to that individual, an inner world which can be rich or poor and can be at peace or in a state of war.

My claim is that if there is a need for this double statement, there is need for a triple one; there is the third part of the life of a human being, a part that we cannot ignore, an intermediate area of *experiencing*, to which inner reality and external life both contribute. It is an area which is not challenged, because no claim is made on its behalf except that it shall exist as a resting-place for the individual engaged in the perpetual human task of keeping inner and outer reality separate yet inter-related.

It is usual to refer to 'reality-testing', and to make a clear distinction between apperception and perception. I am here staking a claim for an intermediate state between a baby's inability and growing ability to recognize and accept reality. I am therefore studying the substance of *illusion*, that which is allowed to the infant, and which in adult life is inherent in art and religion. We can share a respect for *illusory experience*, and if we wish we may collect together and form a group on the basis of the similarity of our illusory experiences. This is a natural root of grouping among human beings. Yet it is a hall-mark of madness when an adult puts too powerful a claim on the credulity of others, forcing them to acknowledge a sharing of illusion that is not their own.

I hope it will be understood that I am not referring exactly to the little child's teddy bear nor to the infant's first use of the fist (thumb, fingers). I am not specifically studying the first object of object relationships. I am concerned with the first possession, and with the intermediate area between the subjective and that which is objectively perceived.

### Development of a Personal Pattern

There is plenty of reference in psycho-analytic literature to the progress from 'hand to mouth' to 'hand to genital', but perhaps less to progress leading to the handling of truly '*Not-Me*' objects. Sooner or later in an infant's development there comes a tendency on the part of the infant to weave other-than-me objects into the personal pattern. To some extent these objects stand for the breast, but it is not especially this point that is under discussion.

In the case of some infants the thumb is placed in the mouth while fingers are made to caress the face by pronation and supination movements of the forearm. The mouth is then active in relation to the thumb, but not in relation to the fingers. The fingers caressing the upper lip, or some other part, may be or may become more important than the thumb engaging the mouth. Moreover this caressing activity may be found alone, without the more direct thumb-mouth union. (Freud, 1905. Hoffer, 1949.)

In common experience one of the following occurs, complicating an auto-erotic experience such as thumb-sucking:

1. with the other hand the baby takes an external object, say a part of a sheet or blanket, into the mouth along with the fingers; or
2. somehow or other the bit of cloth<sup>3</sup> is held and sucked, or not actually sucked. The objects used naturally include napkins and (later) handkerchiefs, and this depends on what is readily and reliably available; or
3. the baby starts from early months to pluck wool and to collect it and to use it for the caressing part of the activity.<sup>4</sup> Less commonly, the wool is swallowed, even causing trouble; or
4. mouthing, accompanied by sounds of 'mum-mum', babbling,<sup>5</sup> anal noises, the first musical notes and so on.

One may suppose that thinking, or fantasizing, gets linked up with these functional experiences.

All these things I am calling *transitional phenomena*. Also, out of all this (if we study any one infant) there may emerge some thing or some phenomenon — perhaps a bundle of wool or the corner of a blanket or eiderdown, or a word or tune, or a mannerism, which becomes vitally important to the infant for use at the time of going to sleep, and is a defence against anxiety, especially anxiety of depressive type. (Illingworth, 1951.) Perhaps some soft object or cot cover has been found and used by the infant, and this then becomes what I am calling a *transitional object*. This object goes on being important. The parents get to know its value and carry it round when travelling. The mother lets it get dirty and even smelly, knowing that by washing it she introduces a break in continuity in the infant's experience, a break that may destroy the meaning and value of the object to the infant.

I suggest that the pattern of transitional phenomena begins to show at about 4–6–8–12 months. Purposely I leave room for wide variations.

Patterns set in infancy may persist into childhood, so that the original soft object continues to be absolutely necessary at bed-time or at time of loneliness or when a depressed mood threatens. In health, however, there is a gradual extension of range of interest, and eventually the extended range is maintained, even when depressive anxiety is near. A need for a specific object or a behaviour pattern that started at a very early date may reappear at a later age when deprivation threatens.

This first possession is used in conjunction with special techniques derived from very early infancy, which can include or exist apart from the more direct autoerotic activities. Gradually in the life of an infant teddies and dolls and hard toys are acquired. Boys to some extent tend to go over to use hard objects, whereas girls tend to proceed right ahead to the acquisition of a family. It is important to note, however, that *there is no noticeable difference between boy and girl in their use of the original Not-Me possession*, which I am calling the transitional object.

As the infant starts to use organized sounds (mum, ta, da) there may appear a 'word' for the transitional object. The name given by the infant to these earliest objects is often significant, and it usually has a word used by the adults partly incorporated in it. For instance, 'baa' may be the name, and the 'b' may have come from the adult's use of the word 'baby' or 'bear'.

I should mention that sometimes there is no transitional object except the mother herself. Or an infant may be so disturbed in emotional development that the transition state cannot be enjoyed, or the sequence of objects used is broken. The sequence may nevertheless be maintained in a hidden way.

### Summary of Special Qualities in the Relationship

1. The infant assumes rights over the object, and we agree to this assumption. Nevertheless some abrogation of omnipotence is a feature from the start.
2. The object is affectionately cuddled as well as excitedly loved and mutilated.
3. It must never change, unless changed by the infant.
4. It must survive instinctual loving, and also hating, and, if it be a feature, pure aggression.
5. Yet it must seem to the infant to give warmth, or to move, or to have texture, or to do something that seems to show it has vitality or reality of its own.
6. It comes from without from our point of view, but not so from the point of view of the baby. Neither does it come from within; it is not an hallucination.
7. Its fate is to be gradually allowed to be decapitated, so that in the course of years it becomes not so much forgotten as relegated to limbo. By this I mean that in health the transitional object does not 'go inside' nor does the feeling about it necessarily undergo repression. It is not forgotten and it is not mourned. It loses meaning, and this is because the transitional phenomena have become diffused, have become spread out over the whole intermediate territory between 'inner psychic reality' and 'the external world as perceived by two persons in common', that is to say, over the whole cultural field.

At this point my subject widens out into that of play, and of artistic creativity and appreciation, and of religious feeling, and of dreaming, and also of fetishism, lying and stealing, the origin and loss of affectionate feeling, drug addiction, the talisman of obsessional rituals, etc.

### Relationship of the Transitional Object to Symbolism

It is true that the piece of blanket (or whatever it is) is symbolical of some part-object, such as the breast. Nevertheless the point of it is not its symbolic value so much as its actuality. Its not being the breast (or the mother) is as important as the fact that it stands for the breast (or mother).

When symbolism is employed the infant is already clearly distinguishing between fantasy and fact, between inner objects and external objects, between primary creativity and perception. But the term transitional object, according to my suggestion, gives room for the process of becoming able to accept difference and similarity. I think there is use for a term for the root of symbolism in time, a term that describes the infant's journey from the purely subjective to objectivity; and it seems to me that the transitional object (piece of blanket, etc.) is what we see of this journey of progress towards experiencing.

It would be possible to understand the transitional object while not fully understanding the nature of symbolism. It seems that symbolism can only be properly studied in the process of the growth of an individual, and that it has at the very best a variable meaning. For instance, if we consider the wafer of the Blessed Sacrament, which is symbolic of the body of Christ, I think I am right in saying that for the Roman Catholic community it *is* the body, and for the Protestant community it is a *substitute*, a reminder, and is essentially not, in fact, actually the body itself. Yet in both cases it is a symbol.

A schizoid patient asked me, after Christmas, had I enjoyed eating her at the feast. And then, *had I really eaten her or only in fantasy*. I knew that she could not be satisfied with either alternative. Her split needed the double answer.

### **Clinical Description of a Transitional Object**

For anyone in touch with parents and children, there is an infinite quantity and variety of illustrative clinical material.<sup>6</sup> The following illustrations are given merely to remind readers of similar material in their own experiences.

#### **Two Brothers: Contrast in Early Use of Possessions**

*Distortion in use of transitional object.* X, now a healthy man, has had to fight his way towards maturity. The mother 'learned how to be a mother' in her management of X when he was an infant and she was able to avoid certain mistakes with the other children because of what she learned with him. There were also external reasons why she was anxious at the time of her rather lonely management of X when he was born. She took her job as a mother very seriously and she breast-fed X for seven months. She feels that in his case this was too long and he was very difficult to wean. He never sucked his thumb or his fingers and when she weaned him 'he had nothing to fall back on'. He had never had the bottle or a dummy or any other form of feeding. He had a very strong and early attachment to the mother herself, as a person, and it was her actual person that he needed.

From twelve months he adopted a rabbit which he would cuddle and his affectionate regard for the rabbit eventually transferred to real rabbits. This particular rabbit lasted till he was five or six years old. It could be described as a *comforter*, but it never had the true quality of a transitional object. It was never, as a true transitional object would have been, more important than the mother, an almost inseparable part of the infant. In the case of this particular boy the kind of anxieties which were brought to a head by the weaning at seven months later produced asthma, and only gradually did he conquer this. It was important for him that he found employment far away from the home town. His attachment to his mother is still very powerful. He comes within the wide definition of the term normal, or healthy. This man has not married.

*Typical use of transitional object.* X's younger brother, Y, has developed in quite a straightforward way throughout. He now has three healthy children of his own. He was fed at the breast for four months and then weaned without difficulty.<sup>7</sup> Y sucked his thumb in the early weeks and this again 'made weaning easier for him than for his older brother'. Soon after weaning at five to six months he adopted the end of the blanket where the stitching finished. He was pleased if a little bit of the wool stuck out at the corner and with this he would tickle his nose. This very early became his 'Baa'; he invented this word for it himself as soon as he could use organized sounds. From the time when he was about a year old he was able to substitute for the end of the blanket a soft green jersey with a red tie. This was not a 'comforter' as in the case of the depressive older brother, but a 'soother'. It was a sedative which always worked. This is a typical example of what I am calling a *Transitional Object*. When Y was a little boy it was always certain that if anyone gave him his 'Baa' he would immediately suck it and lose anxiety, and in fact he would go to sleep within a few minutes if the time for sleep were at all near. The thumb-sucking continued at the same time, lasting until he was three or four years old, and he remembers thumb-sucking and a hard place on one thumb which resulted from it. He is now interested (as a father) in the thumb-sucking of his own children and their use of 'Baas'.

The story of seven ordinary children in this family brings out the points, arranged for comparison in the table below.

		Thumb	Transitional Object	Type of Child
X	Boy	O	Mother	Rabbit (comforter)
Y	Boy	+	'Baa'	Jersey (soother)
Twins	{ Girl Boy	O O	Dummy 'Ee'	Donkey (friend) Ee (protective)
Children of Y	{ Girl Girl Boy	O + +	'Baa' Thumb 'Mimis'*	Blanket (reassurance) Thumb (satisfaction) Objects (sorting)
				Developing well " " " " " "

\* Innumerable similar soft objects distinguished by colour, length, width, and early subjected to sorting and classification.

In consultation with a parent it is often valuable to get information about the early techniques and possessions of all the children of the family. This starts the mother on a comparison of her children one with another, and enables her to remember and compare their characteristics at an early age.

Information can often be obtained from a child in regard to transitional objects; for instance, Angus (11 years 9 months) told me that his brother 'has tons of teddies and things' and 'before that he had little bears', and he followed this up with a talk about his own history. He said he never had teddies. There was a bell rope which hung down, a tag end of which he would go on hitting, and so go off to sleep. Probably in the end it fell, and that was the end of it. There was, however, something else. He was very shy about this. It was a purple rabbit with red eyes. 'I wasn't fond of it. I used to throw it around. Jeremy has it now. I gave it to him. I gave it to Jeremy because it was naughty. It would fall off the chest of drawers. *It still visits me. I like it to visit me.*' He surprised himself when he drew the purple rabbit. It will be noted that this eleven-year-old boy with the ordinary good reality-sense of his age spoke as if lacking in reality-sense when describing

the transitional object's qualities and activities. When I saw the mother later she expressed surprise that Angus remembered the purple rabbit. She easily recognized it from the coloured drawing.

I deliberately refrain from giving more case material here, particularly as I wish to avoid giving the impression that what I am reporting is rare. In practically every case history there is something to be found that is interesting in the transitional phenomena, or in their absence (cf. Stevenson, Olive, 1954).

### **Theoretical Study**

There are certain comments that can be made on the basis of accepted psycho-analytic theory.

1. The transitional object stands for the breast, or the object of the first relationship.
2. The transitional object antedates established reality-testing.
3. In relation to the transitional object the infant passes from (magical) omnipotent control to control by manipulation (involving muscle erotism and coordination pleasure).
4. The transitional object may eventually develop into a fetish object and so persist as a characteristic of the adult sexual life. (See Wulff's development of the theme.)
5. The transitional object may, because of anal-erotic organization, stand for faeces (but it is not for this reason that it may become smelly and remain unwashed).

### **Relationship to Internal Object (Klein)**

It is interesting to compare the transitional object concept with Melanie Klein's concept of the internal object. The transitional object is *not an internal object* (which is a mental concept) – it is a possession. Yet it is not (for the infant) an external object either.

The following complex statement has to be made. The infant can employ a transitional object when the internal object is alive and real and good enough (not too persecutory). But this internal object depends for its qualities on the existence and aliveness and behaviour of the external object (breast, mother figure, general environmental care). Badness or failure of the latter indirectly leads to deadness or to a persecutory quality of internal object. After a persistence of failure of the external object the internal object fails to have meaning to the infant, and then, and then only, does the transitional object become meaningless too. The transitional object may therefore stand for the 'external' breast, but *indirectly* so, through standing for an 'internal' breast.

The transitional object is never under magical control like the internal object, nor is it outside control as the real mother is.

### **Illusion–Disillusionment**

In order to prepare the ground for my own positive contribution to this subject I must put into words some of the things that I think are taken too easily for granted in many psycho-analytic writings on infantile emotional development, although they may be understood in practice.

There is no possibility whatever for an infant to proceed from the pleasure-principle to the reality principle or towards and beyond primary identification (see Freud, 1923, p. 14),<sup>8</sup> unless there is a good enough mother.<sup>9</sup> The good enough 'mother' (not necessarily the infant's own mother) is one who makes active adaptation to the infant's needs, an active adaptation that gradually lessens, according to the infant's growing ability to account for failure of adaptation and to tolerate the results of frustration. Naturally the infant's own mother is more likely to be good enough than some other person, since this active adaptation demands an easy and unresented preoccupation with the one infant; in fact, success in infant care depends on the fact of devotion, not on cleverness or intellectual enlightenment.

The good-enough mother, as I have stated, starts off with an almost complete adaptation to her infant's needs, and as time proceeds she adapts less and less completely, gradually, according to the infant's growing ability to deal with her failure.

The infant's means of dealing with this maternal failure include the following:

The infant's experience, often repeated, that there is a time limit to frustration. At first, naturally, this time limit must be short.

A growing sense of process.

The beginnings of mental activity.

The employment of auto-erotic satisfactions.

Remembering, reliving, fantasizing, dreaming; the integrating of past, present, and future.

*If all goes well* the infant can actually come to gain from the experience of frustration, since incomplete adaptation to need makes objects real, that is to say hated as well as loved. The consequence of this is that *if all goes well* the infant can be disturbed by a close adaptation to need that is continued too long, not allowed its natural decrease, since exact adaptation resembles magic and the object that behaves perfectly becomes no better than an hallucination. Nevertheless *at the start* adaptation needs to be almost exact, and unless this is so it is not possible for the infant to begin to develop a capacity to experience a relationship to external reality, or even to form a conception of external reality.

### Illusion and the Value of Illusion

The mother, at the beginning, by an almost 100 per cent adaptation affords the infant the opportunity for the *illusion* that her breast is part of the infant. It is, as it were, under magical control. The same can be said in terms of infant care in general, in the quiet times between excitements. Omnipotence is nearly a fact of experience. The mother's eventual task is gradually to disillusion the infant, but she has no hope of success unless at first she has been able to give sufficient opportunity for illusion.

In another language, the breast is created by the infant over and over again out of the infant's capacity to love or (one can say) out of need. A subjective phenomenon develops in the baby which we call the mother's breast.<sup>10</sup> The mother places the actual breast just there where the infant is ready to create, and at the right moment.

From birth, therefore, the human being is concerned with the problem of the relationship between what is objectively perceived and what is subjectively conceived of, and in the solution of this problem there is no health for the human being who has not been started off well enough by the mother. *The intermediate area to which I am referring is the*

area that is allowed to the infant between primary creativity and objective perception based on reality-testing. The transitional phenomena represent the early stages of the use of illusion, without which there is no meaning for the human being in the idea of a relationship with an object that is perceived by others as external to that being.

The idea illustrated in Fig. 19 is this: that at some theoretical point early in the development of every human individual an infant in a certain setting provided by the mother is capable of conceiving of the idea of something which would meet the growing need which arises out of instinctual tension. The infant cannot be said to know at first what is to be created. At this point in time the mother presents herself. In the ordinary way she gives her breast and her potential feeding urge. The mother's adaptation to the infant's needs, when good enough, gives the infant the *illusion* that there is an external reality that corresponds to the infant's own capacity to create. In other words, there is an overlap between what the mother supplies and what the child might conceive of. To the observer the child perceives what the mother actually presents, but this is not the whole truth. The infant perceives the breast only in so far as a breast could be created just there and then. There is no interchange between the mother and the infant. Psychologically the infant takes from a breast that is part of the infant, and the mother gives milk to an infant that is part of herself. In psychology, the idea of interchange is based on an illusion.

In Fig. 20 a shape is given to the area of illusion, to illustrate what I consider to be the main function of the transitional object and of transitional phenomena. The transitional object and the transitional phenomena start each human being off with what will always be important for them, i.e. a neutral area of experience which will not be challenged. *Of the transitional object it can be said that it is a matter of agreement between us and the baby that we will never ask the question 'Did you conceive of this or was it presented to you from*

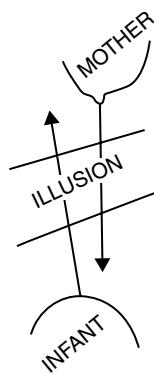

Figure 19

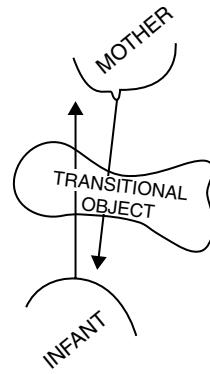

Figure 20

*without? The important point is that no decision on this point is expected. The question is not to be formulated.*

This problem, which undoubtedly concerns the human infant in a hidden way at the beginning, gradually becomes an obvious problem on account of the fact that the mother's main task (next to providing opportunity for illusion) is disillusionment. This is preliminary to the task of weaning, and it also continues as one of the tasks of parents and educators. In other words, this matter of *illusion* is one which belongs inherently to

human beings and which no individual finally solves for himself or herself, although a *theoretical* understanding of it may provide a *theoretical* solution. If things go well, in this gradual disillusionment process, the stage is set for the frustrations that we gather together under the word weaning; but it should be remembered that when we talk about the phenomena (which Klein has specifically illuminated) that cluster round weaning we are assuming the underlying process, the process by which opportunity for illusion and gradual disillusionment is provided. If illusion-disillusionment has gone astray the infant cannot attain to so normal a thing as weaning, nor to a reaction to weaning, and it is then absurd to refer to weaning at all. The mere termination of breast feeding is not a weaning.

We can see the tremendous significance of weaning in the case of the normal child. When we witness the complex reaction that is set going in a certain child by the weaning process we know that this is able to take place in that child because the illusion-disillusionment process is being carried through so well that we can ignore it while discussing actual weaning.

It is assumed here that the task of reality-acceptance is never completed, that no human being is free from the strain of relating inner and outer reality, and that relief from this strain is provided by an intermediate area of experience which is not challenged (arts, religion, etc.) (cf. Riviere, 1936). This intermediate area is in direct continuity with the play area of the small child who is 'lost' in play.

In infancy this intermediate area is necessary for the initiation of a relationship between the child and the world, and is made possible by good enough mothering at the early critical phase. Essential to all this is continuity (in time) of the external emotional environment and of particular elements in the physical environment such as the transitional object or objects.

The transitional phenomena are allowable to the infant because of the parents' intuitive recognition of the strain inherent in objective perception, and we do not challenge the infant in regard to subjectivity or objectivity just here where there is the transitional object.

Should an adult make claims on us for our acceptance of the objectivity of his subjective phenomena we discern or diagnose madness. If, however, the adult can manage to enjoy the personal intermediate area without making claims, then we can acknowledge our own corresponding intermediate areas, and are pleased to find examples of overlapping, that is to say common experience between members of a group in art or religion or philosophy.

I wish to draw particular attention to the paper by Wulff, referred to above, in which clinical material is given illustrating exactly that which I am referring to under the heading of transitional objects and transitional phenomena. There is a difference between my point of view and that of Wulff which is reflected in my use of this special term and his use of the term 'fetish object'. A study of Wulff's paper seems to show that in using the word fetish he has taken back to infancy something that belongs in ordinary theory to the sexual perversions. I am not able to find in his article sufficient room for the consideration of the child's transitional object as a healthy early experience. Yet I do consider that transitional phenomena are healthy and universal. Moreover if we extend the use of the word fetish to cover normal phenomena we shall perhaps be losing some of the value of the term.

I would prefer to retain the word fetish to describe the object that is employed on account of a *delusion* of a maternal phallus. I would then go further and say that we must

keep a place for the *illusion* of a maternal phallus, that is to say, an idea that is universal and not pathological. If we shift the accent now from the object on to the word illusion we get near to the infant's transitional object; the importance lies in the concept of illusion, a universal in the field of experience.

Following this, we can allow the transitional object to be potentially a maternal phallus but originally the breast, that is to say, the thing created by the infant and at the same time provided from the environment. In this way I think that a study of the infant's use of the transitional object and of transitional phenomena in general may throw light on the origin of the fetish object and of fetishism. There is something to be lost, however, in working backwards from the psychopathology of fetishism to the transitional phenomena which belong to the beginnings of experience and which are inherent in healthy emotional development.

## Summary

Attention is drawn to the rich field for observation provided by the earliest experiences of the healthy infant as expressed principally in the relationship to the first possession.

This first possession is related backwards in time to auto-erotic phenomena and fist- and thumb-sucking, and also forwards to the first soft animal or doll and to hard toys. It is related both to the external object (mother's breast) and to internal objects (magically introjected breast), but is distinct from each.

The transitional objects and transitional phenomena belong to the realm of illusion which is at the basis of initiation of experience. This early stage in development is made possible by the mother's special capacity for making adaptation to the needs of her infant, thus allowing the infant the illusion that what the infant creates really exists.

This intermediate area of experience, unchallenged in respect of its belonging to inner or external (shared) reality, constitutes the greater part of the infant's experience and throughout life is retained in the intense experiencing that belongs to the arts and to religion and to imaginative living, and to creative scientific work.

A positive value of illusion can therefore be stated.

An infant's transitional object ordinarily becomes gradually decatheted, especially as cultural interests develop.

In psychopathology:

*Addiction* can be stated in terms of regression to the early stage at which the transitional phenomena are unchallenged.

*Fetishism* can be described in terms of a persistence of a specific object or type of object dating from infantile experience in the transitional field, linked with the delusion of a maternal phallus.

*Pseudologia fantastica* and *thieving* can be described in terms of an individual's unconscious urge to bridge a gap in continuity of experience in respect of a transitional object.

## Notes

- 1 Based on a paper read before the British Psycho-Analytical Society on 30th May, 1951. *Int. J. Psycho-Anal.*, Vol. XXXIV, 1953.
- 2 It is necessary to stress that the word used here is 'possession' and not 'object'. In the typed version distributed to members I did in fact use the word 'object' (instead of 'possession') in one place by mistake, and this led to confusion in the discussion. It was pointed out that the first *Not-Me object*

is usually taken to be the breast. The reader's attention is drawn to the use of the word 'transitional' in many places by Fairbairn (1952, p. 35.).

- 3 A recent example is the blanket-doll of the child in the film *A Two-year-old Goes to Hospital* by James Robertson (Tavistock Clinic), cf. also Robertson *et al.* (1952).
- 4 Here there could possibly be an explanation for the use of the term 'wool-gathering', which means: inhabiting the transitional or intermediate area.
- 5 cf. Scott (1955).
- 6 There are excellent examples in the one article I have found on this same subject. Wulff ('Fetishism and Object Choice in Early Childhood', *Psychoanal. Quart.*, 1946, 15, p. 450) is clearly studying this same phenomenon, but he calls the objects 'fetish objects'. It is not clear to me that this term is correct, and I discuss this below. I did not actually know of Wulff's paper until I had written my own, but it gave me great pleasure and support to find the subject had already been considered worthy of discussion by a colleague. See also Abraham (1916) and Lindner (1879).
- 7 The mother had 'learned from her first child that it was a good idea to give one bottle feed while breast feeding', that is, to allow for the positive value of substitutes for herself, and by this means she achieved easier weaning than with X.
- 8 See also Freud (1921), p. 65.
- 9 One effect, and the main effect, of failure of the mother in this respect at the start of an infant's life, is discussed clearly (in my view) by Marion Milner (1952, p. 181). She shows that because of the mother's failure there is brought about a premature ego development, with precocious sorting out of a bad from a good object. The period of illusion (or my Transitional Phase) is disturbed. In analysis or in various activities in ordinary life an individual can be seen to be going on seeking the valuable resting-place of illusion. Illusion in this way has its positive value. See also Freud (1950).
- 10 I include the whole technique of mothering. When it is said that the first object is the breast, the word 'breast' is used, I believe, to stand for the technique of mothering as well as for the actual flesh. It is not impossible for a mother to be a good-enough mother (in my way of putting it) with a bottle for the actual feeding. If this wide meaning of the word 'breast' is kept in mind, and maternal technique is seen to be included in the total meaning of the term, then there is a bridge forming between the wording of Melanie Klein's statement of early history and that of Anna Freud. The only difference left is one of dates, which is in fact an unimportant difference which will automatically disappear in the course of time.

# CHAPTER 7

## Trauma Studies and the Literature of the US South

*Lisa Hinrichsen*

Lisa Hinrichsen is Assistant Professor of English at the University of Arkansas. She is currently revising a manuscript on the roles trauma, fantasy, and misrecognition play in modern and contemporary southern literature. She holds a PhD in English from Boston University.

Southern literature and its criticism have long recognized the roles that memory, trauma, and history play in the development of culture, but criticism about “the mind of the South” has historically been problematic: riddled by Oedipal anxieties and fascinations, much of this work has served to replay and reinforce the notion that, as Faulkner put it, “The past is never dead. It’s not even past” (81).<sup>1</sup> Yet in the wake of postmodern and postcolonial studies, gender studies, and trauma and memory studies, southern studies has recently begun to reexamine its own historical construction, representation, and development, questioning notions of self-identity, history, and community, and complicating what it means to remember. Drawing on trauma studies, which bequeaths a theoretical framework and methodology to southern studies’ key concepts of “memory” and “history,” has been an increasingly popular move, especially within the theoretically inflected “New Southern Studies.”<sup>2</sup> This essay briefly historicizes and surveys the rise of contemporary trauma theory, notes the impact that these theories have had on southern literary criticism, evaluates the role that depictions of injury play in the literature of the South, and assesses the usefulness of trauma theory for understanding events such as slavery, segregation, racism, and political violence. To historicize and contextualize trauma means recognizing the fissures within the concept and understanding the limitations of it as a descriptive term and organizing category. While the term “trauma” originally had a physical meaning – it comes from the ancient Greek word for “wound” and

*Original publication details:* Lisa Hinrichsen, “Trauma Studies and the Literature of the US South.” *Literature Compass* 10.8 (2013), pp. 605–617. Reproduced with permission from John Wiley & Sons.

its primary denotation is invasive bodily injury – in modernity, through the work of Jean-Martin Charcot, Pierre Janet, Joseph Breuer, and Sigmund Freud, it accrued mental as well as physical meanings and came to refer to both individual and collective processes. As Judith Herman (1992) has noted, trauma has had a history of “episodic amnesia” because “the subject provokes such intense controversy that it periodically becomes anathema” (7); as she remarks, it periodically erupts into public consciousness in conjunction with certain charged social and political movements.

As a history of the term reveals, trauma is a concept closely tied to modernity. The professional codification of the concept came largely from four main branches of medical thinking: Anglo-American legal medicine, French studies on hysteria, German social medicine, and modern war psychiatry (Lerner and Micale 21). The modern understanding of trauma can be traced to the work of the British physician John Erichsen, who during the 1860s identified signs of trauma (somatic symptoms, repetitive behaviors) in victims suffering from the emotional aftershocks of railway accidents; the Berlin neurologist Paul Oppenheim subsequently gave this psychic state the name ‘traumatic neurosis’ (Leys 3). Much of the early work on trauma emerges from work on hysteria by Charcot and Janet, and later by Breuer and Freud in their *Studies on Hysteria* (1895), which formed part of the reorientation of the human and medical sciences away from somatically based models and toward psychological models of subjectivity.

A revised understanding arose in conjunction with the violent outbreak of World War I and the subsequent large numbers of returning soldiers with mental disorders. Composed during the war, Freud’s *Beyond the Pleasure Principle* (1920) explores the issue of internal versus external assault on the ego and renders a definition of trauma through military metaphors: “We describe as ‘traumatic’ any excitations from outside which are powerful enough to break through the protective shield,” Freud wrote, provoking “a disturbance on a large scale in the functioning of the organism’s energy and [setting] in motion every possible defensive measure” (33). Yet, arguably, Freud’s most significant discussion on the subject occurs in *Moses and Monotheism* (1939), written while he was living in exile in England after the outbreak of World War II. Here, Freud, acutely aware of the complex temporal aspects of trauma, compares the “forgetting” of monotheism in Judaism to the latency of the man who walks away from a train accident, physically unharmed but suffering from belated psychical and motor symptoms. *Moses and Monotheism* also marks a methodological shift: Freud develops the beginnings of an understanding of trauma not as an individual but as a collective phenomenon, a move debated in contemporary theoretical work, and struggles to explain its transgenerational persistence.

The origin of contemporary trauma studies can be dated to 1980, when the American Psychiatric Association officially recognized Post-Traumatic Stress Disorder (PTSD). As Judith Herman and Anne Whitehead argue, the formal acknowledgment of PTSD was the result of aggressive political campaigning by Vietnam veterans seeking to raise public awareness about the ongoing psychological effects of combat exposure. As Whitehead writes, this was a significant cultural moment, marking widespread recognition that “a psychiatric disorder could be wholly environmentally determined and that a traumatic event occurring in adulthood could have lasting psychological consequences” (2004, 2). “Trauma theory,” as a distinct field of humanistic study that sought to understand the literary, cultural, and ethical implications of trauma, began to emerge in the early 1990s. At a cultural moment in which literary theory was seen as being irrelevant or indifferent to “real-world” issues of history, politics, and ethics, trauma theory gained

ubiquity as a way to reinvigorate humanistic work with ethical and political potency. Cathy Caruth (1995, 1996), Shoshana Felman (1992, 2002), and Geoffrey Hartman (1994, 1996) became early investigators of the relationship between trauma and literature, examining the ways in which psychoanalytical theory and literature engage in a complex dialogue about how injury is experienced, remembered, and represented. Felman and Dori Laub's *Testimony: Crisis of Witnessing in Literature, Psychoanalysis and History* (1992) and Caruth's *Trauma: Explorations in Memory* (1995) were two landmark edited volumes that sought to make trauma studies an interdisciplinary dialogue that could combine work by literary critics, sociologists, archivists, filmmakers, and psychiatrists; Caruth's *Unclaimed Experience: Trauma, Narrative and History* (1996) followed, quickly becoming a seminal publication in an emerging field (the term "trauma theory" [72] first appears in *Unclaimed Experience*). Meanwhile, psychologists and literary critics were engaged in expanding Holocaust studies with new psychological and literary dimensions, drawing attention to issues of transference, sublimity, working through and acting out, and deferred meaning. Work by Dominick La Capra (1996, 1998, 2000), James E. Young (1988, 1993), Eric Santner (1993), Robert Jay Lifton (2000), Marianne Hirsch (1997, 2012), and Michael Rothberg (2000, 2009), among others, sought to understand how the Holocaust as a traumatic event makes fundamental demands on representation.

Caruth's and Felman's work echoes the definition of trauma in the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders* and builds on the work of scientist Bessel A. Van der Kolk and a selective reading of Freud, while also utilizing deconstructive and poststructuralist models of reading. As such, their work opens itself to larger critiques over the role dissociation plays in the experience of trauma, the validity of importing medical models into literary models, and the way in which the American Psychiatric Association's definition of PTSD participates in a process that converts what is often a social and political problem into an individual psychopathology. For Caruth, trauma fundamentally involves a crisis of representation, and her work emphasizes poststructuralist tropes of difficulty, rupture, aporia, and impossibility, positioning the traumatic experience as radically displaced, unable to be integrated into schemes of prior knowledge, instead remaining positioned *between* times: trauma is, in her definition, "not known in the first instance" and "not locatable in the simple violent or original event in an individual's past, but rather in the way that its very unassimilated nature – the way it was precisely *not known* in the first instance – returns to haunt the survivor later on" (4). Both Caruth's and Felman's work insists on an opposition between traumatic event and narrative possibility; together they emphasize the need for a changed critical – and ethical – practice and a new mode of reading and listening, in which inter-subjectivity plays a key role in bearing witness to how wound becomes voice (Caruth ix). As Felman writes in *Testimony: Crises of Witnessing in Literature, Psychoanalysis, and History*, bearing witness demands an act of testimony, which, as she sees it, encompasses "the political dimension of oppression and the ethical dimension of resistance" (12).

Despite criticism of their work – Susannah Radstone, for example, has critiqued its underlying model of subjectivity and its relation to theories of referentiality and representation, and Ruth Leys, in *Trauma: A Genealogy* (2000), has vehemently argued against what she sees as Caruth's universalization of the concept and her effacement of the distinction between victims and perpetrators – it has come to form the dominant model of trauma studies. The continued importance of Caruth's and Felman's work lies in the way they elaborate and revise Freudian concepts in line with deconstructionist

and poststructuralist modes of reading. Some of the many literary and cultural studies texts that draw on and respond to Caruth's and Felman's claims include Anne Whitehead's *Trauma Fiction* (2004), Laurie Vickroy's *Trauma and Survival in Contemporary Fiction* (2002), E. Ann Kaplan's *Trauma Culture: The Politics of Terror and Loss in Media and Literature* (2005), Leigh Gilmore's *The Limits of Autobiography: Trauma and Testimony* (2001), Nancy K. Miller and Jason Tougal's edited volume *Extremities: Trauma, Testimony, and Community* (2002), Judith Greenberg's collection *Trauma at Home: After 9/11* (2003), Deborah M. Horovitz's *Literary Trauma: Sadism, Memory, and Sexual Violence in American Women's Fiction* (2000), Michelle Balaev's *The Nature of Trauma in American Novels* (2012), Sarah Anderson's *Readings of Trauma, Madness, and the Body* (2012), Julie Goodspeed-Chadwick's *Modernist Women Writers and War: Trauma and the Female Body in Djuana Barnes, H.D., and Gertrude Stein* (2011), Jennifer L. Griffiths' *Traumatic Possessions: The Body and Memory in African American Women's Writing and Performance* (2009), Anne Rothe's *Popular Trauma Culture: Selling the Pain of Others in the Mass Media* (2011) and Ann Cvetkovich's *An Archive of Feelings: Trauma, Sexuality, and Lesbian Public Cultures* (2003).

As these titles reveal, trauma theory has been adopted not only by scholars working on the politics and aesthetics of literary form but also more broadly by scholars examining issues of public culture, mass media, and the politics of gender, race, and sexuality. The field has long been critically self-reflective, and a surplus of work explores anew the history of the concept. Texts such as Mark Micale and Paul Lerner's *Traumatic Pasts* (2001) and Roger Luckhurst's *The Trauma Question* (2008) outline with more detail the manner in which trauma has been historically constructed and contingent on social context, and work by Jeffrey Alexander (2004, 2012) and Arthur Neal (1998) examine trauma's relation to discourses of nationalism, imperialism, and politics. Kali Tal's *Worlds of Hurt: Reading the Literatures of Trauma* (1995) draws on a feminist politics that underscores how systemic violence shapes everyday life; Tal discusses critical approaches to Holocaust testimony, literature by Vietnam War veterans, and published testimonies by female survivors of incest and child abuse, focusing on social appropriations of individual testimonies. Similarly, in *Serial Killers: Death and Life in America's Wound Culture* (1998), Mark Seltzer examines the formation of the public sphere around the pathological visualization of suffering and violence. One of the results of this profusion of work on trauma has been the tendency to see victimhood everywhere: in *Hystories* (1998), for example, Elaine Showalter criticizes the hysterical "victim" culture in the United States, and in *Post-Traumatic Culture: Injury and Interpretation in the Nineties* (1998), Kirby Farrell investigates how trauma functions as an "enabling fiction, an explanatory tool for managing unquiet minds in an overwhelming world" (x).

The surge of interest in theories of collective trauma have also raised questions regarding the universality and limits of victimhood. Beginning with Maurice Halbwachs' conception of *collective memory* (1925), Freud's musings in *Moses and Monotheism*, the work of Kai Erikson (1976), Arthur G. Neal (1998) and Ron Eyerman (2001) and Pierre Nora's conceptualization of *lieux de mémoire* (1984–1992), and extending to contemporary work such as Paul Connerton's *How Societies Remember* (1989) and Jeffrey Alexander's *Trauma: A Social Theory* (2012), which draws attention to postcolonial trauma and civil institutions, the concepts of collective trauma and collective memory have remained a contentious issue. While some theorists assume an unproblematic translation from individual to collective trauma, others caution that a simple metaphorical extension may be both intellectually reductive and politically irresponsible. While

critics like Dominick LaCapra in *Writing History, Writing Trauma* (2000) employ the psychoanalytic categories of “acting out” (Freud’s term for behavior marked by repetitive, unconscious actions, and fantasies) and “working through” (repetition altered by interpretation, capable of arresting unconscious repetitions) to analyze collective responses to historical events such as the Holocaust, there remain a number of theoretical loose ends in conceptualizations of collective trauma: how exactly is injury mediated among a collective group? Is collective or communal violence perhaps best seen as a political and ideological issue rather than a psychological one?

Finally, the definition of trauma has been further complicated by popular culture’s extension of its psychoanalytical definition – what Jeffrey C. Alexander has called trauma’s “embeddedness in everyday life and language” (2) – and its untethered use as a metaphor for the “memoro-politics” of a wide variety of psychic and cultural struggles, which often divert focus away from the individual. The feminist psychotherapist Laura S. Brown, for example, has argued that traumatic experiences of people of color, women, gays and lesbians, lower-class people, and people with disabilities often go unrecognized because current definitions are based on the experiences of dominant groups in Western society. Brown stresses the need to expand our understanding from sudden catastrophic events to “insidious trauma,” by which she means “the traumatogenic effects of oppression that are not necessarily overtly violent or threatening to bodily well-being at the given moment but that do violence to the soul and spirit” (107). The result is a revitalized focus on what surrounds suffering: politics, communities, institutions, experiences, and environments, marking a movement away from a problematic politics in which certain types of pain are privileged.

### Trauma and the U.S. South

Despite the complications of defining and historicizing trauma, several studies have gestured toward the potential usefulness of trauma studies in articulating the South as a site of particular cultural and psychological conflict. The U.S. South has long been seen as a terrain of trauma, a space where American violence is projected and “contained,” and its history is marked by removals and diasporas, including Native American genocide and dispossession; the slavery, migration, and displacement of African Americans; legacies of forced, unpaid labor; and brutal deeds and violent institutions. The sense that lost histories still linger is vividly felt in the sense of inherited historical consciousness in contemporary southern writing. As Barbara Ladd states,

Memory continues to be important in the determination of southerners to interpret or reproduce orality and performance, to attend to what writing erases or elides, and especially to attend to what United States historiography (plain and literary) has obscured in its commitment to cultural naturalism (1636).

In bequeathing a sense of grounding specificity and locality to trauma as a general concept, southern studies scholars have been conceptualizing the differing functions of temporal and spatial memorials (narrative, ritual, history, monuments); uncovering and articulating the political uses of mourning; exploring the relationship between cultural memory and cultural amnesia; examining forms of aesthetic representation and memorialization; and articulating the power of countermemories in the political and narrative

history of the South. The vocabulary and paradigms of trauma studies, when rooted in the historical and cultural specificity of southern space and place, have enabled further theorizing of the field's longstanding key concepts of memory and history, though there is still a great deal of work to be done, especially in relation to the diversity and complexity of identities and histories found in the region.

Scholars within southern studies have long been attentive to personal and historical trauma but have not always named it as such. Historian C. Vann Woodward's sense of the "burden" of southern history (1993) and its experience of defeat frames southerners as fundamentally permeated with historical consciousness. Other historians, such as C. Hugh Holman, in his *The Immoderate Past: The Southern Writer and History* (1977) and Louis D. Rubin (1989) note a particularly southern preoccupation with memory. Texts such as Anne Goodwyn Jones and Susan Donaldson's edited collection *Haunted Bodies: Gender and Southern Texts* (1997), the work of Patricia Yaeger in *Dirt and Desire: Reconstructing Southern Women's Writing, 1930–1990* (2000), and the sociologist Avery F. Gordon's *Ghostly Matters: Haunting and the Sociological Imagination* (1996) find articulation for trauma's eerie ability to escape our ability to rationalize or analyze it by using the language of the supernatural, the grotesque, and the spectacular, describing its effects through metaphors of "haunting."

More recently, Fitzhugh Brundage, in *Where These Memories Grow: History, Memory, and Southern Identity* (2000) and *The Southern Past: A Clash of Race and Memory* (2005), examines the meaning and use of the southern past, underscoring the political and ideological work of certain versions of history – especially ones that privilege the Civil War, defining it as traumatic for white southerners – in establishing White racial privilege and power, while also noting how black countermemories fueled the Civil Rights movement. Wolfgang Schivelbusch, in *The Culture of Defeat: On National Trauma, Mourning, and Recovery* (2003), details the state of the South after the Civil War, which he positions as a "national trauma" akin to France in the wake of the Franco-Prussian War and Germany following World War I, and notes how, in the aftermath of military defeat, myths of cultural superiority, such as nostalgic plantation legends, flourish as means of explaining the experience of loss. As Tara McPherson notes in *Reconstructing Dixie* (2003), these modes of imaginative fantasy continue to resonate, for the South "remains at once the site of the trauma of slavery and also the mythic location of a vast nostalgia industry" (3). Simultaneously a geographical space and an imaginative site, the U.S. South forms a locus for examining the relationship of social and individual memory to structures of power, including the discursive construction of experience.

While a large body of criticism has devoted itself to the way that the Civil War and Lost Cause mythologies have "haunted" the South and its literature, theories of memory, and trauma have been a productive part of other aspects of the discourse surrounding the South. Work on the plantation as a site of memory, such as Jessica Adams' *Wounds of Returning* (2007), reveals how the landscape of the "postslavery plantation," as a site of cultural trauma, has been transformed by tourism and consumer culture (5). Elizabeth Christine Russ's *The Plantation in the Postslavery Imagination* (2009) emphasizes how plantation-era modes of being and thinking refuse historical boundaries, affecting several generations. Other work has attended to how literature has memorialized and aesthetized violent historical events: Harriet Pollack and Christopher Metress's edited collection *Emmett Till in Literary Memory and Imagination* (2008) takes a paramount moment in racial history as its focal point, exploring how Till's brutal murder has been rendered by writers such as William Bradford Huie, James Baldwin, Langston Hughes, Gwendolyn

Brooks, Audre Lorde, Anne Moody, Nicolas Guillén, Aimé Césaire, Bebe Moore Campbell, and Lewis Nordan; Metress stresses how Emmett Till's murder functions as what Ron Eyerman in his work on slavery and African American identity calls a "cultural trauma" or "tear in the social fabric" (Metress 17). The aesthetic impact of Till's traumatic murder has also been explored by Ted Atkinson in "Hellhound on His Trail: Faulknerian Blood-guilt and the Traumatized Form of Lewis Nordan's *Wolf Whistle*" (2011); here, Atkinson argues that Nordan's surreal, defamiliarized style reflects "the limiting and haunting historical and cultural narratives that the author is compelled to rehearse," including, but not limited to, negotiating the long shadow of Faulkner's influence on what it means to tell about the South. Other key historical traumas and their impact on southern literature have also been explored: David A. Davis (2011), for example, has examined Katherine Anne Porter's "Pale Horse, Pale Rider," and its rendering of the Influenza Pandemic of 1918; Daniel Y. Kim (2009) has explored the impact of the Korean War in Susan Choi's *The Foreign Student*; Julie Buckner Armstrong (2011) has investigated the impact of Mary Turner's lynching on a range of literature, journalism, and artistic representation, including the "Kabniss" section of Jean Toomer's *Cane* and Angelina Weld Grimké's short story "Goldie"; and Lisa Hinrichsen (2008) has detailed the influence of the Vietnam War in Bobbie Ann Mason's *In Country*.

Additional work has veered from focusing on how specific historical traumas have been registered to examining larger issues of social structures, economies, and aesthetics. A notable special issue of *The Southern Literary Journal* in the Spring of 2008, edited by Minrose Gwin, focused on history, memory, and forgetting, and essays by Ruth Salvaggio, Susan V. Donaldson, Daniel Cross Turner, Rebecca Mark, Pearl McHaney, and others drew attention to issues of intertextuality, nostalgia, melancholia, and sublimination in southern literature and cinema, while also underscoring the impact of trauma studies as a critical approach. Melanie Benson Taylor's work on the trauma of capitalism in *Disturbing Calculations: The Economics of Identity in Postcolonial Southern Literature, 1912–2002* (2008) examines how structures of calculations and numbers, historically indebted to the traumatic history of the South as a site of capitalism and colonialism, function to determine social and racial hierarchies and establish individual worth and identity, perpetuating traumatic patterns; and, in *Reconstructing the Native South: American Indian Literature and the Lost Cause* (2012), Benson examines Native American removal, economic dispossession, and recuperation, underscoring the way that southern literary criticism has long tended to omit and obscure the story of American Indians in the South, forming modes of traumatic erasure. Michael Kreyling focuses on topic of memory in *The South That Wasn't There: Postsouthern Memory and History* (2010). Building upon Martyn Bone's work on the "postsouthern" and Scott Romine's work on the mechanically reproduced and media-made "post-South," Kreyling explores a diversity of texts and films in which memory and history take center stage, probing difficult issues such as the applicability of Holocaust and trauma studies to the narrative remembrance of slavery and the role that collective memory plays in key canonical texts like Toni Morrison's *Beloved*. More recently, Daniel Cross Turner's *Southern Crossings: Poetry, Memory, and the Transcultural South* (2012), examines the work of a variety of southern poets, from Robert Penn Warren and James Dickey to Betty Adcock, and Charles Wright, Yusef Komunyakaa, and Natasha Trethewey, reconceiving in the process theories of collective remembrance on regional, national, and transnational levels, while examining trauma alongside other modes of memory, including nostalgia, primal and cartographic memory, and countermemory.

Trauma theory's privileging of the testimonial power of literature resonates with the emphasis in southern studies on the aesthetic power of certain forms of literature that bear witness to difficult histories. As Felman and Laub argue in *Testimony*, in order to address "the consequent, ongoing, as yet unresolved crisis of history," one must turn to literature, for "literature becomes a witness, and perhaps the only witness, to the crisis within history which precisely cannot be articulated, witnessed in the given categories of history itself" (xviii). Neo-slave narratives, such as Edward P. Jones' *The Known World* (2003), Sherley Anne Williams' *Dessa Rose* (1986), Valerie Martin's *Property* (2003), and Octavia E. Butler's *Kindred* (1979) revise both the content and form of the historical record as they raise postmodern questions about how that record has been constructed through erasure. Works such as William Styron's *The Confessions of Nat Turner* (1967), Alex Haley's *Roots* (1976), and Ernest Gaines's *The Autobiography of Miss Jane Pittman* (1971) turn back to the past to probe the origins and consequences of racial violence. Literary memoirs, such as Lillian Smith's *Killers of the Dream* (1949) and Anne Moody's *Coming of Age in Mississippi* (1968) assert the impact of traumatic historical events on individual memories. Contemporary texts like Morrison's *Beloved* (1987) have become magnets for work on trauma: there has been a surge of work that addresses *Beloved*'s portrayal of physical and emotional injury and the relationship between individual recovery and the complex sociopolitical heritage that the novel registers in aesthetically inventive ways. Critics such as J. Brooks Bouson (1999) have focused on how Morrison utilizes literary techniques that mirror at a formal level the effects of trauma, noting the novel's insistence on circling back to violent events, and its disrupted timeline, structures of belatedness, and withholding of important information, as well as its literalization of the haunting past through a ghost. Roger Luckhurst, author of *The Trauma Question* (2008), addresses *Beloved*'s status as "a formative text in literary trauma studies" (90), and Evelyn Jaffe Schreiber's *Race, Trauma and Home in the Novels of Toni Morrison* (2010) examines issues of slavery and inherited trauma in Morrison's novels, paying particular attention to the "core cultural trauma of slavery" (1).

The work of William Faulkner has also frequently been read through the lens of trauma theory: Greg Forter, in "Freud, Faulkner, Caruth: Trauma and the Politics of Literary Form" (2007) and "Faulkner, Trauma, and the Uses of Crime Fiction" (2007), details Faulkner's relationship to trauma theory. Richard Godden's work, in *William Faulkner: An Economy of Complex Words* (2007) and *Fictions of Labor: William Faulkner and the South's Long Revolution* (1997) marks how Faulkner's late fiction registers the economic and racial traumas of the South's delayed modernization; in both books, Godden links stylistic aspects of Faulkner's writing to a generative social trauma – a labor trauma – which constitutes its formal core. And in "Not Even Past": *Race, Historical Trauma, and Subjectivity in Faulkner, Larsen, and Van Vechten* (2010), Dorothy Stringer examines William Faulkner's *Sanctuary* and *Requiem for a Nun* (1951), drawing upon the work of Judith Butler, Joan Riviere, and Freud to illuminate how these novels stage fantasies about race and gender and illustrate the racialization of trauma as a discursive phenomenon. In Stringer's reading, Faulkner frames slavery and institutionalized anti-Black racism as key structural determinants of national history and individual identity.

Issues of collective memory have long been a focal point in southern studies, as each generation of Americans since the Civil War has had to deal with the structural and generational memory of slavery. Whereas dominant (White) culture holds the collective memory of slavery as a moral, political, or economic wrong righted by the Civil War and a century of activism that followed, African Americans hold countermemories based on

ongoing experiences of discrimination. As Leigh Anne Duck has powerfully articulated in *The Nation's Region: Southern Modernism, Segregation, and U.S. Nationalism* (2006), White southerners have relied upon an identity narrative closely bound to specific modes of memorializing the past in ways that block and prevent ethical modes of witnessing. As she demonstrates, strategies of White southern public memorialization have historically “cast purportedly traditional values, including White supremacy, as immutable elements in a culture that maintained an anomalous relationship to time” (159). The construction of the South as backwards, damaged, and anti-modern was part of larger national interests that necessitated seeing the region as the figure of an otherness to the nation at large, and as a site where national racist practice and ideology could be contained and localized. The South’s supposedly specific identity crisis is thus part and parcel of a larger national obsession with racial trauma, White victimization, and American “innocence.”

Thus, scholars such as Deborah Cohn and Jon Smith (2004) have reminded us that though the South has long been seen as the exception within American exceptionalism – and as a particular space of trauma – it is necessary to “look away” from an insular view of the South to instead explore links between the South and developing countries with similar economic histories of belated capitalist modernization, slavery, and exploitation of labor and raw materials. In recent years, southern studies has embraced work which sets trauma in transatlantic terms: Dave Eggers’ post-Katrina novel *Zeitoun* (2009), which centers on a Syrian immigrant and his American-born family; Erna Brodber’s diasporic novel *Louisiana* (1994), which features connections between the U.S. South and the Caribbean; and Cynthia Shearer’s *The Celestial Jukebox* (2004), which intertwines the stories of a Chinese-American grocer and a young African immigrant and sets them against a soundtrack of American melodies that compose a global pop culture. Scholars such as Maureen Ryan have explored how novels like Lan Cao’s *Monkey Bridge* (1997) draw parallels between traumatic experience in South Vietnam and the U.S. South, and work has been done on other writers who have confronted the trauma of the Vietnam War – Jayne Anne Phillips, James Webb, Winston Groom, Barry Hannah, and Robert Olen Butler – through a particularly southern lens. Meanwhile, Deborah Cohn, in *History and Memory in the Two Souths: Recent Southern and Spanish American Fiction* (1999) and George Handley, in *Postslavery Literature in the Americas: Family Portraits in Black and White* (2000), have explored interconnections based on shared traumatic histories between the U.S. South, Latin America, and the Caribbean.

Furthermore, New Orleans, with its African, French, Spanish, Caribbean foundations, and transatlantic history, has been a site of national trauma and global anguish in the wake of Hurricane Katrina (2005). The growing collection of post-Katrina literature, which offers opportunities for scholars working with trauma theory, includes John Biguenet’s acclaimed plays, *Rising Water* (2006) and *Shotgun* (2009); Tom Piazza’s novel *City of Refuge* (2008) and his post-Katrina polemic *Why New Orleans Matters* (2005); James Lee Burke’s novel *The Tin Roof Blowdown* (2007), as well as his short story collection *Jesus Out to Sea* (2007); Jesmyn Ward’s novel *Salvage the Bones* (2011); Chris Rose’s essay collection *I Dead in Attic* (2005, 2007); inventive memoirs such as Jerry Ward’s *The Katrina Papers: A Journal of Trauma and Recovery* (2009) and Joshua Clark’s *Heart Like Water* (2007); poetry by Raymond McDaniel, Patricia Smith, and Katie Ford; as well as numerous collections, such as Jarrett Lofstead and Joe Longo’s *Life in the Wake: Fiction from Post-Katrina New Orleans* (2007). A wave of graphic

novels has also emerged, forming innovative visual and narrative responses to the problem of writing trauma: Brad Benischek's *Revacuation* (2007), Mat Johnson's *Dark Rain* (2011), and Josh Neufeld's *A.D.: New Orleans After the Deluge* (2009) are notable. Many of these plays, poems, essays, memoirs, and graphic novels make political as well as aesthetic statements, highlighting the failed crisis management, the endemic racial and economic inequity, the lasting environmental damage, and the mix of carelessness and compassion that defined the human response to the disaster and contributed to its traumatic impact.

Theories of the Global South and conceptualizations of the U.S. South as a postcolonial space, when combined with a focus on trauma, stress the need to rethink some fundamental aspects of current theories, for trauma has been a category largely codified by Western medical and psychological institutions and grounded in events and processes of Western modernity. Though Cathy Caruth wrote that in "a catastrophic age" such as ours, "trauma itself may provide the very link between cultures" and between disparate historical experiences (1995, 11), there has been insufficient exploration of how Western theoretical and diagnostic models translate into non-Western contexts, and how conceptions of memory in non-Western contexts challenge and revise dominant Western conceptions. If, as Caruth argues, "history is precisely the way we are implicated in each other's traumas" (*Unclaimed* 24), then Western histories are, some scholars suggest, tied up with histories of colonial trauma. While two collections of essays, *Trauma and Dissociation in a Cross-Cultural Perspective: Not Just a North American Phenomenon* (2006) and *Honoring Differences: Cultural Issues in the Treatment of Trauma and Loss* (1999, 2010, 2011), have explored the relationship between cultural difference and trauma, and postcolonial critics and theorists like Jill Bennett, Sam Durrant, Linda Hutcheon, David Lloyd, and Rebecca Saunders have suggested theorizing colonization in terms of the infliction of a collective trauma, effectively reconceptualizing postcolonialism as a post-traumatic cultural formation, scholars within southern studies have just started to explore these interconnections.

Despite trauma's conceptual thorniness and complicated history, southern studies seems set to foster sustained engagement with it. As scholars of the U.S. South continue to explore the Global South, moving away from an outdated model of regional exceptionalism, the plantation, as site and source of traumatic inheritance, will continue to be a focal interest, as will further conceptualizing collective cultural trauma. Comparative work will necessitate additional investigations of what trauma means across an array of cultural, historical, political, and social experiences. As myths about the monolithic homogeneity of "the South" continue to be deconstructed, the internal diversity of the region will foster complex modes of thinking about the relationship between racial and ethnic identity and trauma, especially in regard to African American and Native American identity. Added studies will also need to be done on late 20th and early 21st century experiences that are still being narrated – Katrina, 9/11, and continued experiences of racial, sexual, and economic trauma. As southern studies increasingly focuses on issues of mass media, including cinema, and its reception, there will likely be work on what Alison Landsberg terms "prosthetic memory," or memory enabled by mass cultural communication and commodification. Without a doubt, however, southern literary studies' continued commitment to the importance of language, and to the specificity of historical time and place, will continue to cultivate nuanced work on how literature configures and refigures trauma through the aesthetic power of narrative.

- 2 The New Southern Studies originates in Houston A. Baker, Jr. and Dana Nelson's call in a 2001 special issue of *American Literature* on "Violence, the Body, and 'The South'" for a "new Southern studies [...] that welcomes intellectual, multiparticipant, and revisionary complexity," and that embraces "the complication of old borders and terrains, [and] wishes to construct and survey a new scholarly map of 'The South.'" (243). This call has been continued in work published in the University of Georgia Press's New Southern Studies series, in publications such as Kathryn McKee and Annette Trefzer's special issue of *American Literature* on "Global Contexts, Local Literatures: The New Southern Studies" (2006), and in book-length projects such as Jon Smith and Deborah Cohn's edited collection *Look Away! The U.S. South in New World Studies* (2004). These projects rely upon a destabilized view of the South, positioning it as a porous, dynamic construct, rather than as an insular and contained space with fixed cultural and geographical demarcations.

# CHAPTER 8

## Theory in Practice

### King Lear: *The Transference of the Kingdom*

*Jeffrey Stern*

Jeffrey Stern is a research and clinical graduate of the Institute for Psychoanalysis, and a member of the faculty. He is a lecturer in the University of Chicago's psychiatry department and a member of the psychiatry faculty at Rush University, where he lectures on Shakespeare and film.

#### I

The transference of Lear's kingdom occasions the very tragedy it is designed to prevent.<sup>1</sup> Lear's plan is to avoid future strife between his three daughters by publishing their several dowers – that is, by dividing his kingdom among them – and divesting himself of power. It has been a convention of criticism since Coleridge to regard the plan as foolish, even absurd, but Harry Jaffa has demonstrated convincingly that it is the strategy of a leader skilled in the complexities of *Realpolitik*.<sup>2</sup> By placing the favored Cordelia between Goneril and Regan in the center of the kingdom and bequeathing to her the lion's share of the land and power, Lear reduces the likelihood that his elder, dangerous daughters will be able either to attack one another or to join in league against Cordelia and her disturbingly foreign husband.

The plan, however, is not only public and political but personal and psychological, not only (indeed, I think, not crucially) about the division of the state and the loss of his lands but rather about the division of the self and the loss of his heart – of Cordelia. The time compels Lear to give away the child whose minority has allowed him to defy the concerns of age. He associates the loss of this child with the loss of life itself. Following her marriage he will “crawl toward death” (1.1.41).<sup>3</sup> He does not wish to let her go. Although his “last and least,” she is his “joy” (ll. 82, 83). Division of the kingdom and divestiture are the means by which he can outwit time’s demand and prevent her departure. He will ransom his kingdom for his love. By giving Cordelia her portion while he

*Original publication details:* Jeffrey Stern, “King Lear: The Transference of the Kingdom.” *Shakespeare Quarterly* 41.3 (Autumn 1990), pp. 299–308. Reproduced with permission from Johns Hopkins University Press.

lives, he will block her passage across the sea with a husband<sup>4</sup> and keep her in Britain with him to rule. He would “set [his] rest / On [Cordelia’s] kind nursery” (ll. 123–24).

Yet, like Hamlet, Lear delays. Each daughter’s portion has been decided: Kent and Gloucester discuss the shares planned for Cornwall and Albany:

KENT	I thought the King had more affected the Duke of Albany than Cornwall.
GLOUCESTER	It did always seem so to us; but now, in the division of the kingdom, it appears not which of the dukes he values most, for equalities are so weigh’d that curiosity in neither can make choice of either’s moi’ty. (ll. 1–7)

Burgundy is fully aware of what Cordelia’s husband shall receive:

Most royal Majesty,  
I crave no more than hath your Highness offer’d,  
Nor will you tender less.  
(ll. 194–96)

Nonetheless, the “great rivals in [his] youngest daughter’s love” (l. 46) have long in his court made their amorous sojourn and still require answer. Stanley Cavell, in his beautiful essay “The Avoidance of Love,” points out that divestiture would leave Lear powerless – and thus feeling shamefully unworthy of love.<sup>5</sup> Lear’s plan requires another turn of the screw: a master stroke to regain the prestige that in divesting he must lose. Thus he conceives the love trial.<sup>6</sup>

This ceremony, which is to precede the announcement of the name of Cordelia’s husband and in which dowers are exchanged for vows of love, is, in its staging and its intended effect, that of a marriage, preeminently a marriage to Cordelia.<sup>7</sup> Her suitors do not attend. Pledging her truth of love to Lear, she will in effect be plighting her troth to him, thereby nullifying, annulling, as it were, the force if not the fact of her vows to Burgundy. Lear’s will be the prior, the ultimate claim of her affection as well as of her allegiance. The same will obtain for Goneril and Regan: he will give his lands to their husbands after the daughters have sworn a husband’s prerogative to him. That which Lear describes, then, as his “darker purpose” (l. 36) is, in effect, to regain by marrying its new queen(s) the kingdom he has renounced.

By making his daughters’ portions depend on their professions of love to him rather than upon loving actions, Lear seeks ultimately to establish a new dispensation in which words will not merely symbolize but will equal deeds; for to retain his royal authority without the lands that would underwrite it, he requires a kingdom in which merely to possess the “name, and all th’ addition to a king” (l. 136) will be to be a king in deed.

If language is to be taken not as symbolic but as literal action, it follows that the child who loves best will say best, that speech is a fair (indeed the only possible) measure of love. By such logic, Lear’s decision to award the most ample third of his kingdom to the best-spoken child is reasonable. Naturally, he expects this child to be Cordelia. He has reason to think so: “Her voice was ever soft, / Gentle, and low, an excellent thing in woman” (5.3.276–77).

Regan and Goneril are eager to participate in the trial because if words no longer depend on deeds, if action no longer joins signifier and signified, rhetoric alone will be power, and their claims, by definition, will be as valid as those of Cordelia. They may gain most by speaking best; loving will have fallen beside the point. This is why Cordelia

is angry. In a game in which to speak love is everything, her love itself will mean nothing. To speak it would be to equate it qualitatively with the love of her sisters, would be, in other words, to lie. Indeed, only a lie, in the sense of only words emptied of their significance, can win. So Cordelia says nothing.

Critics have both praised Cordelia's devotion to truth and blamed her proud obstinacy. Those who blame her assume that Lear's plan is a sound one and that if she had humored him, the play would have been comic and, one presumes, short. Let me take a moment to say that I think not. Had Shakespeare been required to write this play following the success of Lear's plan (i.e., Cordelia marries Burgundy and sets up housekeeping with her father), the outcome would have been the same: his rage at Cordelia is not a function of her bad behavior but of his inability to tolerate the waning of his strength and influence, a consequence of the fact (and not the form) of her marriage and the changes in his relations to her it mandates. No amount of solicitousness from Cordelia could protect him ultimately from the jealous conviction that he is no longer preeminent in her love, that rival claimants are being honored at his expense. Indeed, I think that what we see in Lear's outrage over Goneril's malicious neglect is a fast-forwarded version of what he would eventually feel even in the entirely devoted care of Cordelia, because his rage is fundamentally a rage against Time, a rage against the dying of the light. Inevitably he would break with her (perhaps following her decision to accompany her husband to the Continent – though the reason hardly matters), after which Lear would flee in fury to Goneril for recompense. Seeing her chance, Goneril would use her father's power and influence to prepare a campaign with Regan against Cordelia before discarding Lear and launching the play we know. My point is that Lear's tragedy is crucially one of character, not circumstance, and that in time his fate, like murder, will out.

Returning then to the opposing conceptions of Cordelia, I would say that discussions regarding her either as proudly obstinate or valiant for truth nevertheless beg the question of Lear's reaction – which cannot be thought to follow necessarily from what Cordelia says. However startled and displeased he is by her answer, he has other options – especially inasmuch as it is her “bond” speech, rather than what clearly strike him as her not-very-sweet “nothings,” that precipitates his rage. “Good my Lord,” she says,

You have begot me, bred me, lov'd me. I  
 Return those duties back as are right fit,  
 Obey you, love you, and most honor you.  
 Why have my sisters husbands, if they say  
 They love you all? Happily, when I shall wed,  
 That lord whose hand must take my plight shall carry  
 Half my love with him, half my care and duty.  
 Sure I shall never marry like my sisters,  
 To love my father all.

(1.1.96–104)

Jaffa points out that Lear might well laud her truth as precisely the response he seeks (as, in effect, the correct answer to the riddle of the three caskets that Portia's deceased father asks his daughter's suitors in *The Merchant of Venice*), the plain leaden truth that unlocks the secret to love's golden treasure.<sup>8</sup> Moreover, Cordelia's attack on her sisters' claim that while they have husbands they can love their father all implies a defense of the authenticity of her own love. She alone is unmarried, hence bound at this time entirely to Lear. If it can be asked why Cordelia might not compromise her truth in the service of her love, it seems

warranted to ask why might not Lear, in the interest of the plan upon which he has staked his kingdom and indeed his very life, interpret her words to his own advantage?

The answer, I believe, is that Lear finds love on Cordelia's terms intolerable precisely because these terms require that he accept all he has sought to deny. By insisting that marriage must divide her love, Cordelia insists that he accept the validity of her union to another – thus, in effect, that he accept time's tragic news of loss and change, of difference; that he recognize that the future requires giving up the past; that he see that he cannot give her away and demand all of her love, renounce his kingdom and remain a king, crawl toward death and live forever. Wishing, even saying, otherwise will not make it so. He will not endow such a truth with his name: dower it. Rather he disavows it and disinherits her – even as he banishes Kent, who swears by that truth – awarding her prize instead to the dream-sustaining rhetoric of Goneril and Regan. They have spoken well; if he is to achieve his desire, he must affirm that what they mean is what they have said.

His decision to retain the name but to forsake the function of king, and at the same time to make his daughters his mothers, inverts the oedipal law of culture, which requires the sacrifice of the incestuous object as the condition of participation in the social order. Thus he engenders a dispensation not of wish-fulfillment but of empty words and primitive, even monstrous, hunger. Figuring himself in terms of “the barbarous Scythian, / Or he that makes his generation messes / To gorge his appetite” (ll. 116–18), he commands Cornwall and Albany to “digest” (l. 28) Cordelia’s portion between them.<sup>9</sup> Not fantasy but falseness comes to rule. Edmund appears the true son by forging letters, Goneril deceives her husband, and both sisters dishonor their father in violation of their claims of love. Lear’s commands cease to be translated into deeds that satisfy his wishes. The Fool tells him he is “an O without a figure” (1.4.189–90) – as Goneril and Regan literalize when they “disquantity [his] train” (l. 245) from the one-hundred knights in his retinue to none. When his words lose all of their force, when he is to have no follower who would act on them, Lear flees into the storm and into madness.

Where the love trial failed, madness appears to succeed in reinvesting his voice with power. He exhorts the storm to rage and, as if in answer to his command, it does. At his word a joint stool becomes Goneril, the hovel a courtroom; he is “every inch a king” (4.6.107). Yet even madness cannot protect him from his distress over Cordelia’s truth of love divided between father and husband. It is this truth that lies behind his fearful misogyny – his sense of woman as monstrously double: “Down from the waist they are Centaurs, / Though women all above. / But to the girdle do the gods” – does a father – “inherit, / Beneath is all the fiends” (ll. 124–27) – is all a husband’s, is all France’s: “There’s hell, there’s darkness, there is the sulphurous pit, / Burning, scalding …” (ll. 128–29). Female sexuality seems to Lear thus because it represents the key to his daughter’s unbearable desire of the other, of France. Thus he characterizes it horribly in imagery associated with syphilis, in terms, that is, of the venereal infection Shakespeare’s countrymen called the French disease.<sup>10</sup>

Yet, as he had by means of the love trial, Lear tries madly to transform the source of his distress into one of comfort. As it is Cordelia’s sexuality that threatens him, he would convince himself of its virtue. Having been betrayed by the artificial affection of Goneril and Regan, he appears fantastically “bedecked with weeds” (4.6.80 s.d.) in the place of Cordelia’s champion, the Fool, to advocate natural – that is, sexual – relations. He is “even / The natural fool of fortune” (ll. 190–91). He would forgive Gloucester his crime: “Thou shalt not die. Die for adultery? No” (l. 111). And he would do so because sexual activity is natural: “The wren goes to’t, and the small gilded fly / Does lecher in my sight”

(ll. 112–13) – though of course it is not Gloucester’s adultery that threatens Lear but Cordelia’s: for adultery is how he experiences her marriage to France and its betrayal of her union to him, a union that he hoped the love trial would sacrifice. He would “Let copulation thrive” (l. 114) that the very cause of his loss of Cordelia’s protection might provide protection in the form of male children – bastard sons? – who would rally to his defense: “To’t, luxury, pell-mell, for I lack soldiers” (l. 117). Such children he thinks would take better care of him than his own ungrateful progeny: “for Gloucester’s bastard son / Was kinder to his father than my daughters / Got ‘tween the lawful sheets” (ll. 114–16). But the idea of the begetting of his daughters inevitably evokes the intolerable idea of sexuality as the secret of woman’s essentially divided, her essentially duplicitous nature:

Behold yond simp’ring dame,  
Whose face between her forks presages snow,  
That minces virtue, and does shake the head  
To hear of pleasure’s name;  
The fitchew, nor the soiled horse, goes to’t  
With a more riotous appetite.

(ll. 120–25)

It is precisely the fear of a secret, ineluctable nature within his daughter that plagues another of Shakespeare’s tragic fathers, Brabantio, the fear of a secret doubleness that would compel Desdemona to be ruled by another authority. Brabantio claims she is entirely “opposite to marriage” (1.2.68), “A maiden never bold; / Of spirit so still and quiet that her motion / Blush’d at herself” (1.3.96–98) and insists it can only be witchcraft that allows her to fall in love with what she fears to look on. Yet Desdemona’s speech to her father before the Senate is nearly Cordelia’s to Lear before the court: “I do perceive here a divided duty,” she tells him:

To you I am bound for life and education;  
My life and education both do learn me  
How to respect you. You are the lord of duty;  
I am hitherto your daughter. But here’s my husband,  
And so much duty as my mother show’d  
To you, preferring you before her father,  
So much I challenge that I may profess  
Due to the Moor my lord.

(ll. 183–91)

And as does Lear, Brabantio conceives of the desire of his daughter for a husband as monstrous. Thus when the empathetic if not honest Iago<sup>11</sup> tells Brabantio, “an old black ram / Is tupping your white ewe” (1.1.89–90), that Brabantio will have his daughter “cover’d with a Barbary horse” (l. 112), as if she were the centaur of Lear’s tortured fantasy, Brabantio says the elopement described is “not unlike my dream” (l. 143).

Madly Lear reasons that if he would possess his daughter’s love – compete, that is, with a husband – he must be a husband, must “die bravely, like a smug bridegroom” (4.6.198), as he says he will when Cordelia’s soldiers announce that she is near. He imagines he has done so: when he awakens, he cannot remember “where [he] did lodge” (4.7.70) the previous – the fantasized wedding – night but thinks he is in France – that is, in the place of Cordelia’s husband, the son-in-law whom he would have stolen upon

and killed. His fantasy leaves him once again burning – this time with unutterable shame, the physical hell of his unsweetened imagination having become a moral one: he is “bound / Upon a wheel of fire, that [his] own tears / Do scald like molten lead” (ll. 47–49), for he believes his incestuous thoughts – thoughts he cannot distinguish from deeds – have killed her: “You are a spirit, I know. When did you die?” (l. 50). Cordelia’s living presence makes possible his awakening as if from death itself – “You do me wrong to take me out o’ th’ grave” (l. 46) – for it absolves him of his terrible guilt. So too her loving forgiveness disabuses him of his madness (“The great rage, / You see, is kill’d in him” [ll. 80–81]) and fills him with joy because it reawakens his original fantasy of their union: “Come, let’s away to prison. / We two alone will sing like birds i’ th’ cage” (5.3.8–9). They are not in France but in Lear’s “own kingdom” (4.7.78). France himself has disappeared. The “wall’d prison” (5.3.18) to which Lear imagines they will escape is a kind of faery land where they will live, as it were, gathered within the artifice of eternity, singing, praying, telling old tales, overseeing and outliving “packs and sects of great ones, / That ebb and flow by th’ moon” (ll. 18–19); taking upon them the secrets of the forbidden, “the mystery of things” (l. 16), with the license of heaven – as if they were “God’s spies” (l. 17). “Upon such sacrifices,” Lear tells his child, “the gods themselves throw incense” (ll. 20–21).

Lear’s experience has transformed the rhetoric and intention though not the nature of his desire. Where he had sought to bribe Cordelia for her pledge of love, now he speaks exquisitely of his own love, and he no longer cares either for the name or “all th’ addition to a king” (1.1.136). The magical vision and communion of lovers will make world enough of prison. Cavell writes:

he has found at the end a way to have what he has wanted from the beginning ... partnership in a mystic marriage ... it is their love itself which [for Lear] has the meaning of sacrifice. As though the ideas of love and of death are interlocked in his mind – and in particular of death as a payment or placation for the granting of love.<sup>12</sup>

It must be. It is this love that cannot sustain or be sustained by the world, that sacrifices the world to itself. This love, by collapsing the difference between father, husband, and son, and between wife, mother, and daughter, collapses the difference upon which linguistic, psychic, and social structure depends. At the end Lear can no longer distinguish Cordelia’s breath from the stillness, her voice from the silence, her life from her death. His words collapse into the action they can no longer symbolize: he dies like a bridegroom on the body of his child – the play’s cruel justice an expression of Freud’s law of culture: for the wages of incest are death.

## II

I think that to say all of this is, nonetheless, to leave much unsaid about the nature of Lear’s desire and about the nature of desire in the play. What he wants from Cordelia – certainly until he becomes floridly psychotic – is not sexual but maternal, as Kahn has seen. He would “marry” Cordelia in order to assure her maternal care. Indeed, it is his failure to find such care from his daughters that leads to his rage and madness. It is his professed desire to “set [his] rest / On her kind nursery” (1.1.23–24), and he becomes enraged over Cordelia’s refusal to promise him the limitless devotion he

requires. The Fool chides him for making his elder daughters his mothers, and the daughters infuriate him further by withholding the maternal responsiveness he demands. He would have Goneril feed him on the instant he commands – “Let me not stay a jot for dinner; go get it ready” (1.4.9–10) – and is shaken when she doesn’t smile at him: “How now, daughter? What makes that frontlet on? / You are too much of late i’ th’ frown!” (ll. 186–87). The “weary negligence” (1.3.13) with which she and her retainers attend him leaves him doubting his very identity: “This is not Lear. / Does Lear walk thus? Speak thus? Where are his eyes?” (1.4.222–23); and her insistence that he “disquantity his train” (l. 245) unleashes his curses. For denying him a mother’s care, he would deny her the very capacity to bear children, urging that Nature convey into her womb sterility and “dry up in her the organs of increase” (l. 276). Fleeing to Regan in hopes of sympathy and redress, he discovers – as children often discover of the parent they hope will take their part – that she is entirely in league with Goneril. Having exhausted all hope of reintegration into a world of maternal love, he flees into the storm calling on the thunder to “Strike flat the thick rotundity o’ th’ world! / Crack nature’s molds, all germaine spill at once, / That makes ingrateful man” (3.2.79). Denied mothering, his rage is such that he would destroy the round maternal belly of the very earth itself and abort its gestating contents.

The storm lays bare his need for maternal care: cold, wet, furious, and raving, he is, on the heath, the very image of the child the Fool accused him of being, and it is in this regressed condition that he finally finds a version of the attention he has sought – finds it not from his daughters but from the maternal males who tend him there. Kent, Gloucester, and the Fool deliver him to shelter and then dry, change, feed, warm, and soothe him before finally getting him to sleep.

Lear’s transference of the kingdom thus seems engendered by and surely to engender in him, indeed in his kingdom, a transference in the psychoanalytic sense: that is, an awakening in the present of powerful infantile feelings and attitudes. In psychoanalysis, transference reenacts what the analysand cannot or will not remember about his or her psychological past. It is thus the source of the self’s lost knowledge. Lear’s transference of the kingdom, seen in the light of the psychological transference behavior it generates, also points, I would suggest, toward earlier conflicts that the exigencies of the time have remobilized. If we regard Lear’s transference of the kingdom as linked to his transference crisis over the loss of Cordelia, and if we interpret this crisis, as the play asks us to do, in terms of a loss of mothering – or to put it more precisely, a loss of functions a mother would perform – our psychoanalytic question must be: what does the loss of Cordelia repeat?

Of course the play offers nothing about Lear’s own mother, nor about his early life. But we do know that the woman who replaces the mother in the structure of his psychological history<sup>13</sup> – the mother of his children – is dead. Given the fact that Cordelia never invokes her mother’s memory, nor for that matter does Goneril, Regan, or anyone but Lear (who mentions her only once), it seems that Shakespeare means us to suppose she has long been absent from their lives. Indeed, Lear’s words to his “last and least” encourage us to imagine that Cordelia has replaced her mother in Lear’s affection. This would seem to explain Lear’s extraordinary love for this child, and something of his father-of-the-bride’s wish not to give her up. Nonetheless I think it fails to make sense of the fact that he has “ever but slenderly known himself” (1.1.294–95), or of the extraordinary extent of his distress in the face of her marriage, or of the violence and implacability of his rage following what he experiences as her denial of him.

I would argue that Lear's proneness to rage and shame, his inability to tolerate the division of Cordelia's affection, and his fragmentation in the face of her perceived betrayal are evidence of what Heinz Kohut would call a deficit in the self, or what literary critics, also thinking of pathological narcissism, of pride, have traditionally called a tragic flaw. And this deficit stands as a scar or trace of the earliest relationship with the mother (or whatever caretaker stood in her place). Thus it is interesting that Lear calls the madness he feels "swell[ing] up toward [his] heart" "this mother" (2.4.55).<sup>14</sup> For it is as a consequence of the earliest mother-child matrix that the child's secure sense of self is established. Kohut sees such a self as a consequence of the mother's loving admiration—the gleam in her eye in the face of "his-majesty-the-baby's" grandiose exhibitionistic display of himself.<sup>15</sup>

As a result of this maternal responsiveness to the infant, this "mirroring" by the need-satisfying (m)other, which Kohut calls the "self-object,"<sup>16</sup> the child develops the internal psychic structure to regulate self-esteem. A failure of this required responsiveness inhibits such development, and hence inhibits the development of a cohesive self. In the absence of such psychological completeness, the child continues to depend on others to provide the mirroring he or she requires to maintain a narcissistic homeostasis. Kohut thus explains the extraordinary need of people with such deficits – people who, like Lear, might be said but slenderly to know themselves – for the admiration of others. Thus it is that Shakespeare's quintessentially narcissistic King Lear surrounds himself with loving – male – companions like Kent and the Fool whose devotion is absolute, and whose nature is not, like that of Lear's daughters, to divide; neither has wife or children, and the hallmark of each is loyalty: the Fool is a fool for love: he is faithful and will tarry. And thus it is that when Lear is refused the responsiveness he requires, when he is not mirrored, his sense of self begins to fade: "Does any here know me?" (1.4.222) he asks. "Who is it that can tell me who I am?" (l. 226). He has become, the Fool tells him, "Lear's shadow" (l. 227).

Inasmuch as self-objects perform crucially self-regulating functions, they are jealously regarded. Even small fluctuations in their attentiveness unsettle the equilibrium of the self and are experienced as evidence of bad faith. Indeed the subject's failure to control the self-object is felt as tantamount to a failure to control a part of his own body and gives rise to a painful sense of psychic fragmentation, which manifests itself as rage.<sup>17</sup> The loss of such objects is inevitably traumatic, and even their death is experienced unconsciously as evidence of betrayal, of willful abandonment, a common fantasy of bereaved children. It is not surprising then that Lear's sole mention of his dead wife elaborates a fantasy of her infidelity. He says that if Regan is not glad to see him when he meets her at Gloucester's, he will "divorce me from thy mother's tomb, / Sepulchring an adulteress" (2.4.129–30).

The story then that frames the story of Lear's traumatic loss of Cordelia in the play is thus a barely spoken story of the loss of her mother, and the trace, perhaps, of an unspoken story of lost maternal responsiveness in his own childhood. Unlike the loss of Cordelia, however, the story of this second loss, the loss of Lear's wife, contains the resolution to the crisis of narcissism that is implicit for Lear in its structure. This is because it leaves Lear with a new self-object in the person of Cordelia, a self-object arguably better positioned to protect his fragile narcissistic equilibrium than could a wife whose love, of necessity, was divided between husband and children. Cordelia, with no mother to require a bond of "half [her] love ... half [her] care and duty" (1.1.102), is bound in love entirely to Lear. He is thus never so happy as in the presence of this

child – she whom he calls “our joy” (l. 82) – and it is not difficult to understand the anxious terror with which he confronts her impending loss to him in marriage: the loss of Cordelia threatens him with the loss of an irreplaceable (mirroring/maternal) self-object. This is to say it threatens Lear with a catastrophic loss of self, with, in effect, the loss of his mind – exactly the whirlwind it reaps.

## Notes

- 1 I am deeply indebted to Drs. Arnold Goldberg, Henry Seidenberg, Jarl Dyrud, and Jerry Winer for their thoughts and encouragement during the writing of this essay; to Professors David Bevington and Richard Strier; and especially to my father, Richard Stern.
- 2 “The Limits of Politics: *King Lear*, Act I, scene i” in *Shakespeare’s Politics*, Allan Bloom with Harry V. Jaffa (New York: Basic Books, 1964), pp. 113–45.
- 3 All quotations of Shakespeare are from *The Complete Works of Shakespeare*, David Bevington, ed. (Glenview, Ill.: Scott, Foresman, 1980).
- 4 Jaffa argues persuasively that it is Burgundy whose status is that of the favored suitor (pp. 124–25). Thus Lear’s plan specifically blocks her crossing to France with Burgundy.
- 5 “The Avoidance of Love: A Reading of *King Lear*” in *Must We Mean What We Say?* (New York: Charles Scribner’s Sons, 1969), pp. 267–353, esp. p. 289.
- 6 Jaffa argues that the trial is a strategy to trap Goneril and Regan into accepting portions they might otherwise have been unwilling to take (pp. 128–29). But I think this is at best no more than its manifest rationale.
- 7 See Lynda E. Boose, “The Father and the Bride in Shakespeare,” *PMLA*, 97 (1982), 325–47. See also Arpad Pauncz, “Psychopathology of Shakespeare’s ‘King Lear’,” *American Imago*, 9 (1952), 57–78.
- 8 pp. 128–29.
- 9 Coppélia Kahn writes,

The play is full of oral rage: it abounds in fantasies of biting and devouring, and more specifically, fantasies of parents eating children and children eating parents. ... When Cordelia doesn’t feed [Lear] with love, he thinks angrily of eating *her*.

- See her wonderful essay “The Absent Mother in *King Lear*” in *Rewriting the Renaissance: The Discourses of Sexual Difference in Early Modern Europe*, Margaret W. Ferguson, Maureen Quilligan, and Nancy J. Vickers, eds. (Chicago: Univ. of Chicago Press, 1986), pp. 33–49, esp. pp. 41–42.
- 10 Anthony Burgess feels that the astonishing misogyny of these lines reflects a collapse of Shakespeare’s control of Lear’s character and suspects the poet himself may have been suffering from syphilis at the time he wrote *King Lear* (*Shakespeare* [London: Jonathan Cape, 1970], pp. 186, 220–22).
- 11 Stephen Greenblatt writes that “what [sociologist] Professor [Daniel] Lerner calls ‘empathy’ Shakespeare calls ‘Iago’” (*Renaissance Self-Fashioning: From More to Shakespeare* [Chicago: Univ. of Chicago Press, 1980], p. 225).
- 12 pp. 297–98 (cited in n. 5, above).
- 13 See Sigmund Freud, “The Theme of the Three Caskets,” *The Standard Edition of the Complete Psychological Works of Sigmund Freud*, 23 vols., ed. James Strachey (London: The Hogarth Press, 1966), Vol. 12, 289–301.
- 14 Kahn argues that as a result of Lear’s loss of maternal care, the repressed feminine component of his nature returns. Thus he is humiliated that “women’s weapons, water drops, stain [his] man’s cheeks” and he identifies his malaise as “*hysterica passio*” (from the Greek *hustera*, womb) – a condition brought on, it was thought, by a wandering womb. Lear would restore his “climbing sorrow,” the mother’s part, the womb, to its proper element “below” (pp. 33–34). The idea of

Lear's rage at an uncontrollable womb within himself helps to explain his wish to destroy the creative power of Goneril's womb and Nature's.

# CHAPTER 9

## Theory in Practice

### *The Weirdest Scale on Earth: Elizabeth Bishop and Containment*

*Lee Zimmerman*

Lee Zimmerman's study of Elizabeth Bishop's poetry takes an object relations perspective. Rather than focus on the tension between primitive drives and an embattled ego trying to deal with them (the Freudian model), Zimmerman examines instead the use of language to negotiate the boundary between self and other. He focuses especially on Bishop's poems about children engaging with mothers or mother figures. Dr. Zimmerman teaches twentieth-century American Literature at Hofstra University and is the editor of the journal *Twentieth Century Literature*.

At the heart of "In the Waiting Room" – the first poem in Elizabeth Bishop's last book – lies the recollection of a terrifying childhood experience:

the sensation of falling off  
the round, turning world  
into cold, blue-black space.  
(160)<sup>1</sup>

This experience has been characterized by many readers, following Helen Vendler, as "vertigo" (1977, 37), and though Vendler herself construes vertigo as "metaphysical doubt," I would like to take a harder look at what is at stake in this childhood memory, which inaugurates a volume whose last line concedes the persistence of beginnings: "(A yesterday I find almost impossible to lift)" (181). What other sense can we make of this early "falling off"?

*Original publication details:* Lee Zimmerman, "The Weirdest Scale on Earth: Elizabeth Bishop and Containment." *American Imago* 61.4 (Winter 2004), pp. 495–518. Reproduced with permission from Johns Hopkins University Press.

One way to pursue this question is to consider the passage as a stark instance of one of Bishop's crucial tropes: the destabilizing threat of what, in the poem following "In the Waiting Room," Bishop's Crusoe calls "weird scale" (164). Highlighting the way that "throughout her work Bishop loves juggling relative sizes," James Merrill points out that in "Crusoe in England" "Crusoe's flute appropriately plays 'the weirdest scale on earth'" (1989, 256). Merrill's formulation, however, seems to me a little too cheerful, by contrast with the darker sense informing Vendler's observation that "Bishop's poems ... put into relief the continuing vibration between two frequencies – the domestic and the strange" (1977, 32). But of the important early readings, perhaps David Kalstone's most clearly evokes the threat posed by such "juggling" and "continuing vibration": the "odd, habitual changes of scale" (1977, 13) in Bishop's poems, Kalstone asserts, reflect "an effort at reconstituting the world as if it were in danger of being continually lost" (12).

Focusing on this trope of instability in "In the Waiting Room" and some related work, I would like to explore the threat that impels Bishop's weird scale. We can call this the threat of "loss" that many critics have come to recognize as central to Bishop's writing.<sup>2</sup> In trying to enrich our sense of how her work explores what "loss" means, I shall have recourse to a psychoanalytic perspective, albeit one that cuts against the Lacanian grain of many previous readings of Bishop, drawing instead on the object-relational formulations of D. W. Winnicott and W. R. Bion.<sup>3</sup>

This tradition envisions the role of language very differently from that ascribed to it by Lacan. As Jane Flax maintains in her lucid contrast of Lacan and Winnicott, since for Lacan language "is not self-created, it must be alien and alienating. Language and its laws are seen as imposed on the subject from the 'outside' – by a culture that is 'alien'" (1990, 96–97). For Winnicott, in contrast, culture, including language, can occupy a "potential space" between inner and outer worlds that is neither purely subjective nor purely objective; given a "good-enough" presentation of the external world, the individual "*can* creatively transform what is given in part by bringing something of inner reality to the process" (Flax 1990, 119).

Barbara Schapiro points out that "much of the current clinical research ... would seem to belie Lacan's view of the primacy of language in the construction of subjectivity" (1994, 22). She marshals many recent theorists who share Daniel Stern's view that "the word is given to the infant from the outside, by the mother, but there exists a thought for it to be given to.... It occupies a midway position between the infant's subjectivity and the mother's objectivity [and thus] is a union experience" (qtd. in Schapiro 1994, 23).<sup>4</sup> Christopher Bollas, as Peter Rudnytsky summarizes him, "subsumes a theory of language, the alpha and omega for Lacanians, within an object relational framework, which recognizes that nonverbal affects precede linguistic representations" (1993, xvi–xvii). For Lacan, all human beings come to language in the same way, as something fixed and non-negotiable; for Winnicott and his colleagues, our encounter with language participates in an already existing *relationship* between self and world that is, necessarily, different for each of us.

Crucial to this approach is that the *conditions* of our earliest relationships shape how we experience language and other cultural formations. Winnicott sees "cultural experience" as being located in the "*potential space* between the individual and the environment (originally the object)" (1967, 100), and he claims this "intermediate area" or "transitional" realm is indispensable for "the perpetual human task of keeping inner and outer reality separate yet related" (1953, 2). Marion Milner likewise stresses those

very early “moments when the original ‘poet’ in each of us created the outside world for us, by finding the familiar in the unfamiliar” (1955, 18). But the possibility of this intermediate area where moments of poetic originality can occur depends (at least in part) on the external environment. Winnicott’s “potential space happens only *in relation to a feeling of confidence* on the part of the baby … related to the dependability of the mother-figure or environmental elements” (1967, 100), and Milner’s focus is on “the internal and external conditions that make it possible to find the familiar in the unfamiliar” (1955, 16).

Bion’s notion of “containment” provides, in my view, an especially illuminating way of posing these “conditions” and exploring how they animate Bishop’s work. Before undertaking any further theoretical elaboration, though, I would like to consider in more detail the ubiquity in Bishop’s writing of the trope of instability. An oft-quoted instance concerns her admiration for Darwin:

reading Darwin one admires the beautiful solid case being built up out of his endless, heroic observations, almost unconscious or automatic – and then comes a sudden relaxation, a forgetful phrase, and one feels that strangeness of his undertaking, sees the lonely young man, his eyes fixed on facts and minute details, sinking or sliding giddily off into the unknown.<sup>5</sup> (1966, 288)

This is pretty obviously also a self-portrait, but the anxiety implicit in such sinking or sliding into the unknown is veiled here – or isn’t really – by the “giddiness.” Writing to herself, Bishop is more forthright about the danger of such sliding off, as is suggested by two entries Kalstone cites from her shipboard journal on her first, disorienting, trip to Europe, in 1935: she sees something in the water as “*men on rafts*, poor wretches, clinging to a board or two” (Kalstone 1989, 20), and twice at dinner is “overtaken by an awful feeling of deathly physical and mental *illness* – something that seems ‘after’ me. It is as if one were whirled off from all the world and the interests of the world in a sort of cloud – dark, sulphurous gray – of melancholia” (21).<sup>6</sup>

Kalstone notes how this 1935 experience of sinking and sliding anticipates the late, very ungiddy, “In the Waiting Room,” but – if we accept that such disorientation is related to Merrill’s “juggling,” Vendler’s “continuous vibration,” and Kalstone’s “odd, habitual changes of scale” – we can begin to see its threat lurking just about everywhere in Bishop’s work. Her first volume presents “The Unbeliever,” who firmly shuts out the external world, sleeping “on top of his mast / with his eyes closed tight,” anxious about a Darwinian sinking or sliding, as he dreams, “I must not fall. / The spangled sea below wants me to fall / … it wants to destroy us all” (22). “Sleeping on the Ceiling” begins with a disorienting shift in scale –

It is so peaceful on the ceiling!  
 It is the place de la Concorde.  
 The little crystal chandelier  
 is off, the fountain is in the dark  
 (29)

– as does “The Man-Moth,” whose first line, in the act of offering a setting, dislocates: “Here, above” (14). The title of that poem, too, uneasily commingles the small (moth) with the medium (man) with the large (the title is taken from a “misprint for

mammoth"). That such weirdness of scale expresses troubled early relationships seems all but explicit at the start of "Chemin de Fer":

Alone on the railroad track  
I walked with pounding heart.  
The ties were too close together  
or maybe too far apart.

(8)

The connection between vexed early "ties" and subsequent instability concludes "At the Fishhouses," in the second volume, where knowledge of the external world derives from "rocky breasts" and is thus imagined as undependable, not merely "flowing," but, more troublingly, "flown," having left no substantiating trace (66). In "Sandpiper," in the third book, the bird's panic reflects this absence; knowing "that every so often the world is bound to shake," that on his beach "a sheet / of interrupting water comes and goes," he obsessively observes the grains of sand ("no detail too small") and, like Darwin, is "preoccupied, / looking for something, something, something" (131). And in the last volume, in addition to "In the Waiting Room," we find Crusoe's island of weird scale, also a place of giant waves where "the world [is] bound to shake" so violently, in volcanic eruptions, that the volcanoes' heads are "blown off," dependable scale dissolves, and thought itself cannot reconstitute things:

Well, I had fifty-two  
miserable, small volcanoes I could climb  
with a few slithery strides –  
volcanoes dead as ash heaps.  
I used to sit on the edge of the highest one  
and count the others standing up,  
naked and leaden, with their heads blown off.  
I'd think that if they were the size  
I thought volcanoes should be, then I had  
become a giant;  
and if I had become a giant  
*I couldn't bear to think* what size  
the goats and turtles were,  
or the gulls, or the overlapping rollers.

(162; italics added)

Such weirdness of scale seems to derive not only from "rocky breasts" or from violent explosions or from sinking and sliding away, but also from the kind of cultural representations that structure Bishop's early experience. In her prose memoir "Primer Class," she recalls the start of her formal education, an early experience of being presented with the external forms of a culture. Already haunted by her parentlessness – "I used to ask Grandmother ... to promise me not to die before I came home" from school (6)<sup>7</sup> – young Elizabeth seems hungry for meaningful symbols but also thwarted by them. She is fascinated by "long columns of numbers, handwritten," but they remain "a mystery I never solved when I went to Primer Class in Nova Scotia!" (4). She is drawn to "two rolled-up maps, one of Canada and one of the whole world" (10), and wants to meet these symbolic representations half-way – in a potential space where her own agency is

accommodated, and she is allowed playfully to “snap them up, and pull them down again, and touch all the countries and provinces with my own hands.”

These first lessons don’t, however, mediate between the internal world and the external one or help the students discover the familiar in the unfamiliar: “we didn’t sit about socially, and build things, or crayon, or play, or quarrel. We sat one behind the other in a line of small, bolted-down desks and chairs” (4). Elizabeth never does get her hands on the maps, and soon these rigid representations of identity and place serve only to confuse, as scale turns weird: “I got the general impression that Canada was the same size as the world, which somehow or other fitted in it, or the other way around” (10).

A dominant strain in the critical response to Bishop’s trope of instability – reflecting some postmodern and feminist valorizations of indeterminacy – celebrates it as her resistance to repressive, inflexible structures of meaning. Barbara Page contends that, “against the finality of closure, Bishop asserted her preference for unofficial and unstable positionings” (1993, 210). Bonnie Costello parses her “antimimetic manipulations of perspective and scale … which challenge visual and conceptual frames” (1991, 5). For Susan McCabe, Bishop’s poetry “dismantles the notion of the traditional self as it confesses to a disunified self” (1994, xvi), a position echoed in David Jarraway’s Žižekian claim that Bishop “proposes to turn a blind eye to universalist (i.e. natural, normal) notions of selfhood, constructing in their place hypothetical (i.e. synthetic, artificial) versions, whose endlessly rhetorical prospect makes true selfhood … unattainable” (1998, 250). Lee Edelman’s influential essay on “In the Waiting Room” concludes that “the critical desire to locate or to define or to frame any literal inside for that voice [the ‘oh! of pain’] to emerge from has been discredited as ideological blindness, a hierarchical gesture” (1985, 107).

It is certainly true, as such readings suggest, that Bishop’s work resists authoritarian and universalist structures, and remains alive to the vitality of the particular and unpredictable. There is some giddiness to sliding away, as her last poem, “Sonnet,” insists, slyly sexualizing and celebrating as “Freed” the “rainbow-bird … flying wherever / it feels like, gay!” (192). But to do justice to this freedom one must also take into account what threatens it. In her shipboard diary, as we have seen, Bishop equates being “whirled off from the world” with “melancholia” and “homesickness”; and as Kalstone observes, “disorientation and the threat of abandonment are very close in her mind” (1989, 21).

What has forsaken Bishop, then, is what Edelman and many others don’t allow for: an external structure that is not *by definition* alienating and repressive. Brett Millier sees in her work “the simultaneous realization of selfhood and the awful otherness of the inevitable world” (1993, 23), and even Vendler seems to take for granted “the fact that one’s house always *is* inscrutable” (1977, 33). But how much of the world *is* inevitable, and why is otherness self-evidently only awful? Is one’s house necessarily *only* inscrutable, affording no possibility of, in Milner’s phrase, “finding the familiar in the unfamiliar”?

Millier and Vendler are hardly “Lacanian,” but even they accept Lacan’s premise of the fixity of the symbolic order – an assumption strangely at odds with the frequent postmodern celebrations of indeterminacy. Jane Flax interrogates the way Lacan “assumes that if something is not self-created, it must be alien and alienating” (1990, 96), and contrasts his view with the relational one, “more compatible with postmodernism than Freud and Lacan” in that it doesn’t “require a fixed … view of ‘human nature’” (110). For Winnicott and his British colleagues, again, much depends upon the particulars of one’s early relations with others, who may respond either in a way that imposes rigid structure and thus alienates or in one that, to a good-enough degree, negotiates

with the individual's emerging disposition and thus shapes a self *capable* of giddily resisting closure or "flying wherever / it feels like."<sup>8</sup> The "permanent gap between subject and Other, self and culture," that Flax rightly imputes to Lacan can, she argues, instead be rethought as a "space" (126–27) where disposition flourishes in some dependable relation to a not too inflexibly positioned other.

To the limited extent that object relational perspectives have been taken up by literary and critical theorists, Winnicott is now a central figure. But as important to many psychoanalysts is the work of W. R. Bion, whose notion of "containment" I find especially helpful in thinking about the fragility of potential space – that is, about the possibilities and anxieties of weird scale – in Bishop's work.<sup>9</sup> For Bion, an infant's often overwhelmingly intense internal states need to be made tolerable by the mother by being taken in and returned to the infant in a more bearable form. This is the basis for constructing a relationship between inside and outside, and hence also for thinking and experiencing. Bion describes how containment operates in a psychoanalytic session:

When the patient strove to rid himself of fears of death which were felt to be too powerful for his personality to contain he split off his fears and put them into me, the idea apparently being that if they were allowed to repose there long enough they would undergo modification by my psyche and could then be safely reintegrated.... An understanding mother is able to experience the feeling of dread that this baby was striving to deal with by projective identification, and yet retain a balanced outlook. (1959, 103–4)

So-called "normal development" thus involves a caretaker with a state of mind that Bion calls "maternal reverie" and who engages in *active mirroring*:

Normal development follows if the relationship between the infant and breast permits the infant to project a feeling, say, that it is dying into the mother and to reintegrate it after its sojourn in the breast has made it tolerable to the infant psyche. If projection is not accepted by the mother the infant feels that its feeling that it is dying is stripped of such meaning as it has. It therefore reintegrates, not a fear of dying made tolerable, but a nameless dread. (1962b, 116)

As glossed by Hanna Segal, maternal reverie is the origin of the emerging self's experience of "mental stability":

When an infant has an intolerable anxiety he deals with it by projecting it into the mother. The mother's response is to acknowledge the anxiety and do whatever is necessary to relieve the infant's distress. The infant's perception is that he has projected something intolerable into his object, but the object was capable of containing it.... He can then reintegrate not only his original anxiety but an anxiety modified by having been contained. He also introjects an object capable of containing ... anxiety. The containment of anxiety by an external object capable of understanding is a beginning of mental stability. (1981, 134–35)

Although containment is originally presymbolic, Bion's view of early relations implies that language itself, far from constituting an inevitable structure of alienation, is one medium through which containment can be achieved, while containment is reciprocally one form by which the meaningful use of language can be achieved.<sup>10</sup> Bion writes of a patient who was "trying to 'contain' his emotions within a form of words.... The words that should have represented the meaning the man wanted to express were fragmented

by the emotional forces to which he wished to give only verbal expression: the verbal formulation could not ‘contain’ his emotions” (1970, 94). The failure of containment thus leads not only to an intense mental state being “stripped of such meaning as it has” with a consequent disruption of “mental stability,” but also to what Bion calls “nameless dread” or to what Winnicott analogously calls “unthinkable anxiety,” an “acute confusional state” also resulting from maternal absence (1967, 97).<sup>11</sup> In turn, the world itself no longer seems to be dependably there, as “the patient feels surrounded not so much by real objects, things-in-themselves, but by bizarre objects that are … stripped of their meaning” (Bion 1962a, 99).

Bishop is not alone among her poetic kin in exploring this terrain. In “Of Modern Poetry,” Wallace Stevens describes the challenge of a modern poem in terms that evoke an infant’s predicament. It has to develop some sense of meaningful space – to “construct a new stage” – and to “learn the speech of the place,” “face the men,” and “meet / The women of the time” (1990, 174–75). But the poem functions at once as the infant and as the infant’s first good object. In mirroring itself, in being able to “repeat / Exactly, that which it wants to hear,” it has “expressed / … an emotion as of two people, as of two / Emotions becoming one.” By such responsiveness, the poem “gives / Sounds passing through sudden rightness, wholly / Containing the mind.” Poetry as an art of containment lies at the heart, too, of James Merrill’s *The Changing Light at Sandover*, where God B reveals to DJ and JM their true subject: “MY SON MICHAEL LIT UP YOUR MINDS MY SON / GABRIEL TURNED THEM TO THE DARK FORCE WE / CONTAIN” (1982, 493).

But though she is not unique in this respect, Bishop is surely among the poets most consistently and originally engaged by such issues. When she says that “There are times … when I really start to wonder what holds me together – awful times” (qtd. in Wehr 1981, 325), and in her notebook ascribes to a severed arm the words, “this is what it means to be really ‘alone in the world’” (Page 1993, 197), we can sense how the “loss” so often taken to be central to her work is experienced as a failure of containment.<sup>12</sup> And when readers repeatedly stress that Bishop’s world is “populated by people and things whose ties to one another [are] tenuous at best and at worst nonexistent” (Lombardi 1995, 103), that her “great subject” is “discovering the strangeness, the unreality of our reality” (Ashbery 1977, 8), they are intuiting that such failure of containment produces a world of Bionian “bizarre objects.”

Bishop’s most explicit writing about her difficult early relations with her mother is the autobiographical story “In the Village,” the “vital center,” as Kalstone puts it, “from which many of Bishop’s poem’s radiate” (1977, 16). The story concerns her mother’s return from a sanitarium to the Nova Scotia village where, her father having died when she was an infant, Elizabeth has been living with her maternal grandparents and aunts. Her mother can’t cope and soon must leave again, for another sanitarium, where she remains for good; at the age of five, Bishop has seen her mother for the last time. The story’s exposition starkly presents the destabilizing family history: “First” the mother “had come home, with her child. Then she had gone away again, alone, and left the child. Then she had come home. Then she had gone away again, with her sister; and now she was home again” (1984, 252).

In the beginning was “a scream,” as the story’s first words tell us, one that seems to have permeated nature itself and the narrator’s perceiving consciousness: “A scream, the echo of a scream, hangs over that Nova Scotian village. No one hears it; it hangs there forever, a slight stain in those pure blue skies… The scream hangs like that, unheard, in

memory – in the past, in the present, and those years between” (251). Woven into the fabric of perception – partly constituting the narrator’s world – the scream is quietly associated in that first paragraph with weirdness of scale: its “pitch would be the pitch of my village. Flick the lightning rod on top of the church steeple with your fingernail and you will hear it.” (You would have to be gigantic, or the church miniaturized, to play upon its string instrument so casually.)

The mother is experienced primarily as the source of this scream. She is being fitted for a new purple dress, having decided, finally, to “come out of [the] black” (251) she has been wearing since her husband’s death five years earlier. (Her tenuous presence for the child reflects her own uncontained grief.) Both drawn to and wary of the mother, the child stands “in the doorway, watching” (252). The negotiation between self and world fails:

The dress was all wrong. She screamed.  
The child vanishes.

(253)

Bishop’s almost desperate flatness of tone here, as in the introductory family history (“First she had come home . . .”), might suggest the intensity of the child’s feelings, but rather than the mother accepting and returning them in “tolerable” form, the mother herself is overcome. Whereas containment might have constructed a potential space, an explosion undermines its possibility, and the child’s intense feelings are, in Bion’s phrase, “stripped of . . . meaning.” The world, in turn, vanishes, doesn’t seem to be really and dependably and usefully there, a disorienting condition that persists, as the scream, “alive forever” (251), becomes the very “pitch of [the] village.”

“In the Village” thus presents a scream-stained world where, the child having emotionally vanished, external objects are tenuously present or are stripped of meaning and become “bizarre.” Just as in “Primer Class,” where maps served not to locate but to disorient, here once again the symbolic order mystifies:

“There’s that mourning coat she got the first winter,” says my aunt.  
But always I think they are saying “morning.” Why, in the morning did one put on black?  
How early in the morning did one begin? (254)

Mother’s china is “painfully desirable” but “broken,” and the “innocent and small” grains of rice it bears on its surface seem present but “aren’t really there,” a hidden absence augmented by the rigid (and patriarchally inflected) imposition of language: “My aunt says that she has heard they write the Lord’s Prayer” on the grains (256).

Other objects associated with the mother likewise are “bizarre,” fail to help constitute the sense of a relatively stable, meaningful presence. The material for her new dress threatens to explode: “The purple stuff lies on a table.... Oh, look away before it moves by itself, or makes a sound; before it echoes, echoes, what it has heard!” (258–59). The mother’s creative power having been withheld, the child is compelled to “abscond with a little ivory stick,” her mother’s embroidery tool, but her anxiety about its reality precludes her making use of it: “To keep it forever I bury it under the bleeding heart by the crab-apple tree, but it is never found again” (257). Substitute sources of maternal creativity and containment are likewise scream-stained. The dressmaker puts things together, helps the outside world “fit” the self, but with “a bosom full of needles” (258)

she hardly offers a “breast” (in Bion’s explanation of containment) in which the child’s “feeling that it is dying” can “sojourn” and thus be “made … tolerable to the infant psyche.” Even though the needles are “to make nests with,” the possibility of violence seems nigh, and, indeed, the child sniffs infanticide in the air: “A gray kitten once lay on the treadle of her sewing machine, where she rocked it as she sewed, like a baby in a cradle, but it got hanged on the belt.... But another gray-and-white one lies now by the arm of the machine in imminent danger of being sewn into a turban.”

If danger is in the air, sadness spills over into the food; nourishment itself is infused with pain, and Bishop is a long way from a world where her fears can be modified and “safely reintrojected”: “My grandmother is sitting in the kitchen stirring potato mash for tomorrow’s bread and crying into it. She gives me a spoonful and it tastes wonderful but wrong. In it I think I taste my grandmother’s tears” (259). Anything so problematically introjected can’t be left at home. When the child goes out and looks in a shop window, she sees in “something new” the old, devastating story of her parents: “In the other window is something new: shoes, single shoes, summer shoes, each sitting on top of its own box with its mate beneath it, inside, in the dark” (262). And when she ventures beyond the village to the pasture, the natural world, seemingly at first a safe haven, finally is “stripped of such meaning as it has”: “For a while I entertain the idea of not going home today at all, of staying safely here in the pasture all day, playing in the brook and climbing on the squishy, moss-covered hummocks in the swampy part. But an immense, sibilant, glistening loneliness suddenly faces me” (265).<sup>13</sup>

The few times Bishop writes of even earlier experience with her mother reflect this anxiety about containment. Her memory of a “first ride on a swan boat … at the age of three” centers on a “live swan” who bit the finger of her still-mourning mother (1952, 282). Rather than giving shape to, and thus making bearable, the intensity of feeling – if we can read the swan’s bite as expressing Bishop’s own early (oral) rage, a biting of the hand that failed really to feed her – all her mother does is bleed, the inside seeping out beyond a containing boundary (both her skin and the black glove), in muted anticipation, perhaps, of the scream.

But if the scream persists in “In the Village,” it is not the only sound that does. When the child “vanishes,” she heads to Nate’s blacksmith shop and its “beautiful sound” (252), the “Clang” of metal being worked into shape. The clang can’t erase the scream from memory, but it at least offers the prospect of another sort of interaction. The scream signals a self shattered by the intensity of its feelings; the clang sounds the *shaping* of elemental forces, as Nate neither denies nor is overcome by them. The mother’s final breakdown and return to the sanitarium is precipitated by a fire that destroys part of a nearby barn; a fire is present at Nate’s too, but, rather than going uncontaminated, it is made meaningful, focused in the forge. Nate controls it with bellows, and when the “coals blow red and wild,” he doesn’t scream but “laughs.”<sup>14</sup>

The smithy is but a temporary refuge. Soon the child is removed from the Nova Scotia village to live in Worcester, Massachusetts, with her father’s parents, a period Bishop writes about in her prose memoir “The Country Mouse” (1984). This transplantation offers no escape from the threat of the scream, as “there was something ominous, threatening, lowering in the air” (17), but the most immediate threat isn’t an explosion but its opposite, suffocation. From the start, a rigid, conventionalized external world imposes itself on the child: “I had been brought back unconsulted and against my wishes to the house my father had been born in, to be saved from a life of poverty

and provincialism.” These new caretakers themselves seem depersonalized, a “surprising set of extra grandparents” who “until a few weeks ago [were] no more than names.” Indeed, their oppressiveness takes the form of an inflexible symbolic order, generic (and gendered) phrases that displace, rather than negotiate, individual identity and thus produce a “depressing” sense of unreality:

if only Grandma hadn’t such a confusing way of talking. It was almost as if we were playing house. She would speak of “grandma” and “little girls” and “fathers” and “being good” – things I had never before considered in the abstract, or rarely in the third person. In particular, there seemed to be much, much more to being a “little girl” than I had realized: the prospect was beginning to depress me. (16)

What might have served as a “transitional object” (Winnicott 1953, 2) – something the child experiences as both under its control *and* having objective existence, thus enabling meaningful relations between inside and outside – is colonized. Instead of making possible a “finding of the familiar in the unfamiliar,” Bishop’s doll isn’t a transitional object but a bizarre one, “stripped of meaning.” The grandmother asks:

“Where’s your doll? Where’s *Drusilla*? ”

Oh dear. I had dolls, back home in Nova Scotia; I was even quite fond of one or two of them. But Grandma had found them all in no condition to go traveling in Pullmans. She had bought me the best our country store could provide, and made her a checked dress herself. And when I had been reluctant to name her, she had even given her that unappealing name. The doll (I couldn’t say that name) was totally uninteresting.... I could scarcely conceal my real feelings about her. But that seemed to be one of Grandma’s ideas: a “little girl” should carry a doll when she went traveling. (Bishop 1984, 16)

The child herself becomes a kind of doll. As it did for her mother, being literally ill-fitted to the world yields what Winnicott might call “unthinkable anxiety”: “The dressmaker came.... She made me four hideous dresses, too long, too dark, and with decorations made from leftovers of Grandma’s dresses. (Forty-three years later I can scarcely bear to think of those dresses.) ... Then Grandma decided I should have long hair and braids, like ‘nice little girls’” (29).

The consequences of enforcing upon the child such generic and unresponsive cultural forms emerge as “The Country Mouse” culminates in the waiting-room episode reworked later in “In the Waiting Room.” Like the explosive scream, such rigid forms preclude a *relationship* between self and world that might make both seem real. Language having been presented as alienating, when the child is left to *read* she feels an “absolute and utter desolation” (33); but she doesn’t *feel* this feeling (it isn’t contained) so much as she is *defined* by it: “I felt ... *myself*.... I felt *I,I,I.*” To be is to be desolate, to be and no one else. For the child here, being someone doesn’t derive from being both like and unlike others, but from sheer differentiation; she has the “awful sensation” that “You are you.... You are not Beppo, or the chestnut tree, or Emma, you are *you* and you are going to be *you* forever.” Insofar as she feels herself to be “*one of them*,” this isn’t a self-substantiating connection, but a usurpation by external forms such as that of a “nice little girl”; the only alternative to “utter desolation” (if it is one) is Winnicott’s “false self” (1960, 140): “You’re in for it now,’ something said. How had I got tricked into such a false position? I would be like that woman opposite who smiled at me so falsely” (Bishop 1984, 33). The memoir ends with the child vanishing into desolation

or into its double, falsity: she is either uncontained (“It was like coasting downhill, this thought, only much worse”) or else rigidly quashed (this thought “quickly smashed into a tree”).

Which is worse, the catastrophe of being uncontained or the falsity of being a nice little girl? Nameless dread or the dread of being named? The attempt to represent this dilemma is extended in “In the Waiting Room.” As the first poem in *Geography III*, Bishop’s last and most directly autobiographical book, it evinces a concern with origins, though these origins are destabilized and destabilizing. The volume’s epigraph, from a schooltext “First Lessons in Geography,” frames the issue: can earliest contact with otherness (e.g., maps, representation) offer a sense of location? Initially, the series of questions in the lesson is answered, but soon – as it turns to the volcano, a violent threat to containment – unanswered questions proliferate dizzyingly:

*In what direction is the Volcano? The  
Cape? The Bay? The Lake? The Straight?  
The Mountains? The Isthmus?  
What is in the East? In the West? In the  
South? In the North? In the Northwest?  
In the Southeast? In the Northeast?  
In the Southwest?*

(1983, 157)

This vertiginous list ends the epigraph, as “First Lessons” leaves a student wondering: where am I? “In the Waiting Room” expands this question: if I don’t know *where* I am, how do I know *who* I am?<sup>15</sup>

It is important that such questions emerge in a waiting room. Whereas “potential space” is a way of describing a realm in which self and world can find each other, a waiting room is a zone where time is killed and nothing is supposed to happen; it is not a place of interplay “between me-extensions and the not-me” (Winnicott 1967, 100), but a nowhere that excludes both.

Winnicott holds that potential space arises only from “a confidence related to the dependability of the mother figure or environmental elements” (100), but it is the very absence of such confidence that marks Bishop’s experience here. Indeed, one of the ways that “In the Waiting Room” exceeds “The Country Mouse” is in its closer examination of how the child’s initial reading of *National Geographic* suggests this absence. In the memoir, the “desolation” is triggered when the child merely “looked at the magazine cover” (32), while the poem details the photographs she “carefully / studied” (159), photographs that, for all their exoticism, evoke an uncannily familiar – or *familial* – history and set of anxieties. “A dead man on a pole” conjures her fatherlessness, while the bizarre caption, “Long Pig,” pretending but really failing to explain, suggests the inexplicability of such a loss, the failure to make it nameable or thinkable through containment. The image of “Babies with pointed heads / wound round and round with string” evokes the imposition of thwarting external forms upon the emerging self and the dread of being named – that is, defined as a nice little girl – in such a context. The grown women are similarly thwarted, “with necks / wound round and round with wire / like the necks of light bulbs,” a condition that produces an “undependable” maternal presence, not breasts in which infantile fears can, as Bion puts it, “sojourn” and be “made tolerable,” but rather, in Bishop’s own words, breasts that are “horrifying” and “awful.”

This anxiety about maternal containment, indeed, is the ground note of the child's reading, evident in the first photograph she encounters, underlying all the others:

the inside of a volcano,  
black, and full of ashes;  
then it was spilling over  
in rivulets of fire.

(159)

"First Lessons in Geography" defines Earth as "The planet or body on which we live," but here the planet/body doesn't help to constitute an initial potential space, an interplay, and thus a sorting out, of inside and outside; rather, the inside explodes out, the intensity isn't made bearable, the original object, we might say, doesn't shape but rather screams. Something wound tightly with wire might well want to unwind with a vengeance, to blow its top.<sup>16</sup>

Confronted by this "spilling over," by her whole dislocating history, the child tries to keep things in place, to sort inside from out, to attend to a series of boundaries: "And then I looked at the cover: / the yellow margins, the date." But the initial failure of containment is repeated as "Suddenly, from inside, / came an *oh!* of pain" (160): another eruption, another shattering of language and its meanings, another scream. Although the "*oh!*" was "not very loud," it "could have / got loud and worse" (161), just as the original scream "was not even loud to begin with, perhaps" (251). As Edelman (1985) emphasizes, the source of the "*oh!*" is crucially indeterminate;<sup>17</sup> it came "from inside" the office, was "Aunt Consuelo's voice," but just as the mother's scream came "to live forever" in Bishop's memory, so too this exclamation "was *me*: / my voice, in my mouth." As with the volcano, meaningful relations between inside and outside dissolve, questions of place are revealed to be questions of identity, and the unthinkable cry of pain causes the child to vanish:

the sensation of falling off  
the round, turning world  
into cold, blue-black space  
.....  
The waiting room was bright  
and too hot. It was sliding  
beneath a big black wave,  
another, and another.

(160–61)

To "stop / the sensation," the child resorts to language and number, to a symbolic order of absolute demarcation: "I said to myself: three days / and you'll be seven years old." But at what cost? Even if language is not by definition alienating, in this context being culturally positioned is as estranging as falling, and, again, the only alternative to nameless dread is the dread of being rigidly named. To stop falling, Bishop reassures herself, "you are an *I*, / you are an *Elizabeth*," but to be "*an I*" or "*an Elizabeth*" is to be just an example, to be no one in particular, to be not herself but "one of *them*," a placement experienced as arbitrary and "awful": "Why should you be one, too?" she wonders:

Why should I be my aunt,  
or me, or anyone?

What similarities –  
 boots, hands, the family voice  
 I felt in my throat, or even  
*the National Geographic*  
 and those awful hanging breasts –  
 held us all together  
 or made us just one?<sup>18</sup>

(161)

Coming in out of the cold, blue-black, isolating space means renouncing any degree of the crucial difference necessary for relatedness. Self and others, inside and outside, aren't *related* but are "just one," a realization Bishop is loathe to confront, as she "scarcely dared to look" at the other people in the waiting room "to see what it was I was" (160). If she *is* the others (if they are "all just one"), she isn't *like* them, a distinction she quietly insists on by calling this experience of ostensible kinship "unlikely." Indeed, as unthinkable as vanishing is, "nothing / stranger could ever happen" than this being relocated in the social world. What is "unlikely" and "strange" is just what might *seem* to fend off strangeness, so Bishop goes back and forth. After the initial falling off the world, she comes back to be one of them, but then again the world slides away, "beneath a big black wave" (161), and, once more, at the poem's end, it comes back. If "The [First World] War was on" in that outside world, with intense forces going uncontained, the poem makes us see how containment's failure has loosed an even earlier war from her childhood. The waiting room is the antipode of Winnicott's "resting-place for the individual engaged in the perpetual human task of keeping inner and outer reality separate yet interrelated" (1953, 2) – a room where the failure of containment precludes such an intertwining, not a potential space but the nowhere of war.

In tracing how "In the Waiting Room" seems to hover between nameless dread and the dread of being named, I have elided the distinction between "the child" and the adult poet, between the events recalled and the act of writing about them. To some degree, the poem itself asks us to do this: adopting a childlike trimeter and a humble, sometimes markedly childlike diction ("grown-up people" [159]), the poet pretends to sound seven years old, and the poem keeps its focus entirely on the child's experience as it unfolds – in contrast, say, to "Crusoe in England," structured by the distance between past experience, on the island, and the present scene of recounting it, in England. But we can't think "In the Waiting Room" is too invested in this pretense (and couldn't think so even if, like "The Moose," it was cast in the present tense). Indeed, the transparency of the pretense is crucial. The child "didn't know any / word" (161) for her predicament, but the poet knows the poem's words; the child remains in the nowhere of the waiting room, neither in nor out, but the poet's stanzas – the term derives from the Italian for "room" – form a potential space where the inner world can find language, a place for "the perpetual human task of keeping inner and outer reality separate yet interrelated." If young Elizabeth continues to suffer from the failure of containment, the older Bishop, as poet, keeps up that perpetual task (and we might think again of how Merrill sees her "juggling relative sizes"): the task of writing her way between nameless dread and the dread of being named.

## Notes

- 1 All quotations from Bishop's poems are to *The Complete Poems* (1983), with page numbers included in the text.
- 2 Brett Millier summarizes Bishop's history of loss: "As a child, she had lost her father before she knew him, when he died of Bright's disease eight months after she was born. Her mother was deeply disoriented by her husband's death and spent the next five years in and out of mental institutions until, in 1916, she was diagnosed as permanently insane. Her five-year-old daughter would never see her again. Little Elizabeth had managed ... to construct herself a secure world in the home of her maternal grandparents in Great Village, Nova Scotia. But her father's wealthy Boston family, worried that their only grandchild would grow up backward there among the ignorant, uprooted her a year later, and she began what would become a lifetime of living as guest in other people's homes. In 1967, the most secure of these guest homes, in Petropolis, Brazil, was violently disrupted when her hostess, friend, and lover of fifteen years suffered a breakdown and committed suicide, and Bishop was once again cast out" (1990, 233; see also Millier 1993).
- 3 In working with this kind of psychoanalysis, I do not mean to shift attention away from Bishop's poems and prose to her biography. I am not aiming, that is, to trace the *sources* of the trope of instability, but rather to ponder its underappreciated suggestiveness. The events of Bishop's life and her responses to them perhaps have a role in the argument, but only insofar as these are the explicit concerns of her writing. Thus, if I am going against the grain of much previous psychoanalytic work on Bishop, I think I am going *with* the grain of her own work.
- 4 Schapiro is quoting from Stern (1985, 172).
- 5 The previous sentence of this letter refers to the "surrealism of everyday life," and what I've called the trope of instability – especially weirdness of scale – can certainly be read as Bishop's witty engagement with the literary strategy of surrealism. Indeed, it can be read tellingly in a number of ways. By stressing the anxiety implicit in weird scales, I'm hoping to help us grow more acute to the complexities of Bishop's attitude and tone, certainly not trying to obscure the playfulness and bravery that are never too separable from anxiety and terror in her work.
- 6 Kalstone is quoting from the Bishop notebooks at Vassar College Library.
- 7 Unless otherwise indicated, all citations from Bishop's prose are to *The Collected Prose* (1984), with page references included in the text.
- 8 Winnicott stresses that the "capacity to be alone" depends upon an early sense of maternal presence: "Although many types of experience go to the establishment of the capacity to be alone, there is one that is basic ...; *this experience is that of being alone, as an infant and small child, in the presence of mother*. Thus the basis of the capacity to be alone is a paradox; it is the experience of being alone while someone else is present" (1958, 30).
- 9 As Rudnytsky comments, both in Britain and the United States "the perspective on psychoanalysis adopted by most academics has been filtered through the French postmodernist lens of Jacques Lacan, rather than the humanist lens of the English Winnicott. There must be ten literary critics conversant with Lacan's *Écrits* for every one who has read Winnicott's *Playing and Reality*" (1993, xi). For an overview of the British object relations tradition out of which Bion and Winnicott both emerge, see also Greenberg and Mitchell (1983).
- 10 As James S. Grotstein emphasizes: "it is important to differentiate Bion's conception of containment from the mirroring mother as denoted by Lacan, Winnicott, and Kohut.... Bion's conception is of an elaborated primary process activity which acts like a *prism* to refract the intense hue of the infant's screams into the components of the color spectrum, so to speak, so as to sort them out and relegate them to a hierarchy of importance and mental action. Thus, containment for Bion is a very active process – which involves feeling, thinking, organizing, and acting" (1981, 134n).
- 11 R. D. Hinshelwood, whose *Dictionary* has informed my discussion of containment, writes that "nameless dread" is "a term first used by Karin Stephen" in 1941, and "was later given a fuller and specific meaning by Bion to describe a state of meaningless fear that comes about in the context of an infant with a mother incapable of 'reverie'" (1989, 349). I wonder whether Bion fixed on this sort of melodramatic term as a reminder of the predicament of trying to give the nameless a name.

- 12 This failure of containment is aptly summarized in Alan Williamson's (implicitly Bionian) observation that "if Bishop characteristically distanced emotion, it was partly because emotion for her – and especially feelings of despair, loneliness, apprehension – tended to become immense and categorical, insusceptible to rational or, in poetry, to structural counter-argument" (1983, 96).
- 13 Contrast this child going forth with Whitman's, who also wonders "whether that which appears so is so, or is it all flashes and specks?" but who finally believes in his real connection to things. Rather than screaming, the mother in "There Was a Child Went Forth" is characterized by her "mild words"; rather than one with broken china, there is a "mother at home quietly placing the dishes on the supper-table." Vendler cites Whitman's poem as another instance of the "momentary vertigo" (38) she finds in "In the Waiting Room," but while the comparison is suggestive it serves in my view to highlight the crucial differences between the two children going forth.
- 14 Patricia Yeager perceives in the story "the alienating necessity – for the woman writer – of escaping from the mother's scream into the father's speech" (1988, 136). This formulation typifies the way Lacanian-inflected readings assume a fixed set of conditions: the mother can only scream, the father's speech is necessarily alienating, and gender determines the child's response. Although it is true that Winnicott gives insufficient attention to gender (see Flax 1990, 120–26, and Kahane 1993), all of Yeager's assumptions are debatable, as I have argued above.
- 15 Perhaps the paradigmatic posing of this question in American literature occurs in *Huckleberry Finn*. Having been (falsely) told that an agonizing episode of separation from Huck was really a dream, Jim replies, "Is I me, or who is I? Is I heah, or whah is I? Now dat's what I wants to know" (1885, 103).
- 16 Marilyn Lombardi writes, "Like the volcanoes that the child finds pictured in her magazine, Bishop's own mother threatened to erupt in unpredictable ways; emotionally numb one moment, she would spill over in rivulets of fiery, hysterical emotion the next" (1995, 27).
- 17 Edelman's reading is acute, especially in its parsing of how issues of gender inflect Bishop's predicament, though he assumes that language by definition alienates or objectifies the self. Thus, he interprets the "Oh!" not merely as the cry "against that text" she is reading that it surely is (though it is not self-evidently against the text as a text, but rather against a particular kind of language), but also as "a cry of the female refusal of position in favor of disposition" (107), a view that seems to me to underestimate what is at stake in Bishop's very ungiddy "falling."
- 18 As this passage suggests, and as Edelman and others emphasize, the dread of being "one of them" is the dread of being defined as a (heterosexual) "woman" (or, as in "The Country Mouse," a "nice little girl") by a patriarchal cultural system. Even if, as I have implied, gender is not the only structure that can be rigidly imposed, it is certainly a crucial one in Bishop's experience of this dilemma.

# CHAPTER 10

## Theory in Practice *The Uncontrollable: The Underground Stream*

*Ildiko de Papp Carrington*

Alice Munro's stories, according to Ildiko de Papp Carrington, depict a tension between a culture of self-control and a reality of emotional eruption. In Munro's fiction, people pay a price for such restraint in the form of violence that breaks the cultural regime of control apart and gives expression to tormented feelings and negative energies. Violence is pervasive in Munro's world, from the beating of children to the murder of those with disabilities by mean children. Carrington focuses on Freud's essay "A Child Is Being Beaten" and discusses it in relation to Munro's stories about child-beating, especially her famous "Royal Beatings."

The basic values of the Scotch-Irish Protestant culture in which Munro grew up provide a key to understanding why the events watched by the detached observers in her fiction are so often secret and concealed. One central value of this culture is dramatized by a brief passage in "A Better Place Than Home" (1979), an uncollected story that served as the basis for "1847," Munro's CBC screenplay about the Irish immigrants of the 1840s.<sup>1</sup> One of its two Catholic protagonists, James Thompson, is a young Irishman emigrating to Canada. During the first storm at sea, James and all the other passengers rush up on deck. Terrified of drowning, the Catholic passengers are crying, vomiting, and praying, frantically calling on "Saint Patrick, Saint Christopher, Saint Michael, and the Mother of God." But the "Protestant family," James observes, "did not weep or pray or vomit, but crouched together and held themselves tight in their Protestant way" (115). This cultural contrast vividly dramatizes the almost superhuman physical and emotional self-control of the "tight" Protestant family.

The descendants of these Canadian Protestant immigrants still define both physical and emotional tightness as desirable. They exhibit what could be termed *claustrophilia*.

*Original publication details:* Ildiko de Papp Carrington, "The Uncontrollable: The Underground Stream" from *Controlling the Uncontrollable: The Fiction of Alice Munro*, pp. 33–70. Northern Illinois University Press, 1989. Reproduced with permission from Northern Illinois University Press.

For example, Munro describes physical tightness as a necessary ingredient of her arrangements for writing. When she writes, she sits facing a “wall” that “slop[es] down in front” of her; thus, she is “very closed in. Very tight.” She explains, “I like it that way” (“Interview”: Hancock, 110). Elsewhere she suggests, “It’s like being inside a warm wooden place” (Slopen, 77). This physically closed setting also suggests emotional tightness, repression valued as a primary virtue. To be unrepressed is to be outside the tightly closed-in community. Thus, it is significant that Harry Brooke, the babbling protagonist of “The Edge of Town” (1955), lives where he does, geographically, as well as emotionally, on the periphery of the community that views him with deep distrust and suspicion because he fails to subscribe to their ethos of silent repression. That Harry once owned a bookstore and is “a great reader of books” about Spiritualism is bad enough (369). But what the town cannot “trust” is his “naked and discomfiting talk” about those books. The adjective “naked” shows that even talk can be a form of shameful exposure. “Among the raw bony faces of the Scotch-Irish, with their unspeaking eyes, the face of Harry was a flickering light, an unsteady blade; his exaggerated flowering talk ran riot amongst barren statements and silences” (371). Such stubborn silences also characterized Munro’s Scotch-Presbyterian grandfather, whom she describes in “Working for a Living” as a man who “lived a life of discipline, silence, privacy,” a man who almost “never talked” to his son (15, 14). In “Winter Wind” the narrator describes her grandmother in very similar terms, as a woman who “had schooled herself” never to “lose control” (SIB, 206, 204). And in “The Stone in the Field” the narrator’s painfully shy maiden aunts lead a life of hard, silent, and unremitting toil and consider any decision contrary to this ethos, even the purchase of labor-saving farm machinery, “a sign of an alarming … lack of propriety and self-control” (MJ, 29).

But Munro repeatedly reveals that such rigidly silent repression and self-control have their limits. From time to time, the taut surface is shattered by violent emotional outbursts.<sup>2</sup> “[T]hese people are very controlled … on the surface, very *very* careful. Life is very circumscribed and then occasionally something – well, Gothic – will happen.” When it does, “there will be an incident that is a kind of outbreak. …” This incident “will be perhaps a murder, a fire[,] … something very black, very horrible” (Untitled, 171, 170, 171). In a later interview she has defined these Gothic incidents as “big bustings-out and grotesque crime. … There’s always this sort of boiling life going on” (“Interview”: Hancock, 93). One clue to the nature of this “boiling life” is the “junkyard” in “The Edge of Town,” “where the wrecked cars lie overturned” (368). Similarly, in *Lives of Girls and Women* the local young men bust out by drinking “like fish” and driving “like fools” (195); gory accidents are the inevitable results. The narrator of “Home,” as she returns to the family farm in southwestern Ontario where she grew up, also notes these appalling accidents: “drunks on Saturday nights manage regularly to disembowel and decapitate themselves …” (134). Musing on the reasons for their suicidal speeding, she refers to “[a]n underground stream that surfaces in the murderous driving …” (142). This image of a subterranean force suddenly splitting the earth and bursting forth in an uncontrolled and destructive fury is a metaphor for the violently “boiling life” that resists repression. The relative infrequency of these outbursts makes them all the more terrifyingly shameful when they do occur. Such an eruption first appears in one of Munro’s early uncollected stories, “At the Other Place.” A detailed analysis of this revealing story illuminates the techniques and themes developed in many later major stories.

Published in September 1955 under her maiden name, Alice Laidlaw, “At the Other Place” is narrated by a retrospective first-person narrator who is a preadolescent girl in

the time frame of the story. During a Sunday picnic with her family “at the other place,” the poor sheep farm where her father and his brother, Uncle Bert, grew up, the girl hears a conversation between her parents that reminds her of an earlier episode involving the uncle and his wife, Aunt Thelma. The flashback to the earlier episode is preceded by a description of the narrator’s parents, which not only contrasts them to Bert and Thelma but also introduces their arrival. The uncle and aunt disrupt the pleasant picnic in a climactic scene of horrible quarreling.

At the beginning of the story, the girl describes the elaborate food her mother has prepared for the picnic and her mother’s appearance in a rose dress and pink makeup. In contrast, her father looks stiff and uncomfortable in his Sunday best, but “in the fields . . . he was sure and powerful, a little more than life-size” (131). This difference between the narrator’s parents emphasizes the clearly defined “sexual polarity” that Munro says “feels good” (“Name,” 69): the conventional social role of the feminine, food-preparing, pink mother and the masculine self-confidence and power of the farmer-father in his working element, the fields. But in the marriage of Uncle Bert and Aunt Thelma, this conventional sexual difference is significantly reversed. He, too, is a farmer, but his “hungry, watchful, distempered” wife runs the show when he threshes, when he taps maple trees, and even when he is “dealing with his oldest neighbor,” whom she forces him to cheat. Uncle Bert “did not go against her in anything.” The narrator’s description of red-faced, weather-beaten Aunt Thelma, wearing “a man’s leather jacket” and always carrying a phallic stick, suggests that she has figuratively castrated her “miserable” husband. Not only powerfully male but also ferociously sadistic, she beats her children regularly, “with a leather belt or a halter strap” (“At the Other Place,” 132).

In their picnic conversation the parents tell an anecdote about Uncle Bert watching Aunt Thelma thrash a dog with a horsewhip. Bert and Thelma apparently were not yet married, for this episode is identified as occurring the “first time” that Uncle Bert brought Thelma to the farm; the family dog, who “didn’t like strangers round the barn,” had nipped her on the ankle. As the narrator’s father recalls his brother’s behavior, he is very puzzled: “Bert just stood and watched her. That was a queer thing to see” (132). What is “queer,” of course, is that Bert is not at all repelled by this violence in his future wife. His silence makes him Thelma’s accomplice in her sadism. This revealing anecdote reminds the narrator of another significant episode in which she, too, watched her aunt in blindly brutal action.

The point of view from which this memory is narrated, the powerful emotional connotations of what the narrator sees and describes, the interpretive comments that the retrospective, older narrator makes about her experience, and the connection between this remembered experience and the reason behind the quarrel at the story’s climax – all these significant elements in this story are either repeated or developed with variations in many later, major stories. In his discussion of Munro’s earlier stories, Robert Thacker has pointed out that “‘At the Other Place’ is the first story in which the narrator’s voice reveals two personae,” a child’s and a “more mature” person’s (4).<sup>3</sup> In the remembered scene, however, the child’s physical position gives the story’s simple title an additional meaning that defines the narrator’s point of view not as that of a protagonist but as that of a witness. She is in “the other place” of a first-person narrator, the position of a peripheral character quite literally on the edge of the action, looking in at and watching the frightening adult characters. “I was with Marjory, my oldest cousin, and we were looking in the window of the back kitchen, watching Aunt Thelma punish . . . Alma . . .” (132). What happens then is narrated in a way that allows the reader to comprehend far

more than the young Peeping Tom, peering in through a split in a concealing surface, can understand. Her innocent eye sees, but she records without fully articulated comprehension. Aunt Thelma

was excited, and sucked her breath in ...; she rocked on her feet to the rhythm of the blows, and her face was dark and glowing with the blood underneath. Uncle Bert came in; she was out of breath and let Alma run away. She and Uncle Bert stood looking at each other; her face looked blind, and seemed to throb with blood coming up in it; his was ashamed and desperate, but it reflected the look in hers – and in the moment of this look they seemed to me so alien and frightful that I did not need to have Marjory drag me away from the window. (132)

Both the narrator's frightened reaction to the adults' exchanged and naked "look" and Marjory's dragging her away emphasize the subliminal sexual connotations of Thelma's orgasmic rocking and throbbing and Bert's instinctive but unwilling complicity in her sadistic excitement. Seeing Marjory's "sly pale face," the narrator "angrily" asks her cousin why she is laughing. Marjory's evasive reply, "I'm older than you are," prompts the retrospective narrator, older than both of them, to interject a very important insight: "[F]rom that time on I knew there was something here I could not understand, a secret, an ugly bondage" (132). But the precise meaning of the obviously sexual "bondage" in this scene is left undefined, and is deeply confused, both by Alma's role and by her mother's masculinity.

After this flashback Aunt Thelma, ravaged by terminal cancer, suddenly arrives at the picnic with Uncle Bert and their children. The narrator remarks that she and her siblings "did not know Death to see it but were afraid of her in a different way than ever before" (132). This somewhat heavy-handed personification of death in Thelma's terrifying figure, her face "the dirty yellowish color of an old bruise" and her skin hanging "slack from the bones," begins a series of such symbolic characters in Munro's early fiction (132). These symbolic figures are "Old Bram," the scissors-man in "The Time of Death" (1956); the mysterious hypnotist in "A Trip to the Coast" (1961); and Joe Phippen, the paranoid old hermit in "Images" (1968) (Ross, 118). More significant, this description also juxtaposes the image of shameful sexual excitement with the frightening image of death: the narrator's two memories of Aunt Thelma's blind, throbbing face and of her dying face, drained of its excitedly glowing blood, are recalled one after the other.

The climax of this story is a second terrible scene between the uncle and the aunt, once again witnessed by the narrator and once again not completely comprehended. It is introduced by Marjory telling the narrator that she has to nurse her mother. Humiliated by her helplessness in the face of impending death, Aunt Thelma is now weak enough for her husband to humiliate *her*, for usurping his masculine role throughout their marriage and holding him in lifelong bondage. Although she still has her symbolic stick, she holds it up "shakily"; she has become powerless. In a quarrel about how many of the sheep on the farm belong to his wife, Uncle Bert yells at her in a voice "full of rage and loathing," a "terrible, hating, vengeful voice," mocking her and laughing "straight into her face" (133). Horrified by this eruption, the narrator's parents drag their children away from the scene, just as Marjory dragged the watching narrator away from the window. The shameful revelations of this second drama are clearly the explosive consequence of the first one, typical of Bert and Thelma's marriage. The children are bursting with bewildered questions, but their parents refuse to answer. Hastily piling their family into the truck, they drive home "in the sunlight, the golden air of July," an ironic contrast to

the dark scene of sadistic humiliation, revenge, and impending death that they have left behind them (133).

This slightly clumsy, but immensely powerful, early story can be seen as the prototype of many major Munro stories, for it contains many of the characteristic elements that recur in her later work. These include a watcher, a sense of something secret, a sudden revelation of the secret, and a struggle to control the threatening results of this revelation. The watcher is either a character – a retrospective first-person narrator or a third-person observer – or the omniscient author. The secret is something either shameful or frightening or both, temporarily concealed from the watching character. The most typical secret is often a combination of death and sex, the impending death of a family member or the character's apprehension of her or his own mortality or sexuality. A sudden split in the concealing surface reveals this secret through an unexpected event or experience that threatens the character's control. Struggling to maintain or regain control, the character may attempt to control the threatening external or internal forces, to dominate a relationship with another character, or often to do both.

For the purposes of this study, I have divided Munro's stories into four large and occasionally overlapping groups. They overlap mainly because, as already indicated, the inevitability of death hovers over much of Munro's fiction.<sup>4</sup> Haunted by her mother's death, Munro believes that it imbued her with "a great sense of fatality" and evoked a "tremendous guilt" ("What Is," 18; "Name," 70).<sup>5</sup> This sense of fatality, however, produces her compulsion to watch life: "[T]he thing I most want to do," she says, "is look at things, and see the way everything is. And I only have a few years to do that. The collection of molecules that is me isn't going to be here very long" ("Name," 71). But often what she makes her characters look at is ghosts. She peoples her fiction not only with the ghosts of dead mothers, as many critics have pointed out, but also with those of accidentally killed children and young people. Unlike Del in "Baptizing," who fights against drowning, six of her characters actually drown, and the literal or metaphorical image of a drowned corpse reappears in story after story, from *Lives of Girls and Women* to *The Progress of Love*, and "Meneseteung." Thus, even when these deaths do not constitute the major plot elements, they create a backdrop that intensifies the struggles of the living characters in the foreground. For thirty years – from "The Time of Death" (1956), through "Heirs of the Living Body" (1971), "Memorial" (1974), and "Accident" (1977), and right on to her most recent stories, "The Ferguson Girls Must Never Marry" (1982), "Miles City, Montana" (1985), and "Circle of Prayer" (1986) – Munro's fiction has been full of funerals. For her, death is one of those "intense ... moments of experience" in which she can "zero in" on life (Slopen, 76).

But death is by no means the only recurrent topic in her fiction. In discussing the fiction of other writers, Munro has made an important observation that characterizes her own work, too:

I disagree with this picture of writing that you progress from one book to the next and that you do different things, you open up new areas of your consciousness and for your readers, and that it's supposed to be a kind of step-ladder. ... It may be that you ... have to go back over and over again and mine the same material and look at it in different ways, or in the same way, and sometimes you get to it and sometimes you don't. ("Real Material," 12)

As the list of characteristic elements in her stories suggests, Munro recognizes that she returns to "the same material": "I've been writing the same kind of stories all along"

(Adachi, D3). She repeatedly returns to her sudden revelations of the submerged but rock-hard realities of life, certain sets of situations that threaten her characters' sense of control over their lives. Because her emphasis upon controlling these essentially uncontrollable realities is the central, paradoxical theme of her work, I have classified her stories into four groups according to the specific source of the external or internal power that threatens her narrators' or protagonists' sense of control. By comparing her techniques in these stories, I will show that, although the basic material of her stories remains much the same, she changes and develops her methods, especially those methods that connect her retrospective split point of view with her recurrent splitting metaphors.

In the first group is a series of stories about different characters – major male protagonists as well as female ones – presented from both the first-person and the third-person points of view. These characters observe, and sometimes participate in, external violence – not only beatings and murders but also accidents that end the lives of children. In this group of stories, the common element is the eruption of either deliberate or accidental violence that, like an underground stream that splits the earth, suddenly bursts through the seemly surface of everyday behavior. These frightening eruptions make the characters lose control of themselves or of the events in their lives, but then they struggle to regain it somehow. This pattern of eruptions, which can be traced through the thirty-nine years of Munro's fiction, climaxes in two of the stories in *The Progress of Love*, "Fits" and "Miles City, Montana." This is the group of stories I will discuss in this chapter.

In the second, and chronologically earlier group, to be discussed in chapter 3, is a series of stories told by the same first-person narrator, the unnamed little girl who appears in three stories in *Dance of the Happy Shades* and who reappears as Del Jordan, the retrospective narrator of *Lives of Girls and Women*. Like the watching narrator in "At the Other Place," who not only senses the power of both sexuality and natural death but also apprehends them in a particularly frightening synergistic combination, Del repeatedly sees these two centrally defining human experiences as closely related forces. Although both are, of course, internal forces, she sees them as terrifying powers loose in the world, powers that she must try to understand and, through understanding, somehow to control. Thus the fear of losing control and the importance of trying to maintain or regain it constitute a thematic similarity that these stories share with the first group. The two groups also have an important metaphorical similarity. "Images" (1968), one of the three stories narrated by Ben Jordan's daughter in *Dance of the Happy Shades*, and the interrelated stories of the novel narrated by Del Jordan are linked by a repeated metaphorical pattern, which reappears in the later stories of the first group. The function of this pattern, which equates the power of both sexuality and death with electric power or lightning, is analogous to the function of the pattern of eruptions that Munro repeatedly uses in the stories about violence. They both split open surfaces to reveal what is hidden inside or underneath. This analogous function is an important key to comprehending what Munro repeatedly demonstrates about sexuality, a dangerous power that threatens her characters' control.

But there are also major differences between these two groups of stories. In the first group, Munro uses different characters and also manipulates point of view in steadily more complicated and ironic ways than in the earlier Del stories. The second group, the Del stories, is also linked both thematically and metaphorically to the third and fourth groups of stories, both of which extend from Munro's first collection to her most recent collected and uncollected stories. To analyze and emphasize these important thematic and metaphorical links, I will discuss the Del stories out of chronological order. Because

Del is a writer-figure ironically ambivalent both about sexuality and her relationship to her mother, Del is Munro's most significant character. This double ambivalence and the deep internal struggles it creates in Del as a woman and as a writer link her thematically with the narrators and protagonists in both earlier and later stories.

Because Munro is much more interested in the psychological paradoxes of internal violence than in the final simplicity of external force, the third group of stories is by far the largest group. It consists mainly, though not completely, of stories about ambivalent characters struggling for power, primarily the power to control sexual encounters, love affairs, and marriages. But the situations that expose these characters' internal vulnerability sometimes also include aging or the ultimate humiliation of approaching death, especially as it affects sexuality. The vulnerability of these characters is revealed by their exposure either to sexual scenes or to scenes in which others are trying or failing to achieve control. The metaphorical link between some of these stories and *Lives of Girls and Women* is that the loss of control or the failure to achieve control is repeatedly equated with drowning, as in the climactic river scene of the novel. Thus, in this group of stories the question of control is often the humiliating question of *being* controlled by the power of sexual desire and the sexual partner. Most of the characters thus humiliated are deeply ambivalent female narrators or protagonists who abdicate their power. Like Del, they are ambivalent because a part of them wants to be controlled by the man but at the same time another part struggles for self-assertion against such control. At the conclusion of several of these stories, however, the question of which sex is in control is shown to be "beside the point" (SIB, 190). As at the end of "At the Other Place," death is in control. However, in Munro's most recent collection, *The Progress of Love*, the question sometimes has a new answer, for, although she continues to create deeply ambivalent female characters, there are also humiliated male characters and some controlling female ones. But the concept of control is shown to be ironically illusory in "White Dump" and in her satiric novella, "A Queer Streak." This third group of stories will be discussed in chapter 4.

The final group of stories is about parents and daughters, mainly mothers and daughters. These stories also examine the humiliations caused by the loss of control, but these losses repeatedly involve a daughter's failure to achieve emotional distance from her obsessive relationship with her mother. It is only in some of her most recent stories, the title stories in *The Moons of Jupiter* and *The Progress of Love*, that Munro grants these daughter-characters the emotional freedom that they seek. In these stories the daughters have become middle-aged mothers with adult daughters of their own. This last group of stories will be discussed in chapter 5.

In discussing these four major groups of stories, I will take the same freedom to slide up and down the time axis that Munro gives her retrospective narrators and protagonists. As already indicated, my basis of classification is, therefore, not primarily chronological but thematic and metaphorical. So I will not discuss the stories in Munro's six books in strict chronological order; neither will I discuss every story in every book. But within the four groups of stories that I have defined, I will generally discuss the works in chronological order, though sometimes I will also range back and forth within closely related thematic clusters in a given group to illuminate significant relationships between them. One such cluster, for example, consists of three stories in three different collections: "Lives of Girls and Women" (LGW), "Wild Swans" (WDY), and "Jesse and Meribeth" (PL) are all about adolescent sexual curiosity. Occasionally I will also discuss key stories more than once to illustrate different sets of relationships between them.

In adopting this type of organization, I will be following Munro's practice in yet another way, spatially as well as temporally. She has a uniquely nonlinear method of reading other writers' stories: "I can start reading them anywhere; from beginning to end, from end to beginning, from any point in between in either direction." The result of this non-linear reading is that she goes "into" a story "and move[s] back and forth ... and stay[s] in it for a while," as if the story were "like a house," a "structure" that "encloses space and makes connections between one enclosed space and another ..." ("What Is Real," 5). I will demonstrate the unity of Munro's fiction by making such connections myself, not only between the spaces or rooms in her carefully constructed story-houses but also between the structures of those she has built in similar architectural styles.

The shameful pattern of watching beatings and murderous humiliations that is introduced in "At the Other Place" recurs briefly in "The Ottawa Valley" (1974), and much more significantly in "Royal Beatings" (1977), "Executioners" (1974), and "Fits" (1986). Although both *Lives of Girls and Women* and *Who Do You Think You Are?* begin with a story in which a child is beaten – "The Flats Road" and "Royal Beatings," respectively – there is a significant difference: the beating episodes in "The Flats Road" are not watched by Del, the narrator. She only hears Uncle Benny's "stories" of how Madeleine, his teenage mail-order wife, beats Diane, her daughter (LGW, 22). Even though Diane has visible "bruises on her legs," at the end of the story Del's mother suggests, "Uncle Benny could have made up the beatings" (18, 26–27). This ambiguity about what happened disappears in "The Ottawa Valley," where, as in "At the Other Place," the first-person narrator actually watches her aunt beat her children. Aunt Lena's name is very similar to both Aunt Thelma's and Madeleine's, and Aunt Lena's physique and personality also resemble Thelma's. Lena has "arms ... as long and strong as a man's," dominates her husband, and beats her children (SIB, 232). Like both Uncle Bert and Uncle Benny, Uncle James, Lena's husband, "never held [the children] back from being beaten, never protested" (233). Sometimes Aunt Lena dwindles to "an unthreatening dark shape," holding a child on her lap, but when the visiting first-person narrator watches her beat her howling children, the scene repeats the earlier one in "At the Other Place" in two key ways: in the presence of the watching observer and in the humiliation evoked (238). The narrator comments that, although her cousins soon forgot Aunt Lena's beatings, "[w]ith me, such a humiliation could last for weeks, or forever" (232). Although the word *humiliation* has many meanings in this story, as I will show in chapter 5, the phrase "such a humiliation" restricts the meaning in this sentence to the humiliation of being beaten. It is this meaning that recurs in "Royal Beatings," the opening story in *Who Do You Think You Are?*, first published on 14 March 1977, in the *New Yorker*.

If the watching narrator in "The Ottawa Valley" is one of Munro's personae, the eternal duration of the humiliation with which the narrator identifies is confirmed by the second reappearance of the character that she watches, the beaten child. But in "Royal Beatings," which Munro has defined as "a big breakthrough story, a kind of story that [she] didn't intend to write at all," the narrative method she uses to describe the child's beatings changes in several significant ways ("Real Material," 21). First, in contrast to "At the Other Place" and "The Ottawa Valley," where she describes the beatings in the past tense, in "Royal Beatings" she uses the present tense, with present progressive verbs narrating the actual action: "her father is ... cracking the belt at her ..." (WDY, 17). The psychological effect created by this use of the "dramatic Present" is defined by

Otto Jespersen in *Essentials of English Grammar*: “the speaker … forgets all about time and recalls what he is recounting as vividly as if it were now present before his eyes” (238, 239). The significance of Jespersen’s reference to the speaker’s eyes is emphasized by Munro’s revealing comment on the beating scene: “I just wanted to look at it and think about it and it was a drama in my mind” (“Interview”: Hancock, 101). Thus, the point of view has also changed, for the author herself is the watching narrator here. In contrast to the first-person narrators Munro uses in the two earlier stories, in “Royal Beatings” she uses a split third-person point of view. The speaker, therefore, is not Rose, the child being beaten, but the narrating author who is watching her as the drama of the relived memory of the beating is synchronized with its narration. The dreamlike nature of this memory is suggested by Munro’s reference to “Royal Beatings” as “the story about the child being beaten” (“Interview”: Hancock, 101); this phrase echoes the title of Freud’s essay about beating fantasies, “A Child Is Being Beaten.” That Munro consciously conceived of the memory of the beating as Rose’s repeatedly relived fantasy is indicated not only by her description of the beating scene as a mental drama but also by her use of the present tense and the third person for its narration.

The third and most important difference between this story and the two earlier ones is that Rose, the child being beaten, is no longer a minor character but the protagonist. In significant correlation with this difference, the parents’ roles have also been reversed. Although Flo, Rose’s stepmother, instigates the beating because she wants Rose punished for verbally humiliating her, it is Rose’s father who beats her while Flo watches. This double change, however, does not alter one basic similarity between the reactions of the two sets of parents in this story and in “At the Other Place.” Both stories suggest that the adults’ behavior reveals something shameful about them. At the beginning of “Royal Beatings,” Rose thinks, “she could not stand to know anymore, about her father, or about Flo; she pushed any discovery aside with embarrassment and dread” (3). But because of the shift in point of view, the shameful revelations in this story include a significant addition to the adults’ behavior: Rose’s pleasurable complicity in her own beating.

In his essay “A Child Is Being Beaten,” Freud discusses the genesis of such masochism in the “high degree of pleasure and … pleasurable, auto-erotic gratification” associated with girls’ beating fantasies (173). In the first stage of these fantasies, as in “At the Other Place” and “The Ottawa Valley,” a girl watches another child being beaten by an adult. In later stages, as in “Royal Beatings,” she watches *herself* being beaten by her father. The change in the identity of the beating adult clarifies the secret significance of both Aunt Thelma’s and Aunt Lena’s powerful masculinity: they are fathers in disguise. The second stage of the beating fantasies, “the most important and the most momentous” (179), Freud defines as “a meeting-place between the sense of guilt and sexual love. *It is not only the punishment for the forbidden genital relation, but also the regressive substitute for it*, and from this latter source it derives the libidinal excitation which is from this time attached to it, and which finds its outlet in onanistic acts. Here for the first time we have the essence of masochism” (184). The similarities and differences between “At the Other Place” and “Royal Beatings” illustrate these two stages vividly.

In both stories the beating is administered in almost exactly the same way, with sexual overtones of almost orgasmic release. When Aunt Thelma beat Alma, her daughter, “[s]he was swinging the belt and it flew out of her hand, so she used the flat of her hands against the sides of Alma’s head” (132). When Rose’s father beats her, he too begins with his belt, then switches to his hands: “Her father is … cracking the belt at her when he can, then abandoning it and using his hands. Bang over the ear, then bang

over the other ear" (WDY, 17). Just as the narrator in "At the Other Place" observes Aunt Thelma's sadistic pleasure, so Rose observes the same feeling building up in her father as she watches his reaction to Flo's accusations against her. She sees the appalling revelations in his face: "It fills with hatred and pleasure. Rose sees that and knows it. Is that just a description of anger, should she see his eyes filling up with anger? No. Hatred is right. Pleasure is right. His face loosens and changes and grows younger ..." as he "starts to loosen his belt" (16). The combination of these two loosening actions is highly suggestive.

The other two participants also experience a release charged with guilt because it is felt and defined in sexually suggestive terms. After instigating and watching the sickening family charade, Flo becomes very solicitous. The cold cream she brings Rose, the tempting snack that she prepares and takes to Rose in her bedroom, and the acrobatic tricks that she later performs to amuse the family all reveal her guilt about the pleasure that she has derived from Rose's beating.

But Rose's masochistic pleasure is the most significant because it is the new element in this story and because it is both psychological and physical. During the beating she splits in half to become observer and observed, listening to her own "willing sound of humiliation and defeat," and watching herself playing her father's "victim with a self-indulgence that arouses, and maybe hopes to arouse, his final, sickened contempt" (17). The key word here, *self-indulgence*, with its autoerotic connotations, also suggests the true nature of Rose's intensely sensual enjoyment of her sweet snack. At first she tries to resist the miserable temptation to eat the sandwiches, chocolate cookies, and chocolate milk, but soon she is "roused and troubled ... by the smell of salmon, the anticipation of crisp chocolate. ..." Finally, "in helpless corruption," with chocolate syrup smeared on her fingers, she eats everything, "though she sniffles with shame" (19). The highly ambiguous connotations of *roused*, *corruption*, and *shame* do not suggest a simple, childish appetite. And Rose succumbs to its pleasurable gratification much as her father, seduced by Flo, succumbs to the pleasure of beating his daughter.

After the beating and its aftermath are both over, the family members "feel a queer lassitude, a convalescent indolence, not far off satisfaction," that, as their mutual embarrassment evaporates, gradually mellows into "a feeling of permission, relaxation, even a current of happiness ..." (19, 20). These distinctly postcoital interpretations by the ironic, omniscient narrator, who, along with Rose, has watched the royal beating, are further intensified by the story's narrative structure. The story begins with Flo's threat to Rose, "You are going to get one Royal Beating," but she does not carry out her threat of punishment immediately (1). Instead, Flo's conversation with a visitor to her store introduces the story of Becky Tyde, a dwarf deformed by polio, and Becky's late father, the prosperous English butcher who once owned a large brick house, a slaughterhouse, and an orchard. The much discussed parallels between this story and the story of Rose's beating, which it interrupts, are derived from two subtly intertwined sets of similarities.<sup>6</sup>

The first set of similarities connects Flo's steaming resentment of her stepdaughter's verbal skills and the community's envy and resentment of the well-to-do outsider. After Becky contracted polio and became deformed, Tyde kept her out of school: "He didn't want people gloating" (7). The second set of similarities emerges from the rumors that the ignorant community manufactures when its itch to gloat is frustrated. The community's malicious fantasies about Tyde and his daughter explicitly emphasize the elements only subliminally suggested by Rose's sensually self-indulgent complicity in her beating.

These rumors include tales not only of beatings but also of incest, pregnancy, and infanticide to explain why Becky was deformed and why she never left the house. Telling these “lurid” tales about Becky and Tyde, Flo “regretfully” admits, “It was all lies in all probability” (7). The adverb suggests that Flo would dearly love the stories to be true, for Tyde, with his prosperity and his position, has the same effect on the community as Rose has on Flo. Before calling in Rose’s father to beat her *for* her, Flo angrily asks, “Who do you think you are?” (13). Symbolically, the community asked Tyde exactly the same angry question when it, too, decided to call in somebody to beat him on its behalf, powerful surrogates to cut him and his pretensions of superiority down to size. “Three useless young men” were “got together, by more influential” members of the community to give Tyde “a horsewhipping in the interests of public morality” (7). Flo uses an analogous moral argument when she accuses Rose of teaching Brian, her brother, dirty words. Both arguments are transparently trumped-up rationalizations to justify persecution, for Rose silently protests that Flo has been “telling the grossest sort of lies, twisting everything to suit herself,” just as the townspeople told lies about Tyde, distorting everything to suit themselves about him (15). When he later died as a result of the vicious beating that symbolically reduced him to the source of his resented wealth, bloody “*Butcher’s meat*,” the three young men received prison sentences; but these sentences were merely more pretense, for the men were soon released and even given jobs (8).

In an essay entitled “What Is Real?” Munro has identified the story of Tyde’s beating as “a big chunk of reality,” a true “story out of an old newspaper,” that shows “the dark side of human nature, the beast let loose, the evil we can run up against in communities and families” (36). But she characteristically rejects a didactic purpose in inserting this chunk of terrible reality into her story. “I don’t do it to show anything,” she protests. “I put this story at the heart of my story because I need it there and it belongs there. It is the black room at the centre of the house,” the “structure which encloses the soul of my story,” and all the other rooms lead “to and away from” this evil black room (36). This metaphor of the house with the central black room shows why Munro uses the Tyde story to interrupt the scene of Rose’s beating: to emphasize both the psychological and the perversely theatrical parallels between them. Like the theatrical beating of Rose by her father, the trial and the abbreviated punishment of the three horsewhippers constitute a “farce” (WDY, 9). Both of these episodes are farcical performances in which every participant plays a preassigned role. So in the case of Rose’s beating, these roles are not the “savage and splendid” ones that Rose imagines at the beginning of the story, when she childishly fantasizes about a royal beating, witnessed by “a crowd of formal spectators” (1). Freud comments on the “artistic superstructure of day-dreams, … of great significance for the life of the person concerned, [which] had grown up over the masochistic beating-phantasy. The function of this superstructure was to make possible a feeling of gratified excitation …” (185). But in Rose’s case this gratified excitation is soon replaced by a shameful reality devoid of all “dignity” (WDY, 1).

Rose thinks of her father as “king of the royal beatings,” but this fantasy image is ironically exploded when she overhears him quote from *The Tempest* (1). Gassed in World War I, he constantly coughs and mutters to himself in the shed where he works. Here she overhears him speak Prospero’s lines, “The cloud-capped towers, the gorgeous palaces” (4). Although Rose does not recognize the passage, the allusion to Prospero deepens Munro’s irony by emphasizing the difference between *The Tempest* and the sordid farce in which Rose’s father performs. Prospero is the rightful Duke of Milan, so when he uses his magic powers to punish his wicked enemies, his revenge *is* a royal beating

that the usurpers richly deserve. This subtle contrast between a powerful, aristocratic magician and a chronically ill man manipulated by his wife emphasizes Munro's ironic point that a similar release of tension in "real life" swiftly degenerates from a "gorgeous" fantasy into something shabby and shameful, into *farce noire*, a vengeful triumph of the underground id (1).

This emphasis on the shameful release from analogous tensions hidden under the surface of family and community life also characterizes the aftermath of the beating, the story's epilogue, and Munro's further comments on her story. After the beating, Flo and Rose's father discuss the old men who sit in front of Flo's store. To explain the presence of the planet Venus in the evening sky, the old men make up their own fantasies: they say it is an American airship. The ignorant old men have "never heard of the planet Venus," and, Rose knows, neither has Flo (20). Just as the old men do not recognize what they are looking at, neither do the members of Rose's family recognize what they are doing. Venus is the goddess of sexual love, and there is a shameful and secretly sexual component in the sadomasochistic family farce in which all three participate. Although my references to Freud's analysis of masochistic fantasies are not meant to suggest that Munro had Freud consciously in mind, this final allusion to Venus, combined with the genesis of the tense family situation in "a dream ... go[ing] back and back into other dreams, ... maddeningly dim ... and familiar and elusive," reinforces a sexual interpretation of the dark underground of family relationships (WDY, 11).

In the epilogue, set in the present, Hat Nettleton, one of the horse-whippers egged on to get Tyde, and Flo, who egged on Rose's father and originally told her Tyde's story, are both residents in the county home for the aged. Like the formidable Aunt Thelma in "At the Other Place," the two ferocious characters have both been diminished by old age. When Rose hears Nettleton interviewed on the radio, she thinks that if she could tell Flo about the interview, Flo would have "her worst suspicions gorgeously confirmed" (22). But the completely senile Flo no longer talks or listens to anyone, although she occasionally bites her nurse, and Nettleton, although cackling with belligerent obscenity, does not say anything at all about the long-ago Tyde affair. Thus, because both characters are confined and reduced, the parallels between them continue.

Munro's further comments on the story make it clear that her psychological purpose in writing it is to control *her* worst suspicions about the shameful, hidden secrets of human nature by turning their confirmation into art: "Who told me to write [Tyde's] story? Who feels any need of it before it's written? I do. I do, so that I might grab off this piece of horrid reality and install it where I see fit, even if Hat Nettleton and his friends are still around to make me sorry" ("What Is Real?", 36).

Munro's comment implies that the desire for revenge is always burning in "the beast let loose," and this beast breaks out even more violently in a story published three years earlier, "Executioners" ("What Is Real?", 36). Here again, the watching narrator's primary emotion begins as humiliation; here again, as Sandra Djwa has pointed out, the narrative structure of the story develops a thematic parallel between two situations (186); here again, the metaphors emphasize the sudden bursting out of what was rigidly repressed; and here again, the final irony is generated by allusions to literary concepts of dignity.

Helena, the retrospective first-person narrator of "Executioners," is humiliated by her classmates' taunts about her clothes; like the narrator of "Walker Brothers Cowboy," she is overdressed by her ladylike mother. Helena puts herself into an even more humiliating situation, however, by condescending to a bootlegger's son, Howard Troy, a retarded

classmate so unteachable that both teachers and students simply ignore him. By giving him a piece of paper and a pencil, Helena brings herself to his attention.

She soon regrets her deed. Howard begins to waylay her and to torment her with sexual taunts: “*You want to fuck*” (SIB, 142). This obscenity is the spoken equivalent of the dirty words on the sidewalk in “Walker Brothers Cowboy.” In the story’s epilogue, Helena, now an elderly widow, tries to explain how deeply the word *fuck* humiliated her in the past:

It used to be a word that could be thrown against you, that could bring you to an absolute stop. Humiliation was promised, but was perhaps already there, was contained in the hearing, the being stopped, having to acknowledge. Shame could choke you. .... quantities of greasy shame, ... indigestible bad secrets. The vulnerability which is in itself a shame. We are shamefully made. (142–43)

Convinced that only she is vulnerable to such torment, Helena never tells anyone what is happening. But of course her silence and rigid repression do not work: “it had to be concealed and blotted out, stamped out, quick, quick, but I could never get it all, the knowledge, the memory, it was running underground and spurting out at another place in my mind” (143). Like the “*underground stream that surfaces in the murderous driving*” of the drunken rural drivers in “Home” (a story published in 1974, the same year as “Executioners”), this subterranean urge surfaces in murderous thoughts (142): Helena imagines horribly sadistic punishments for Howard.

Her sadistic fantasies are closely connected to her description of her relationship with the family of Robina, her mother’s sinister maid. There is a deeply rankling enmity between Stump Troy, Howard’s legless father, crippled in a mill accident, and Jimmy and Duval, Robina’s brothers. Stump and the brothers are “rivals, or fallen-out accomplices, in the bootlegging business” (148). After Robina tells Helena how much her brothers hate Stump Troy, Helena thinks of how much she hates Howard. Helena’s relationship with Jimmy and Duval suggests the hidden reason for her violent reaction to Howard’s sexual taunts: he knows what she wants. When Jimmy and Duval tickle her “to make [her] break into screams of jittery pleasure,” call her their “girl friend,” and “play-[fight] over [her], each of them grabbing [her] from the other and trapping [her] in a hard hug,” her reaction to these mock battles for her possession is obviously sexual (147). That reaction is the unacknowledged reason for her fantasy about stabbing Howard: then “all kinds of pus, venomous substances, would spurt and flow, everything would leak away” (149). Her fantasy of revenge combines an image of Howard’s suffering with an act of denial through projection, in which his tortured body becomes her tortured mind. What she is really describing is the foul purging of her own ambivalent hatred, her guilty lust not only for vengeance but for denial.

In the very next sentence after this fantasy, in a sudden associative leap forward in time, the two parts of the plot are fused (Djwa, 185–86). Helena narrates: “The fire filled the house the way blood fills a boil. It seemed every minute ready to burst, but the skin still held” (SIB, 149). Robina, who knows that her brothers have committed arson to transform *their* fantasies of revenge into reality, watches the Troys’ burning house “in a great state of excitement. She trembled and crackled, she was like a burning beam herself” (150). This scarlet simile links Robina not only with the burning house but also with the blood-filled boil of hate that is Helena’s mind. Like Helena fantasizing about Howard’s horrible punishment, Robina, who has only one arm herself, licks her chops

with sadistic relish over the legless Stump trapped in the blazing house: “He’s not going to walk out of there, is he?” (151). This gloating question echoes Helena’s earlier description of how she walked past Howard when he called “fuck” after her: “I walked past him with … my breath drawn, just like somebody walking through a wall of flame” (142). As the burning house collapses, this simile leaps into reality. Howard, whose initial attempt to rescue his father has been prevented, has been watching the fire helplessly, but suddenly he rushes into the collapsing house and dies with his father.

As the epilogue transfers the reader to the present, Helena’s sense of complicity in the bootleggers’ revenge is still festering in her mind. Although she tries to drown her memory in whiskey, to her Calvinistic conscience the fire still seems an eruption of her own secret desire: she wished and she watched. Like the constantly replayed beating in “Royal Beatings,” the fire will continue burning in her mind as long as she or anybody else “who could have remembered it” is alive (155). Confession, therefore, is not catharsis.

The Homeric allusions in the names of Helena and Troy and in the burning of the house also function in much the same ironic way as the allusions to *The Tempest* and the theatrical metaphors do in “Royal Beatings.” Helena is not a beautiful queen fought over by the Greeks and Trojans but an overdressed and sexually confused schoolgirl “play-fought” over by two bootleggers (147). The burning of the Troys’ house is not the fabled destruction of the topless towers of Ilium, but an act of arson committed against a legless man and his retarded son. Howard’s rush into the burning house is “far too late to save anybody,” although those onlookers who interpret his action as a second desperate attempt to rescue his father see him as “heroic” (152). This adjective ironically links Howard with the semidivine hero Aeneas, who carried his crippled old father, Anchises, out of the burning ruins of Troy. Anchises was crippled by a lightning bolt for boasting of the love of Venus, Aeneas’s mother. It is almost as if Munro were rewriting “A Basket of Strawberries,” once again to reject Mr. Torrance’s far-fetched fantasies about a classical dreamworld. Howard does not found a new empire, no one composes a classical epic about him, and no one has any definitive “explanations” of what he has done (152). But the pathetic difference between Vergil’s hero and the retarded, but crazily courageous, Howard subtly shifts the reader’s final sympathies from Helena to Howard. And through this completely unexpected shift, these allusions emphasize the same shameful irony that the fantasizing theatricality of “Royal Beatings” does. In both stories, the final result is murder.

Munro has defined the genesis of her stories as her desire to get “at some kind of emotional core that [she] want[s] to investigate” or to approach “something that is mysterious and important” (“What Is,” 17; Untitled, 178). These three stories – “At the Other Place,” “Royal Beatings,” and “Executioners” – all get at the same violent and mysterious emotional core, and although “Royal Beatings,” unlike the other two, is written in the third person, the role of the watching observer is clear both in the repeated splits in Rose’s perception and in the author’s comments. As already illustrated, Rose not only watches herself performing at the time but, from the retrospective vantage point of a later time, she or the narrating author also comments on what has happened earlier. At the critical moment, for instance, just before Rose’s father begins beating her, the narration is interrupted to describe Rose’s thoughts in the future: “She has since wondered about murders, and murderers. Does the thing have to be carried through … to prove … that such a thing can happen, that there is nothing that can’t happen …?” (WDY, 16). When the interrupted beating scene is resumed, Rose is seeking “rescue” by staring down at the kitchen linoleum instead of at her father’s shamefully excited face as he

removes his belt. But she sees that “the patterns of linoleum can leer up at you, treachery is the other side of dailiness” (16). The startling personification in this interpretive hindsight emphasizes the scene’s sexual significance: not the mother but the *father* beats the daughter. The displacement of the leer from the father’s far too naked face to a much safer, disguised location – the linoleum – seems to be an observation from the point of view of the generalizing narrator rather than of Rose. The distance of this narrator from Rose suggests a frightening answer to Rose’s question about murders: when the rigid dailiness is shattered, anything *can* happen, including murder.<sup>7</sup>

Murder also shatters the decent daily surface in a story in Munro’s latest collection, *The Progress of Love*. In “Fits” (1986), as in “Royal Beatings” and “Executioners,” the narrative structure develops a thematic parallel between several situations, and here again Munro’s images and metaphors dramatize a violent emotional eruption. But the manipulation of point of view is something definitely different from both the retrospective first-person point of view in “Executioners” and the third-person point of view in “Royal Beatings.” The third-person male protagonist of “Fits,” Robert Kuiper, does not observe the violence. Instead, Peg, his wife, delivering some eggs to their neighbors, Walter and Nora Weebles, discovers their corpses. Walter has murdered his wife and then shot himself. But instead of being narrated directly, Peg’s experience is related indirectly from Robert’s point of view.

Robert’s role as an observer is defined in the beginning of the story: he is described as an outsider in Gilmore, the rural community on Lake Huron where the action is set. Although his father used to own stores in Gilmore, Robert does not settle there until his father dies and he himself is over forty. After Peg’s discovery, he gradually reconstructs her experience from several direct and indirect sources. “He picture[s] what happened” from what he is told by her; by the constable to whom she initially reports her discovery; by Karen, Peg’s co-worker; and by various other characters, including Clayton, one of Peg’s teenage sons from her first marriage (PL, 111). Thus, the “many abominable details” of what Peg must have seen in the Weebles’ bedroom are *doubly* distanced by being filtered through the point of view of an outsider and a secondhand observer, a witness who observes not the murder scene itself but only the bloodstained observer returned from that scene (130).

Robert first hears what has happened from the constable who has already investigated the Weebles’ house. Then rushing to the store where Peg works, Robert sees that her coat is smeared with blood. Karen, Peg’s co-worker, tells him that Peg also left bloody footprints when she entered the store. Later, at home, he observes his wife: “Robert was watching her, from time to time. He would have said that he was watching to see ... if she seemed numb, or strange, or showed a quiver. ... But in fact he was watching her just because there was no sign of such difficulty and because he knew there wouldn’t be” (124). The repetition of the word *watching* emphasizes Robert’s role as a third-person observer. He is not surprised by his wife’s behavior because he has always considered her calm and “self-contained” (109). His limited knowledge of the Weebles also underscores their seemly self-control; he knew them only as a good-looking, well-dressed, fairly affluent retired couple who lived in an immaculate house.

The other characters with whom Robert discusses the Weebles all speculate about various possible reasons for the catastrophe, such as imminent financial ruin or terminal illness, but all these speculations prove false. Although there seems to be no explanation, Clayton, Peg’s son, insists that his mother was not “surprised” that the Weebles “could do it” (125). When she insists that she *was* surprised, Clayton suddenly reminds her of

the terrible quarrels that she used to have with his father, from whom she is divorced. During these quarrels Clayton “used to lie in bed and think” that one of his parents “was going to come and kill [him] with a knife” (126).

At this point Munro has the listening Robert interject a metaphorical comment that suggests his function as not only an observer but also a narrator. His comment explains the title of the story, “Fits,” and defines the parallel between the Weebles’ marriage and Peg’s marriage to Dave, her first husband. Robert tells Clayton, “[I]t’s like an earthquake or a volcano. It’s that kind of happening. It’s a kind of fit. People can take a fit like the earth takes a fit. But it only happens once in a long while. It’s a freak occurrence” (126). This metaphor of an earthquake splitting the earth or a volcano erupting is like the “underground stream” in “Home,” the leering linoleum in “Royal Beatings,” and the bursting boil in “Executioners.”<sup>8</sup> But Clayton rejects the freakishness of earthquakes and volcanoes and insists, “If you want to call that a fit, you’d have to call it a periodic fit. Such as people have, married people have” (126). Although this remark could also describe the fits of two earlier married couples, Aunt Thelma and Uncle Bert in “At the Other Place,” and Rose’s father and stepmother in “Royal Beatings,” a comparison of these two couples and the Weebles shows that the reasons for their “fits” become more mysterious. In “At the Other Place,” at least one reason is perfectly clear; in “Royal Beatings,” the reason is only subliminally suggested; in “Fits” it not only remains mysterious but mirrors the mysteriousness of the two other relationships.

After his conversation with Peg and Clayton, Robert goes for a long walk, during which he recalls his relationship with Lee, his lover before his marriage to Peg. Just as violence erupted through the deceptively ordinary surface of the Weebles’ marriage and of Peg and Dave’s, so an earthquake “split open” Lee and Robert’s relationship. “[T]hey found themselves saying the cruellest things to each other that they could imagine,” and they said these things with “loathing,” the same noun Munro used to describe Uncle Bert’s hatred of his dying wife (127). And just as the face of Rose’s father “fills with hatred and pleasure” as he prepares to inflict pain upon her (WDY, 16), so Robert and Lee “trembled with murderous pleasure, … they exulted in wounds inflicted but also in wounds received …” (PL, 128). Here the separation between verbal and specifically sexual sadism quickly dissolves, for Robert remembers that their volcanic quarrel culminated in making love “with a self-conscious brutality,” after which “they were enormously and finally sick of each other …” (128).<sup>9</sup> Extrapolating from his own experience, therefore, he imagines that something similar must have occurred between Peg and Dave, who abandoned his family to work in the Arctic.

But during these reminiscences on his walk, Robert is still worrying about what Peg told him that she saw outside the Weebles’ bedroom. She said that she saw Walter’s “leg stretched out into the hall,” and then she entered the room (125). Having heard the constable’s description of the murder scene before he heard Peg’s, Robert knows that she has lied to him on this point. But to increase the suspense of her narration, Munro delays until the very end of her story Robert’s memory of the constable’s description of the bedroom scene.

Worrying about Peg’s false story, Robert slowly approaches what he eventually recognizes as an auto junkyard full of wrecked cars almost completely buried in deep drifts of frozen snow. These “[t]wisted” and “gutted” cars, piled crazily on top of each other, recall the junkyard full of wrecked cars in “The Edge of Town” and the drunken accidents in “Home” (131). Here Munro develops the buried cars into a complex symbol. Robert’s doubly distanced point of view, combined with his slow, puzzled approach to

the junkyard, emphasizes the many layers of mystery concealing the true nature not only of the Weebles but also of his “preternaturally reserved” wife (Duchêne, 109).

When he began his walk, Robert noticed curious townspeople driving by the Weebles’ house. These drivers “seemed joined to their cars, making some new kind of monster that came poking around in a brutally curious way” (PL, 126). Now in the deep snow covering the auto junkyard, he sees “a new kind of glitter under the trees” (130). Through the repetition of the phrase “new kind,” Munro suggests the metaphorical function of the junkyard. The “congestion of shapes, with black holes in them, and unmatched arms or petals reaching up to the lower branches of the trees” seem monstrous (130). As Robert approaches, he at first cannot identify these vaguely human shapes: “They did not look like anything, except perhaps a bit like armed giants half collapsed, frozen in combat. … He kept waiting for an explanation, and not getting one, until he got very close. He was so close he could almost have touched one of these monstrosities before he saw that they were just old cars” (130–31). His puzzled curiosity about the “new kind of glitter” finally satisfied, he then remembers what the constable told him: Walter Weebles blew off his head. “What was left of it was laying out in the hall” (131). This description links Walter’s mangled corpse with the anthropomorphic car wrecks buried in the snow, a fusion foreshadowed by the earlier link between the “brutally curious” neighbors and their cars. But the murderous Walter and his neighbors are not the only monsters loose in the story.

Going home to his wife, Robert suddenly realizes that she has seen Walter’s shattered skull, *not* his leg. “That was not what anybody turning at the top of the stairs would see and would have to step over, step through, … to go into the bedroom to look at the rest of what was there” (131). This realization forces the reader to reinterpret Robert’s picture of Peg. He has seen her as “reserved” and “self-contained,” with “a scrubbed, youthful look,” created not only by her schoolgirlish wardrobe but also by her earnest participation in cultural courses at the local high school (108, 109). He has read her neat notes on Prince Henry the Navigator, whose “importance … was in the inspiration and encouragement of other explorers for Portugal, even though he did not go on voyages himself” (109). But ironically, this description applies to Walter and Peg as well as to Prince Henry and the Portuguese explorers, for Walter inspired Peg’s exploration of his bedroom. All the townspeople expect Peg to be “absolutely shattered” by her experience, but, on the contrary, she was so fascinated by what Walter had done that she wanted to see more of it (120). So, instead of screaming and running away, she stepped through whatever remained of Walter’s exploded head and entered the bedroom to look at Nora’s corpse. That is how her feet and coat got bloodstained. Although incapable of Walter’s physical violence, Peg was thus exhibiting a much more violent form of the same brutal curiosity that her neighbors exhibited later on. Along with Robert, the reader is forced to figure this all out like a detective, for, like Walter’s mysteriously hidden motives and like the anthropomorphic monsters in the snow, Peg’s real nature is buried and frozen, rigid and deeply repressed. Only when Clayton reminds her of her quarrels with his father does the watching Robert see her expression of “steady, helpless, unapologetic pain” (126). This expression is as close as she comes to revealing to Robert the eruptions in her past life, the emotional upheavals that occurred when she, like Walter, suddenly lost control. This superbly crafted story, in which the peripheral point of view is reinforced by the central symbol, is the climax of Munro’s collected stories about murderous violence.

Although Walter’s suicide and the anthropomorphic wrecked cars in “Fits” suggest the psychological ambiguity of any distinction between deliberate and accidental violence,

the second type of story about external violence is the accident story. In a significant group of seven stories – “The Time of Death” (1956), “Memorial” (1974), “Accident” (1977), “Wood” (1980), “Circle of Prayer” (1986), “Monsieur les Deux Chapeaux” (1985), and “Miles City, Montana” (1985) – accidents symbolize the sudden, violent eruption of a different world into the controlled daily one. Only in “Circle of Prayer” is the accident not the main pivot of the plot. Although not all the accidents are fatal, the characters who die are all children; thus the shock is intensified. In different ways the surviving characters in all these stories try to reestablish their shattered sense of control.

Munro’s technique in “Time of Death” resembles, although in a limited way, the subtly indirect method just discussed in “Fits.” Originally published in the *Canadian Forum*, this story is not narrated directly but pieced together nonchronologically by an omniscient author. Like the Weebles murder-suicide, the pivotal event of the story, the fatal scalding of retarded Benny Parry, happens before the story begins and is never actually described. Instead, Munro gives the reader three reactions to the child’s death – by Leona, his mother; Patricia, his sister; and a neighbor, Allie McGee – and a concluding description of the frozen small-town setting by the omniscient author. At the beginning of the story, Allie briefly and ironically observes Leona’s reaction to her son’s death. Allie’s perspective, similar to Robert’s internal and peripheral angle in “Fits,” defines Allie as the watcher in this story, noting Leona’s self-defensive lies and evasions but saying nothing, just as Robert says nothing to his wife about her lies.

It is nine-year-old Patricia’s reaction, delayed until the story’s climax, that dramatizes the terrible price of self-control. Unlike her mother, who has hysterics almost immediately and therefore bounces back to normality, Patricia, who feels responsible for Benny’s death because she was boiling the water that scalded him, exerts formidable self-control and succeeds in repressing her guilt until the visit of Brandon, the scissors-man. Because Benny was fond of the old man, Patricia associates the two of them. When she hears Brandon coming down the road with “his unintelligible chant, mournful and shrill, and so strange that you would think … that there was a madman loose in the world,” she begins “to scream …” (DHS, 98). Because she has tried very hard to act “the way a grown-up does,” and to be the careful mother to her siblings that the slovenly Leona is not, her terror of something completely uncontrolled in the world shatters her: she turns into “a wretched little animal insane with rage or fear” (92, 99). The sharp contrast between Leona’s and Patricia’s reactions makes this early story about self-control memorable, although Munro has criticized it as “a kind of imitation Southern story” and has noted both its lack of complexity and the lack of “compassion” for Leona (“Real Material,” 23; Untitled, 181).

“Memorial,” published eighteen years later in 1974, handles the same subject of accidental death in an infinitely more complicated and sophisticated fashion. Set in an affluent, suburban Vancouver home in the 1960s, this satirical story is narrated mainly, but not completely, from the point of view of Eileen, the aunt of seventeen-year-old Douglas, who has just been killed in a freakish car crash. Like Robert in “Fits” and Allie in “The Time of Death,” Eileen is a third-person observer, on the periphery of the main action, watching her trendy sister, June, and her wealthy brother-in-law, Ewart, on the day of their son’s funeral or “memorial.” Like Allie, silently critical of Leona, Eileen is inwardly disapproving of the psychological jargon June uses in her determined efforts to demonstrate self-control despite her son’s death. In the past, the two sisters have quarreled about June’s compulsion to control everything, and Eileen has tried “to turn June’s own language against her” by insisting, “Order is an anal perversion” (SIB, 210). Now,

however, she expects June's body to "have loosened, in her grief, ... her voice" to "have grown uncertain, or been silenced" (208).

But on the morning of her son's funeral, June chats on the telephone in "a cheerful buoyant matter-of-fact voice" in which Eileen disapprovingly discerns "some lively insistence on control" (209). She suspects that both her sister, still confidently mouthing the clichés of pop psychology she acquired in college, and Ewart, her earnest husband, see the funeral as "[a]n occasion to display ... [their] values" (214), and Eileen recognizes that their "earnestness was no joke. Here was a system of digestion which found everything to its purposes," including the terror of "accidental death," which it "accepted, chewed and altered, assimilated, destroyed" (216). Eileen admits that "[w]ithout religion" it is impossible to face "the fact of ... death," and even with it, "it [can]not be done" (215). Nevertheless, she is "offended" when a passage from *The Prophet* is read at Douglas's memorial service (221). She rejects this "modern equivalent of piety" as a fraudulent attempt to conceal and control the harsh facts of accidental death, which she compares to being struck by "lightning" (221, 215). "People die; they suffer, they die. ... Illness and accidents. They ought to be respected, not explained. Words are all shameful. They ought to crumble in shame" (221). In this critical mood, she rejects all words, even though she was a literature major in college. She decides that "[s]ilence" is "the only possible thing" because, listening to her sister's determined psychobabble, she feels that speaking any words at all is pretending to have control and therefore perpetrating some kind of verbal and emotional "fraud" (221).

If this story ended here, the contrast between the two sisters' attitudes would be clearly defined. But in her insistence on complexity, clear definition is exactly what Munro wishes to avoid. Therefore, the story continues to a very ironic conclusion in which the contrast between the two sisters, unlike the contrast between Leona and Patricia Parry, is deliberately blurred by the sudden and repeatedly dissonant intrusion of another point of view, that of an omniscient narrator who evokes the reader's criticism of the highly critical Eileen.<sup>10</sup> Munro has commented that "there's a kind of smugness" about Eileen's "point of view" in this story ("Real Material," 24). This smugness is what she wants her reader to recognize when she introduces an ironically observing narrator. This narrator temporarily becomes the second watcher in the story when, on the night of the funeral, Eileen permits the drunk and grieving Ewart to make love to her in his car.

During the love scene, Eileen notices that Ewart keeps repeating her name, but her question, "What did Ewart mean by that name, what was Eileen to him?," is not immediately answered (SIB, 224). Instead, an omniscient narrator intrudes with a series of generalizations in the plural and in the present tense: "Women have to wonder. Pinned down not too comfortably on a car seat ... they will still look for clues, and store things up in a hurry to be considered later. They have to believe that more is going on than seems to be going on; that is part of the trouble" (224). In discussing such interruptions of narration from a character's point of view, Cohn points out in *Transparent Minds* that "the most emphatic of all marks of narratorial disparity" is "a gnomic generalization" (150).<sup>11</sup> Here the disparity is between what Eileen has been telling herself about how totally different she is from June and what the author now tells the reader. This disparity effectively throws into confusion not only everything that Eileen has already made the reader believe, but also her answer to the question about what she means to her brother-in-law when he makes loves to her: "What Eileen meant to Ewart, she would tell herself later, was confusion. The opposite of June, wasn't that what she was? ... Eileen ... comes out of the same part of the world accidents come from. He lies in her to acknowledge, to

yield – but temporarily, safely – to whatever has got his son, whatever cannot be spoken of in his house” (SIB, 224).

Eileen’s subjective point of view returns in this narrated monologue, but immediately afterwards the omniscient narrator intrudes again. Cohn explains that “narrated monologues … tend to commit the narrator to attitudes of sympathy or irony. Precisely because they cast the language of a subjective mind into the grammar of objective narration, they amplify emotional notes, but also throw into ironic relief all false notes struck by a figural mind” (117). These false notes are “most clearly in evidence when narrated monologues show up in a pronouncedly authorial milieu, framed by explicit commentary” (118). That is precisely what happens here as the narrator critically examines Eileen’s future thoughts: “So Eileen, with her fruitful background of reading, her nimble habit of analysis (material and direction different from June’s, but the habit not so different, after all), can later explain and arrange it for herself. Not knowing, never knowing, if that is not all literary, fanciful” (SIB, 224). Eileen has been contrasting her study of literature to her sister’s psychology major, but now the deflating narrator describes their resulting mental habits as “not so different, after all.” Then the narrator increases the disparity between herself and Eileen even farther by emphasizing Eileen’s fatuous mistake in investing Ewart’s words with meaning. This error, the narrator’s generalization points out, once again in the present tense, is one commonly committed by women who would naturally love to believe that their own “woman’s body” is uniquely significant (224). But it is not: “Before and during the act [men] seem to invest this body with certain individual powers, they will say its name in a way that indicates something particular, something unique, that is sought for. Afterwards it appears that they have changed their minds, they wish it understood that such bodies are interchangeable. Women’s bodies” (224–25).

Eileen is unaware of her mistaken attempt at self-definition because it lies in the future. Thus her delusion is a piece of information shared only by the subtly mocking narrator and the sadly nodding reader. But when Eileen tries to apologize to June the next morning, Eileen becomes aware of the terrible unreliability of her own verbal attempt to control her present situation. When Eileen says, “I haven’t helped you the way I meant to,” she cringes at the unintentional irony of her words. “No sooner was that sentence out than it flung itself inside out and grinned at her. This was a day when there was nothing she could say that would work” (225). And glimpsing her face in the mirror, she is guiltily surprised by the discrepancy between her inner thoughts and her outward, “wonderfully appropriate look of tactfulness and concern” as she listens to her sister describe her son’s freakish death (226).

Through these double splits in point of view – shifting from Eileen in the present to the ironically omniscient narrator in the future, and then splitting Eileen in half by having her look at her false reflection in the mirror – Munro suggests that the compulsive drive to define, explain, and thus control the uncontrollable, the terrifying “part of the world accidents come from,” is not limited just to June and to her obvious misuse of language (224). The situation is more complicated than that. Eileen also uses language spuriously, to inflate herself and her sexual favors with false and smugly fanciful significance by concealing the true nature of what happens between herself and her sister’s husband. Thus, she has no real moral right to criticize because, without fully realizing it, she is just as confused about herself as her sister is.

“Accident,” a story originally published three years after “Memorial,” is similar to “Memorial” in two ways: a son is accidentally killed, as if suddenly struck by lightning,

and an ironically omniscient narrator comments on the characters' reactions to this eruption of confusion and violence into their lives. But in "Accident" there are two central characters instead of one. Frances Wright, a high-school music teacher in Hanratty, and Ted Makkavala, a married colleague, are carrying on an adulterous love affair. They both believe it is a well-concealed secret, but the omniscient narrator gleefully informs the reader that it is not a secret at all. In this story there are thus really three clearly defined points of view, Frances's, Ted's, and that of the omniscient author, who is the watcher.

In discussing her own fiction, Margaret Atwood has defined the advantages of using such a triple point of view. Two characters, she says,

can ... think for themselves, and what they think won't always be what [another character] thinks of *them*. If I like, I can add in yet another point of view, that of the omniscient author, ... yet another voice within the [story]. The omniscient author can claim to know things about the characters that even they don't know, thus letting the reader know these things as well. (426)

In "Accident" Munro introduces such a fully developed, alternating, multiple point of view and thus creates exactly the kind of situation that Atwood defines. The omniscient author watches Frances and Ted and keeps interrupting their internal comments with her own ironic reflections. Her purpose is to show how mistaken they are in what they believe about the townspeople of Hanratty, about each other, and – most significantly – about themselves. This narrator functions throughout the story, rather than just at the conclusion, as in "Memorial." By interjecting these ironic revelations, she emphasizes the uncontrolled repercussions of the fatal accident that permanently alters the lives of Frances and Ted.

In the opening scene, narrated from Frances's third-person point of view, Frances "shamefully" eavesdrops outside Ted's science classroom. Although she hears only a normal schoolroom pattern of "order and acquiescence," Frances feels "a familiar pressure, of longing or foreboding, that strange lump of something you can feel sometimes in music or a landscape, barely withheld, promising to burst and reveal itself, but it doesn't, it dissolves and goes away" (MJ, 79). However, this time the lump does burst, in an accident that kills two children, and this foreshadowing metaphor of bursting and revelation clearly links this story with the ones already discussed.

The reasons motivating the lovers' belief that their relationship is a secret constitute another link between this story and the later "Fits." Like Robert, Frances and Ted are outsiders, although in Frances's case this role is merely the result of her four years of study at an out-of-town conservatory. "It is in imagining her affair to be a secret," the omniscient author explains, "that Frances shows, most clearly, a lack of small-town instincts, a trust and recklessness she is unaware of; this is what people mean when they say of her that it sure shows that she has been away" (80). It shows in "the outsider's innocent way of supposing herself unobserved as she dashes from one place to another around town ..." (81). Ted actually is an outsider, not only from a "frontier settlement" in Northern Ontario but also from an intellectual Finnish family "banished from Finland" for their political activities (96, 98). During the main time frame of the narrative, 1943, Ted is "considered an enemy alien" in Canada, and he is "proud of it" (98). By characterizing both protagonists in this way, Munro sharpens the irony of her narrator's comment that the high-school secretary, "[I]ike almost everybody else in town, ... had known about [Frances and Ted] for some time" (86).

This secretary interrupts their excited preparations for intercourse in a school storeroom. While undressing, Frances has been remembering their previous encounters in the same place, associating them with “lightning, a crazy and shattering, painful kind of lust,” and admiring Ted’s “ruddy cheerful penis, upright and workmanlike” (85, 86). But when the secretary yells through the door, “Mr. Makkaval! … Your son’s been killed!”, Frances sees him unmanned, “that workman … losing color [and] … drooping …” (87). This sudden physiological change symbolizes a more shattering and painful kind of lightning, Bobby’s sudden death and Ted’s consequent loss of control over his life.

The following scene is narrated from Ted’s third-person point of view. When Bobby Makkaval and another boy tied their sleds to the back of a car, they were accidentally run over. The other boy has died, but Bobby is still alive, although obviously dying. As Ted and Greta, his wife, wait helplessly in the hospital, Ted thinks, “Everything was changed” (87). Struggling to exercise some control over this unbelievably changed world in which his only son can die, he suddenly thinks of bargaining with God to let Bobby live. He will give up Frances in exchange for his son: “by not even thinking about her, by willing her to stop existing in his life, he could increase Bobby’s chances, hold off his death” (88). The terrible irony of Ted’s desperate maneuvering for control is that he is an atheist. After his son’s death, he himself realizes this irony: he tells Frances “his thoughts of bargains” to illustrate “the way the most rational mind can relapse and grovel” (89).

In the next scene, narrated once again from Frances’s point of view, she callously rages against Bobby because she believes that the accident will end her relationship with Ted. “She felt fury at that child, at his stupidity, at his stupid risk, … his breaking through into other people’s lives, into her life” (94). This metaphor of “breaking through” connects Frances’s present reaction with her initial apprehension of something ready to “burst and reveal itself” (79). Almost as if she intuited Ted’s attempt to bargain with God, she believes that Greta and Ted will be reunited by their shared grief and that she will not see him anymore. But she is mistaken, for exactly the opposite happens. This plot structure embodies Munro’s main point about the effect of Bobby’s death on Ted, his sense of losing control of his life.

After Bobby’s funeral, Ted boasts to Frances of how he imposed his will upon Greta’s huge, bossy, devoutly Lutheran family, who descended en masse from Northern Ontario. Although the clan insisted on bringing a Finnish Lutheran pastor to the funeral, Ted proudly tells Frances that at the grave he outshouted the family, wailing in Finnish, to read the “few memorial paragraphs” that he had written (101). He did not allow “that pack of maniacs” any hymns or prayers (102). But by narrating this scene from Frances’s point of view, Munro reveals that Ted’s conscious motives in confessing his temporary irrationality in the hospital are not his real motives. He confesses to emphasize his swiftly restored rationality and his decisiveness. “I knew I couldn’t show a moment’s hesitation” (102). But underneath his confession and boasting, Frances clearly observes his selfish and frightened egotism: “He did it all for himself, Frances was thinking. He wasn’t thinking of Greta for a moment. Or of Bobby. He was thinking of himself and his beliefs and not giving in to his enemies. That was what mattered to him. She could not help seeing this and she did not like it” (103). Immediately after his boasting, Ted insists on making love, even though Frances is “not ready”; he is “too intent to notice” how she feels, for, like Ewart in “Memorial,” he sees the act as another way to reassert his control (103).

In the next scene, the omniscient author adds her own ironic comments on Ted’s motives in an interview with his principal. When the principal tries to elicit some pro

forma promise from Ted to terminate his affair, Ted furiously announces that he is going to divorce Greta and marry Frances: "My mind was made up long ago." The narrator wryly observes, "He believed that was true" (104). And Frances feels the same skepticism when he later insists that he would have married her in any case, accident or no accident: "But it didn't seem so to Frances, and she wondered if he said it just because he could not bear the thought of anything being set in motion outside his control – and so wastefully, so cruelly ..." (106). In an interview, Munro has defined "Accident" as a story about "love ... suddenly catapulted into having to be real ..." ("Visit," 13). Because the accident is the cruel catapult, Frances's part in Ted's frantic decision remains "ambiguous" (MJ, 106).

But in an epilogue "nearly thirty years later," when Frances returns to Hanratty for another funeral, she meets the man who accidentally ran over Bobby (107). She is forced to admit that Bobby's death gave her Ted and their marriage, but she pushes this admission out of her mind as "too ugly" and "monstrous" (109). Even a generation after the event, the eruption of accidental violence into life's routine orderliness is so intensely frightening that it cannot be faced. The dark parentheses of the two funerals, the alternating points of view, and the intruding, ironic narrator all emphasize Ted's self-deluding attempts to convince himself and Frances that, after only a momentary loss, he has regained full control of his life.<sup>12</sup>

Munro's comments on "Wood," another story in which an accident is the pivotal plot element, emphasize the same loss of control. Describing Roy Fowler, the main character in this uncollected *New Yorker* story, she has said: "The man's accident when he's alone in the woods brings him out of that ordinary world of control and inquisitiveness and into a completely different world" ("Interview": Hancock, 90). Like Robert in "Fits" and Ted in "Accident," Roy is an outsider, not so much in Logan, Ontario, where he lives, as in the huge and "closeknit clan" into which he has married but to which he has not contributed any children. "As a rule," he notes, "they don't take much notice of people who aren't like themselves" ("Wood," 46). He is a woodcutter who classifies and catalogues the trees in every bush or forest because he wants to exert control. "Roy's thoughts about wood are covetous and nearly obsessive. ... He would like to map every bush he sees, get it in his mind, know what is there" (48). His inquisitiveness, like Munro's documentary urge, constitutes part of his desire for control. Very proud of his experienced knowledge of the bush, he "thinks that there is very little danger in going tree cutting alone if you know what you are doing" (47). Knowing that includes the self-vigilance of constant awareness: "In the bush it isn't good to let your mind wander or your worries intrude" (48).

But, ironically, that is exactly what Roy does when old Percy Marshall, a local character, tells him a confused rumor that another, unidentified man has secured a lucrative contract for cutting the same trees that Roy has received the owner's verbal permission to cut. Initially Roy considers the "possibility" that Percy may "have got [the story] badly twisted," but in his eagerness to cut some of the promised trees, he forgets this suspicion (50). Even though it has begun to snow, he hurries out into the bush alone to begin cutting.

As a result of these psychological and physical conditions, Roy has an accident. Hurrying over the rough, snow-covered, hummocky ground, he slips, falls, and breaks his ankle. Unable to walk, he has "to abandon his axe and his chain saw and get down on his hands and knees and crawl" (53). Munro has emphasized that what is "important to [her] in the story is what his experience is like when he is crawling back trying to get to

the truck" ("Interview": Hancock, 90). He has quite literally split the concealing surface in his fall, his "feet ... plung[ing] through a cover of snowy brush to the ground, ... farther down than he expected" (52). Then, as he slowly and painfully crawls over "rotten leaves and dirt," hatless and gloveless in the steadily falling snow, he is gradually forced to accept the reality of his situation, to stop "believing in an order of things in which [his accident] couldn't happen" (53). Beginning "to feel almost light-headed," he becomes increasingly detached from his worries: "Nobody knows what anybody else is thinking about or how anybody else is feeling. ... Nobody knows how others see themselves" (54). This generalization introduces a significant split in his self-perception. He backs off to look at himself and at how this absurd accident has occurred. As he sees a hawk or a buzzard circling above him, "its eye on him" in his exposed and potentially vulnerable situation, he suddenly realizes how his generalization about other people applies to him (54). Because he momentarily sees himself as the watching bird sees him, he also sees what the rumormongers have been thinking about him.

Percy's rumor about the unidentified woodcutter with the contract is about "Roy himself" (54). Percy has simply distorted the story of Roy's agreement with the owner of the bush because "[e]verything that involves money, in this county, gets talked up, distorted, ... turned into a story" (54). By not recognizing himself in Percy's "big fable," Roy has ironically and very painfully lost control of himself in the very setting in which he has been the most confident of both his mental and physical control (54). It is almost a case of hubris, but there is no tragedy.

The concluding paragraph of the story pulls sharply away from Roy to emphasize this thematic irony. An omniscient author, distancing herself from her protagonist, observes:

Roy's mind operates very economically at this moment – perhaps more selectively than ever before. It manages to turn everything to good account. It no longer dwells on the foolishness of the accident but triumphs in the long, successful crawl and the approach to the truck. (He is on his way again.) It cancels out any embarrassment at his having been so mistaken; it pushes out any troubling detection of waste and calamity; it ushers in a decent sense of victory. Safe. (54)

This ironic conclusion, with its emphasis on Roy's rejection of "waste and calamity" and on his triumphant reassertion of control, leaves him in a state of mind very similar to Ted's when he deluded himself about his motives for marrying Frances: "he could not bear the thought of anything being set in motion outside his control – and so wastefully ..." (MJ, 106). In both stories, published three years apart ("Accident" appeared in *Toronto Life* in November 1977; "Wood," in the *New Yorker* on 24 November 1980), the ironic distance of the omniscient narrator from her protagonists emphasizes their loss of control as something so terrifying that they unconsciously deny it.<sup>13</sup>

Accidents occur in the background of other stories. For instance, Sandy Desmond drowns in "Something I've Been Meaning to Tell You," and Frank McArter drowns in "Walking on Water." But in Munro's first three non-interrelated collections – *Dance of the Happy Shades*, *Something I've Been Meaning To Tell You*, and *The Moons of Jupiter* – there is only one major accident story apiece. In contrast, *The Progress of Love* includes three such stories: "Circle of Prayer," "Monsieur les Deux Chapeaux," and "Miles City, Montana." Interviewed upon the publication of this collection, Munro commented that her "way of thinking ... embraces randomness pretty well" (Kolson, 4C). The increased number of accidents suggests her intensified concentration on life's

frightening fragility. The randomness of accidents represents the most frightening fact of life, its uncontrollability.<sup>14</sup>

In “Circle of Prayer,” originally published in the *Paris Review*, the fatal accident is not the central plot element, for the story describes the disintegration of a marriage two years before the accident. But, although Trudy, the central character, initially manages to come to terms with the loss of Dan, her husband, the accident later forces her to confront the finality of this loss as something almost like a death. To unify her story, Munro establishes the parallels between these two losses in several subtle ways. When Dan leaves Trudy for a woman whom he meets by chance and who exploits him, he destroys his marriage in what he himself initially recognizes as “a middle-aged fit” (PL, 265). Similarly, when their daughter’s drunk or stoned friend, fifteen-year-old Tracy Lee, accidentally drives a truck into a tree, she, too, is “self-destructive” and “stupid” (259). After Dan’s defection Trudy keeps three objects in a jug, her engagement and wedding rings and a valuable jet necklace Dan’s mother has willed to Robin, their daughter. In the opening scene of the story, when Trudy discovers that this necklace is missing, she immediately suspects what Robin has done with it, and, in a fit of destructive rage, throws the heavy jug across Robin’s room. Robin says that her mother “could have killed” her, and eventually Trudy admits the truth of this accusation (255). By starting her story with this jug-throwing scene, Munro shows that Trudy, like Dan and Tracy Lee, is capable of fits of uncontrolled and potentially dangerous behavior. When the necklace is buried with Tracy Lee, its loss becomes a symbolic burial of Dan and Trudy’s dead marriage.

The circumstances under which the necklace ends up in the dead girl’s coffin not only emphasize the parallel between the two types of deaths but also demonstrate, once again, the crucial importance of trying to assert control in an uncontrollable world. The “crying” and “shivering” teenage girls who attend Tracy Lee’s funeral-home visitation file past her open coffin. As they do, they sing what they believe to be “an old hymn” (263). Although it is actually a song from a movie, the *carpe diem* theme of its lyrics explains their naive mistake. When they reach the coffin, they strip off their jewelry – rings, bracelets, earrings, necklaces, and chains – and drop them all in, “flashing and sparkling down on the dead girl. . . .” With unconscious irony, they all behave as if this were “a religious ceremony,” and the bereaved family gratefully agrees: “It was like church” (263). Like Eileen in “Memorial,” the girls, including Robin, find it impossible to face death without any religious faith. Trying to fill the frightening emptiness created by the sudden and accidental death of one of their own peers, they rediscover a ritual reminiscent of many pre-Christian burial practices. Thus they form the first circle of prayer around the coffin.

This circle’s adult counterpart is the “Circle of Prayer” that Trudy’s friend, Janet, tells her about on the morning of the funeral. Janet suggests that Judy join the women in this circle to pray for the return of the necklace and Dan, her husband. To this suggestion, Trudy replies: “I’ll just go down on my knees right now and pray. . . . that I get the necklace back and I get Dan back, and why do I have to stop there? I can pray that Tracy Lee never died. I can pray that she comes back to life. Why didn’t her mother ever think of that?” (269–70). Although later Trudy not only apologizes for this outburst but even asks another character whether *he* prays, her sarcastic rejection of prayer completes the many parallels between Tracy Lee’s death and the death of Trudy and Dan’s marriage. In different ways, both losses are the results of random accidents, beyond anything but symbolic control.

In “Monsieur les Deux Chapeaux” this compulsion to control the frightening uncontrollability of life becomes the lifelong obsession of Colin, the protagonist, after a fatal accident, or rather what momentarily appears to be one. In the climactic flashback that concludes the story, Colin believes that he has accidentally killed Ross, his younger brother. Although he soon finds out that Ross was only pretending to be dead, this childhood trauma of imagining himself a murderer shapes his adult life. He becomes what Cain, the first fratricide, protests to God he cannot be: Colin – the name is symbolically similar to Cain – becomes his brother’s keeper.

In the opening scene, the principal of the school where Colin teaches and Ross does occasional yard work asks Colin, “Is that your brother out there?” (PL, 56). This question echoes the one God asked the guilty Cain: “Where is Abel, thy brother?” The principal’s query is prompted by the fact that Ross, while clipping the school grass, is wearing two hats, one on top of the other. A French teacher also notices the two hats and dubs Ross “Monsieur les Deux Chapeaux,” but when she later mentions seeing him, Ross denies what he was doing. “You’re seeing things. You got double vision” (69). In a symbolical sense, however, it is Colin, not Ross, who wears two hats; it is also Colin, not the French teacher, who has double vision because he is constantly watching his brother, the “secret weight on” his life (66).

Initially Ross’s weird behavior and his proneness to car accidents seem to be the only reasons for Colin’s hovering protectiveness. But gradually Munro builds up to the revelation of something “horrible” that occurred in the past and “could’ve been tragic” (74). These suspenseful allusions to the past are embedded in a discussion of something dangerous that Ross is doing in the present, installing an engine in a car not big enough for it. The French teacher warns Colin that the powerful engine “will simply break the drive shaft” and “literally flip [the car] over” (70). Colin is anxious not only to prevent Ross from doing this but also to avoid hurting his feelings by criticizing him.

The climactic flashback at the end of the story reveals that Colin’s protectiveness is not only the result but, paradoxically, also the cause of the traumatic event that shaped his life. When the two brothers and several young boys find a rifle and start playing with it, Colin grabs it to prevent Ross from doing something dangerous. Somehow the gun goes off, there are screams and shouts, and in the confusion Colin sees “Ross lying on the ground, on his back, with his arms flung out, a dark stain spilled out from the top of his head” (77). This description also echoes Abel’s death, whose “blood crieth unto [God] from the ground.” But what Colin imagines to be blood is actually a puddle of water, for Ross is only feigning death: “The bullet hadn’t come near him” (77).

In the final scene of the flashback, Colin is sitting on a bridge girder. From this perch above nothingness, he sees “all the jumble of his life, and other people’s lives ..., rolled back, just like a photograph split and rolled back, so it shows what was underneath all along. Nothing” (81–82). Like so many other Munro characters at the moment of crisis, Colin feels not only completely dissociated from himself but also suddenly separated from the safe world, whose surface he has broken through. “How silly it was that he should have a name and it should be Colin. ... His life had split open, and nothing had to be figured out anymore” (82). But then a crowd of people arrives, with the living and laughing Ross in tow, shouting, “I ain’t dead, Colin!” and calling him to come down (82). As Colin obeys, “sick with the force of things coming back to life,” and trying not to think about what has nearly happened, he knows “that to watch out for something like that happening – to Ross, and to himself – [is] going to be his job in life from then on” (83). Thus he becomes one of Munro’s watchers, but in an almost saintly sense: he stays

permanently split, permanently double. The final irony is that the new identity shaped by his brother's unintentionally cruel hoax is the exact opposite of Cain's, but marks him nonetheless.

The dramatic culmination of these stories about accidents is "Miles City, Montana," the only accident story with a first-person narrator who is not only the mother of a small child threatened by a fatal accident but also a writer. In this tightly unified story, the retrospective narrator – who seems to be speaking in the actual present – tells the stories of two accidents occurring twenty years apart. The later story, which she dates in the summer of 1961, is framed within her confused childhood memory of the other event, a boy's accidental drowning. The two stories are associatively linked by a third memory: the narrator remembers helping her farmer father rescue stranded turkeys who "had managed to crowd to higher ground and avoid drowning" in a rainstorm that flooded the fields (PL, 94). In the first accident, Steve Gauley fell into a flooded gravel pit; his father did not watch him, and even his "fatherhood seemed accidental ..." (85). In the later accident, the narrator's little girl, Meg, falls into the deep end of a public pool in Miles City when nobody is watching her, but she comes up swimming and is swiftly rescued by Andrew, her father. These two accidents are focused in parallel images of a father carrying a child. The story opens with this ominous sentence: "My father came across the field carrying the body of the boy who had been drowned" (84). When Andrew rescues Meg, he also carries her. But the narrator's role in these two incidents is radically different. In the first story she is a six-year-old child who has partially seen and partially imagined a dark and indelible image of death: the corpse of another child, a motherless little boy, whose "hair and clothes were mud-colored," whose nostrils and ears "were plugged up with greenish mud" (84). In the second story she is the mother of a three-year-old child who has escaped drowning. The associative link, however, is not merely the common theme of drowning but the painful paradox of parents as the begetters of death, a paradox that the narrator discovers as a result of the change in her role from watching child to writing parent.

In the first drowning story, the six-year-old child attends the drowned boy's funeral. Holding "a white narcissus" and wearing innocent white stockings, she stands "removed from" her hymn-singing parents. "[W]atching" them, she feels "a furious and sickening disgust" (86). Thirty years separate this narrator from the narrator of "At the Other Place," removed from the adults and watching them, but she, too, remembers seeing them as grossly sexual beings. Although her parents are decorously dressed for the formal occasion, she is disgusted by their "bloated power" and by what she insists on imagining under their dark clothes: their "lumpy shapes," their "coarseness, ... hairiness, [and] ... horrid secretions," all of which fill her with "a thin, familiar misgiving" (86).

After Meg's rescue from the swimming pool, the narrator suddenly understands what this dimly perceived "misgiving" really meant. As a child she had suspected that her parents were not her protection from death but some kind of threat. Now she and her husband, Andrew, have become a threat to their own children. Trying to imagine what Meg's death and its aftermath would have been like, "a blind sinking and shifting," she tells herself that it is "shameful" to place her "finger on the wire to get the safe shock, feeling a bit of what it's like, then pulling back" (103). These metaphors dramatically combine three forms of splitting: "sinking" suggests drowning, "shifting" suggests an earthquake, and "the wire" suggests electricity, lightning in its safely controlled form. That is why the narrator tells herself that her imagination is shameful: to do what the writer does, "changing from a participant into an observer," is to play with lightning, to

arrange “patterns and destinies” like God (“Author’s Commentary,” 125). It is shameful for another reason, too. This deliberate exercise of the writer’s controlling imagination reveals an appalling fact: just as Andrew has always suspected, his wife, the narrator, “really” is “a secret monster of egotism” because she can contemplate the death of her own child (PL, 91). Recognizing this fact makes her remember her parents at the funeral once again, and now she feels that her parents consented to her own death simply by the act of begetting her: “Their big, stiff, dressed-up bodies did not stand between me and sudden death, or any kind of death. They gave consent. So it seemed. They gave consent to the death of children and to my death … by the very fact that they had made children – they had made me” (103). Their hypocritical hymn-singing at the funeral only made things worse because it denied or attempted to conceal the frightening facts.

The narrator thus sees the treacherous world of sudden and accidental death, where children can drown in “clear blue water,” as a world into which parents thrust their children simply by begetting them and exposing them to inevitable mortality (102). In retrospect, the scene in “Accident” in which Ted loses his erection as he hears the premature announcement of his son’s death becomes a paradigm of the paradox explicitly developed here: sexual desire sows the seeds not only of new life but also of death. Children are forced to trust their parents, but their parents have thrust them into a trap.

Thus, even though baby Meg blithely observes, “I didn’t drown,” and even though her parents exult in their luck, “Miles City, Montana” seems the most deeply pessimistic of this group of stories in which accidents are the pivotal plot elements (102). The dimly persistent image of the drowned boy haunting the background of the two earlier stories already mentioned – the memory of little Sandy Desmond in “Something I’ve Been Meaning to Tell You,” and of young Frank McArter in “Walking on Water” – now comes into focus as the central image (SIB, 7, 90). Meg’s escape from tragedy on a sunny summer day does *not* mean that life is not a tragedy. Although the narrator longs for the right of children to be “free, to live a new, superior kind of life,” she knows that they are “caught in the snares of vanquished grownups, with their sex and funerals” (PL, 104).

These close links between the shocking power of death and the literal shock of electric power and between sex and funerals constitute a recurrent thematic pattern in Munro’s work. As already shown, she describes sexual excitement and impending death on the same page in both “At the Other Place” and “Accident” and sex and a funeral on the very same day in “Memorial.” The electric metaphor first occurs in “Images,” where the shocking power of death is perceived as electric power, and both this metaphor and the close link between death significantly recur in *Lives of Girls and Women*, at the climax of which Del, the narrator, is nearly drowned immediately after intercourse.

## Notes

- 1 The sources for Munro’s documentary script were Susanna Moodie and an Irish couple’s diary and letters (Adachi D3).
- 2 In “The Fiction of Alice Munro,” Hallvard Dahlie compares Munro to Flannery O’Connor in their shared “vision” of “worlds … suddenly violated by … some unexpected force or event” (58). See also Andrew Stubbs (56) and Catherine Sheldrick Ross (112).
- 3 Although Miss Abelhart, the protagonist of “The Dimensions of a Shadow,” is not a narrator, she is actually Munro’s first split character, for her imaginary other self, the male student, is in many ways a younger persona.

- 4 Eileen Dombrowski defines Munro's first three books as illustrations of her "vision" of "life as slipping away in a relentless movement toward death" (21). See also the conclusion of John Orange's essay: "At the centre of the maze is death ..." (97).
- 5 The second phrase is not Munro's own, but when Ken Murch interviewed her for *Chatelaine* in August 1975 and remarked, "Many of your stories seem to involve the tremendous guilt over the death of someone," she agreed: "Yes ... you're very perceptive. ... That's probably the thing with my mother... yes" ("Name," 70).
- 6 Critics disagree on the meaning of the parallels between the beatings in this story and even on the question of whether there are any parallels. They also have somewhat different interpretations of the theatrical metaphors. See Lawrence Mathews, 185–87; Warwick, 211; Barry Cameron, viii; Hallvard Dahlie, "Alice Munro and Her Works," 248–9; J. R. (Tim) Struthers, "Alice Munro's Fictive Imagination," 109–10; and Martin, *Alice Munro: Paradox and Parallel*, 104–6.
- 7 In "The Other Side of Dailiness," York quotes this passage about the linoleum as an illustration of the paradox that "even familiar objects are not man's familiars" (51). In "Gulfs" and 'Connections,' she sees the father in this scene as "a hate-filled child beater" (141).
- 8 Compare "A Trip to the Coast" where the child May thinks: "If her grandmother capitulated [to the hypnotist] it would be as unsettling an event as an earthquake ..." (DHS, 188).
- 9 The phrase "with a self-conscious brutality" occurs in the original version of "Fits" in *Grand Street* 5 (1986): 58, but Munro deleted it from the revised version in *The Progress of Love*. Compare the fight and the violent copulation in "Meneseteung," *New Yorker*, 11 Jan. 1988: 33–34.
- 10 Lorna Irvine emphasizes "the opposition between" the two sisters and ignores the story's ironic conclusion ("Changing," 104–5). Although Margaret Anne Fitzpatrick recognizes that the "vice [Eileen] accuses her sister of turns out to be her own," Fitzpatrick does not discuss the shifts in point of view that reveal this "projection" (19).
- 11 Although Dorrit Cohn's discussion in this passage is about a first-person point of view, her comment is applicable to sudden shifts from a limited third-person point of view.
- 12 W. R. Martin, who criticizes this story as one about "naked, unrefined sexual desire," does not recognize the triple point of view Munro uses in its narration (*Alice Munro: Paradox and Parallel*, 138).
- 13 James Carscallen includes an analysis of "Wood" in "The Shining House," 93–94, 97–100. W. R. Martin also discusses this story in *Alice Munro: Paradox and Parallel*, 168–70.
- 14 Accidents continue to play a key role in two later, uncollected *New Yorker* stories. In "Oh, What Avails" (1987), Morris Fordyce is blinded in one eye as the result of a childhood accident. Scorned as "Deadeye Dick" and rejected by the woman he loves, he remains a bachelor all his life. In "Five Points" (1988), Cornelius Zendt is so badly injured in a salt-mine accident that he can no longer work at the mine and often has to "lie on the livingroom floor, coping with the pain" (34). His wife copes by taking a lover.

# PART SIX

## Marxism, Critical Theory, History

---

# CHAPTER 1

## Introduction *Starting with Zero*

*Julie Rivkin and Michael Ryan*

Marxism derives from the work of Karl Marx, a German philosopher who lived in Paris and London in the middle of the nineteenth century, a time of severe industrialization that was creating a new class of industrial workers that he called the “proletariat.” When Marx wrote his major works *The German Ideology* (1846), *The Manifesto of the Communist Party* (1848), and *Capital* (1867), the ideals of socialism (that wealth should be distributed more equitably, that class differences should be abolished, that society should be devoted to providing for everyone’s basic needs, etc.) were emerging in counterpoint to the principles and realities of industrial capitalism – individual freedom in economic matters, an intractable inequality in the distribution of wealth, severe class differentiation, and brutal poverty for those without property. It was also a time of revolution. Across Europe in 1848, monarchies were challenged by democratic uprisings, and colonized nations struggled for independence. In 1870–1, workers seized power in Paris, and the Commune briefly established an egalitarian alternative to capitalism. It was a time when “bourgeois” society itself, which was organized around the ideal of the private accumulation of wealth in an economy unhampered by state regulation, was being challenged for the first time. That Marx was deeply influenced by his historical context is itself a lesson in Marxist methodology. According to Marx, we are all situated historically and socially, and our social and historical contexts mean that our lives are “determined,” which simply means that they are concrete and specific and “determinate.” They are material, historical, and social. This is as true of literature as it is of human beings: literature is not, according to Marxist criticism, the expression of universal or eternal ideas, as the New Critics claimed, nor is it, as the Russian Formalists claimed, an autonomous realm of aesthetic or formal devices and techniques that act independently of their material setting in society and history. Rather, literature is in the first instance a social phenomenon, and as such, it cannot be studied independently of the social relations, the economic forms, and the political realities of the time in which it was written.

Marxist literary criticism has traditionally been concerned with studying the embeddedness of a work within its historical, social, and economic contexts. Some Marxist criticism argues that literature reflects unproblematically the values and ideals of the class in dominance. In order to make it onto the stage at all, Shakespeare’s plays had

somehow to address (which is to say, accept and further) the values and ideals of monarchial English culture. Shakespeare's history plays all celebrate kingship not because he was a political conservative but because the material context of literary production places limits on what can and cannot be said or expressed at a particular historical moment. Shakespeare could not have expressed counter-monarchical ideas and still been "Shakespeare," that is, someone hired to produce plays for the king's court. All literature is in this respect "determined" by economics, by the translation into cultural limitations and imperatives of the sheer weight of how material life in a society is conducted. Those limitations range from the choosing of what will or will not be published to the implanted selection procedures that readers inherit from schooling within a culture and that shape what and how they read (whether or not they can even understand the language of a play like *Lear*, for example).

This "reflectionist" approach to literature has been supplanted by critical approaches that emphasize the complexity of the relationships between literature and its social context. While some contemporary Marxist critics continue to emphasize the role of literature and of culture in reproducing class society, others look for ways in which literature undermines or subverts the dominant ideologies of the culture simply because all inequalitarian societies contain contradictions between their professed egalitarianism (freedom for all, for example) and their unequal reality, and those contradictions manifest themselves in the cultural products of the society. One function of literature is to offer those on the economic losing end in any given society images that assure them that their situation of relative deprivation is the natural result of fair play and fair rules, not of systematic dispossession that is a structural feature of the society. In Shakespeare's plays, for example, the lower-class characters, though likeable and comic for the most part, seem to deserve their lower-class status. Their speech and patterns of thought suggest less refined natures than those possessed by their "bettters," who usually happen to be aristocrats. The plays legitimate class division.

But literature also displays signs of contradictions (between classes, between ideologies and realities) that threaten society from within and are put on display in literature. No matter how much it spuriously resolves contradictions in society between the rich and the poor or between an ideal of "freedom" and a reality of economic enslavement, literature must also show them forth for all to see. According to this approach, all attempts to naturalize social divisions reveal their artificiality, and all ideological resolutions put their "imaginary" quality on display. In Shakespeare's plays, for example, the nobility may consistently triumph, but the very necessity of depicting such triumph over adversaries suggests that there is trouble, rather than peace and universal contentment, in the society. In the effort to reassure the nobility, the plays draw attention both to divisions in society and to the need on the part of those in power to make those divisions seem easily resolvable. The very effort suggests that the class differences harbor potential dangers for the rule of the aristocracy.

British Marxism has evolved in two different directions. Influenced less by dialectical theory, it has developed in much more historicist directions. Raymond Williams, for many years the sole practitioner of Marxist literary studies on either side of the Atlantic, helped to foster a concern in British Marxist literary criticism with the evolution of literature in relation to social, political, and economic changes. Terry Eagleton has refined this historicist approach by linking literary form to social ideology. According to Eagleton, literary form is itself ideological and laden with political meanings. In his book, *Criticism and Ideology* (1977), Eagleton argued that as one moves

from the nineteenth into the twentieth century, works of literature provide different and differently ideological pictures of the social universe both in their content and in the way they are written. The organic form of the Romantics suggested a virtuously cohesive society in which class difference is an accepted feature of life, while T. S. Eliot's fragmented Modernist poetic form embodies his reactionary sense that modern democratic life represents a falling away from a good cultural tradition based on conservative values.

Another school of British Marxism, called Cultural Materialism, draws on Post-Structuralist and gender theory. Cultural Materialist scholars such as Alan Sinfield take issue with the idea that literature reflects and promotes social power or embodies in an unproblematic way the interests of a ruling class. All power structures are contingent; that is, they lack a logical ground or a natural foundation and are dependent on assistance from cultural narratives that assure their legitimacy. Such narratives strive for plausibility, but they must work against the contingency of the institutions they defend, a contingency that leaves them open to counter-narratives that suggest different social possibilities. Moreover, all class-divided societies project into culture the instabilities on which they are built. Those instabilities register in literary works as dissidence and as dissonance. The narratives of such works usually evoke social adversaries in order to quell them, as, for example, Edmund in *King Lear* is evoked as a pretender to power but ultimately killed by "true" nobles. He represents a dissident presence in the social world of the era, a new class of merchants, small businessmen, and industrialists who were struggling for power against the reigning nobility. His presence in the play, moreover, produces dissonance within the play's discourse. True, "virtue" (the ideological term the nobility used to anoint itself with the right to rule) triumphs in the end, but it can do so only by evoking vice and by giving it time on stage. Even as the play asserts the right of the nobility to rule, it evokes the reality that such rule was being contested at the time. By having the defeat of Edmund hang solely on an act of violence (Edgar, the true noble, defeats him in combat), the play also draws attention to the fact that the nobility's claim to legitimacy is tenuous, a matter of force, not virtue.

Another strand of Marxism arose in Germany in the mid-twentieth century and is usually referred to as "Critical Theory." It comprised the work of Walter Benjamin, Theodor Adorno, Ernst Bloch, Herbert Marcuse, and others. They were fascinated by the way society and culture consisted of parts in necessary relationship to one another such that a change in one area meant changes in another inevitably. In this "dialectical" way of theorizing about society and culture, those relations were often conceived as being antagonistic, dissonant, or contradictory. An example of relational change would be the way the growth of huge amounts of wealth in one sector of the population under capitalism meant the relative deprivation of another large group, and this imbalance gave rise to cultural forms that were also unbalanced. High art captured the best of human imagination for a few, while banal popular culture fed the under-nourished masses a gruel of rote, repetitive, intellectually depleted forms of "entertainment" that kept them happy and kept them from complaining overly much about the unequal situation in which they lived. Yet because they were dialecticians, the Critical Theorists located negations within the seeming unity of capitalist culture. High art negated the banal reality of capitalism by assigning value to things other than commodities or money. Art therefore could progressively point ahead in a utopian manner to a society founded on non-utilitarian principles where activities could, like art, be ends in themselves rather than slavishly dutiful work for the benefit of someone in economic power.

Marxism is one form of historical criticism, but it is not the only one. Back when New Criticism was getting itself named new, one kind of traditional criticism that it was replacing was historical. This historical work might or might not be governed by a specific theory of history – such as, for example, Marxism – but it would invariably see the historical as a context for the study of the literary work. Historical background, historical context: the language of a traditional historicism saw the literary work in the foreground and history in the background, with the task of the critic being to connect the two. The literary work might represent or refer to the historical context; the critic would make sense of the literary work by researching the history to which it referred. Without such background information, how could the reader understand anything from the wars fought in a Shakespeare play to the property laws that governed the plot of an Austen novel? One notable consequence was that a literary critic needed to read a good deal of non-literary work, and the critic's enterprise led to the historical archive. Biographical, social, cultural, political – there were as many possibilities as there were schools of historical study, and the literary critic might share with his colleague in history a knowledge of certain eras or institutions that could make him look like an early advocate of interdisciplinarity. Indeed, such was the accusation of the New Critics, who were interested in distinguishing and clarifying the uniquely literary nature of their enterprise, and in sending the historians, sociologists, and biographers of literary study off to their separate fields of study. But history has returned to literary study, and like any repressed entity, it has done so with a vengeance. Literary study today is pervasively historical.

The first return of history falls under the denomination of New Historicism. New Historicism distinguished itself from its antecedents largely because of the way in which the concept of history it assumed had passed through a Post-Structuralist critique. What such a critique makes explicit is the textuality of history, the way in which history is only available as a collection of discourses and the way history is itself relational and web-like (much like a text). Foucault and Derrida are the Post-Structuralist thinkers who most influenced this critical approach. Foucault's histories of everything from madness to sexuality are histories of the discourses that have constructed the past. And Derrida's theory of supplementarity denaturalized the referent by converting it from a thing into a web of relations. New Historians see the historical as textual, and one effect is to create a new relationship between the historical and the literary text. Because both are representations, a term very important to the New Historians (so much so that it is the title of a New Historical journal), neither one is closer to the "truth" of history. History is not some unmediated reality out there, some stable background that the literary text reflects or refers to; it is not a context. Rather, it is like the literary text itself – of a different genre, granted, but no less a discourse or a web of relations. Such a view might seem to undo the privilege of the literary text or of "history" – depending on whether someone valorizes an aesthetic distinction or an ontological one – but it does make it possible to study relations between texts both literary and historical and discover how they trace certain patterns and negotiate various kinds of cultural meaning.

What kinds of patterns interest the New Historian? Influenced at once by Foucauldian and Marxist theories of history, the New Historian focuses on issues of power – with a particular interest in the ways in which power is maintained by unofficial means such as the theatricality of royal display in the Court. The cultural materialists argued that all power is fragile, subject to undermining by dissident elements within a society, and they believed that literature inadvertently displays the fissures in power, the moments of

subversion where the precariousness of power is most palpable. Responding to their critique, New Historicist Stephen Greenblatt argued that subversion itself was a ruse of power. His essay, entitled “Invisible Bullets,” referred to a ploy of English colonists, who characterized the diseases ravaging Native populations as God-sent punishment for disobedience to their colonial masters; in Greenblatt’s argument, the containment of subversion was like the “invisible bullets” of germ warfare used to contain Native resistance. A playwright like Shakespeare might evoke the undermining of royal power in his *Henry* plays, but in the end, such undermining merely serves the ends of reinforcing that power all the more forcefully. At a certain point, subversion and containment were almost the catch-phrases of New Historicism.

Another preoccupation of New Historicism is with the circulation of discourses both within and through various texts. Any text itself will have a mode of circulation – it will have a place within an economic system – but it will also serve to circulate certain discourses. To see the discourses circulating in a particular era, one needs to see not only their literary manifestation but also their presence in other kinds of cultural representations. The New Historian is selective in an approach to the archive; the historical text that illuminates a pattern might be a single manifesto or conduct book, a broadside or a periodical. All texts might be called interventions in such patterns, in that they do not merely reflect but have effects on the cultural situation they represent. A New Historicist essay will often put the same reading practices into play for all the texts it studies, with the non-literary subject to the same close reading as the literary.

The turn to history is a crucial part of the current scene in literary study and is one conducted under the aegis of many critical approaches. Feminism and gender studies, post-colonialism and ethnic studies: the categories of analysis are themselves historical, and in the anti-essentialism of the moment few would be willing to adopt a vocabulary without historicizing it. Historicism in literary study received a highly visible revival with the creation of New Historicism, but in some sense the wider success of historicism is evidenced in the ways historicism has entered almost every other critical approach from C. L. R. James’s study of the revolution in Haiti, *The Black Jacobins*, to Gerald Vizenor’s work on nostalgic imagery of the “vanishing” Native Americans, *Native Poses*, to Paul Gilroy’s account of a circum-Atlantic African cultural diaspora in “Black Atlantic.”

A historian recently characterized his discipline as one in which knowledge is presumed to be diachronic, across time, to use the vocabulary introduced by Saussure. Saussure himself focused on a synchronic mode of analysis, we might note. Historicism today is, in fact, both diachronic and synchronic. That is, many contemporary historicist critics draw on the synchronic analysis of Saussure and his structuralist heirs, who show “reality” to be constituted of systems of signs, realms of discourse that work to construct a version of the real. Understanding “history” as discursively produced allows one to consider the source of a given discourse, its genealogy, to use a term important to Foucault, and along with its source the perspective it might serve. In a recent film entitled *The Official Story*, an Argentinian woman who teaches history in a high school is brought face to face with the discrepancy between history as she is teaching it, as her government wants her to teach it, with all of its occlusions, and history as she is living it. Reading between the lines of “the official story,” she discovers an alternative discourse being produced by the mothers of the disappeared (victims of Argentina’s right-wing military dictatorship), a discourse that inhabits her own family, however much the official story denies its existence. Or to cite a different example, in a preface to Frederick

Douglass's *Narrative*, Wendell Phillips recounts the fable of "The Man and the Lion" in which the Lion complains that he would not be so misrepresented "when the lions write history." Frederick Douglass, a fugitive slave for whom literacy itself was against the law, was Wendell Phillips's lion, and he was writing history. Presumably the disappeared can tell no stories. No more can lions. But the metaphor of their missing stories is another way to mark the place of alternative discourses, alternative histories, of all the historical work yet to be done in the ever-expanding processes of writing the past.

# CHAPTER 2

## The Philosophic and Economic Manuscripts of 1844

*Karl Marx*

Private property is a concept in Marx that has been widely misunderstood. By private property, Marx did not mean things like cars, houses, bank accounts, and businesses. He meant instead the product of human labor that is seized by the owners of capital and converted into their exclusive private property as accumulated wealth. Marx saw human life as an active process of creation and production. Humans act on nature, transforming it to suit their needs. Human life is creative active life. In early human existence, humans only needed to produce food to survive, but as human civilization developed (another product of human creativity), human needs expanded. Now, humans needed to produce dwellings, institutions such as governments, and manufactured goods such as pottery and roofing tiles that could be used in food storage and building. Advance again two thousand years in time, and humans were producing clothes, pots and pans, cutlery, furniture, iron goods, and horse carriages. Usually, these produced goods belonged to those who made them. Small shops did the manufacture. But with time, as the human population expanded and civilization grew, more produced goods were needed, and new human inventions such as steam power made their production on a mass scale possible. Humans, separated from farms and the ability to grow their own food, had to sell their labor to the owners of capital who employed them making things in the new factories. The creative activity of humans now was in the service of someone else (it had become "alien" or "estranged"). And the product of human labor now belonged to the owner of the factory rather than to the workers. The product of human labor had become "privatized."

That is what Marx means by private property. The products of human creative labor belong to someone other than those who made them. Under the rules of capitalism, the factory owner owns what others make for him in return for wages.

*Original publication details:* Karl Marx, "The Economic and Philosophic Manuscripts" from *The Marx–Engels Reader*, trans. Robert C. Tucker, pp. 52–71. W.W. Norton, 1972.

In his early manuscripts, Marx develops this theory, but because they were not made available until 1932, well after the Russian Revolution of 1917, which attempted to transform Russia into a Marxist society that abolished "private property," the Russian communists instead tried to abolish private property in the colloquial sense, taking homes and businesses away from people.

## Estranged Labour<sup>1</sup>

We have proceeded from the premises of political economy. We have accepted its language and its laws. We presupposed private property, the separation of labour, capital and land, and of wages, profit of capital and rent of land – likewise division of labour, competition, the concept of exchange-value, etc. On the basis of political economy itself, in its own words, we have shown that the worker sinks to the level of a commodity and becomes indeed the most wretched of commodities; that the wretchedness of the worker is in inverse proportion to the power and magnitude of his production; that the necessary result of competition is the accumulation of capital in a few hands, and thus the restoration of monopoly in a more terrible form; that finally the distinction between capitalist and land-rentier, like that between the tiller of the soil and the factory-worker, disappears and that the whole of society must fall apart into the two classes – the *property-owners* and the *propertyless workers*.

Political economy proceeds from the fact of private property, but it does not explain it to us. It expresses in general, abstract formulae the *material* process through which private property actually passes, and these formulae it then takes for *laws*. It does not *comprehend* these laws – i.e., it does not demonstrate how they arise from the very nature of private property. Political economy does not disclose the source of the division between labour and capital, and between capital and land. When, for example, it defines the relationship of wages to profit, it takes the interest of the capitalists to be the ultimate cause; i.e., it takes for granted what it is supposed to evolve. Similarly, competition comes in everywhere. It is explained from external circumstances. As to how far these external and apparently fortuitous circumstances are but the expression of a necessary course of development, political economy teaches us nothing. We have seen how, to it, exchange itself appears to be a fortuitous fact. The only wheels which political economy sets in motion are *avarice* and the *war amongst the avaricious – competition*.

Precisely because political economy does not grasp the connections within the movement, it was possible to counterpose, for instance, the doctrine of competition to the doctrine of monopoly, the doctrine of craft-liberty to the doctrine of the corporation, the doctrine of the division of landed property to the doctrine of the big estate – for competition, craft-liberty and the division of landed property were explained and comprehended only as fortuitous, premeditated and violent consequences of monopoly, the corporation, and feudal property, not as their necessary, inevitable and natural consequences.

Now, therefore, we have to grasp the essential connection between private property, avarice, and the separation of labour, capital and landed property; between exchange and competition, value and the devaluation of men, monopoly and competition, etc.; the connection between this whole estrangement and the *money-system*.

Do not let us go back to a fictitious primordial condition as the political economist does, when he tries to explain. Such a primordial condition explains nothing. He merely

pushes the question away into a grey nebulous distance. He assumes in the form of fact, of an event, what he is supposed to deduce – namely, the necessary relationship between two things – between, for example, division of labour and exchange. Theology in the same way explains the origin of evil by the fall of man: that is, it assumes as a fact, in historical form, what has to be explained.

We proceed from an *actual* economic fact.

The worker becomes all the poorer the more wealth he produces, the more his production increases in power and range. The worker becomes an ever cheaper commodity the more commodities he creates. With the *increasing value* of the world of things proceeds in direct proportion the *devaluation* of the world of men. Labour produces not only commodities; it produces itself and the worker as a *commodity* – and does so in the proportion in which it produces commodities generally.

This fact expresses merely that the object which labour produces – labour's product – confronts it as *something alien*, as a *power independent* of the producer. The product of labour is labour which has been congealed in an object, which has become material: it is the *objectification* of labour. Labour's realization is its objectification. In the conditions dealt with by political economy this realization of labour appears as *loss of reality* for the workers; objectification as *loss of the object* and *object-bondage*; appropriation as *estrangement*, as *alienation*.<sup>2</sup>

So much does labour's realization appear as loss of reality that the worker loses reality to the point of starving to death. So much does objectification appear as loss of the object that the worker is robbed of the objects most necessary not only for his life but for his work. Indeed, labour itself becomes an object which he can get hold of only with the greatest effort and with the most irregular interruptions. So much does the appropriation of the object appear as estrangement that the more objects the worker produces the fewer can he possess and the more he falls under the dominion of his product, capital.

All these consequences are contained in the definition that the worker is related to the *product of his labour* as to an *alien* object. For on this premise it is clear that the more the worker spends himself, the more powerful the alien objective world becomes which he creates over-against himself, the poorer he himself – his inner world – becomes, the less belongs to him as his own. It is the same in religion. The more man puts into God, the less he retains in himself. The worker puts his life into the object; but now his life no longer belongs to him but to the object. Hence, the greater this activity, the greater is the worker's lack of objects. Whatever the product of his labour is, he is not. Therefore the greater this product, the less is he himself. The *alienation* of the worker in his product means not only that his labour becomes an object, an *external* existence, but that it exists *outside him*, independently, as something alien to him, and that it becomes a power of its own confronting him; it means that the life which he has conferred on the object confronts him as something hostile and alien.

Let us now look more closely at the *objectification*, at the production of the worker; and therein at the *estrangement*, the *loss of the object*, his product.

The worker can create nothing without *nature*, without the *sensuous external world*. It is the material on which his labor is manifested, in which it is active, from which and by means of which it produces.

But just as nature provides labor with the *means of life* in the sense that labour cannot *live* without objects on which to operate, on the other hand, it also provides the *means of life* in the more restricted sense – i.e., the means for the physical subsistence of the *worker* himself.

Thus the more the worker by his labour *appropriates* the external world, sensuous nature, the more he deprives himself of *means of life* in the double respect: first, that the sensuous external world more and more ceases to be an object belonging to his labour – to be his labour's *means of life*; and secondly, that it more and more ceases to be *means of life* in the immediate sense, means for the physical subsistence of the worker.

Thus in this double respect the worker becomes a slave of his object, first, in that he receives an *object of labour*, i.e., in that he receives *work*; and secondly, in that he receives *means of subsistence*. Therefore, it enables him to exist, first, as a *worker*; and, second, as a *physical subject*. The extremity of this bondage is that it is only as a *worker* that he continues to maintain himself as a *physical subject*, and that it is only as a *physical subject* that he is a *worker*.

(The laws of political economy express the estrangement of the worker in his object thus: the more the worker produces, the less he has to consume; the more values he creates, the more valueless, the more unworthy he becomes; the better formed his product, the more deformed becomes the worker; the more civilized his object, the more barbarous becomes the worker; the mightier labour becomes, the more powerless becomes the worker; the more ingenious labour becomes, the duller becomes the worker and the more he becomes nature's bondsman.)

*Political economy conceals the estrangement inherent in the nature of labour by not considering the direct relationship between the worker (labour) and production.* It is true that labour produces for the rich wonderful things – but for the worker it produces privation. It produces palaces – but for the worker, hovels. It produces beauty – but for the worker, deformity. It replaces labour by machines – but some of the workers it throws back to a barbarous type of labour, and the other workers it turns into machines. It produces intelligence – but for the worker idiocy, cretinism.

*The direct relationship of labour to its produce is the relationship of the worker to the objects of his production.* The relationship of the man of means to the objects of production and to production itself is only a *consequence* of this first relationship – and confirms it. We shall consider this other aspect later.

When we ask, then, what is the essential relationship of labour we are asking about the relationship of the *worker* to production.

Till now we have been considering the estrangement, the alienation of the worker only in one of its aspects, i.e., the worker's *relationship to the products of his labour*. But the estrangement is manifested not only in the result but in the *act of production* – within the *producing activity* itself. How would the worker come to face the product of his activity as a stranger, were it not that in the very act of production he was estranging himself from himself? The product is after all but the summary of the activity of production. If then the product of labour is alienation, production itself must be active alienation, the alienation of activity, the activity of alienation. In the estrangement of the object of labour is merely summarized the estrangement, the alienation, in the activity of labour itself.

What, then, constitutes the alienation of labour?

First, the fact that labour is *external* to the worker, i.e., it does not belong to his essential being; that in his work, therefore, he does not affirm himself but denies himself, does not feel content but unhappy, does not develop freely his physical and mental energy but mortifies his body and ruins his mind. The worker therefore only feels himself outside his work, and in his work feels outside himself. He is at home when he is not working, and when he is working he is not at home. His labour is therefore not voluntary, but

coerced; it is *forced labour*. It is therefore not the satisfaction of a need; it is merely a means to satisfy needs external to it. Its alien character emerges clearly in the fact that as soon as no physical or other compulsion exists, labour is shunned like the plague. External labour, labour in which man alienates himself, is a labour of self-sacrifice, of mortification. Lastly, the external character of labour for the worker appears in the fact that it is not his own, but someone else's, that it does not belong to him, that in it he belongs, not to himself, but to another. Just as in religion the spontaneous activity of the human imagination, of the human brain and the human heart, operates independently of the individual – that is, operates on him as an alien, divine or diabolical activity – in the same way the worker's activity is not his spontaneous activity. It belongs to another; it is the loss of his self.

As a result, therefore, man (the worker) no longer feels himself to be freely active in any but his animal functions – eating, drinking, procreating, or at most in his dwelling and in dressing-up, etc.; and in his human functions he no longer feels himself to be anything but an animal. What is animal becomes human and what is human becomes animal.

Certainly eating, drinking, procreating, etc., are also genuinely human functions. But in the abstraction which separates them from the sphere of all other human activity and turns them into sole and ultimate ends, they are animal.

We have considered the act of estranging practical human activity, labour, in two of its aspects. (1) The relation of the worker to the *product of labour* as an alien object exercising power over him. This relation is at the same time the relation to the sensuous external world, to the objects of nature as an alien world antagonistically opposed to him. (2) The relation of labour to the *act of production* within the *labour process*. This relation is the relation of the worker to his own activity as an alien activity not belonging to him; it is activity as suffering, strength as weakness, begetting as emasculating, the worker's own physical and mental energy, his personal life or what is life other than activity – as an activity which is turned against him, neither depends on nor belongs to him. Here we have *self-estrangement*, as we had previously the estrangement of the *thing*.

We have yet a third aspect of *estranged labour* to deduce from the two already considered.

Man is a species being, not only because in practice and in theory he adopts the species as his object (his own as well as those of other things), but – and this is only another way of expressing it – but also because he treats himself as the actual, living species; because he treats himself as a *universal* and therefore a free being.

The life of the species, both in man and in animals, consists physically in the fact that man (like the animal) lives on inorganic nature; and the more universal man is compared with an animal, the more universal is the sphere of inorganic nature on which he lives. Just as plants, animals, stones, the air, light, etc., constitute a part of human consciousness in the realm of theory, partly as objects of natural science, partly as objects of art – his spiritual inorganic nature, spiritual nourishment which he must first prepare to make it palatable and digestible – so too in the realm of practice they constitute a part of human life and human activity. Physically man lives only on these products of nature, whether they appear in the form of food, heating, clothes, a dwelling, or whatever it may be. The universality of man is in practice manifested precisely in the universality which makes all nature his *inorganic body* – both inasmuch as nature is (1) his direct means of life, and (2) the material, the object, and the instrument of his life-activity. Nature is man's *inorganic body* – nature, that is, in so far as it is not itself the human body. Man *lives*

on nature – means that nature is his *body*, with which he must remain in continuous intercourse if he is not to die. That man's physical and spiritual life is linked to nature means simply that nature is linked to itself, for man is a part of nature.

In estranging from man (1) nature, and (2) himself, his own active functions, his life-activity, estranged labour estranges the *species* from man. It turns for him the *life of the species* into a means of individual life. First it estranges the life of the species and individual life, and secondly it makes individual life in its abstract form the purpose of the life of the species, likewise in its abstract and estranged form.

For in the first place labour, *life-activity, productive life* itself, appears to man merely as a *means* of satisfying a need – the need to maintain the physical existence. Yet the productive life is the life of the species. It is life-engendering life. The whole character of a species – its species character – is contained in the character of its life-activity; and free, conscious activity is man's species character. Life itself appears only as a *means to life*.

The animal is immediately identical with its life-activity. It does not distinguish itself from it. It is *its life-activity*. Man makes his life-activity itself the object of his will and of his consciousness. He has conscious life-activity. It is not a determination with which he directly merges. Conscious life-activity directly distinguishes man from animal life-activity. It is just because of this that he is a species being. Or it is only because he is a species being that he is a Conscious Being, i.e., that his own life is an object for him. Only because of that is his activity free activity. Estranged labour reverses this relationship, so that it is just because man is a conscious being that he makes his life-activity, his *essential being*, a mere means to his *existence*.

In creating an *objective world* by his practical activity, in *working-up* inorganic nature, man proves himself a conscious species being, i.e., as a being that treats the species as its own essential being, or that treats itself as a species being. Admittedly animals also produce. They build themselves nests, dwellings, like the bees, beavers, ants, etc. But an animal only produces what it immediately needs for itself or its young. It produces one-sidedly, whilst man produces universally. It produces only under the dominion of immediate physical need, whilst man produces even when he is free from physical need and only truly produces in freedom therefrom. An animal produces only itself, whilst man reproduces the whole of nature. An animal's product belongs immediately to its physical body, whilst man freely confronts his product. An animal forms things in accordance with the standard and the need of the species to which it belongs, whilst man knows how to produce in accordance with the standard of every species, and knows how to apply everywhere the inherent standard to the object. Man therefore also forms things in accordance with the laws of beauty.

It is just in the working-up of the objective world, therefore, that man first really proves himself to be a *species being*. This production is his active species life. Through and because of this production, nature appears as *his work* and his reality. The object of labour is, therefore, the *objectification of man's species life*: for he duplicates himself not only, as in consciousness, intellectually, but also actively, in reality, and therefore he contemplates himself in a world that he has created. In tearing away from man the object of his production, therefore, estranged labour tears from him his *species life*, his real species objectivity, and transforms his advantage over animals into the disadvantage that his inorganic body, nature, is taken from him.

Similarly, in degrading spontaneous activity, free activity, to a means, estranged labour makes man's species life a means to his physical existence.

The consciousness which man has of his species is thus transformed by estrangement in such a way that the species life becomes for him a means.

Estranged labour turns thus:

(3) *Man's species being*, both nature and his spiritual species property, into a being *alien* to him, into a *means* to his *individual existence*. It estranges man's own body from him, as it does external nature and his spiritual essence, his *human being*.

(4) An immediate consequence of the fact that man is estranged from the product of his labour, from his life-activity, from his species being is the *estrangement of man from man*. If a man is confronted by himself, he is confronted by the *other man*. What applies to a man's relation to his work, to the product of his labour and to himself, also holds of a man's relation to the other man, and to the other man's labour and object of labour.

In fact, the proposition that man's species nature is estranged from him means that one man is estranged from the other, as each of them is from man's essential nature.<sup>3</sup>

The estrangement of man, and in fact every relationship in which man stands to himself, is first realized and expressed in the relationship in which a man stands to other men.

Hence within the relationship of estranged labour each man views the other in accordance with the standard and the position in which he finds himself as a worker.

We took our departure from a fact of political economy – the estrangement of the worker and his production. We have formulated the concept of this fact – *estranged, alienated labour*. We have analysed this concept – hence analysing merely a fact of political economy.

Let us now see, further, how in real life the concept of estranged, alienated labour must express and present itself.

If the product of labour is alien to me, if it confronts me as an alien power, to whom, then, does it belong?

If my own activity does not belong to me, if it is an alien, a coerced activity, to whom, then, does it belong?

To a being *other* than me.

Who is this being?

The *gods*? To be sure, in the earliest times the principal production (for example, the building of temples, etc., in Egypt, India and Mexico) appears to be in the service of the gods, and the product belongs to the gods. However, the gods on their own were never the lords of labour. No more was *nature*. And what a contradiction it would be if, the more man subjugated nature by his labour and the more the miracles of the gods were rendered superfluous by the miracles of industry, the more man were to renounce the joy of production and the enjoyment of the produce in favour of these powers.

The *alien* being, to whom labour and the produce of labour belongs, in whose service labour is done and for whose benefit the produce of labour is provided, can only be *man* himself.

If the product of labour does not belong to the worker, if it confronts him as an alien power, this can only be because it belongs to some *other man than the worker*. If the worker's activity is a torment to him, to another it must be *delight* and his life's joy. Not the gods, not nature, but only man himself can be this alien power over man.

We must bear in mind the above-stated proposition that man's relation to himself only becomes *objective* and *real* for him through his relation to the other man. Thus, if the product of his labour, his labour *objectified*, is for him an *alien*, hostile, powerful object independent of him, then his position towards it is such that someone else is master of this object, someone who is alien, hostile, powerful, and independent of him. If his own

activity is to him an unfree activity, then he is treating it as activity performed in the service, under the dominion, the coercion and the yoke of another man.

Every self-estrangement of man from himself and from nature appears in the relation in which he places himself and nature to men other than and differentiated from himself. For this reason religious self-estrangement necessarily appears in the relationship of the layman to the priest, or again to a mediator, etc., since we are here dealing with the intellectual world. In the real practical world self-estrangement can only become manifest through the real practical relationship to other men. The medium through which estrangement takes place is itself *practical*. Thus through estranged labour man not only engenders his relationship to the object and to the act of production as to powers that are alien and hostile to him; he also engenders the relationship in which other men stand to his production and to his product, and the relationship in which he stands to these other men. Just as he begets his own production as the loss of his reality, as his punishment; just as he begets his own product as a loss, as a product not belonging to him; so he begets the dominion of the one who does not produce over production and over the product. Just as he estranges from himself his own activity, so he confers to the stranger activity which is not his own.

Till now we have only considered this relationship from the standpoint of the worker and later we shall be considering it also from the standpoint of the non-worker.

Through *estranged, alienated labour*, then, the worker produces the relationship to this labour of a man alien to labour and standing outside it. The relationship of the worker to labour engenders the relation to it of the capitalist, or whatever one chooses to call the master of labour. *Private property* is thus the product, the result, the necessary consequence, of *alienated labour*, of the external relation of the worker to nature and to himself.

*Private property* thus results by analysis from the concept of *alienated labour* – that is, of *alienated man*, of estranged labour, of estranged life, of *estranged man*.

True, it is as a result of the *movement of private property* that we have obtained the concept of *alienated labour* (*of alienated life*) from political economy. But on analysis of this concept it becomes clear that though private property appears to be the source, the cause of alienated labour, it is really its consequence, just as the gods *in the beginning* are not the cause but the effect of man's intellectual confusion. Later this relationship becomes reciprocal.

Only at the very culmination of the development of private property does this, its secret, re-emerge, namely, that on the one hand it is the *product* of alienated labour, and that secondly it is the *means* by which labour alienates itself, the *realization of this alienation*.

This exposition immediately sheds light on various hitherto unsolved conflicts.

(1) Political economy starts from labour as the real soul of production; yet to labour it gives nothing, and to private property everything. From this contradiction Proudhon has concluded in favour of labour and against private property. We understand, however, that this apparent contradiction is the contradiction of *estranged labour* with itself, and that political economy has merely formulated the laws of estranged labour.

We also understand, therefore, that *wages* and *private property* are identical: where the product, the object of labour pays for labour itself, the wage is but a necessary consequence of labour's estrangement, for after all in the wage of labour, labour does not appear as an end in itself but as the servant of the wage. We shall develop this point later, and meanwhile will only deduce some conclusions.

A *forcing-up of wages* (disregarding all other difficulties, including the fact that it would only be by force, too, that the higher wages, being an anomaly, could be maintained) would therefore be nothing but *better payment for the slave*, and would not conquer either for the worker or for labour their human status and dignity.

Indeed, even the *equality of wages* demanded by Proudhon only transforms the relationship of the present-day worker to his labour into the relationship of all men to labour. Society is then conceived as an abstract capitalist.

Wages are a direct consequence of estranged labour, and estranged labour is the direct cause of private property. The downfall of the one aspect must therefore mean the downfall of the other.

(2) From the relationship of estranged labour to private property it further follows that the emancipation of society from private property, etc., from servitude, is expressed in the *political form* of the *emancipation of the workers*; not that *their* emancipation alone was at stake but because the emancipation of the workers contains universal human emancipation – and it contains this, because the whole of human servitude is involved in the relation of the worker to production, and every relation of servitude is but a modification and consequence of this relation.

Just as we have found the concept of *private property* from the concept of *estranged, alienated labour* by *analysis*, in the same way every *category* of political economy can be evolved with the help of these two factors; and we shall find again in each category, e.g., trade, competition, capital, money, only a *definite and developed expression* of the first foundations.

Before considering this configuration, however, let us try to solve two problems.

(1) To define the general *nature of private property*, as it has arisen as a result of estranged labour, in its relation to *truly human, social property*.

(2) We have accepted the *estrangement of labour*, its *alienation*, as a fact, and we have analysed this fact. How, we now ask, does *man* come to *alienate*, to *estrangle*, *his labour*? How is this estrangement rooted in the nature of human development? We have already gone a long way to the solution of this problem by *transforming* the question as to the *origin of private property* into the question as to the relation of *alienated labour* to the course of humanity's development. For when one speaks of *private property*, one thinks of being concerned with something external to man. When one speaks of labour, one is directly concerned with man himself. This new formulation of the question already contains its solution.

*As to (1): The general nature of private property and its relation to truly human property.*

Alienated labour has resolved itself for us into two elements which mutually condition one another, or which are but different expressions of one and the same relationship. *Appropriation* appears as *estrangement*, as *alienation*; and *alienation* appears as *appropriation*, *estrangement* as true *enfranchisement*.

We have considered the one side – *alienated labour* in relation to the *worker* himself, i.e., the *relation of alienated labour to itself*. The *property-relation of the non-worker to the worker and to labour* we have found as the product, the necessary outcome of this relation of alienated labour. *Private property*, as the material, summary expression of alienated labour, embraces both relations – the *relation of the worker to work, to the product of his labour and to the non-worker*, and the *relation of the non-worker to the worker and to the product of his labour*.

Having seen that in relation to the worker who *appropriates* nature by means of his labour, this appropriation *appears* as *estrangement*, his own spontaneous activity as

activity for another and as activity of another, vitality as a sacrifice of life, production of the object as loss of the object to an alien power, to an *alien* person – we shall now consider the relation to the worker, to labour and its object of this person who is *alien* to labour and the worker.

First it has to be noticed, that everything which appears in the worker as an *activity of alienation, of estrangement*, appears in the non-worker as a *state of alienation, of estrangement*.

Secondly, that the worker's *real, practical attitude* in production and to the product (as a state of mind) appears in the non-worker confronting him as a *theoretical attitude*.

*Thirdly*, the non-worker does everything against the worker which the worker does against himself; but he does not do against himself what he does against the worker.

Let us look more closely at these three relations.<sup>4</sup>

## Private Property and Communism

*Re. p. XXXIX.* The antithesis of *propertylessness* and *property* so long as it is not comprehended as the antithesis of *labour* and *capital*, still remains an antithesis of indifference, not grasped in its *active connection*, its *internal relation* – an antithesis not yet grasped as a *contradiction*. It can find expression in this *first form* even without the advanced development of private property (as in ancient Rome, Turkey, etc.). It does not yet appear as having been established by private property itself. But labour, the subjective essence of private property as exclusion of property, and capital, objective labour as exclusion of labour, constitute *private property* as its developed state of contradiction – hence a dynamic relationship moving inexorably to its resolution.

*Re. the same page.* The transcendence of self-estrangement follows the same course as self-estrangement. *Private property* is first considered only in its objective aspect – but nevertheless with labour as its essence. Its form of existence is therefore *capital*, which is to be annulled “as such” (Proudhon). Or a *particular form* of labour – labour levelled down, parcelled, and therefore unfree – is conceived as the source of private property’s *perniciousness* and of its existence in estrangement from men; for instance, *Fourier*, who, like the physiocrats, also conceived *agricultural labour* to be at least the *exemplary* type, whilst *Saint-Simon* declares in contrast that *industrial labour* as such is the essence, and now also aspires to the *exclusive* rule of the industrialists and the improvement of the workers’ condition. Finally, *communism* is the *positive* expression of annulled private property – at first as *universal private property*. By embracing this relation as a *whole*, communism is:

- (1) In its first form only a *generalization* and *consummation* of this relationship. It shows itself as such in a twofold form: on the one hand, the dominion of *material property* bulks so large that it wants to destroy *everything* which is not capable of being possessed by all as *private property*. It wants to abstract *by force* from talent, etc. For it the sole purpose of life and existence is direct, physical possession. The category of *labourer* is not done away with, but extended to all men. The relationship of private property persists as the relationship of the community to the world of things. Finally, this movement of counterposing universal private property to private property finds expression in the bestial form of counterposing to *marriage* (certainly a *form of exclusive private property*) the *community of women*, in which a woman becomes a piece of *communal* and *common* property. It may be said that this idea of the *community of women* gives away the *secret of*

this as yet completely crude and thoughtless communism. Just as the woman passes from marriage to general prostitution,<sup>5</sup> so the entire world of wealth (that is, of man's objective substance) passes from the relationship of exclusive marriage with the owner of private property to a state of universal prostitution with the community. In negating the *personality* of man in every sphere, this type of communism is really nothing but the logical expression of private property, which is this negation. General envy constituting itself as a power is the disguise in which *avarice* re-establishes itself and satisfies itself, only in *another* way. The thoughts of every piece of private property – inherent in each piece as such – are *at least* turned against all *wealthier* private property in the form of envy and the urge to reduce to a common level, so that this envy and urge even constitute the essence of competition. The crude communism is only the consummation of this envy and of this levelling-down proceeding from the *preconceived* minimum. It has a *definite, limited* standard. How little this annulment of private property is really an appropriation is in fact proved by the abstract negation of the entire world of culture and civilization, the regression to the *unnatural simplicity* of the *poor and undemanding* man who has not only failed to go beyond private property, but has not yet even attained to it.

The community is only a community of *labour*, and an equality of *wages* paid out by the communal capital – the *community* as the universal capitalist. Both sides of the relationship are raised to an *imagined* universality – *labour* as a state in which every person is put, and *capital* as the acknowledged universality and power of the community.

In the approach to *woman* as the spoil and handmaid of communal lust is expressed the infinite degradation in which man exists for himself, for the secret of this approach has its *unambiguous*, decisive, *plain* and undisguised expression in the relation of *man* to *woman* and in the manner in which the *direct* and *natural* procreative relationship is conceived. The direct, natural, and necessary relation of person to person is the *relation of man to woman*. In this *natural* relationship of the sexes man's relation to nature is immediately his relation to man, just as his relation to man is immediately his relation to nature – his own *natural* function. In this relationship, therefore, is *sensuously manifested*, reduced to an observable *fact*, the extent to which the human essence has become nature to man, or to which nature has to him become the human essence of man. From this relationship one can therefore judge man's whole level of development. It follows from the character of this relationship how much *man as a species being*, as *man*, has come to be himself and to comprehend himself; the relation of man to woman is the *most natural* relation of human being to human being. It therefore reveals the extent to which man's *natural* behaviour has become *human*, or the extent to which the *human* essence in him has become a *natural* essence – the extent to which his *human nature* has come to be *nature to him*. In this relationship is revealed, too, the extent to which man's *need* has become a *human* need; the extent to which, therefore, the *other* person as a person has become for him a need – the extent to which he in his individual existence is at the same time a social being. The first positive annulment of private property – *crude* communism – is thus merely one *form* in which the vileness of private property, which wants to set itself up as the *positive community*, comes to the surface.

(2) Communism (a) of a political nature still – democratic or despotic; (b) with the annulment of the state, yet still incomplete, and being still affected by private property (i.e., by the estrangement of man). In both forms communism already knows itself to be re-integration or return of man to himself, the transcendence of human self-estrangement; but since it has not yet grasped the positive essence of private property, and just as

little the *human* nature of need, it remains captive to it and infected by it. It has, indeed, grasped its concept, but not its essence.

(3) *Communism* as the *positive* transcendence of *private property*, or *human self-estrangement*, and therefore as the real *appropriation of the human essence* by and for man; communism therefore as the complete return of man to himself as a *social* (i.e., human) being – a return become conscious, and accomplished within the entire wealth of previous development. This communism, as fully-developed naturalism, equals humanism, and as fully-developed humanism equals naturalism; it is the *genuine* resolution of the conflict between man and nature and between man and man – the true resolution of the strife between existence and essence, between objectification and self-confirmation, between freedom and necessity, between the individual and the species. Communism is the riddle of history solved, and it knows itself to be this solution.

The entire movement of history is, therefore, both its *actual* act of genesis (the birth act of its empirical existence) and also for its thinking consciousness the *comprehended* and *known* process of its *coming-to-be*. That other, still immature communism, meanwhile, seeks an *historical* proof for itself – a proof in the realm of the existent – amongst disconnected historical phenomena opposed to private property, tearing single phases from the historical process and focussing attention on them as proofs of its historical pedigree (a horse ridden hard especially by Cabet, Villegardelle, etc.). By so doing it simply makes clear that by far the greater part of this process contradicts its claims, and that, if it has once been, precisely its being in the *past* refutes its pretension to being *essential*.

That the entire revolutionary movement necessarily finds both its empirical and its theoretical basis in the movement of *private property* – in that of the economy, to be precise – is easy to see.

This *material*, immediately *sensuous* private property is the material sensuous expression of *estranged human* life. Its movement – production and consumption – is the *sensuous* revelation of the movement of all production hitherto – i.e., the realization or the reality of man. Religion, family, state, law, morality, science, art, etc., are only *particular* modes of production, and fall under its general law. The positive transcendence of *private property* as the appropriation of *human* life is, therefore, the positive transcendence of all estrangement – that is to say, the return of man from religion, family, state, etc., to his *human*, i.e., *social* mode of existence. Religious estrangement as such occurs only in the realm of *consciousness*, of man's inner life, but economic estrangement is that of *real life*; its transcendence therefore embraces both aspects. It is evident that the *initial* stage of the movement amongst the various peoples depends on whether the true and for them *authentic* life of the people manifests itself more in consciousness or in the external world – is more ideal or real. Communism begins from the outset (*Owen*) with atheism; but atheism is at first far from being *communism*; indeed, it is still mostly an abstraction.

The philanthropy of atheism is therefore at first only *philosophical*, abstract, philanthropy, and that of communism is at once *real* and directly bent on *action*.

We have seen how on the premise of positively annulled private property man produces man – himself and the other man; how the object, being the direct embodiment of his individuality, is simultaneously his own existence for the other man, the existence of the other man, and that existence for him. Likewise, however, both the material of labour and man as the subject, are the point of departure as well as the result of the movement (and precisely in this fact, that they must constitute the *point of departure*, lies the historical *necessity* of private property). Thus the *social* character is the general character of

the whole movement: *just as* society itself produces *man as man*, so is society *produced by him*. Activity and consumption, both in their content and in their *mode of existence*, are *social*: *social* activity and *social* consumption; the *human* essence of nature first exists only for *social* man; for only here does nature exist for him as a *bond* with *man* – as his existence for the other and the other's existence for him – as the life-element of the human world; only here does nature exist as the *foundation* of his own *human* existence. Only here has what is to him his *natural* existence become his *human* existence, and nature become man for him. Thus *society* is the consummated oneness in substance of man and nature – the true resurrection of nature – the naturalism of man and the humanism of nature both brought to fulfilment.

### Notes

- 1 *Die Entfremdete Arbeit.* [In some other translations this phrase appears as “alienated labour.” – R. T.]
- 2 “Alienation” – *Entausserung*. An alternative and perhaps better translation of *Entausserung* would be “externalization.” The term translated “estrangement” in the above passage is *Entfremdung*. [R. T.]
- 3 “Species nature” (and, earlier, “species being”) – *Gattungswesen*; “man's essential nature” – *menschlichen Wesen*.
- 4 At this point the first manuscript breaks off unfinished.
- 5 Prostitution is only a *specific* expression of the *general* prostitution of the *labourer*, and since it is a relationship in which falls not the prostitute alone, but also the one who prostitutes – and the latter's abomination is still greater – the capitalist, etc., also comes under this head. [Marx]

# CHAPTER 3

## The German Ideology

*Karl Marx*

In this early work (1846), Marx retells the story of human history from the perspective of who owns and who works. In this selection, he argues against a group of mid-nineteenth-century German thinkers who saw the world as an embodiment of spiritual ideas. Marx believed that there was no such thing as spirit. All life consists of physical or material processes. And human consciousness is part of those physical processes.

Men can be distinguished from animals by consciousness, by religion, or anything else you like. They themselves begin to distinguish themselves from animals as soon as they begin to produce their means of subsistence, a step which is conditioned by their physical organization. By producing their means of subsistence men are indirectly producing their actual material life.

The way in which men produce their means of subsistence depends first of all on the nature of the actual means of subsistence they find in existence and have to reproduce. This mode of production must not be considered simply as being the reproduction of the physical existence of the individuals. Rather it is a definite form of activity of these individuals, a definite form of expressing their life, a definite *mode of life* on their part. As individuals express their life, so they are. What they are, therefore coincides with their production, both with *what* they produce and with *how* they produce. The nature of individuals thus depends on the material conditions determining their production.

This production only makes its appearance with the *increase of population*. In its turn this presupposes the *intercourse* [*Verkehr*] of individuals with one another. The form of this intercourse is again determined by production.

The relations of different nations among themselves depend upon the extent to which each has developed its productive forces, the division of labor and internal intercourse. This statement is generally recognized. But not only the relation of one nation to others, but also the whole interval structure of the nation itself depends on the stage of

*Original publication details:* Karl Marx, “The German Ideology: Part 1,” from *The Marx–Engels Reader*, second edition, trans. Robert C. Tucker, pp. 110–164. W.W. Norton, 1978. Reproduced with permission from W.W. Norton & Company Inc.

development reached by its production and its internal and external intercourse. How far the productive forces of a nation are developed is shown most manifestly by the degree to which the division of labor has been carried. Each new productive force, insofar as it is not merely a quantitative extension of productive forces already known (for instance the bringing into cultivation of fresh land), causes a further development of the division of labor.

The division of labor inside a nation leads at first to the separation of industrial and commercial from agricultural labor, and hence to the separation of *town* and *country* and to the conflict of their interests. Its further development leads to the separation of commercial from industrial labor. At the same time through the division of labor inside these various branches there develop various divisions among the individuals cooperating in definite kinds of labor. The relative position of these individual groups is determined by the methods employed in agriculture, industry, and commerce (patriarchalism, slavery, estates, classes). These same conditions are to be seen (given a more developed intercourse) in the relations of different nations to one another.

The various stages of development in the division of labor are just so many different forms of ownership, i.e., the existing stage in the division of labor determines also the relations of individuals to one another with reference to the material, instrument, and product of labor.

The first form of ownership is tribal [*Stammeigentum*] ownership. It corresponds to the undeveloped stage of production, at which a people lives by hunting and fishing, by the rearing of beasts, or, in the highest stage, agriculture. In the latter case it presupposes a great mass of uncultivated stretches of land. The division of labor is at this stage still very elementary and is confined to a further extension of the natural division of labor existing in the family. The social structure is, therefore, limited to an extension of the family; patriarchal family chieftains, below them the members of the tribe, finally slaves. The slavery latent in the family only develops gradually with the increase of populations, the growth of wants, and with the extension of external relations, both of war and of barter.

The second form is the ancient communal and State ownership which proceeds especially from the union of several tribes into a city by agreement or by conquest, and which is still accompanied by slavery. Beside communal ownership we already find movable, and later also immovable, private property developing, but as an abnormal form subordinate to communal ownership. The citizens hold power over their laboring slaves only in their community, and on this account alone, therefore, they are bound to the form of communal ownership. It is the communal private property which compels the active citizens to remain in this spontaneously derived form of association over against their slaves. For this reason the whole structure of society based on this communal ownership, and with it the power of the people, decays in the same measure as, in particular, immovable private property evolves. The division of labor is already more developed. We already find the antagonism of town and country; later the antagonism between those states which represent town interests and those which represent country interests, and inside the towns themselves the antagonism between industry and maritime commerce. The class relation between citizens and slaves is now completely developed....

The third form of ownership is feudal or estate property. If antiquity started out from the town and its little territory, the Middle Ages started out from the *country*. This different starting-point was determined by the sparseness of the political at that

time, which was scattered over a large area and which received no large increase from the conquerors. In contrast to Greece and Rome, feudal development at the outset, therefore, extends over a territory, prepared by the Roman conflicts and the spread of agriculture; at first associated with them. The last centuries of the declining Roman Empire and its conquest by the barbarians destroyed a number of productive forces; agriculture had declined, industry had decayed for want of a market, trade had died out or been violently suspended, the rural and urban population had decreased. From these conditions and the mode of organization of the conquest determined by them, feudal property developed under the influence of the Germanic military constitution. Like tribal and communal ownership, it is based again on a community; but the directly producing class standing over against it is not, as in the case of the ancient community, the slaves, but the enserfed small peasantry. As soon as feudalism is fully developed, there also arises antagonism to the towns. The hierarchical structure of landownership, and the armed bodies of retainers associated with it, gave the nobility power over the serfs. This feudal organization was, just as much as the ancient communal ownership, an association against a subjected producing class; but the form of association and the relation to the direct producers were different because of the different conditions of production.

This feudal system of landownership had its counterpart in the *towns* in the shape of corporative property, the feudal organization of trades. Here property consisted chiefly in the labor of each individual person. The necessity for association against the organized robber nobility, the need for communal covered markets in an age when the industrialist was at the same time a merchant, the growing competition of the escaped serfs swarming into the rising towns, the feudal structure of the whole country, these combined to bring about the *guilds*. The gradually accumulated small capital of individual craftsmen and their stable numbers, as against the growing population, evolved the relation of journeyman and apprentice, which brought into being in the towns a hierarchy similar to that in the country.

Thus the chief form of property during the feudal epoch consisted on the one hand of landed property with serf labor chained to it, and on the other of the labor of the individual with small capital commanding the labor of journeymen. The organization of both was determined by the restricted conditions of production – the small-scale and primitive cultivation of the land, and the craft type of industry. There was little division of labor in the heyday of feudalism. Each country bore in itself the antithesis of town and country; the division into estates was certainly strongly marked; but apart from the differentiation of princes, nobility, clergy and peasants in the country and masters, journeymen, apprentices and soon also the rabble of casual laborers in the towns, no division of importance took place. In agriculture it was rendered difficult by the strip-system beside which the cottage industry of the peasants themselves emerged. In industry there was no division of labor at all in the individual trades themselves, and very little between them. The separation of industry and commerce was found already in existence in older towns; in the newer it only developed later, when the towns entered into mutual relations.

The grouping of larger territories into feudal kingdoms was a necessity for the landed nobility as for the towns. The organization of the ruling class, the nobility, had, therefore, everywhere a monarch at its head.

The fact is, therefore, that definite individuals who are productively active in a definite way enter into these definite social and political relations. Empirical

observation must in each separate instance bring out empirically, all without mystification and speculation, the connection of the social and political structure with production. The social structure and the State are continually evolving out of the life process of definite individuals, but of individuals, not as they may appear in their own or other people's imagination, but as they *really* are; i.e., as they operate, produce materially, and hence as they work under specific material limits, presuppositions and conditions independent of their will.

The production of ideas, of conceptions, of consciousness is at first directly interwoven with the material activities and the material intercourse of men, the language of real life. conceiving, thinking, the mental intercourse of men, appear at this stage as the direct efflux of their material behavior. The same applies to mental production as expressed in the language of politics, laws, morality, religion, metaphysics, etc., of a people. Men are the producers of their conceptions, ideas, etc. – real active men, as they are conditioned by a particular development of their productive forces and of the intercourse corresponding to these, up to its furthest forms. Consciousness can never be anything else than conscious existence, and the existence of men is their actual life-process. If in all ideology men and their circumstances appear upside-down as in a *camera obscura*, this phenomenon arises just as much from their historical life-process as the inversion of objects on the retina does from their physical life-process.

In direct contrast to German philosophy which descends from heaven to earth, here we ascend from earth to heaven. That is to say, we do not set out from what men say, imagine, conceive, nor from men as narrated, thought of, imagined, conceived, in order to arrive at men in the flesh. We set out from real, active men, and on the basis of their real life-process we demonstrate the development of the ideological reflexes and echoes of this life-process. The phantoms formed in the human brain are also, necessarily, sublimates of their material life-process, which is empirically verifiable and bound to material premises. Morality, religion, metaphysics, all the rest of ideology and their corresponding forms of consciousness, thus no longer retain the semblance of independence. They have no history, no development; but men, developing their material production and their material intercourse, alter, along with this their real existence, their thinking and the products of their thinking. Life is not determined by consciousness, but consciousness by life. In the first method of approach the starting-point is consciousness taken as the living individual; in the second method, which conforms to real life, it is the real living individuals themselves, and consciousness is considered solely as *their* consciousness....

The ideas of the ruling class are in every epoch the ruling ideas: i.e., the class which is the ruling *material* force of society, is at the same time its ruling *intellectual* force. The class which has the means of material production at its disposal has control at the same time over the means of material production, so that thereby, generally speaking, the ideas of those who lack the means of mental production are subject to it. The ruling ideas are nothing more than the ideal expression of the dominant material relationships, the dominant material relationships grasped as ideas; hence of the relationships which make the one class the ruling one, therefore, the ideas of its dominance. The individuals composing the ruling class possess among other things consciousness, and therefore think. Insofar, therefore, as they rule as a class and determine the extent and compass of an epoch, it is self-evident that they do this in its whole range, hence among other things rule also as thinkers, as producers of ideas, and regulate the production and distribution

of the ideas of their age: thus their ideas are the ruling ideas of the epoch. For instance, in an age and in a country where royal power, aristocracy, and bourgeoisie are contending for mastery and where, therefore, mastery is shared, the doctrine of the separation of powers proves to be the dominant idea and is expressed as an "eternal law."

The division of labor, which we have already seen above as one of the chief forces of history up till now, manifests itself also in the ruling class as the division of mental and material labor, so that inside this class one part appears as the thinkers of the class (its active, conceptive ideologists, who make the perfecting of the illusion of the class about itself their chief source of livelihood), while the others' attitude to these ideas and illusions is more passive and receptive, because they are in reality the active members of this class and have less time to make up illusions and ideas about themselves. Within this class this cleavage can even develop into a certain opposition and hostility between the two parts, which, however, in the case of a practical collision, in which the class itself is endangered, automatically comes to nothing, in which case there also vanishes the semblance that the ruling ideas were not the ideas of the ruling class and had a power distinct from the power of this class. The existence of revolutionary ideas in a particular period presupposes the existence of a revolutionary class; about the premises for the latter sufficient has already been said above.

If now in considering the course of history we detach the ideas of the ruling class from the ruling class itself and attribute to them an independent existence, if we confine ourselves to saying that these or those ideas were dominant at a given time, without bothering ourselves about the conditions of production and the producers of these ideas, if we thus ignore the individuals and world conditions which are the source of the ideas, we can say, for instance, that during the time that the aristocracy was dominant, the concepts honor, loyalty, etc., were dominant, during the dominance of the bourgeoisie the concepts freedom, equality, etc. The ruling class itself on the whole imagines this to be so. This conception of history, which is common to all historians, particularly since the eighteenth century, will necessarily come up against the phenomenon that increasingly abstract ideas hold sway, i.e., ideas which increasingly take on the form of universality. For each new class which puts itself in the place of one ruling before it, is compelled, merely in order to carry through its aim, to represent its interest as the common interest of all the members of society, that is, expressed an ideal form: it has to give its ideas the form of universality, and represent them as the only rational, universally valid ones. The class making a revolution appears from the very start, if only because it is opposed to a *class*, not as a class but as the representative of the whole of society; it appears as the whole mass of society confronting the one ruling class.<sup>1</sup> It can do this because, to start with, its interest really is more connected to the common interest of all other non-ruling classes, because under the pressure of hitherto existing conditions its interest has not yet been able to develop as the particular interest of a particular class. Its victory, therefore, benefits also many individuals of the other classes which are not winning a dominant position, but only insofar as it now puts these individuals in a position to raise themselves into the ruling class. When the French bourgeoisie overthrew the power of the aristocracy, it thereby made it possible for many proletarians to raise themselves above the proletariat, but only insofar as they became bourgeois. Every new class, therefore, achieves its hegemony only on a broader basis than that of the class ruling previously, whereas the opposition of the non-ruling class against the new ruling class develops all the more sharply and profoundly. Both these things determine the fact that the struggle to be waged against this new ruling class, in

its turn, aims at a more decided and radical negation of the previous conditions of society than could all previous classes which sought to rule.

This whole semblance, that the rule of a certain class is only the rule of certain ideas, comes to a natural end, of course, as soon as class rule in general ceases to be the form in which society is organized, that is to say, as soon as it is no longer necessary to represent a particular interest as general or the “general interest” as ruling.

### Note

- 1 Marginal note by Marx: “Universality corresponds to (1) the class versus the estate, (2) the competition, world-wide intercourse, etc., (3) the great numerical strength of the ruling class, (4) the illusion of the *common* interests (in the beginning this illusion is true), (5) the delusion of the ideologists and the division of labor.”

# CHAPTER 4

## Theses on the Philosophy of History

*Walter Benjamin*

Walter Benjamin was one of the most important Marxist thinkers of the twentieth century. Both highly speculative in his approach as well as extremely perceptive regarding the intersection of art and popular culture, he wrote essays that have continued to inspire scholars concerned with combating the tendency towards Fascism in human nature and with understanding how such things as technology transform our concepts and practices of literature and art. His well-known "The Work of Art in the Age of Mechanical Reproduction" argues that the new media that make art easily reproducible change its cultural value and deprive it of the aura that allowed it to be a sign of cultural status and hieratic value. The new medium of film, Benjamin argued, in a move that prefigured some findings of neuroscience, changes our ways of thinking and seeing. In this essay on the concept of history, he notes that political positions such as those of the Social Democrats assume a particular picture of how history moves through time. At the time in the 1920s and 1930s, the parliamentary Left (the Social Democrats mainly) were at odds with the Right (the Nazis). The Marxists (the Spartacists) had been repressed in 1919, clearing the way for the rise of the revolutionary conservative movement called Nazism. The Social Democrats did not perceive the danger the Nazis posed. They conceived of history as moving progressively forward. The working class could therefore make accommodations with capitalists because their lives were slowly improving through better working conditions and higher wages. The Marxists (who Benjamin refers to as Historical Materialists) felt history was not progressive. Rather, the continuity of history could be broken by a state of exception of the kind the Nazis represented. The working class also had to think of history as in the present, as a moment of breaking, if it was to liberate itself from capitalism.

## I

The story is told of an automaton constructed in such a way that it could play a winning game of chess, answering each move of an opponent with a countermove. A puppet in Turkish attire and with a hookah in its mouth sat before a chessboard placed on a large table. A system of mirrors created the illusion that this table was transparent from all sides. Actually, a little hunchback who was an expert chess player sat inside and guided the puppet's hand by means of strings. One can imagine a philosophical counterpart to this device. The puppet called "historical materialism" is to win all the time. It can easily be a match for anyone if it enlists the services of theology, which today, as we know, is wizened and has to keep out of sight.

## II

"One of the most remarkable characteristics of human nature," writes Lotze, "is, along-side so much selfishness in specific instances, the freedom from envy which the present displays toward the future." Reflection shows us that our image of happiness is thoroughly colored by the time to which the course of our own existence has assigned us. The kind of happiness that could arouse envy in us exists only in the air we have breathed, among people we could have talked to, women who could have given themselves to us. In other words, our image of happiness is indissolubly bound up with the image of redemption. The same applies to our view of the past, which is the concern of history. The past carries with it a temporal index by which it is referred to redemption. There is a secret agreement between past generations and the present one. Our coming was expected on earth. Like every generation that preceded us, we have been endowed with a *weak* Messianic power, a power to which the past has a claim. That claim cannot be settled cheaply. Historical materialists are aware of that.

## III

A chronicler who recites events without distinguishing between major and minor ones acts in accordance with the following truth: nothing that has ever happened should be regarded as lost for history. To be sure, only a redeemed mankind receives the fullness of its past – which is to say, only for a redeemed mankind has its past become citable in all its moments. Each moment it has lived becomes a *citation à l'ordre du jour* – and that day is Judgment Day.

## IV

*Seek for food and clothing first, then  
the Kingdom of God shall be added unto you.*

– Hegel, 1807

The class struggle, which is always present to a historian influenced by Marx, is a fight for the crude and material things without which no refined and spiritual things could exist. Nevertheless, it is not in the form of the spoils which fall to the victor that the

latter make their presence felt in the class struggle. They manifest themselves in this struggle as courage, humor, cunning, and fortitude. They have retroactive force and will constantly call in question every victory, past and present, of the rulers. As flowers turn toward the sun, by dint of a secret heliotropism the past strives to turn toward that sun which is rising in the sky of history. A historical materialist must be aware of this most inconspicuous of all transformations.

## V

The true picture of the past flits by. The past can be seized only as an image which flashes up at the instant when it can be recognized and is never seen again. "The truth will not run away from us": in the historical outlook of historicism these words of Gottfried Keller mark the exact point where historical materialism cuts through historicism. For every image of the past that is not recognized by the present as one of its own concerns threatens to disappear irretrievably. (The good tidings which the historian of the past brings with throbbing heart may be lost in a void the very moment he opens his mouth.)

## VI

To articulate the past historically does not mean to recognize it "the way it really was" (Ranke). It means to seize hold of a memory as it flashes up at a moment of danger. Historical materialism wishes to retain that image of the past which unexpectedly appears to man singled out by history at a moment of danger. The danger affects both the content of the tradition and its receivers. The same threat hangs over both: that of becoming a tool of the ruling classes. In every era the attempt must be made anew to wrest tradition away from a conformism that is about to overpower it. The Messiah comes not only as the redeemer, he comes as the subduer of Antichrist. Only that historian will have the gift of fanning the spark of hope in the past who is firmly convinced that *even the dead* will not be safe from the enemy if he wins. And this enemy has not ceased to be victorious.

## VII

*Consider the darkness and the great cold  
In this vale which resounds with mystery.*

— Brecht, THE THREEPENNY OPERA

To historians who wish to relive an era, Fustel de Coulanges recommends that they blot out everything they know about the later course of history. There is no better way of characterizing the method with which historical materialism has broken. It is a process of empathy whose origin is the indolence of the heart, *acedia*, which despairs of grasping and holding the genuine historical image as it flares up briefly. Among medieval theologians it was regarded as the root cause of sadness. Flaubert, who was familiar with it, wrote: "*Peu de gens devineront combien il a fallu être triste pour ressusciter Carthage.*"<sup>1</sup>

The nature of this sadness stands out more clearly if one asks with whom the adherents of historicism actually empathize. The answer is inevitable: with the victor. And all rulers are the heirs of those who conquered before them. Hence, empathy with the victor invariably benefits the rulers. Historical materialists know what that means. Whoever has emerged victorious participates to this day in the triumphal procession in which the present rulers step over those who are lying prostrate. According to traditional practice, the spoils are carried along in the procession. They are called cultural treasures, and a historical materialist views them with cautious detachment. For without exception the cultural treasures he surveys have an origin which he cannot contemplate without horror. They owe their existence not only to the efforts of the great minds and talents who have created them, but also to the anonymous toil of their contemporaries. There is no document of civilization which is not at the same time a document of barbarism. And just as such a document is not free of barbarism, barbarism taints also the manner in which it was transmitted from one owner to another. A historical materialist therefore dissociates himself from it as far as possible. He regards it as his task to brush history against the grain.

## VIII

The tradition of the oppressed teaches us that the “state of emergency” in which we live is not the exception but the rule. We must attain to a conception of history that is in keeping with this insight. Then we shall clearly realize that it is our task to bring about a real state of emergency, and this will improve our position in the struggle against Fascism. One reason why Fascism has a chance is that in the name of progress its opponents treat it as a historical norm. The current amazement that the things we are experiencing are “still” possible in the twentieth century is *not* philosophical. This amazement is not the beginning of knowledge – unless it is the knowledge that the view of history which gives rise to it is untenable.

## IX

*Mein Flügel ist zum Schwung bereit,  
ich kehrte gern zurück,  
denn blieb ich auch lebendige Zeit,  
ich hätte wenig Glück.*

– Gerhard Scholem, “Gruss vom Angelus”<sup>2</sup>

A Klee painting named “Angelus Novus” shows an angel looking as though he is about to move away from something he is fixedly contemplating. His eyes are staring, his mouth is open, his wings are spread. This is how one pictures the angel of history. His face is turned toward the past. Where we perceive a chain of events, he sees one single catastrophe which keeps piling wreckage upon wreckage and hurls it in front of his feet. The angel would like to stay, awaken the dead, and make whole what has been smashed. But a storm is blowing from Paradise; it has got caught in his wings with such violence that the angel can no longer close them. This storm irresistibly propels him into the future to which his back is turned, while the pile of debris before him grows skyward. This storm is what we call progress.

## X

The themes which monastic discipline assigned to friars for meditation were designed to turn them away from the world and its affairs. The thoughts which we are developing here originate from similar considerations. At a moment when the politicians in whom the opponents of Fascism had placed their hopes are prostrate and confirm their defeat by betraying their own cause, these observations are intended to disentangle the political worldlings from the snares in which the traitors have entrapped them. Our consideration proceeds from the insight that the politicians' stubborn faith in progress, their confidence in their "mass basis," and, finally, their servile integration in an uncontrollable apparatus have been three aspects of the same thing. It seeks to convey an idea of the high price our accustomed thinking will have to pay for a conception of history that avoids any complicity with the thinking to which these politicians continue to adhere.

## XI

The conformism which has been part and parcel of Social Democracy from the beginning attaches not only to its political tactics but to its economic views as well. It is one reason for its later breakdown. Nothing has corrupted the German working class so much as the notion that it was moving with the current. It regarded technological developments as the fall of the stream with which it thought it was moving. From there it was but a step to the illusion that the factory work which was supposed to tend toward technological progress constituted a political achievement. The old Protestant ethics of work was resurrected among German workers in secularized form. The Gotha Program<sup>3</sup> already bears traces of this confusion, defining labor as "the source of all wealth and all culture." Smelling a rat, Marx countered that "... the man who possesses no other property than his labor power" must of necessity become "the slave of other men who have made themselves the owners...." However, the confusion spread, and soon thereafter Josef Dietzgen proclaimed: "The savior of modern times is called work. The ... improvement ... of labor constitutes the wealth which is now able to accomplish what no redeemer has ever been able to do." This vulgar-Marxist conception of the nature of labor bypasses the question of how its products might benefit the workers while still not being at their disposal. It recognizes only the progress in the mastery of nature, not the retrogression of society; it already displays the technocratic features later encountered in Fascism. Among these is a conception of nature which differs ominously from the one in the Socialist utopias before the 1848 revolution. The new conception of labor amounts to the exploitation of nature, which with naïve complacency is contrasted with the exploitation of the proletariat. Compared with this positivistic conception, Fourier's fantasies, which have so often been ridiculed, prove to be surprisingly sound. According to Fourier, as a result of efficient cooperative labor, four moons would illuminate the earthly night, the ice would recede from the poles, sea water would no longer taste salty, and beasts of prey would do man's bidding. All this illustrates a kind of labor which, far from exploiting nature, is capable of delivering her of the creations which lie dormant in her womb as potentials. Nature, which, as Dietzgen puts it, "exists gratis," is a complement to the corrupted conception of labor.

## XII

*We need history, but not the way a spoiled loafer  
in the garden of knowledge needs it.*

— Nietzsche, OF THE USE AND ABUSE OF HISTORY

Not man or men but the struggling, oppressed class itself is the depository of historical knowledge. In Marx it appears as the last enslaved class, as the avenger that completes the task of liberation in the name of generations of the downtrodden. This conviction, which had a brief resurgence in the Spartacist group,<sup>4</sup> has always been objectionable to Social Democrats. Within three decades they managed virtually to erase the name of Blanqui, though it had been the rallying sound that had reverberated through the preceding century. Social Democracy thought fit to assign to the working class the role of the redeemer of future generations, in this way cutting the sinews of its greatest strength. This training made the working class forget both its hatred and its spirit of sacrifice, for both are nourished by the image of enslaved ancestors rather than that of liberated grandchildren.

## XIII

*Every day our cause becomes clearer and people get smarter.*

— Wilhelm Dietzgen, DIE RELIGION DER SOZIALEMOKRATIE

Social Democratic theory, and even more its practice, have been formed by a conception of progress which did not adhere to reality but made dogmatic claims. Progress as pictured in the minds of Social Democrats was, first of all, the progress of mankind itself (and not just advances in men's ability and knowledge). Secondly, it was something boundless, in keeping with the infinite perfectibility of mankind. Thirdly, progress was regarded as irresistible, something that automatically pursued a straight or spiral course. Each of these predicates is controversial and open to criticism. However, when the chips are down, criticism must penetrate beyond these predicates and focus on something that they have in common. The concept of the historical progress of mankind cannot be sundered from the concept of its progression through a homogeneous, empty time. A critique of the concept of such a progression must be the basis of any criticism of the concept of progress itself.

## XIV

*Origin is the goal.*

— Karl Kraus, WORTE IN VERSEN, Vol. I

History is the subject of a structure whose site is not homogeneous, empty time, but time filled by the presence of the now [*Jetztzeit*.<sup>5</sup>] Thus, to Robespierre ancient Rome was a past charged with the time of the now which he blasted out of the continuum of history. The French Revolution viewed itself as Rome reincarnate. It evoked ancient Rome the way fashion evokes costumes of the past. Fashion has a flair for the topical, no matter

where it stirs in the thickets of long ago; it is a tiger's leap into the past. This jump, however, takes place in an arena where the ruling class gives the commands. The same leap in the open air of history is the dialectical one, which is how Marx understood the revolution.

## XV

The awareness that they are about to make the continuum of history explode is characteristic of the revolutionary classes at the moment of their action. The great revolution introduced a new calendar. The initial day of a calendar serves as a historical time-lapse camera. And, basically, it is the same day that keeps recurring in the guise of holidays, which are days of remembrance. Thus the calendars do not measure time as clocks do; they are monuments of a historical consciousness of which not the slightest trace has been apparent in Europe in the past hundred years. In the July revolution an incident occurred which showed this consciousness still alive. On the first evening of fighting it turned out that the clocks in towers were being fired on simultaneously and independently from several places in Paris. An eye-witness, who may have owed his insight to the rhyme, wrote as follows:

Qui le croirait! on dit, qu'irrités contre l'heure  
De nouveaux Josués au pied de chaque tour,  
Tiraient sur les cadrans pour arrêter le jour.<sup>6</sup>

## XVI

A historical materialist cannot do without the notion of a present which is not a transition, but in which time stands still and has come to a stop. For this notion defines the present in which he himself is writing history. Historicism gives the “eternal” image of the past; historical materialism supplies a unique experience with the past. The historical materialist leaves it to others to be drained by the whore called “Once upon a time” in historicism’s bordello. He remains in control of his powers, man enough to blast open the continuum of history.

## XVII

Historicism rightly culminates in universal history. Materialistic historiography differs from it as to method more clearly than from any other kind. Universal history has no theoretical armature. Its method is additive; it musters a mass of data to fill the homogeneous, empty time. Materialistic historiography, on the other hand, is based on a constructive principle. Thinking involves not only the flow of thoughts, but their arrest as well. Where thinking suddenly stops in a configuration pregnant with tensions, it gives that configuration a shock, by which it crystallizes into a monad. A historical materialist approaches a historical subject only where he encounters it as a monad. In this structure he recognizes the sign of a Messianic cessation of happening, or, put differently, a revolutionary chance in the fight for the oppressed past. He takes cognizance of it in order to

blast a specific era out of the homogeneous course of history – blasting a specific life out of the era or a specific work out of the lifework. As a result of this method the lifework is preserved in this work and at the same time canceled<sup>7</sup>; in the lifework, the era; and in the era, the entire course of history. The nourishing fruit of the historically understood contains time as a precious but tasteless seed.

## XVIII

“In relation to the history of organic life on earth,” writes a modern biologist, “the paltry fifty millennia of *homo sapiens* constitute something like two seconds at the close of a twenty-four-hour day. On this scale, the history of civilized mankind would fill one-fifth of the last second of the last hour.” The present, which, as a model of Messianic time, comprises the entire history of mankind in an enormous abridgment, coincides exactly with the stature which the history of mankind has in the universe.

### A

Historicism contents itself with establishing a causal connection between various moments in history. But no fact that is a cause is for that very reason historical. It became historical posthumously, as it were, through events that may be separated from it by thousands of years. A historian who takes this as his point of departure stops telling the sequence of events like the beads of a rosary. Instead, he grasps the constellation which his own era has formed with a definite earlier one. Thus he establishes a conception of the present as the “time of the now” which is shot through with chips of Messianic time.

### B

The soothsayers who found out from time what it had in store certainly did not experience time as either homogeneous or empty. Anyone who keeps this in mind will perhaps get an idea of how past times were experienced in remembrance – namely, in just the same way. We know that the Jews were prohibited from investigating the future. The Torah and the prayers instruct them in remembrance, however. This stripped the future of its magic, to which all those succumb who turn to the soothsayers for enlightenment. This does not imply, however, that for the Jews the future turned into homogeneous, empty time. For every second of time was the strait gate through which the Messiah might enter.

### Notes

1 “Few will be able to guess how sad one had to be in order to resuscitate Carthage.”

2  
*My wing is ready for flight,  
I would like to turn back.  
If I stayed timeless time,  
I would have little luck.*

- 3 The Gotha Congress of 1875 united the two German Socialist parties, one led by Ferdinand Lassalle, the other by Karl Marx and Wilhelm Liebknecht. The program, drafted by Liebknecht and Lassalle, was severely attacked by Marx in London. See his "Critique of the Gotha Program."
- 4 Leftist group, founded by Karl Liebknecht and Rosa Luxemburg at the beginning of World War I in opposition to the pro-war policies of the German Socialist party, later absorbed by the Communist party.
- 5 Benjamin says "*Jetztzeit*" and indicates by the quotation marks that he does not simply mean an equivalent to *Gegenwart*, that is, present. He clearly is thinking of the mystical *nunc stans*.
- 6 Who would have believed it! we are told that new Joshuas  
at the foot of every tower, as though irritated with  
time itself, fired at the dials in order to stop the day.
- 7 The Hegelian term *aufheben* in its threefold meaning: to preserve, to elevate, to cancel.

# CHAPTER 5

## Structures and the Habitus

*Pierre Bourdieu*

In this selection from his *Outline of a Theory of Practice* (1972), Marxist social theorist Pierre Bourdieu describes how social practices replicate social structures. We live inside structures that guide behavior in such a way that an implied social order is maintained by our own actions. Dating practices, for example, replicate the heteronormative assumptions of most societies, while associated practices such as dowries or even engagement rings replicate assumptions regarding gender.

Bourdieu's argument is classically dialectical. According to dialectical reasoning, any system operates on the basis of presuppositions, and the action of the system re-positions or replicates those presuppositions. For Marxist dialecticians, this means that the assumptions that allow capitalism to operate – especially the divorce of workers from the product of their labor (which becomes the private property of the capitalist) and the greater power of the capitalist over workers in terms of accumulated wealth – are reproduced through the normal operations of capitalism, which would never suddenly make workers wealthy and capitalists penurious. Bourdieu sees such dialectical operations in all social action. In his highly regarded *Distinction* (1979), for example, a study of taste, he noted that the local culture of each social class trains inhabitants in particular kinds of taste regarding cultural goods. Practicing those tastes effectively helps maintain one's status or lack of it in the hierarchy of cultural locations and goods.

### A False Dilemma: Mechanism and Finalism

The structures constitutive of a particular type of environment (e.g. the material conditions of existence characteristic of a class condition) produce *habitus*, systems of durable, transposable *dispositions*,<sup>1</sup> structured structures predisposed to function as structuring structures, that is, as principles of the generation and structuring of practices and representations which can be objectively “regulated” and “regular” without in any way being the product of obedience to rules, objectively adapted to their goals

*Original publication details:* Pierre Bourdieu, “Structures and the Habitus” from *Outline of a Theory of Practice*, pp. 72–95. Cambridge University Press, 1977.

without presupposing a conscious aiming at ends or an express mastery of the operations necessary to attain them and, being all this, collectively orchestrated without being the product of the orchestrating action of a conductor.

Even when they appear as the realization of the explicit, and explicitly stated, purposes of a project or plan, the practices produced by the habitus, as the strategy-generating principle enabling agents to cope with unforeseen and ever-changing situations, are only apparently determined by the future. If they seem determined by anticipation of their own consequences, thereby encouraging the finalist illusion, the fact is that, always tending to reproduce the objective structures of which they are the product, they are determined by the past conditions which have produced the principle of their production, that is, by the actual outcome of identical or interchangeable past practices, which coincides with their own outcome to the extent (*and only to the extent*) that the objective structures of which they are the product are prolonged in the structures within which they function. Thus, for example, in the interaction between two agents or groups of agents endowed with the same habitus (say A and B), everything takes place as if the actions of each of them (say,  $a_1$  for A) were organized in relation to the reactions they call forth from any agent possessing the same habitus (say,  $b_1$ , B's reaction to  $a_1$ ) so that they objectively imply anticipation of the reaction which these reactions in turn call forth (say  $a_2$ , the reaction to  $b_1$ ). But the teleological description according to which each action has the purpose of making possible the reaction to the reaction it arouses (individual A performing action  $a_1$ , e.g. a gift or challenge, in order to make individual B produce action  $b_1$ , a counter-gift or riposte, so as to be able to perform action  $a_2$ , a stepped-up gift or challenge) is quite as naive as the mechanistic description which presents the action and the riposte as moments in a sequence of programmed actions produced by a mechanical apparatus. The habitus is the source of these series of moves which are objectively organized as strategies without being the product of a genuine strategic intention – which would presuppose at least that they are perceived as one strategy among other possible strategies.<sup>2</sup>

It is necessary to abandon all theories which explicitly or implicitly treat practice as a mechanical reaction, directly determined by the antecedent conditions and entirely reducible to the mechanical functioning of pre-established assemblies, “models” or “rôles” – which one would, moreover, have to postulate in infinite number, like the chance configurations of stimuli capable of triggering them from outside, thereby condemning oneself to the grandiose and desperate undertaking of the anthropologist, armed with fine positivist courage, who recorded 480 elementary units of behaviour in twenty minutes’ observation of his wife in the kitchen.<sup>3</sup> But rejection of mechanistic theories in no way implies that, in accordance with another obligatory option, we should bestow on some creative free will the free and wilful power to constitute, on the instant, the meaning of the situation by projecting the ends aiming at its transformation, and that we should reduce the objective intentions and constituted significations of actions and works to the conscious and deliberate intentions of their authors.

Jean-Paul Sartre deserves credit for having given an ultra-consistent formulation of the philosophy of action accepted, usually implicitly, by all those who describe practices as strategies explicitly oriented by reference to purposes explicitly defined by a free project<sup>4</sup> or even, with some interactionists, by reference to the anticipated cues as to the reaction to practices. Thus, refusing to recognize anything resembling durable dispositions, Sartre makes each action a sort of unprecedented confrontation between the subject and the world. This is clearly seen in the passages in *Being and Nothingness*

where he confers on the awakening of revolutionary consciousness – a sort of “conversion” of consciousness produced by a sort of imaginary variation – the power to create the meaning of the present by creating the revolutionary future which negates it: “For it is necessary to reverse the common opinion and acknowledge that it is not the harshness of a situation or the sufferings it imposes that lead people to conceive of another state of affairs in which things would be better for everybody. It is on the day that we are able to conceive of another state of affairs, that a new light is cast on our trouble and our suffering and we *decide* that they are unbearable.”<sup>5</sup> If the world of action is nothing other than this universe of interchangeable possibles, entirely dependent on the decrees of the consciousness which creates it and hence totally devoid of *objectivity*, if it is moving because the subject chooses to be moved, revolting because he chooses to be revolted, then emotions, passions, and actions are merely games of bad faith, sad farces in which one is both bad actor and good audience: “It is not by chance that materialism is serious; it is not by chance that it is found at all times and places as the favourite doctrine of the revolutionary. This is because revolutionaries are serious. They come to know themselves first in terms of the world which oppresses them … The serious man is ‘of the world’ and has no resource in himself. He does not even imagine any longer the possibility of *getting out* of the world … he is in *bad faith*.”<sup>6</sup> The same incapacity to encounter “seriousness” other than in the disapproved form of the “spirit of seriousness” can be seen in an analysis of emotion which, significantly, is separated by *L'imaginaire* (*Psychology of the Imagination*) from the less radically subjectivist descriptions in *Sketch for a Theory of the Emotions*: “What will make me decide to choose the magical aspect or the technical aspect of the world? It cannot be the world itself, for this in order to be manifested waits to be discovered. Therefore it is necessary that the for-itself in its project must choose being the one by whom the world is revealed as magical or rational; that is, the for-itself must as a free project of itself give to itself rational or magical existence. It is responsible for either one, for the for-itself can *be* only if it has chosen itself. Therefore the for-itself appears as the free foundation of its emotions as of its volitions. My fear *is* free and manifests my freedom.”<sup>7</sup> Such a theory of action was inevitably to lead to the desperate project of a transcendental genesis of society and history (the *Critique de la raison dialectique*) to which Durkheim seemed to be pointing when he wrote in *The Rules of Sociological Method*: “It is because the imaginary offers the mind no resistance that the mind, conscious of no restraint, gives itself up to boundless ambitions and believes it possible to construct, or rather reconstruct, the world by virtue of its own strength and at the whim of its desires.”<sup>8</sup>

No doubt one could counterpose to this analysis of Sartrean anthropology the numerous texts (found especially in the earliest and the latest works) in which Sartre recognizes, for example, the “passive syntheses” of a universe of already constituted significations or expressly challenges the very principles of his philosophy, such as the passage in *Being and Nothingness* in which he seeks to distinguish his position from the *instantanéiste* philosophy of Descartes<sup>9</sup> or a sentence from the *Critique de la raison dialectique* in which he announces the study of “agentless actions, totalizer-less productions, counter-finalities, infernal circularities”.<sup>10</sup> The fact remains that Sartre rejects with visceral repugnance “those gelatinous realities, more or less vaguely haunted by a supra-individual consciousness, which a shamefaced organicism still seeks to retrieve, against all likelihood, in the rough, complex but clear-cut field of passive activity in which there are individual organisms and inorganic material realities”,<sup>11</sup> and that he leaves no room for everything that, as much on the side of the things of the world as on

the side of the agents, might seem to blur the sharp line his rigorous dualism seeks to maintain between the pure transparency of the subject and the mineral opacity of the thing. Within this logic, “objective” sociology can grasp only “the sociality of inertia”, that is, for example, the class reduced to *inertia*, hence to impotence, class as a thing, an essence, “congealed” in its being, i.e. in its “having been”: “Class seriality makes the individual (whoever he is and whatever the class) a being who defines himself as a humanized thing ... The other form of class, that is, the group totalizing in a *praxis*, is born at the heart of the passive form and as its negation.”<sup>12</sup> The social world, the site of these compromises between thing and meaning which define “objective meaning” as meaning-made-thing and dispositions as meaning-made-body, is a positive challenge to someone who can only live in the pure, transparent universe of consciousness or individual “praxis”. The only limit this artificialism recognizes to the freedom of the ego is that which freedom sets itself by the free abdication of a pledge or the surrender of bad faith, the Sartrian name for alienation, or the submission imposed on it by the alienating freedom of the alter ego in the Hegelian struggles between master and slave. Seeing “in social arrangements only artificial and more or less arbitrary combinations”, as Durkheim puts it,<sup>13</sup> without a second thought he subordinates the transcendence of the social – reduced to “the reciprocity of constraints and autonomies” – to the “transcendence of the ego”, as the early Sartre used to put it: “In the course of this action, the individual discovers the dialectic as rational transparency, inasmuch as he produces it, and as absolute necessity inasmuch as it escapes him, in other words, *quite simply*, inasmuch as others produce it; finally, precisely insofar as he recognizes himself in overcoming his needs, he recognizes the law which others impose on him in overcoming their own (recognizes it: this does not mean that he submits to it), he recognizes his own autonomy (inasmuch as it can be used by another and daily is, bluffs, manoeuvres, etc.) as a foreign power and the autonomy of others as the inexorable law which allows him to coerce them.”<sup>14</sup> The transcendence of the social can only be the effect of recurrence, that is to say, in the last analysis, of *number* (hence the importance accorded to the “series”), or of the “materialization of recurrence” in cultural objects;<sup>15</sup> alienation consists in the free abdication of freedom in favour of the demands of “worked upon matter”: “the 19th century worker *makes himself what he is*, that is, he practically and rationally determines the order of his expenditure – hence he decides in his free *praxis* – and by his freedom he makes himself what he was, what he is, what he must be: a machine whose wages represent no more than its running costs... Class-being as practico-inert being comes to men by men through the passive syntheses of worked upon matter.”<sup>16</sup> Elsewhere, affirmation of the “logical” primacy of “individual *praxis*”, constituent Reason, over history, constituted Reason, leads Sartre to pose the problem of the genesis of society in the same terms as those employed by the theoreticians of the social contract: “History determines the content of human relationships in its totality and these relationships ... relate back to everything. But it is not History which *causes* there to be human relationships in general. It is not the problems of organization and division of labour that have caused relations to be set up between those *initially separate* objects, men.”<sup>17</sup> Just as for Descartes “creation is continuous”, as Jean Wahl puts it, “because time is not” and because extended substance does not contain within itself the power to subsist – God being invested with the ever-renewed task of recreating the world *ex nihilo* by a free decree of his will – so the typically Cartesian refusal of the viscous opacity of “objective potentialities” and objective meaning leads Sartre to entrust to the absolute initiative of individual or collective “historical agents”, such as the Party, the hypostasis of the

Sartrian subject, the indefinite task of tearing the social whole, or the class, out of the inertia of the “practico-inert”. At the end of his immense imaginary novel of the death and resurrection of freedom, with its twofold movement, the “externalization of internality”, which leads from freedom to alienation, from consciousness to the materialization of consciousness, or, as the title puts it, “from praxis to the practico-inert”, and the “internalization of externality” which, by the abrupt shortcuts of the awakening of consciousness and the “fusion of consciousnesses”, leads “from the group to history”, from the reified state of the alienated group to the authentic existence of the historical agent, consciousness and thing are as irredeemably separate as they were at the outset, without anything resembling an institution or a socially constituted agent ever having been observed or constructed. The appearances of a dialectical discourse (or the dialectical appearances of the discourse) cannot mask the endless oscillation between the in-itself and the for-itself, or in the new language, between materiality and praxis, between the inertia of the group reduced to its “essence”, i.e. to its outlived past and its necessity (abandoned to sociologists) and the continuous creation of the free collective project, seen as a series of acts of commitment indispensable for saving the group from annihilation in pure materiality.<sup>18</sup>

It is, of course, never ruled out that the responses of the habitus may be accompanied by a strategic calculation tending to carry on quasi-consciously the operation the habitus carries on in a quite different way, namely an estimation of chances which assumes the transformation of the past effect into the expected objective. But the fact remains that these responses are defined first in relation to a system of objective potentialities, immediately inscribed in the present, things to do or not to do, to say or not to say, in relation to a *forthcoming* reality which – in contrast to the future conceived as “absolute possibility” (*absolute Möglichkeit*), in Hegel’s sense, projected by the pure project of a “negative freedom” – puts itself forward with an urgency and a claim to existence excluding all deliberation. To eliminate the need to resort to “rules”, it would be necessary to establish in each case a complete description (which invocation of rules allows one to dispense with) of the relation between the habitus, as a socially constituted system of cognitive and motivating structures, and the socially structured situation in which the agents’ *interests* are defined, and with them the objective functions and subjective motivations of their practices. It would then become clear that, as Weber indicated, the juridical or customary rule is never more than a *secondary principle* of the determination of practices, intervening when the primary principle, interest, fails.<sup>19</sup>

Symbolic – that is, *conventional* and *conditional* – stimulations, which act only on condition they encounter agents conditioned to perceive them, tend to impose themselves unconditionally and necessarily when inculcation of the arbitrary abolishes the arbitrariness of both the inculcation and the significations inculcated. The world of urgencies and of goals already achieved, of uses to be made and paths to be taken, of objects endowed with a “permanent teleological character”, in Husserl’s phrase, tools, instruments and institutions, the world of practicality, can grant only a conditional freedom – *liberet si liceret* – rather like that of the magnetic needle which Leibniz imagined actually enjoyed turning northwards. If one regularly observes a very close correlation between the scientifically constructed *objective probabilities* (e.g. the chances of access to a particular good) and *subjective aspirations* (“motivations” or “needs”) or, in other terms, between the *a posteriori* or *ex post* probability known from past experience and the *a priori* or *ex ante* probability attributed to it, this is not because agents consciously adjust their aspirations to an exact evaluation of their chances of success, like a player regulating his

bets as a function of perfect information as to his chances of winning, as one implicitly presupposes whenever, forgetting the “everything takes place as if”, one *proceeds as if* game theory or the calculation of probabilities, each constructed *against* spontaneous dispositions, amounted to anthropological descriptions of practice.

Completely reversing the tendency of objectivism, we can, on the contrary, seek in the scientific theory of probabilities (or strategies) not an anthropological model of practice, but the elements of a *negative description* of the implicit logic of the *spontaneous interpretation of statistics* (e.g. the propensity to privilege early experiences) which the scientific theory necessarily contains because it is explicitly constructed against that logic. Unlike the estimation of probabilities which science constructs methodically on the basis of controlled experiments from data established according to precise rules, practical evaluation of the likelihood of the success of a given action in a given situation brings into play a whole body of wisdom, sayings, commonplaces, ethical precepts (“that’s not for the likes of us”) and, at a deeper level, the unconscious principles of the *ethos* which, being the product of a learning process dominated by a determinate type of objective regularities, determines “reasonable” and “unreasonable” conduct for every agent subjected to those regularities.<sup>20</sup> “We are no sooner acquainted with the impossibility of satisfying any desire”, says Hume in *A Treatise of Human Nature*, “than the desire itself vanishes.” And Marx in the *Economic and Philosophical Manuscripts*: “If I have no money for travel, I have no *need*, i.e. no real and self-realizing need, to travel. If I have a vocation to study, but no money for it, I have *no* vocation to study, i.e. no *real, true* vocation.”

Because the dispositions durably inculcated by objective conditions (which science apprehends through statistical regularities as the probabilities objectively attached to a group or class) engender aspirations and practices objectively compatible with those objective requirements, the most improbable practices are excluded, either totally without examination, as *unthinkable*, or at the cost of the *double negation* which inclines agents to make a virtue of necessity, that is, to refuse what is anyway refused and to love the inevitable. The very conditions of production of the ethos, *necessity made into a virtue*, are such that the expectations to which it gives rise tend to ignore the restriction to which the validity of any calculus of probabilities is subordinated, namely that the conditions of the experiments should not have been modified. Unlike scientific estimations, which are corrected after each experiment in accordance with rigorous rules of calculation, practical estimates give disproportionate weight to early experiences: the structures characteristic of a determinate type of conditions of existence, through the economic and social necessity which they bring to bear on the relatively autonomous universe of family relationships, or more precisely, through the mediation of the specifically familial manifestations of this external necessity (sexual division of labour, domestic morality, cares, strife, tastes, etc.), produce the structures of the habitus which become in turn the basis of perception and appreciation of all subsequent experience. Thus, as a result of the *hysteresis effect* necessarily implied in the logic of the constitution of habitus, practices are always liable to incur negative sanctions when the environment with which they are actually confronted is too distant from that to which they are objectively fitted. This is why generation conflicts oppose not age-classes separated by natural properties, but habitus which have been produced by different *modes of generation*, that is, by conditions of existence which, in imposing different definitions of the impossible, the possible, and the probable, cause one group to experience as natural or reasonable practices or aspirations which another group finds unthinkable or scandalous, and vice versa.

## Structures, Habitus and Practices

The habitus, the durably installed generative principle of regulated improvisations, produces practices which tend to reproduce the regularities immanent in the objective conditions of the production of their generative principle, while adjusting to the demands inscribed as objective potentialities in the situation, as defined by the cognitive and motivating structures making up the habitus. It follows that these practices cannot be directly deduced either from the objective conditions, defined as the instantaneous sum of the stimuli which may appear to have directly triggered them, or from the conditions which produced the durable principle of their production. These practices can be accounted for only by relating the objective *structure* defining the social conditions of the production of the habitus which engendered them to the conditions in which this habitus is operating, that is, to the *conjuncture* which, short of a radical transformation, represents a particular state of this structure. In practice, it is the habitus, history turned into nature, i.e. denied as such, which accomplishes practically the relating of these two systems of relations, in and through the production of practice. The “unconscious” is never anything other than the forgetting of history which history itself produces by incorporating the objective structures it produces in the second natures of habitus: “... in each of us, in varying proportions, there is part of yesterday’s man; it is yesterday’s man who inevitably predominates in us, since the present amounts to little compared with the long past in the course of which we were formed and from which we result. Yet we do not sense this man of the past, because he is inveterate in us; he makes up the unconscious part of ourselves. Consequently we are led to take no account of him, any more than we take account of his legitimate demands. Conversely, we are very much aware of the most recent attainments of civilization, because, being recent, they have not yet had time to settle into our unconscious.”<sup>21</sup>

Genesis amnesia is also encouraged (if not entailed) by the objectivist apprehension which, grasping the product of history as an *opus operatum*, a *fait accompli*, can only invoke the mysteries of pre-established harmony or the prodigies of conscious orchestration to account for what, apprehended in pure synchrony, appears as objective meaning, whether it be the internal coherence of works or institutions such as myths, rites, or bodies of law, or the objective co-ordination which the concordant or conflicting practices of the members of the same group or class at once manifest and presuppose (inasmuch as they imply a community of dispositions).

Each agent, wittingly or unwittingly, willy nilly, is a producer and reproducer of objective meaning. Because his actions and works are the product of a *modus operandi* of which he is not the producer and has no conscious mastery, they contain an “objective intention”, as the Scholastics put it, which always outruns his conscious intentions. The schemes of thought and expression he has acquired are the basis for the *intentionless invention* of regulated improvisation. Endlessly overtaken by his own words, with which he maintains a relation of “carry and be carried”, as Nicolaï Hartmann put it, the virtuoso finds in the *opus operatum* new triggers and new supports for the *modus operandi* from which they arise, so that his discourse continuously feeds off itself like a train bringing along its own rails.<sup>22</sup> If witticisms surprise their author no less than their audience, and impress as much by their retrospective necessity as by their novelty, the reason is that the *trouvaille* appears as the simple unearthing, at once accidental and irresistible, of a buried possibility. It is because subjects do not, strictly speaking, know what they are doing that what they do has more meaning than they know. The habitus is

the universalizing mediation which causes an individual agent's practices, without either explicit reason or signifying intent, to be none the less "sensible" and "reasonable". That part of practices which remains obscure in the eyes of their own producers is the aspect by which they are objectively adjusted to other practices and to the structures of which the principle of their production is itself the product.<sup>23</sup>

One of the fundamental effects of the orchestration of habitus is the production of a commonsense world endowed with the *objectivity* secured by consensus on the meaning (*sens*) of practices and the world, in other words the harmonization of agents' experiences and the continuous reinforcement that each of them receives from the expression, individual or collective (in festivals, for example), improvised or programmed (commonplaces, sayings), of similar or identical experiences. The homogeneity of habitus is what – within the limits of the group of agents possessing the schemes (of production and interpretation) implied in their production – causes practices and works to be immediately intelligible and foreseeable, and hence taken for granted. This practical comprehension obviates the "intention" and "intentional transfer into the Other" dear to the phenomenologists, by dispensing, for the ordinary occasions of life, with close analysis of the nuances of another's practice and tacit or explicit inquiry ("What do you *mean*?"") into his intentions. Automatic and impersonal, significant without intending to signify, ordinary practices lend themselves to an understanding no less automatic and impersonal: the picking up of the objective intention they express in no way implies "reactivation" of the "lived" intention of the agent who performs them.<sup>24</sup> "Communication of consciousnesses" presupposes community of "unconsciouses" (i.e. of linguistic and cultural competences). The deciphering of the objective intention of practices and works has nothing to do with the "reproduction" (*Nachbildung*, as the early Dilthey puts it) of lived experiences and the reconstitution, unnecessary and uncertain, of the personal singularities of an "intention" which is not their true origin.

The objective homogenizing of group or class habitus which results from the homogeneity of the conditions of existence is what enables practices to be objectively harmonized without any intentional calculation or conscious reference to a norm and mutually adjusted *in the absence of any direct interaction* or, *a fortiori*, explicit co-ordination. "Imagine", Leibniz suggests, "two clocks or watches in perfect agreement as to the time. This may occur in one of three ways. The first consists in mutual influence; the second is to appoint a skilful workman to correct them and synchronize them at all times; the third is to construct these clocks with such art and precision that one can be assured of their subsequent agreement."<sup>25</sup> So long as, retaining only the first or at a pinch the second hypothesis, one ignores the true principle of the conductorless orchestration which gives regularity, unity, and systematicity to the practices of a group or class, and this even in the absence of any spontaneous or externally imposed organization of individual projects, one is condemned to the naive artificialism which recognizes no other principle unifying a group's or class's ordinary or extraordinary action than the conscious co-ordination of a conspiracy.<sup>26</sup> If the practices of the members of the same group or class are more and better harmonized than the agents know or wish, it is because, as Leibniz puts it, "following only [his] own laws", each "nonetheless agrees with the other".<sup>27</sup> The habitus is precisely this immanent law, *lex insita*, laid down in each agent by his earliest upbringing, which is the precondition not only for the co-ordination of practices but also for practices of co-ordination, since the corrections and adjustments the agents themselves consciously carry out presuppose their mastery of a common code and since undertakings of collective mobilization cannot succeed

without a minimum of concordance between the habitus of the mobilizing agents (e.g. prophet, party leader, etc.) and the dispositions of those whose aspirations and world-view they express.

So it is because they are the product of dispositions which, being the internalization of the same objective structures, are objectively concerted that the practices of the members of the same group or, in a differentiated society, the same class are endowed with an objective meaning that is at once unitary and systematic, transcending subjective intentions and conscious projects whether individual or collective.<sup>28</sup> To describe the process of objectification and orchestration in the language of *interaction* and mutual adjustment is to forget that the interaction itself owes its form to the objective structures which have produced the dispositions of the interacting agents and which allot them their relative positions in the interaction and elsewhere. Every confrontation between agents in fact brings together, in an *interaction* defined by the *objective structure* of the relation between the groups they belong to (e.g. a boss giving orders to a subordinate, colleagues discussing their pupils, academics taking part in a symposium), systems of dispositions (carried by "natural persons") such as a linguistic competence and a cultural competence and, through these habitus, all the objective structures of which they are the product, structures which are active only when *embodied* in a competence acquired in the course of a particular history (with the different types of bilingualism or pronunciation, for example, stemming from different modes of acquisition).<sup>29</sup>

Thus, when we speak of class habitus, we are insisting, against all forms of the occasionalist illusion which consists in directly relating practices to properties inscribed in the situation, that "interpersonal" relations are never, except in appearance, *individual-to-individual* relationships and that the truth of the interaction is never entirely contained in the interaction. This is what social psychology and interactionism or ethnomethodology forget when, reducing the objective structure of the relationship between the assembled individuals to the conjunctural structure of their interaction in a particular situation and group, they seek to explain everything that occurs in an experimental or observed interaction in terms of the experimentally controlled characteristics of the situation, such as the relative spatial positions of the participants or the nature of the channels used. In fact it is their present and past positions in the social structure that biological individuals carry with them, at all times and in all places, in the form of dispositions which are so many marks of *social position* and hence of the social distance between objective positions, that is, between social persons conjuncturally brought together (in physical space, which is not the same thing as social space) and correlative, so many reminders of this distance and of the conduct required in order to "keep one's distance" or to manipulate it strategically, whether symbolically or actually, to reduce it (easier for the dominant than for the dominated), increase it, or simply maintain it (by not "letting oneself go", not "becoming familiar", in short, "standing on one's dignity", or on the other hand, refusing to "take liberties" and "put oneself forward", in short "knowing one's place" and staying there).

Even those forms of interaction seemingly most amenable to description in terms of "intentional transfer into the Other", such as sympathy, friendship, or love, are dominated (as class homogamy attests), through the harmony of habitus, that is to say, more precisely, the harmony of ethos and tastes – doubtless sensed in the imperceptible cues of body *hexis* – by the objective structure of the relations between social conditions. The illusion of mutual election or predestination arises from ignorance of the social conditions for the harmony of aesthetic tastes or ethical leanings, which is thereby perceived as evidence of the ineffable affinities which spring from it.

In short, the habitus, the product of history, produces individual and collective practices, and hence history, in accordance with the schemes engendered by history. The system of dispositions – a past which survives in the present and tends to perpetuate itself into the future by making itself present in practices structured according to its principles, an internal law relaying the continuous exercise of the law of external necessities (irreducible to immediate conjunctural constraints) – is the principle of the continuity and regularity which objectivism discerns in the social world without being able to give them a rational basis. And it is at the same time the principle of the transformations and regulated revolutions which neither the extrinsic and instantaneous determinisms of a mechanistic sociologism nor the purely internal but equally punctual determination of voluntarist or spontaneist subjectivism are capable of accounting for.

It is just as true and just as untrue to say that collective actions produce the event or that they are its product. The conjuncture capable of transforming practices objectively co-ordinated because subordinated to partially or wholly identical objective necessities, into *collective action* (e.g. revolutionary action) is constituted in the dialectical relationship between, on the one hand, a *habitus*, understood as a system of lasting, transposable dispositions which, integrating past experiences, functions at every moment as a *matrix of perceptions, appreciations, and actions* and makes possible the achievement of infinitely diversified tasks, thanks to analogical transfers of schemes permitting the solution of similarly shaped problems, and thanks to the unceasing corrections of the results obtained, dialectically produced by those results, and on the other hand, an *objective event* which exerts its action of conditional stimulation calling for or demanding a determinate response, only on those who are disposed to constitute it as such because they are endowed with a determinate type of dispositions (which are amenable to reduplication and reinforcement by the “awakening of class consciousness”, that is, by the direct or indirect possession of a discourse capable of securing symbolic mastery of the practically mastered principles of the class habitus). Without ever being totally co-ordinated, since they are the product of “causal series” characterized by different structural durations, the dispositions and the situations which combine synchronically to constitute a determinate conjuncture are never wholly independent, since they are engendered by the objective structures, that is, in the last analysis, by the economic bases of the social formation in question. The hysteresis of habitus, which is inherent in the social conditions of the reproduction of the structures in habitus, is doubtless one of the foundations of the structural lag between opportunities and the dispositions to grasp them which is the cause of missed opportunities and, in particular, of the frequently observed incapacity to think historical crises in categories of perception and thought other than those of the past, albeit a revolutionary past.

If one ignores the dialectical relationship between the objective structures and the cognitive and motivating structures which they produce and which tend to reproduce them, if one forgets that these objective structures are themselves products of historical practices and are constantly reproduced and transformed by historical practices whose productive principle is itself the product of the structures which it consequently tends to reproduce, then one is condemned to reduce the relationship between the different social agencies (*instances*), treated as “different translations of the same sentence” – in a Spinozist metaphor which contains the truth of the objectivist language of “articulation” – to the logical formula enabling any one of them to be derived from any other. The unifying principle of practices in different domains which objectivist analysis would assign to separate “sub-systems”, such as matrimonial strategies, fertility strategies, or economic choices, is nothing other than the habitus, the locus of practical realization of

the “articulation” of fields which objectivism (from Parsons to the structuralist readers of Marx) lays out side by side without securing the means of discovering the real principle of the structural homologies or relations of transformation objectively established between them (which is not to deny that the structures are objectivities irreducible to their manifestation in the habitus which they produce and which tend to reproduce them). So long as one accepts the canonic opposition which, endlessly reappearing in new forms throughout the history of social thought, nowadays pits “humanist” against “structuralist” readings of Marx, to declare diametrical opposition to subjectivism is not genuinely to *break* with it, but to fall into the fetishism of social laws to which objectivism consigns itself when in establishing between structure and practice the relation of the virtual to the actual, of the score to the performance, of essence to existence, it merely substitutes for the creative man of subjectivism a man subjugated to the dead laws of a natural history. And how could one underestimate the strength of the ideological couple subjectivism/objectivism when one sees that the critique of the *individual* considered as *ens realissimum* only leads to his being made an epiphenomenon of hypostatized structure, and that the well-founded assertion of the primacy of objective relations results in products of human action, the structures, being credited with the power to develop in accordance with their own laws and to determine and overdetermine other structures?

Just as the opposition of language to speech as mere execution or even as a preconstructed object masks the opposition between the objective relations of the language and the dispositions making up linguistic competence, so the opposition between the structure and the individual against whom the structure has to be won and endlessly reworks stands in the way of construction of the dialectical relationship between the structure and the dispositions making up the habitus.

If the debate on the relationship between “culture” and “personality” which dominated a whole era of American anthropology now seems so artificial and sterile, it is because, amidst a host of logical and epistemological fallacies, it was organized around the relation between two complementary products of the same realist, substantialist representation of the scientific object. In its most exaggerated forms, the theory of “basic personality” tends to define personality as a miniature replica (obtained by “moulding”) of the “culture”, to be found in all members of the same society, except deviants. Cora Du Bois’s celebrated analyses on the Alor Island natives provide a very typical example of the confusions and contradictions resulting from the theory that “culture” and personality can each be deduced from the other: determined to reconcile the anthropologist’s conclusions, based on the postulate that the same influences produce the same basic personality, with her own clinical observations of four subjects who seem to her to be “highly individual characters”, each “moulded by the specific factors in his individual fate”, the psychoanalyst who struggles to find individual incarnations of the basic personality is condemned to recantations and contradictions.<sup>30</sup> Thus, she can see Mangma as “the most typical” of the four (“his personality corresponds to the basic personality structure”) after having written: “It is difficult to decide how typical Mangma is. I would venture to say that if he were typical, the society could not continue to exist.” Ripalda, who is passive and has a strong super-ego, is “atypical”. So is Fantan, who has “the strongest character formation, devoid of inhibitions toward women” (extreme heterosexual inhibition being the rule), and “differs from the other men as much as a city-slicker differs from a farmer”. The fourth, Malekala, whose biography is typical at every point, is a well-known prophet who tried to start a revivalist movement, and his personality seems to resemble that of Ripalda, another sorcerer who, as we have seen, is

described as atypical. All this is capped by the analyst's observation that "characters such as Mangma, Ripalda and Fantan can be found in any society". Anthony F. Wallace, from whom this critique is taken,<sup>31</sup> is no doubt right in pointing out that the notion of modal personality has the advantage of avoiding the illogicalities resulting from indifference to differences (and thus to statistics) usually implicit in recourse to the notion of basic personality. But what might pass for a mere refinement of the measuring and checking techniques used to test the validity of a theoretical construct amounts in fact to the substitution of one object for another: a system of hypotheses as to the *structure* of personality, conceived as a homeostatic system which changes by reinterpreting external pressures in accordance with its own logic, is replaced by a simple description of the central tendency in the distribution of the values of a variable, or rather a combination of variables. Wallace thus comes to the tautological conclusion that in a population of Tuscarora Indians, the modal personality type defined by reference to twenty-seven variables is to be found in only 37 per cent of the subjects studied. The construction of a class *ethos* may, for example, make use of a reading of statistical regularities treated as *indices*, without the principle which unifies and explains these regularities being reducible to the regularities in which it manifests itself. In short, failing to see in the notion of "basic personality" anything other than a way of pointing to a directly observable "datum", i.e. the "personality type" shared by the greatest number of members of a given society, the advocates of this notion cannot, in all logic, take issue with those who submit this theory to the test of statistical critique, in the name of the same realist representation of the scientific object.

The habitus is the product of the work of inculcation and appropriation necessary in order for those products of collective history, the objective structures (e.g. of language, economy, etc.) to succeed in reproducing themselves more or less completely, in the form of durable dispositions, in the organisms (which one can, if one wishes, call individuals) lastingly subjected to the same conditionings, and hence placed in the same material conditions of existence. Therefore sociology treats as identical all the biological individuals who, being the product of the same objective conditions, are the supports of the same habitus: social class, understood as a system of objective determinations, must be brought into relation not with the individual or with the "class" as a *population*, i.e. as an aggregate of enumerable, measurable biological individuals, but with the class habitus, the system of dispositions (partially) common to all products of the same structures. Though it is impossible for *all* members of the same class (or even two of them) to have had the same experiences, in the same order, it is certain that each member of the same class is more likely than any member of another class to have been confronted with the situations most frequent for the members of that class. The objective structures which science apprehends in the form of statistical regularities (e.g. employment rates, income curves, probabilities of access to secondary education, frequency of holidays, etc.) inculcate, through the direct or indirect but always convergent experiences which give a social environment its *physiognomy*, with its "closed doors", "dead ends", and limited "prospects", that "art of assessing likelihoods", as Leibniz put it, of anticipating the objective future, in short, the sense of reality or realities which is perhaps the best-concealed principle of their efficacy.

In order to define the relations between class, habitus and the organic individuality which can never entirely be removed from sociological discourse, inasmuch as, being given immediately to immediate perception (*intuitus personae*), it is also socially designated and recognized (name, legal identity, etc.) and is defined by a *social trajectory* strictly speaking irreducible to any other, the habitus could be considered as a subjective but not individual system of internalized structures, schemes of perception, conception, and

action common to all members of the same group or class and constituting the precondition for all objectification and apperception: and the objective co-ordination of practices and the sharing of a world-view could be founded on the perfect impersonality and interchangeability of singular practices and views. But this would amount to regarding all the practices or representations produced in accordance with identical schemes as impersonal and substitutable, like singular intuitions of space which, according to Kant, reflect none of the peculiarities of the individual ego. In fact, it is in a relation of homology, of diversity within homogeneity reflecting the diversity within homogeneity characteristic of their social conditions of production, that the singular habitus of the different members of the same class are united; the homology of world-views implies the systematic differences which separate singular world-views, adopted from singular but concerted standpoints. Since the history of the individual is never anything other than a certain specification of the collective history of his group or class, *each individual system of dispositions* may be seen as a *structural variant* of all the other group or class habitus, expressing the difference between trajectories and positions inside or outside the class. "Personal" style, the particular stamp marking all the products of the same habitus, whether practices or works, is never more than a *deviation* in relation to the *style* of a period or class so that it relates back to the common style not only by its conformity – like Phidias, who, according to Hegel, had no "manner" – but also by the difference which makes the whole "manner".

The principle of these individual differences lies in the fact that, being the product of a chronologically ordered series of structuring determinations, the habitus, which at every moment structures in terms of the structuring experiences which produced it the structuring experiences which affect its structure, brings about a unique integration, dominated by the earliest experiences, of the experiences statistically common to the members of the same class. Thus, for example, the habitus acquired in the family underlies the structuring of school experiences (in particular the reception and assimilation of the specifically pedagogic message), and the habitus transformed by schooling, itself diversified, in turn underlies the structuring of all subsequent experiences (e.g. the reception and assimilation of the messages of the culture industry or work experiences), and so on, from restructuring to restructuring.

Springing from the encounter in an integrative organism of relatively independent causal series, such as biological and social determinisms, the habitus makes coherence and necessity out of accident and contingency: for example, the equivalences it establishes between positions in the division of labour and positions in the division between the sexes are doubtless not peculiar to societies in which the division of labour and the division between the sexes coincide almost perfectly. In a class society, all the products of a given agent, by an essential *overdetermination*, speak inseparably and simultaneously of his class – or, more precisely, his position in the social structure and his rising or falling trajectory – and of his (or her) body – or, more precisely, all the properties, always socially qualified, of which he or she is the bearer – sexual properties of course, but also physical properties, praised, like strength or beauty, or stigmatized.

### The Dialectic of Objectification and Embodiment

So long as the work of education is not clearly institutionalized as a specific, autonomous practice, and it is a whole group and a whole symbolically structured environment, without specialized agents or specific moments, which exerts an anonymous, pervasive

pedagogic action, the essential part of the *modus operandi* which defines practical mastery is transmitted in practice, in its practical state, without attaining the level of discourse. The child imitates not “models” but other people’s actions. Body *hexis* speaks directly to the motor function, in the form of a pattern of postures that is both individual and systematic, because linked to a whole system of techniques involving the body and tools, and charged with a host of social meanings and values: in all societies, children are particularly attentive to the gestures and postures which, in their eyes, express everything that goes to make an accomplished adult – a way of walking, a tilt of the head, facial expressions, ways of sitting and of using implements, always associated with a tone of voice, a style of speech, and (how could it be otherwise?) a certain subjective experience. But the fact that schemes are able to pass from practice to practice without going through discourse or consciousness does not mean that acquisition of the habitus comes down to a question of mechanical learning by trial and error. Unlike an incoherent series of figures, which can be learnt only gradually, through repeated attempts and with continuous predictable progress, a numerical series is mastered more easily because it contains a structure which makes it unnecessary to memorize all the numbers one by one: in verbal products such as proverbs, sayings, maxims, songs, riddles, or games; in objects, such as tools, the house, or the village; or again, in practices such as contests of honour, gift exchanges, rites, etc., the material which the Kabyle child has to assimilate is the product of the systematic application of principles coherent in practice,<sup>32</sup> which means, that in all this endlessly redundant material, he has no difficulty in grasping the *rationale* of what are clearly series and in making it his own in the form of a principle generating conduct organized in accordance with the same rationale.

Experimental analyses of learning which establish that “neither the formation nor the application of a concept requires conscious recognition of the common elements or relationship involved in the specific instances”<sup>33</sup> enable us to understand the dialectic of objectification and incorporation whereby the systematic objectifications of systematic dispositions tend in their turn to give rise to systematic dispositions: when faced with series of symbols – Chinese characters (Hull) or pictures varying simultaneously the colour, nature, and number of the objects represented (Heidbreder) – distributed into classes with arbitrary but objectively based names, subjects who are unable to state the principle of classification nonetheless attain higher scores than they would *if they were guessing at random*, thereby demonstrating that they achieve a practical mastery of the classificatory schemes which in no way implies symbolic mastery – i.e. conscious recognition and verbal expression – of the processes practically applied. Albert B. Lord’s analysis of the acquiring of structured material in a natural environment, based on his study of the training of the *guslar*, the Yugoslav bard, entirely confirms the experimental findings: the practical mastery of what Lord calls “the formula”, that is, the capacity to improvise by combining “formulae”, sequences of words “regularly employed under the same metrical conditions to express a given idea”,<sup>34</sup> is acquired through sheer familiarization, “by hearing the poems”,<sup>35</sup> without the learner’s having any sense of learning and subsequently manipulating this or that formula or any set of formulae:<sup>36</sup> the constraints of rhythm are internalized at the same time as melody and meaning, without being attended to for their own sake.

Between apprenticeship through simple familiarization, in which the apprentice insensibly and unconsciously acquires the principles of the “art” and the art of living – including those which are not known to the producer of the practices or works imitated, and, at the other extreme, explicit and express transmission by precept and

prescription, every society provides for *structural exercises* tending to transmit this or that form of practical mastery. Such are the riddles and ritual contests which test the "sense of ritual language" and all the games, often structured according to the logic of the wager, the challenge or the combat (duels, group battles, target-shooting, etc.), which require the boys to set to work, in the mode of "let's pretend", the schemes generating the strategies of honour.<sup>37</sup> Then there is daily participation in gift exchanges and all their subtleties, which the boys derive from their rôle as messengers and, more especially, as intermediaries between the female world and the male world. There is silent observation of the discussions in the men's assembly, with their effects of eloquence, their rituals, their strategies, their ritual strategies and strategic uses of ritual. There are the interactions with their relatives, which lead them to explore the structured space of objective kin relationships in all directions by means of *reversals* requiring the person who saw himself and behaved as a nephew of his father's brother to see himself and behave as a paternal uncle towards his brother's son, and thus to acquire mastery of the transformational schemes which permit the passage from the system of dispositions attached to one position to the system appropriate to the symmetrically opposite position. There are the lexical and grammatical commutations ("I" and "you" designating the same person according to the relation to the speaker) which instil the sense of the interchangeability of positions and of reciprocity as well as a sense of the limits of each. And, at a deeper level, there are the relationships with the mother and the father, which, by their dyssymmetry in antagonistic complementarity, constitute one of the opportunities to internalize, inseparably, the schemes of the *sexual division of labour* and of the *division of sexual labour*.

But it is in the dialectical relationship between the body and a space structured according to the mythico-ritual oppositions that one finds the form par excellence of the structural apprenticeship which leads to the em-bodying of the structures of the world, that is, the appropriating by the world of a body thus enabled to appropriate the world. In a social formation in which the absence of the symbolic-product-conserving techniques associated with literacy retards the objectification of symbolic and particularly cultural capital, inhabited space – and above all the house – is the principal locus for the objectification of the generative schemes; and, through the intermediary of the divisions and hierarchies it sets up between things, persons, and practices, this tangible classifying system continuously inculcates and reinforces the taxonomic principles underlying all the arbitrary provisions of this culture.<sup>38</sup> Thus, as we have seen, the opposition between the sacred of the right hand and the sacred of the left hand, between *nif* and *haram*, between man, invested with protective, fecundating virtues, and woman, at once sacred and charged with maleficent forces, and, correlatively, between religion (male) and magic (female), is reproduced in the spatial division between male space, with the place of assembly, the market, or the fields, and female space, the house and its garden, the retreats of *haram*. To discover how this spatial organization (matched by a temporal organization obeying the same logic) governs practices and representations – far beyond the frequently described rough divisions between the male world and the female world, the assembly and the fountain, public life and intimacy – and thereby contributes to the durable imposition of the schemes of perception, thought, and action, it is necessary to grasp the dialectic of objectification and embodiment in the privileged locus of the space of the house and the earliest learning processes.

This analysis of the relationship between the objectified schemes and the schemes incorporated or being incorporated presupposes a structural analysis of the social

organization of the internal space of the house and the relation of this internal space to external space, an analysis which is not an end in itself but which, precisely on account of the (dangerous) affinity between objectivism and all that is already objectified, is the only means of fully grasping the structuring structures which, remaining obscure to themselves, are revealed only in the objects they structure. The house, an *opus operatum*, lends itself as such to a deciphering, but only to a deciphering which does not forget that the “book” from which the children learn their vision of the world is read with the body, in and through the movements and displacements which make the space within which they are enacted as much as they are made by it.

The interior of the Kabyle house, rectangular in shape, is divided into two parts by a low wall: the larger of these two parts, slightly higher than the other, is reserved for human use; the other side, occupied by the animals, has a loft above it. A door with two wings gives access to both rooms. In the upper part is the hearth and, facing the door, the weaving loom. The lower, dark, nocturnal part of the house, the place of damp, green, or raw objects – water jars set on the benches on either side of the entrance to the stable or against the “wall of darkness”, wood, green fodder – the place too of natural beings – oxen and cows, donkeys and mules – and natural activities – sleep, sex, birth – and also of death, is opposed to the high, light-filled, noble place of humans and in particular of the guest, fire and fire-made objects, the lamp, kitchen utensils, the rifle – the attribute of the manly point of honour (*nif*) which protects female honour (*hurma*) – the loom, the symbol of all protection, the place also of the two specifically cultural activities performed within the house, cooking and weaving. The meaning objectified in things or places is fully revealed only in the practices structured according to the same schemes which are organized in relation to them (and vice versa). The guest to be honoured (*qabel*, a verb also meaning “to stand up to”, and “to face the east”) is invited to sit in front of the loom. The opposite wall is called the wall of darkness, or the wall of the invalid: a sick person’s bed is placed next to it. The washing of the dead takes place at the entrance to the stable. The low dark part is opposed to the upper part as the female to the male: it is the most intimate place within the world of intimacy (sexuality, fertility). The opposition between the male and the female also reappears in the opposition between the “master” beam and the main pillar, a fork open skywards.

Thus, the house is organized according to a set of homologous oppositions – fire: water :: cooked:raw :: high:low :: light:shade :: day:night :: male:female :: *nif:urma* :: fertilizing:able to be fertilized. But in fact the same oppositions are established between the house as a whole and the rest of the universe, that is, the male world, the place of assembly, the fields, and the market. It follows that each of these two parts of the house (and, by the same token, each of the objects placed in it and each of the activities carried out in it) is in a sense qualified at two degrees, first as female (nocturnal, dark, etc.) insofar as it partakes of the universe of the house, and secondarily as male or female insofar as it belongs to one or the other of the divisions of that universe. Thus, for example, the proverb “Man is the lamp of the outside, woman the lamp of the inside” must be taken to mean that man is the true light, that of the day, and woman the light of darkness, dark brightness; and we also know that she is to the moon as man is to the sun. But one or the other of the two systems of oppositions which define the house, either in its internal organization or in its relationship with the external world, is brought to the foreground, depending on whether the house is considered from the male point of view or the female point of view: whereas for the man, the house is not so much a place he enters as a place he comes out of, movement inwards properly befits the woman.<sup>39</sup>

All the actions performed in a space constructed in this way are immediately qualified symbolically and function as so many structural exercises through which is built up practical mastery of the fundamental schemes, which organize magical practices and representations: going in and coming out, filling and emptying, opening and shutting, going leftwards and going rightwards, going westwards and going eastwards, etc. Through the magic of a world of objects which is the product of the application of the same schemes to the most diverse domains, a world in which each thing speaks metaphorically of all the others, each practice comes to be invested with an objective meaning, a meaning with which practices – and particularly rites – have to reckon at all times, whether to evoke or revoke it. The construction of the world of objects is clearly not the sovereign operation of consciousness which the neo-Kantian tradition conceives of; the mental structures which construct the world of objects are constructed in the practice of a world of objects constructed according to the same structures.<sup>40</sup> The mind born of the world of objects does not rise as a subjectivity confronting an objectivity: the objective universe is made up of objects which are the product of objectifying operations structured according to the very structures which the mind applies to it. The mind is a metaphor of the world of objects which is itself but an endless circle of mutually reflecting metaphors.

All the symbolic manipulations of body experience, starting with displacements within a mythically structured space, e.g. the movements of going in and coming out, tend to impose the *integration* of the body space with cosmic space by grasping in terms of the same concepts (and naturally at the price of great laxity in logic) the relationship between man and the natural world and the complementarity and opposed states and actions of the two sexes in the division of sexual work and sexual division of work, and hence in the work of biological and social reproduction. For example, the opposition between movement outwards towards the fields or the market, towards the production and circulation of goods, and movement inwards, towards the accumulation and consumption of the products of work, corresponds symbolically to the opposition between the male body, self-enclosed and directed towards the outside world, and the female body, resembling the dark, damp house, full of food, utensils, and children, which is entered and left by the same inevitably soiled opening.<sup>41</sup>

The opposition between the *centrifugal*, male orientation and the *centripetal*, female orientation, which, as we have seen, is the true principle of the organization of domestic space, is doubtless also the basis of the relationship of each of the sexes to their “psyche”, that is, to their bodies and more precisely to their sexuality. As in every society dominated by male values – and European societies, which assign men to politics, history, or war and women to the hearth, the novel, and psychology, are no exception – the specifically male relation to sexuality is that of *sublimation*, the symbolism of honour tending at once to refuse any direct expression of sexuality and to encourage its transfigured manifestation in the form of manly prowess: the men, who are neither conscious of nor concerned with the female orgasm but seek the affirmation of their potency in repetition rather than prolongation of the sexual act, are not unaware that, through the intermediary of the female gossip that they both fear and despise, the eyes of the group always threaten their intimacy. As for the women, it is true to say, with Erikson, that male domination tends to “restrict their verbal consciousness”<sup>42</sup> so long as this is taken to mean not that they are forbidden all talk of sex, but that their discourse is dominated by the male values of virility, so that all reference to specifically female sexual “interests” is excluded from this aggressive and shame-filled cult of male potency.

Psychoanalysis, the disenchanting product of the disenchantment of the world, which leads to a domain of signification that is mythically overdetermined to be constituted *as such*, forgets and causes it to be forgotten that one's own body and other people's bodies are only ever perceived through categories of perception which it would be naive to treat as sexual, even if, as is attested by the women's laughter during conversations, and the interpretations they give of graphic symbols – mural paintings, pottery or carpet designs, etc. – these categories always relate back, sometimes very concretely, to the opposition between the biologically defined properties of the two sexes. As naive as it would be to reduce to their strictly sexual dimension the countless acts of diffuse inculcation through which the body and the world tend to be set in order, by means of a symbolic manipulation of the relation to the body and to the world aiming to impose what has to be called, in Melanie Klein's term, a "body geography", a particular case of geography, or better, cosmology.<sup>43</sup> The child's initial relation to its father or mother, or in other terms, to the paternal body and maternal body, which offers the most dramatic opportunity to experience all the fundamental oppositions of mythopoeic practice, cannot be found as the basis of the acquisition of the principles of the structuring of the ego and the world, and in particular of every homosexual and heterosexual relationship, except insofar as that initial relation is set up with objects whose sex is defined symbolically and not biologically. The child constructs its *sexual identity*, the major element in its social identity, at the same time as it constructs its image of the division of work between the sexes, out of the same socially defined set of inseparably biological and social indices. In other words, the awakening of consciousness of sexual identity and the incorporation of the dispositions associated with a determinate social definition of the social functions incumbent on men and women come hand in hand with the adoption of a socially defined vision of the sexual division of labour.

Psychologists' work on the perception of sexual differences makes it clear that children establish clear-cut distinctions very early (about age five) between male and female functions, assigning domestic tasks to women and mothers and economic activities to men and fathers. Everything suggests that the awareness of sexual differences and the distinction between paternal and maternal functions are constituted simultaneously. From the numerous analyses of the differential perception of mother and father it may be gathered that the father is generally seen as more competent and more severe than the mother, who is regarded as "kinder" and more affectionate than the father and is the object of a more emotional and more agreeable relationship. In fact, as Emmerich very rightly points out, underlying all these differences is the fact that children attribute more power to the father than to the mother.

It is not hard to imagine the weight that must be brought to bear on the construction of self-image and world-image by the opposition between masculinity and femininity when it constitutes the fundamental principle of division of the social and symbolic world. As is emphasized by the twofold meaning of the word *nif*, sexual potency inseparable from social potency, what is imposed through a certain social definition of maleness (and, by derivation, of femaleness), is a political mythology which governs all bodily experiences, not least sexual experiences themselves. Thus, the opposition between male sexuality, public and sublimated, and female sexuality, secret and, so to speak, "alienated" (with respect to Erikson's "utopia of universal genitality", i.e. the "utopia of full orgasmic reciprocity") is only a specification of the opposition between the extraversion of politics or public religion and the introversion of psychology or private magic, made up for the most part of rites aimed at domesticating the male partners.

Bodily *hexis* is political mythology realized, *em-bodied*, turned into a permanent disposition, a durable manner of standing, speaking, and thereby of *feeling* and *thinking*. The oppositions which mythico-ritual logic makes between the male and the female and which organize the whole system of values reappear, for example, in the gestures and movements of the body, in the form of the opposition between the straight and the bent, or between assurance and restraint. “The Kabyle is like the heather, he would rather break than bend.” The man of honour’s pace is steady and determined. His way of walking, that of a man who knows where he is going and knows he will arrive in time, whatever the obstacles, expresses strength and resolution, as opposed to the hesitant gait (*thikli thamahmaht*) announcing indecision, half-hearted promises (*awal amahmah*), the fear of commitments and the incapacity to fulfil them. At the same time it is a measured pace: it contrasts as much with the haste of the man who “throws his feet up as high as his head”, “walks along with great strides”, “dances” – running being weak and frivolous conduct – as it does with the sluggishness of the man who “trails along”. The manly man stands up straight and honours the person he approaches or wishes to welcome by looking him right in the eyes; ever on the alert, because ever threatened, he lets nothing that happens around him escape him, whereas a gaze that is up in the clouds or fixed on the ground is the mark of an irresponsible man, who has nothing to fear because he has no responsibilities in his group. Conversely, a woman is expected to walk with a slight stoop, looking down, keeping her eyes on the spot where she will next put her foot, especially if she happens to have to walk past the *thajma’th*; her gait must avoid the excessive swing of the hips which comes from a heavy stride; she must always be girdled with the *thimehremth*, a rectangular piece of cloth with yellow, red, and black stripes worn over her dress, and take care that her headscarf does not come unknotted, revealing her hair. In short, the specifically feminine virtue, *lahia*, modesty, restraint, reserve, orients the whole female body downwards, towards the ground, the inside, the house, whereas male excellence, *nif*, is asserted in movement upwards, outwards, towards other men.

If all societies and, significantly, all the “totalitarian institutions”, in Goffman’s phrase, that seek to produce a new man through a process of “deculturation” and “reculturation” set such store on the seemingly most insignificant details of *dress*, *bearing*, physical and verbal *manners*, the reason is that, treating the body as a memory, they entrust to it in abbreviated and practical, i.e. mnemonic, form the fundamental principles of the arbitrary content of the culture. The principles em-bodied in this way are placed beyond the grasp of consciousness, and hence cannot be touched by voluntary, deliberate transformation, cannot even be made explicit; nothing seems more ineffable, more incommunicable, more imitable, and, therefore, more precious, than the values given body, *made body* by the transubstantiation achieved by the hidden persuasion of an implicit pedagogy, capable of instilling a whole cosmology, an ethic, a metaphysic, a political philosophy, through injunctions as insignificant as “stand up straight” or “don’t hold your knife in your left hand”.<sup>44</sup> The logic of scheme transfer which makes each technique of the body a sort of *pars totalis*, predisposed to function in accordance with the fallacy *pars pro toto*, and hence to evoke the whole system of which it is a part, gives a very general scope to the seemingly most circumscribed and circumstantial observances. The whole trick of pedagogic reason lies precisely in the way it extorts the essential while seeming to demand the insignificant: in obtaining the respect for form and forms of respect which constitute the most visible and at the same time the best-hidden (because most “natural”) manifestation of submission to the established order, the incorporation

of the arbitrary abolishes what Raymond Ruyer calls “lateral possibilities”, that is, all the eccentricities and deviations which are the small change of madness. The concessions of *politeness* always contain *political* concessions. The term *obsequium* used by Spinoza to denote the “constant will” produced by the conditioning through which “the State fashions us for its own use and which enables it to survive”<sup>45</sup> could be reserved to designate the public testimonies of recognition which every group expects of its members (especially at moments of co-option), that is, the symbolic taxes due from individuals in the exchanges which are set up in every group between the individuals and the group. Because, as in gift exchange, the exchange is an end in itself, the tribute demanded by the group generally comes down to a matter of trifles, that is, to symbolic rituals (rites of passage, the ceremonials of etiquette, etc.), formalities and formalisms which “cost nothing” to perform and seem such “natural” things to demand (“It’s the least one can do …”: “It wouldn’t cost him anything to …”) that abstention amounts to a refusal or a challenge.<sup>46</sup>

Through the habitus, the structure which has produced it governs practice, not by the processes of a mechanical determinism, but through the mediation of the orientations and limits it assigns to the habitus’s operations of invention.<sup>47</sup> As an acquired system of generative schemes objectively adjusted to the particular conditions in which it is constituted, the habitus engenders all the thoughts, all the perceptions, and all the actions consistent with those conditions, and no others. This paradoxical product is difficult to conceive, even inconceivable, only so long as one remains locked in the dilemma of determinism and freedom, conditioning and creativity (like Chomsky, for example, who thought the only escape from Bloomfieldian behaviourism lay in seeking “freedom” and “creativity” in the “structure” – i.e. the “nature” – of the human mind). Because the habitus is an endless capacity to engender products – thoughts, perceptions, expressions, actions – whose limits are set by the historically and socially situated conditions of its production, the conditioned and conditional freedom it secures is as remote from a creation of unpredictable novelty as it is from a simple mechanical reproduction of the initial conditionings.<sup>48</sup>

## Notes

- 1 The word *disposition* seems particularly suited to express what is covered by the concept of habitus (defined as a system of dispositions). It expresses first the *result of an organizing action*, with a meaning close to that of words such as structure; it also designates a *way of being*, a *habitual state* (especially of the body) and, in particular, a *predisposition*, *tendency*, *propensity*, or *inclination*. [The semantic cluster of “disposition” is rather wider in French than in English, but as this note – translated literally – shows, the equivalence is adequate. Translator.]
- 2 The most profitable strategies are usually those produced, on the hither side of all calculation and in the illusion of the most “authentic” sincerity, by a habitus objectively fitted to the objective structures. These strategies without strategic calculation procure an important secondary advantage for those who can scarcely be called their authors – the social approval accruing from apparent disinterestedness.
- 3 “Here we confront the distressing fact that the sample episode chain under analysis is a fragment of a larger segment of behavior which in the complete record contains some 480 separate episodes. Moreover, it took only twenty minutes for these 480 behavior stream events to occur. If my wife’s rate of behavior is roughly representative of that of other actors, we must be prepared to deal with an inventory of episodes produced at the rate of some 20,000 per sixteen-hour day per actor ... In a population consisting of several hundred actor-types, the number of different episodes in the total repertory must amount to many millions during the course of an annual cycle” (M. Harris, *The Nature of Cultural Things* (New York: Random House, 1964), pp. 74–5).

- 18 Can one avoid attributing to the permanence of a habitus the constancy with which the objective intention of the Sartrian philosophy (despite its language) asserts itself against the subjective intentions of its author, that is, against a permanent project of "conversion", a project never more manifest and manifestly sincere than in certain anathemas which would perhaps be less violent if they were not redolent of conscious or unconscious self-critique? (Thus, for example, one needs to bear in mind the famous analysis of the café waiter for a full appreciation of a sentence such as this: "To all those who take themselves for angels, their neighbour's activities seem absurd, because such people presume to transcend the human enterprise by refusing to take part in it": *Critique*, pp. 182–3). And when, in his analysis of the relationship between Flaubert and the bourgeoisie, Sartre makes the awakening of consciousness the basis of an existence and an oeuvre, he testifies that it is not sufficient to become aware of class condition in order to be liberated from the lasting dispositions it produces (see P. Bourdieu, "Champ du pouvoir, champ intellectuel et habitus de classe", *Scolies*, 1 (1971), pp. 7–26, esp. pp. 12–14).

"Law, Convention and Custom", *Economy and Society*, ed. G. Roth and C. Wittich (New York: Bedminster Press, 1968), 1, pp. 319–33).
- 20 "We call this subjective, variable probability – which sometimes excludes doubt and engenders a certainty *sui generis* and which at other times appears as no more than a vague glimmer – *philosophical probability*, because it refers to the exercise of the higher faculty whereby we comprehend the order and the rationality of things. All reasonable men have a confused notion of similar probabilities; this then determines, or at least justifies, those unshakable beliefs we call *common sense*" (A. Cournot, *Essai sur les fondements de la connaissance et sur les caractères de la critique philosophique* (Paris: Hachette, 1922; 1st ed., 1851), p. 70).
- 21 E. Durkheim, *L'évolution pedagogique en France* (Paris: Alcan, 1938), p. 16.
- 22 R. Ruyer, *Paradoxes de la conscience et limites de l'automatisme* (Paris: Albin Michel, 1966), p. 136.
- 23 This universalization has the same limits as the objective conditions of which the principle generating practices and works is the product. The objective conditions exercise simultaneously a universalizing effect and a particularizing effect, because they cannot homogenize the agents whom they determine and whom they constitute into an objective group, without distinguishing them from all the agents produced in different conditions.
- 24 One of the merits of subjectivism and moralism is that the analyses in which it condemns, as inauthentic, actions subject to the objective solicitations of the world (e.g. Heidegger on everyday existence and "*das Man*" or Sartre on the "spirit of seriousness") demonstrate, *per absurdum*, the

- impossibility of the authentic existence that would gather up all pre-given significations and objective determinations into a project of freedom. The *purely ethical* pursuit of authenticity is the privilege of the leisured thinker who can afford to dispense with the economy of thought which “inauthentic” conduct allows.
- 25 G. W. Leibniz, “Second éclaircissement du système de la communication des substances” (1696), in *Oeuvres philosophiques*, ed. P. Janet (Paris: de Lagrange, 1866), vol. II, p. 548.
  - 26 Thus, ignorance of the surest but best-hidden foundation of group or class integration leads some (e.g. Aron, Dahl, etc.) to deny the unity of the dominant class with no other proof than the impossibility of establishing empirically that the members of the dominant class have an explicit *policy*, expressly imposed by explicit co-ordination, and others (Sartre, for example) to see the awakening of class consciousness – a sort of revolutionary cogito bringing the class into existence by constituting it as a “class for itself” – as the only possible foundation of the unity of the dominated class.
  - 27 Leibniz, “Second éclaircissement”, p. 548.
  - 28 Were such language not dangerous in another way, one would be tempted to say, against all forms of subjectivist voluntarism, that class unity rests fundamentally on the “class unconscious”. The awakening of “class consciousness” is not a primal act constituting the class in a blaze of freedom; its sole efficacy, as with all actions of symbolic reduplication, lies in the extent to which it brings to consciousness all that is implicitly assumed in the unconscious mode in the class habitus.
  - 29 This takes us beyond the false opposition in which the theories of acculturation have allowed themselves to be trapped, with, on the one hand, the *realism of the structure* which represents cultural or linguistic contacts as contacts between cultures or languages, subject to generic laws (e.g. the law of the restructuring of borrowings) and specific laws (those established by analysis of the structures specific to the languages or cultures in contact) and on the other hand the *realism of the element*, which emphasizes the contacts between the *societies* (regarded as populations) involved or, at best, the structures of the relations between those societies (domination, etc.).
  - 30 *The People of Alor*, Minneapolis: University of Minnesota Press, 1944.
  - 31 *Culture and Personality* (New York: Random House, 1965), p. 86.
  - 32 If illiterate societies seem to have a particular bent for the structural games which fascinate the anthropologist, their purpose is often quite simply mnemonic: the remarkable homology to be observed in Kabylia between the structure of the distribution of the families in the village and the structure of the distribution of graves in the cemetery (Aït Hichem, Tizi Hibet) clearly makes it easier to locate the traditionally anonymous graves (with expressly transmitted landmarks added to the structural principles).
  - 33 B. Berelson and G. A. Steiner, *Human Behavior* (New York: Harcourt, Brace and World, 1964), p. 193.
  - 34 *The Singer of the Tales* (Cambridge, Mass.: Harvard University Press, 1960), p. 30.
  - 35 *Ibid.* p. 32.
  - 36 *Ibid.* p. 24.
  - 37 Thus, in the game of *qochra*, which the children play in early spring, the cork ball (the *qochra*) which is fought for, passed and defended, is the practical equivalent of woman. In the course of the game the players must both defend themselves against it and, possessing it, defend it against those trying to take it away. At the start of the match, the leader of the game repeatedly asks, “Whose daughter is she?” but no one will volunteer to be her father and protect her: a daughter is always a liability for men. And so lots have to be drawn for her, and the unlucky player who gets her must accept his fate. He now has to protect the ball against the attacks of all the others, while at the same time trying to pass it on to another player; but he can only do so in an honourable, approved way. A player whom the “father” manages to touch with his stick, telling him “She’s your daughter”, has to acknowledge defeat, like a man temporarily obliged to a socially inferior family from whom he has taken a wife. For the suitors the temptation is to take the prestigious course of abduction, whereas the father wants a marriage that will free him from guardianship and allow him to re-enter the game. The loser of the game is excluded from the world of men; the ball is tied under his shirt so that he looks like a girl who has been got pregnant.
  - 38 It is said that formerly the women used to go to market alone; but they are so talkative that the market went on until the market time of the following week. So the men turned up one day with

- sticks and put an end to their wives' gossiping ... It can be seen that the "myth" "explains" the present division of space and work by invoking the "evil nature" of women. When a man wants to say that the world is topsy-turvy, he says that "the women are going to market".
- 39 A full presentation of the analysis of the internal structure of the Kabyle house, of which it has only been possible to give the indispensable outline here, can be found in P. Bourdieu, *Esquisse d'une théorie de la pratique* (Paris and Geneva: Librairie Droz, 1972), pp. 45–69.
- 40 This means to say that the "learning by doing" hypothesis, associated with the name of Arrow (see K. J. Arrow, "The Economic Implications of Learning by Doing", *Review of Economic Studies*, 29, 3, no. 80 (June 1962), pp. 155–73) is a particular case (whose particularity needs to be specified) of a very general law: every made product – including symbolic products such as works of art, games, myths, etc. – exerts by its very functioning, particularly by the use made of it, an educative effect which helps to make it easier to acquire the dispositions necessary for its adequate use.
- 41 Erikson's analyses of the Yoruk might be interpreted in the same light (see E. H. Erikson, "Observations on the Yoruk: Childhood and World Image" (University of California Publications in American Archaeology and Ethnology, vol. 35, no. 10, Berkeley: University of California Press, 1943), pp. 257–302).
- 42 E. H. Erikson, "Childhood and Tradition in Two American Tribes", in *The Psychoanalytic Study of the Child* (New York: International Universities Press, 1945), vol. I, pp. 319–50.
- 43 *Contributions to Psycho-analysis 1921–1945* (London: Hogarth Press, 1948), p. 109n1 and p. 260n1.
- 44 Every group entrusts to bodily automatisms those principles most basic to it and most indispensable to its conservation. In societies which lack any other recording and objectifying instrument, inherited knowledge can survive only in its embodied state. Among other consequences, it follows that it is never detached from the body which bears it and which – as Plato noted – can deliver it only at the price of a sort of gymnastics intended to evoke it: *mimesis*. The body is thus continuously mingled with all the knowledge it reproduces, which can never have the objectivity and distance stemming from objectification in writing.
- 45 A. Matheron, *Individu et société chez Spinoza* (Paris: Editions de Minuit, 1969), p. 349.
- 46 Thus, practical mastery of what are called the rules of politeness, and in particular the art of adjusting each of the available formulae (e.g. at the end of a letter) to the different classes of possible addressees, presupposes the implicit mastery, hence the recognition, of a set of oppositions constituting the implicit axiomatics of a determinate political order: in the example considered these are (in France) the opposition between men and women, the former requiring "homage", the latter "salutations" or "sentiments"; the opposition between the older and the younger; the opposition between the personal, or private, and the impersonal – with administrative or business letters; and finally the hierarchical opposition between superiors, equals, and inferiors, which governs the subtle grading of marks of respect.
- 47 One of the reasons for the use of the term habitus is the wish to set aside the common conception of habit as a mechanical assembly or preformed programme, as Hegel does when in the *Phenomenology of Mind* he speaks of "habit as dexterity".
- 48 For a sociological application of these analyses, see P. Bourdieu, "Avenir de classe et causalité du probable", *Revue Française de Sociologie*, 15, (January–March 1974), pp. 3–42. English translation forthcoming.

# CHAPTER 6

## Ideology and Ideological State Apparatuses

*Louis Althusser*

Louis Althusser was the leading Structuralist Marxist philosopher in France in the 1960s. His books included *For Marx* (1965) and *Lenin and Philosophy* (1971). In this his most famous essay, published in 1968, he describes ideology, which traditionally had been characterized as a species of "false consciousness," as a set of practices and institutions that sustain an individual's imaginary relationship to his or her material conditions of existence.

### **Ideology is a “Representation” of the Imaginary Relationship of Individuals to their Real Conditions of Existence**

In order to approach my central thesis on the structure and functioning of ideology, I shall first present two theses, one negative, the other positive. The first concerns the object which is "represented" in the imaginary form of ideology, the second concerns the materiality of ideology.

THESIS I: Ideology represents the imaginary relationship of individuals to their real conditions of existence.

We commonly call religious ideology, ethical ideology, legal ideology, political ideology, etc., so many "world outlooks." Of course, assuming that we do not live one of these ideologies as the truth (e.g. "believe" in God, Duty, Justice, etc....), we admit that the ideology we are discussing from a critical point of view, examining it as the ethnologist examines the myths of a "primitive society," that these "world outlooks" are largely imaginary, i.e. do not "correspond to reality."

*Original publication details:* Louis Althusser, "Ideology and Ideological State Apparatuses" from *Lenin and Philosophy*, trans. B. Brewster, pp. 85–125. New Left Books, 1971. Reproduced with permission from Éditions La Découverte and the publishers, Verso.

However, while admitting that they do not correspond to reality, i.e. that they constitute an illusion, we admit that they do make allusion to reality, and that they need only be “interpreted” to discover the reality of the world behind their imaginary representation of that world (ideology = *illusion/allusion*).

There are different types of interpretation, the most famous of which are the *mechanistic* type, current in the eighteenth century (God is the imaginary representation of the real King), and the “*hermeneutic*” interpretation, inaugurated by the earliest Church Fathers, and revived by Feuerbach and the theologico-philosophical school which descends from him, e.g. the theologian Barth (to Feuerbach, for example, God is the essence of real Man). The essential point is that on condition that we interpret the imaginary transposition (and inversion) of ideology we arrive at the conclusion that in ideology “men represent their real conditions of existence to themselves in an imaginary form.”

Unfortunately, this interpretation leaves one small problem unsettled: why do men “need” this imaginary transposition of their real conditions of existence in order to “represent to themselves” their real conditions of existence?

The first answer (that of the eighteenth century) proposes a simple solution: Priests or Despots are responsible. They “forged” the Beautiful Lies so that, in the belief that they were obeying God, men would in fact obey the Priests and Despots, who are usually in alliance in their imposture, the Priests acting in the interests of the Despots or *vice versa*, according to the political positions of the “theoreticians” concerned. There is therefore a cause for the imaginary transposition of the real conditions of existence: that cause is the existence of a small number of cynical men who base their domination and exploitation of the “people” on a falsified representation of the world which they have imagined in order to enslave other minds by dominating their imaginations.

The second answer (that of Feuerbach, taken over word for word by Marx in his *Early Works*) is more “profound,” i.e. just as false. It, too, seeks and finds a cause for the imaginary transposition and distortion of men’s real conditions of existence, in short, for the alienation in the imaginary of the representation of men’s conditions of existence. This cause is no longer Priests or Despots, nor their active imagination and the passive imagination of their victims. This cause is the material alienation which reigns in the conditions of existence of men themselves. This is how, in *The Jewish Question* and elsewhere, Marx defends the Feuerbachian idea that men make themselves an alienated (= imaginary) representation of their conditions of existence because these conditions of existence are themselves alienating (in the *1844 Manuscripts*: because these conditions are dominated by the essence of alienated society – “alienated labor”).

All these interpretations thus take literally the thesis which they presuppose, and on which they depend, i.e. that what is reflected in the imaginary representation of the world found in an ideology is the conditions of existence of men, i.e. their real world.

Now I can return to a thesis which I have already advanced: it is not their real conditions of existence, their real world, that “men” “represent to themselves” in ideology, but above all it is their relation to those conditions of existence which is represented to them there. It is this relation which is at the center of every ideological, i.e. imaginary, representation of the real world. It is this relation that contains the “cause” which has to explain the imaginary distortion of the ideological representation of the real world. Or rather, to leave aside the language of causality, it is necessary to advance the thesis that it is the *imaginary nature of this relation* which underlies all the imaginary distortion that we can observe (if we do not live in its truth) in all ideology.

To speak in a Marxist language, if it is true that the representation of the real conditions of existence of the individuals occupying the posts of agents of production, exploitation, repression, ideologization and scientific practice, does in the last analysis arise from the relations of production, and from relations deriving from the relations of production, we can say the following: all ideology represents in its necessarily imaginary distortion not the existing relations of production (and the other relations that derive from them), but above all the (imaginary) relationship of individuals to the relations of production and the relations that derive from them. What is represented in ideology is therefore not the system of the real relations which govern the existence of individuals, but the imaginary relation of those individuals to the real relations in which they live.

If this is the case, the question of the “cause” of the imaginary distortion of the real relations in ideology disappears and must be replaced by a different question: why is the representation given to individuals of their (individual) relation to the social relations which govern their conditions of existence and their collective and individual life necessarily an imaginary relation? And what is the nature of this imaginarity? Posed in this way, the question explodes the solution by a “clique,”<sup>1</sup> by a group of individuals (Priests or Despots) who are the authors of the great ideological mystification, just as it explodes the solution by the alienated character of the real world. We shall see why later in my exposition. For the moment I shall go no further.

#### THESIS II: Ideology has a material existence.

I have already touched on this thesis by saying that the “ideas” or “representations,” etc., which seem to make up ideology do not have an ideal (*idéale* or *idéelle*) or spiritual existence, but a material existence. I even suggested that the ideal (*idéale*, *idéelle*) and spiritual existence of “ideas” arises exclusively in an ideology of the “idea” and of ideology, and let me add, in an ideology of what seems to have “founded” this conception since the emergence of the sciences, i.e. what the practitioners of the sciences represent to themselves in their spontaneous ideology as “ideas,” true or false. Of course, presented in affirmative form, this thesis is unproven. I simply ask that the reader be favorably disposed towards it, say, in the name of materialism. A long series of arguments would be necessary to prove it.

This hypothetical thesis of the not spiritual but material existence of “ideas” or other “representations” is indeed necessary if we are to advance in our analysis of the nature of ideology. Or rather, it is merely useful to us in order the better to reveal what every at all serious analysis of any ideology will immediately and empirically show to every observer, however critical.

While discussing the ideological State apparatuses and their practices, I said that each of them was the realization of an ideology (the unity of these different regional ideologies – religious, ethical, legal, political, aesthetic, etc. being assured by their subjection to the ruling ideology). I now return to this thesis: an ideology always exists in an apparatus, and its practice, or practices. This existence is material.

Of course, the material existence of the ideology in an apparatus and its practices does not have the same modality as the material existence of a paving-stone or a rifle. But, at the risk of being taken for a Neo-Aristotelian (NB Marx had a very high regard for Aristotle), I shall say that “matter is discussed in many senses,” or rather that it exists in different modalities, all rooted in the last instance in “physical” matter.

Having said this, let me move straight on and see what happens to the “individuals” who live in ideology, i.e. in a determinate (religious, ethical, etc.) representation of the world whose imaginary distortion depends on their imaginary relation to their conditions of existence, in other words, in the last instance, to the relations of production and to class relations (ideology = an imaginary relation to real relations). I shall say that this imaginary relation is itself endowed with a material existence.

Now I observe the following.

An individual believes in God, or Duty, or Justice, etc. This belief derives (for everyone, i.e. for all those who live in an ideological representation of ideology, which reduces ideology to ideas endowed by definition with a spiritual existence) from the ideas of the individual concerned, i.e. from him as a subject with a consciousness which contains the ideas of his belief. In this way, i.e. by means of the absolutely ideological “conceptual” device (*dispositif*) thus set up (a subject endowed with a consciousness in which he freely forms or freely recognizes ideas in which he believes), the (material) attitude of the subject concerned naturally follows.

The individual in question behaves in such and such a way, adopts such and such a practical attitude, and, what is more, participates in certain regular practices which are those of the ideological apparatus on which “depend” the ideas which he has in all consciousness freely chosen as a subject. If he believes in God, he goes to Church to attend Mass, kneels, prays, confesses, does penance (once it was material in the ordinary sense of the term) and naturally repents and so on. If he believes in Duty, he will have the corresponding attitudes, inscribed in ritual practices “according to the correct principles.” If he believes in Justice, he will submit unconditionally to the rules of the Law, and may even protest when they are violated, sign petitions, take part in a demonstration, etc.

Throughout this schema we observe that the ideological representation of ideology is itself forced to recognize that every “subject” endowed with a “consciousness” and believing in the “ideas” that his “consciousness” inspires in him and freely accepts, must “act according to his ideas,” must therefore inscribe his own ideas as a free subject in the actions of his material practice. If he does not do so, “that is wicked.”

Indeed, if he does not do what he ought to do as a function of what he believes, it is because he does something else, which, still as a function of the same idealist scheme, implies that he has other ideas in his head as well as those he proclaims, and that he acts according to these other ideas, as a man who is either “inconsistent” (“no one is willingly evil”) or cynical, or perverse.

In every case, the ideology of ideology thus recognizes, despite its imaginary distortion, that the “ideas” of a human subject exist in his actions, or ought to exist in his actions, and if that is not the case, it lends him other ideas corresponding to the actions (however perverse) that he does perform. This ideology talks of actions: I shall talk of actions inserted into *practices*. And I shall point out that these practices are governed by the *rituals* in which these practices are inscribed, within the *material existence of an ideological apparatus*, be it only a small part of that apparatus: a small mass in a small church, a funeral, a minor match at a sports club, a school day, a political party meeting, etc.

Besides, we are indebted to Pascal’s defensive “dialectic” for the wonderful formula which will enable us to invert the order of the notional schema of ideology. Pascal says more or less: “Kneel down, move your lips in prayer, and you will believe.” He thus scandalously inverts the order of things, bringing, like Christ, not peace but strife, and

in addition something hardly Christian (for woe to him who brings scandal into the world!) – scandal itself. A fortunate scandal which makes him stick with Jansenist defiance to a language that directly names the reality.

I will be allowed to leave Pascal to the arguments of his ideological struggle with the religious ideological State apparatus of his day. And I shall be expected to use a more directly Marxist vocabulary, if that is possible, for we are advancing in still poorly explored domains.

I shall therefore say that, where only a single subject (such and such an individual) is concerned, the existence of the ideas of his belief is material in that *his ideas are his material actions inserted into material practices governed by material rituals which are themselves defined by the material ideological apparatus from which derive the ideas of that subject*. Naturally, the four inscriptions of the adjective “material” in my proposition must be affected by different modalities: the materialities of a displacement for going to mass, of kneeling down, of the gesture of the sign of the cross, or of the *mea culpa*, of a sentence, of a prayer, of an act of contrition, of a penitence, of a gaze, of a hand-shake, of an external verbal discourse or an “internal” verbal discourse (consciousness), are not one and the same materiality. I shall leave on one side the problem of a theory of the differences between the modalities of materiality.

It remains that in this inverted presentation of things, we are not dealing with an “inversion” at all, since it is clear that certain notions have purely and simply disappeared from our presentation, whereas others on the contrary survive, and new terms appear.

DISAPPEARED: the term *ideas*.

SURVIVE: the terms *subject, consciousness, belief, actions*.

APPEAR: the terms *practices, rituals, ideological apparatus*.

It is therefore not an inversion or overturning (except in the sense in which one might say a government or a glass is overturned), but a reshuffle (of a non-ministerial type), a rather strange reshuffle, since we obtain the following result.

Ideas have disappeared as such (insofar as they are endowed with an ideal or spiritual existence), to the precise extent that it has emerged that their existence is inscribed in the actions of practices governed by rituals defined in the last instance by an ideological apparatus. It therefore appears that the subject acts insofar as he is acted by the following system (set out in the order of its real determination): ideology existing in a material ideological apparatus, prescribing material practices governed by a material ritual, which practices exist in the material actions of a subject acting in all consciousness according to his belief.

But this very presentation reveals that we have retained the following notions: subject, consciousness, belief, actions. From this series I shall immediately extract the decisive central term on which everything else depends: the notion of the *subject*.

And I shall immediately set down two conjoint theses:

1. there is no practice except by and in an ideology;
2. there is no ideology except by the subject and for subjects.

I can now come to my central thesis.

## Ideology Interpellates Individuals as Subjects

This thesis is simply a matter of making my last proposition explicit: there is no ideology except by the subject and for subjects. Meaning, there is no ideology except for concrete subjects, and this destination for ideology is only made possible by the subject: meaning, *by the category of the subject* and its functioning.

By this I mean that, even if it only appears under this name (the subject) with the rise of bourgeois ideology, above all with the rise of legal ideology,<sup>2</sup> the category of the subject (which may function under other names: e.g., as the soul in Plato, as God, etc.) is the constitutive category of all ideology, whatever its determination (regional or class) and whatever its historical date – since ideology has no history.

I say: the category of the subject is constitutive of all ideology, but at the same time and immediately I add that *the category of the subject is only constitutive of all ideology insofar as all ideology has the function (which defines it) of “constituting” concrete individuals as subjects*. In the interaction of this double constitution exists the functioning of all ideology, ideology being nothing but its functioning in the material forms of existence of that functioning.

In order to grasp what follows, it is essential to realize that both he who is writing these lines and the reader who reads them are themselves subjects, and therefore ideological subjects (a tautological proposition), i.e. that the author and the reader of these lines both live “spontaneously” or “naturally” in ideology in the sense in which I have said that “man is an ideological animal by nature.”

That the author, insofar as he writes the lines of a discourse which claims to be scientific, is completely absent as a “subject” from “his” scientific discourse (for all scientific discourse is by definition a subject-less discourse, there is no “Subject of science” except in an ideology of science) is a different question which I shall leave on one side for the moment.

As St Paul admirably put it, it is in the “Logos,” meaning in ideology, that we “live, move and have our being.” It follows that, for you and for me, the category of the subject is a primary “obviousness” (obviousnesses are always primary): it is clear that you and I are subjects (free, ethical, etc....). Like all obviousnesses, including those that make a word “name a thing” or “have a meaning” (therefore including the obviousness of the “transparency” of language), the “obviousness” that you and I are subjects – and that that does not cause any problems – is an ideological effect, the elementary ideological effect.<sup>3</sup> It is indeed a peculiarity of ideology that it imposes (without appearing to do so, since these are “obviousnesses”) obviousnesses as obviousnesses, which we cannot *fail to recognize* and before which we have the inevitable and natural reaction of crying out (aloud or in the “still, small voice of conscience”): “That’s obvious! That’s right! That’s true!”

At work in this reaction is the ideological function which is one of the two functions of ideology as such (its inverse being the function of *misrecognition – méconnaissance*).

To take a highly “concrete” example, we all have friends who, when they knock on our door and we ask, through the door, the question “Who’s there?,” answer (since “it’s obvious”) “It’s me.” And we recognize that “it is him,” or “her.” We open the door, and “it’s true, it really was she who was there.” To take another example, when we recognize somebody of our (previous) acquaintance ((*re*)-*connaissance*) in the street, we show him that we have recognized him (and have recognized that he has recognized us) by saying to him “Hello, my friend,” and shaking his hand (a material ritual practice of ideological recognition in everyday life – in France, at least; elsewhere, there are other rituals).

In this preliminary remark and these concrete illustrations, I only wish to point out that you and I are *always already* subjects, and as such constantly practice the rituals of ideological recognition, which guarantee for us that we are indeed concrete, individual, distinguishable and (naturally) irreplaceable subjects. The writing I am currently executing and the reading you are currently<sup>4</sup> performing are also in this respect rituals of ideological recognition, including the “obviousness” with which the “truth” or “error” of my reflections may impose itself on you.

But to recognize that we are subjects and that we function in the practical rituals of the most elementary everyday life (the hand-shake, the fact of calling you by your name, the fact of knowing, even if I do not know what it is, that you “have” a name of your own, which means that you are recognized as a unique subject, etc.) – this recognition only gives us the “consciousness” of our incessant (eternal) practice of ideological recognition – its consciousness, i.e. its *recognition* – but in no sense does it give us the (scientific) *knowledge* of the mechanism of this recognition. Now it is this knowledge that we have to reach, if you will, while speaking in ideology, and from within ideology we have to outline a discourse which tries to break with ideology, in order to dare to be the beginning of a scientific (i.e. subjectless) discourse on ideology.

Thus in order to represent why the category of the “subject” is constitutive of ideology, which only exists by constituting concrete subjects as subjects, I shall employ a special mode of exposition: “concrete” enough to be recognized, but abstract enough to be thinkable and thought, giving rise to a knowledge.

As a first formulation I shall say: *all ideology hails or interpellates concrete individuals as concrete subjects*, by the functioning of the category of the subject.

This is a proposition which entails that we distinguish for the moment between concrete individuals on the one hand and concrete subjects on the other, although at this level concrete subjects only exist insofar as they are supported by a concrete individual.

I shall then suggest that ideology “acts” or “functions” in such a way that it “recruits” subjects among the individuals (it recruits them all), or “transforms” the individuals into subjects (it transforms them all) by that very precise operation which I have called *interpellation* or hailing, and which can be imagined along the lines of the most commonplace everyday police (or other) hailing: “Hey, you there!”<sup>5</sup>

Assuming that the theoretical scene I have imagined takes place in the street, the hailed individual will turn round. By this mere one-hundred-and-eighty-degree physical conversion, he becomes a *subject*. Why? Because he has recognized that the hail was “really” addressed to him, and that “it was *really him* who was hailed” (and not someone else). Experience shows that the practical telecommunication of hailings is such that they hardly ever miss their man: verbal call or whistle, the one hailed always recognizes that it is really him who is being hailed. And yet it is a strange phenomenon, and one which cannot be explained solely by “guilt feelings,” despite the large numbers who “have something on their consciences.”

Naturally for the convenience and clarity of my little theoretical theater I have had to present things in the form of a sequence, with a before and an after, and thus in the form of a temporal succession. There are individuals walking along. Somewhere (usually behind them) the hail rings out: “Hey, you there!” One individual (nine times out of ten it is the right one) turns round, believing/suspecting/knowing that it is for him, i.e. recognizing that “it really is he” who is meant by the hailing. But in reality these things happen without any succession. The existence of ideology and the hailing or interpellation of individuals as subjects are one and the same thing.

I might add: what thus seems to take place outside ideology (to be precise, in the street), in reality takes place in ideology. What really takes place in ideology seems therefore to take place outside it. That is why those who are in ideology believe themselves by definition outside ideology: one of the effects of ideology is the practical *denial* of the ideological character of ideology by ideology: ideology never says, “I am ideological.” It is necessary to be outside ideology, i.e. in scientific knowledge, to be able to say: I am in ideology (a quite exceptional case) or (the general case): I was in ideology. As is well known, the accusation of being in ideology only applies to others, never to oneself (unless one is really a Spinozist or a Marxist, which, in this matter, is to be exactly the same thing). Which amounts to saying that ideology *has no outside* (for itself), but at the same time *that it is nothing but outside* (for science and reality).

Spinoza explained this completely two centuries before Marx, who practiced it but without explaining it in detail. But let us leave this point, although it is heavy with consequences, consequences which are not just theoretical, but also directly political, since, for example, the whole theory of criticism and self-criticism, the golden rule of the Marxist-Leninist practice of the class struggle, depends on it.

Thus ideology hails or interpellates individuals as subjects. As ideology is eternal, I must now suppress the temporal form in which I have presented the functioning of ideology, and say: ideology has always-already interpellated individuals as subjects; which amounts to making it clear that individuals are always-already interpellated by ideology as subjects, which necessarily leads us to one last proposition: *individuals are always-already subjects*. Hence individuals are “abstract” with respect to the subjects which they always-already are. This proposition might seem paradoxical.

That an individual is always-already a subject, even before he is born, is nevertheless the plain reality, accessible to everyone and not a paradox at all. Freud shows that individuals are always “abstract” with respect to the subjects they always-already are, simply noting the ideological ritual that surrounds the expectation of a “birth,” that “happy event.” Everyone knows how much and in what way an unborn child is expected. Which amounts to saying, very prosaically, if we agree to drop the “sentiments,” i.e. the forms of family ideology (paternal/maternal/conjugal/fraternal) in which the unborn child is expected: it is certain in advance that it will bear its father’s name, and will therefore have an identity and be irreplaceable. Before its birth, the child is therefore always-already a subject, appointed as a subject in and by the specific familial ideological configuration in which it is “expected” once it has been conceived. I hardly need add that this familial ideological configuration is, in its uniqueness, highly structured, and that it is in this implacable and more or less “pathological” (presupposing that any meaning can be assigned to that term) structure that the former subject-to-be will have to “find” “its” place, i.e., “become” the sexual subject (boy or girl) which it already is in advance. It is clear that this ideological constraint and pre-appointment, and all the rituals of rearing and then education in the family, have some relationship with what Freud studied in the forms of the pre-genital and genital “stages” of sexuality, i.e. in the “grip” of what Freud registered by its effects as being the unconscious. But let us leave this point, too, to one side....

Let me summarize what we have discovered about ideology in general.

The duplicate mirror-structure of ideology ensures simultaneously:

1. the interpellation of “individuals” as subjects;
2. their subjection to the Subject;<sup>6</sup>

3. the mutual recognition of subjects and Subject, the subjects' recognition of each other, and finally the subject's recognition of himself;<sup>7</sup>
4. the absolute guarantee that everything really is so, and that on condition that the subjects recognize what they are and behave accordingly, everything will be all right: Amen – “*So be it.*”

Result: caught in this quadruple system of interpellation as subjects, of subjection to the Subject, of universal recognition and of absolute guarantee, the subjects “work,” they “work by themselves” in the vast majority of cases, with the exception of the “bad subjects” who on occasion provoke the intervention of one of the detachments of the (repressive) State apparatus. But the vast majority of (good) subjects work all right “all by themselves,” i.e. by ideology (whose concrete forms are realized in the Ideological State Apparatuses [ISAs]). They are inserted into practices governed by the rituals of the ISAs. They “recognize” the existing state of affairs (*das Bestehende*), that “it really is true that it is so and not otherwise,” and that they must be obedient to God, to their conscience, to the priest, to de Gaulle, to the boss, to the engineer, that thou shalt “love thy neighbour as thyself,” etc. Their concrete, material behavior is simply the inscription in life of the admirable words of the prayer: “Amen – *So be it.*”

Yes, the subjects “work by themselves.” The whole mystery of this effect lies in the first two moments of the quadruple system I have just discussed, or, if you prefer, in the ambiguity of the term *subject*. In the ordinary use of the term, subject in fact means: (1) a free subjectivity, a center of initiatives, author of and responsible for its actions; (2) a subjected being who submits to a higher authority, and is therefore stripped of all freedom except that of freely accepting his submission. This last note gives us the meaning of this ambiguity, which is merely a reflection of the effect which produces it: the individual is *interpellated as a (free) subject in order that he shall (freely) accept his subjection*, i.e. in order that he shall make the gestures and actions of his subjection “all by himself.” *There are no subjects except by and for their subjection.* That is why they “work all by themselves.”

“*So be it!* ...” This phrase which registers the effect to be obtained proves that it is not “naturally” so (“naturally”: outside the prayer, i.e. outside the ideological intervention). This phrase proves that it *has* to be so if things are to be what they must be, and let us let the words slip: if the reproduction of the relations of production is to be assured, even in the processes of production and circulation, every day, in the “consciousness,” i.e. in the attitudes of the individual subjects occupying the posts which the socio-technical division of labor assigns to them in production, exploitation, repression, ideologization, scientific practice, etc. Indeed, what is really in question in this mechanism of the mirror recognition of the Subject and of the individuals interpellated as subjects, and of the guarantee given by the Subject to the subjects if they freely accept their subjection to the Subject’s “commandments”? The reality in question in this mechanism, the reality which is necessarily *misrecognized (méconnue)* in the very forms of recognition (ideology = misrecognition/ignorance) is indeed, in the last resort, the reproduction of the relations of production and of the relations deriving from them.

## Notes

1 I use this very modern term deliberately. For even in Communist circles, unfortunately, it is a commonplace to “explain” some political deviation (left or right opportunism) by the action of a “clique.”

- 2 Which borrowed the legal category of “subject in law” to make an ideological notion: man is by nature a subject.
- 3 Linguists and those who appeal to linguistics for various purposes often run up against difficulties which arise because they ignore the action of the ideological effects in all discourses – including even scientific discourses.
- 4 NB: this double “currently” is one more proof of the fact that ideology is “eternal,” since these two “currentlys” are separated by an indefinite interval; I am writing these lines on April 6, 1969, you may read them at any subsequent time.
- 5 Hailing as an everyday practice subject to a precise ritual takes a quite “special” form in the policeman’s practice of “hailing,” which concerns the hailing of “suspects.”
- 6 By “Subject,” Althusser means the deity. [Eds.]
- 7 Hegel is (unknowingly) an admirable “theoretician” of ideology insofar as he is a “theoretician” of Universal Recognition who unfortunately ends up in the ideology of Absolute Knowledge. Feuerbach is an astonishing “theoretician” of the mirror connexion, who unfortunately ends up in the ideology of the Human Essence. To find the material with which to construct a theory of the guaranteee, we must turn to Spinoza.

# CHAPTER 7

## Right of Death and Power over Life

*Michel Foucault*

In this famous essay, Michel Foucault introduced the concept of “biopower.” In the past sovereigns assumed the right to decide life or death in regard to their subjects. With time, that right has diminished, but, according to Foucault, power over life merely shifted mode of operation and became more insidious and pervasive, operating now through mechanisms of knowledge such as police reports or psychiatric examinations and through the disciplinary management of bodies for purposes that seem positive and enabling such as work.

For a long time, one of the characteristic privileges of sovereign power was the right to decide life and death. In a formal sense, it derived no doubt from the ancient *patria potestas* that granted the father of the Roman family the right to “dispose” of the life of his children and his slaves; just as he had given them life, so he could take it away. By the time the right of life and death was framed by the classical theoreticians, it was in a considerably diminished form. It was no longer considered that this power of the sovereign over his subjects could be exercised in an absolute and unconditional way, but only in cases where the sovereign’s very existence was in jeopardy: a sort of right of rejoinder. If he were threatened by external enemies who sought to overthrow him or contest his rights, he could then legitimately wage war, and require his subjects to take part in the defense of the state; without “directly proposing their death,” he was empowered to “expose their life”: in this sense, he wielded an “indirect” power over them of life and death.<sup>1</sup> But if someone dared to rise up against him and transgress his laws, then he could exercise a direct power over the offender’s life: as punishment, the latter would be put to death. Viewed in this way, the power of life and death was not an absolute privilege: it was conditioned by the defense of the sovereign, and his own survival. Must we follow Hobbes in seeing it as the transfer to the prince of the natural right possessed by every individual to defend his life even if this meant the death of others? Or should it be regarded as a specific right that was manifested with the formation of that new juridical

*Original publication details:* Michel Foucault, “Right of Death and Power over Life” from *History of Sexuality*, trans. Robert Hurley, pp. 133–159. Random House and Editions Gallimard, 1978. Reproduced with permission from Penguin UK and Georges Borchardt, Inc., for Editions Gallimard.

being, the sovereign?<sup>2</sup> In any case, in its modern form – relative and limited – as in its ancient and absolute form, the right of life and death is a dissymmetrical one. The sovereign exercised his right of life only by exercising his right to kill, or by refraining from killing; he evidenced his power over life only through the death he was capable of requiring. The right which was formulated as the “power of life and death” was in reality the right to *take* life or *let* live. Its symbol, after all, was the sword. Perhaps this juridical form must be referred to a historical type of society in which power was exercised mainly as a means of deduction (*prélèvement*), a subtraction mechanism, a right to appropriate a portion of the wealth, a tax of products, goods and services, labor and blood, levied on the subjects. Power in this instance was essentially a right of seizure: of things, time, bodies, and ultimately life itself; it culminated in the privilege to seize hold of life in order to suppress it.

Since the classical age the West has undergone a very profound transformation of these mechanisms of power. “Deduction” has tended to be no longer the major form of power but merely one element among others, working to incite, reinforce, control, monitor, optimize, and organize the forces under it: a power bent on generating forces, making them grow, and ordering them, rather than one dedicated to impeding them, making them submit, or destroying them. There has been a parallel shift in the right of death, or at least a tendency to align itself with the exigencies of a life-administering power and to define itself accordingly. This death that was based on the right of the sovereign is now manifested as simply the reverse of the right of the social body to ensure, maintain, or develop its life. Yet wars were never as bloody as they have been since the nineteenth century, and all things being equal, never before did regimes visit such holocausts on their own populations. But this formidable power of death – and this is perhaps what accounts for part of its force and the cynicism with which it has so greatly expanded its limits – now presents itself as the counterpart of a power that exerts a positive influence on life, that endeavors to administer, optimize, and multiply it, subjecting it to precise controls and comprehensive regulations. Wars are no longer waged in the name of a sovereign who must be defended; they are waged on behalf of the existence of everyone; entire populations are mobilized for the purpose of wholesale slaughter in the name of life necessity: massacres have become vital. It is as managers of life and survival, of bodies and the race, that so many regimes have been able to wage so many wars, causing so many men to be killed. And through a turn that closes the circle, as the technology of wars has caused them to tend increasingly toward all-out destruction, the decision that initiates them and the one that terminates them are in fact increasingly informed by the naked question of survival. The atomic situation is now at the end point of this process: the power to expose a whole population to death is the underside of the power to guarantee an individual’s continued existence. The principle underlying the tactics of battle – that one has to be capable of killing in order to go on living – has become the principle that defines the strategy of states. But the existence in question is no longer the juridical existence of sovereignty; at stake is the biological existence of a population. If genocide is indeed the dream of modern powers, this is not because of a recent return of the ancient right to kill; it is because power is situated and exercised at the level of life, the species, the race, and the large-scale phenomena of population.

On another level, I might have taken up the example of the death penalty. Together with war, it was for a long time the other form of the right of the sword; it constituted the reply of the sovereign to those who attacked his will, his law, or his person. Those who died on the scaffold became fewer and fewer, in contrast to those who died in wars.

But it was for the same reasons that the latter became more numerous and the former more and more rare. As soon as power gave itself the function of administering life, its reason for being and the logic of its exercise – and not the awakening of humanitarian feelings – made it more and more difficult to apply the death penalty. How could power exercise its highest prerogatives by putting people to death, when its main role was to ensure, sustain, and multiply life, to put this life in order? For such a power, execution was at the same time a limit, a scandal, and a contradiction. Hence capital punishment could not be maintained except by invoking less the enormity of the crime itself than the monstrosity of the criminal, his incorrigibility, and the safeguard of society. One had the right to kill those who represented a kind of biological danger to others.

One might say that the ancient right to *take* life or *let* live was replaced by a power to *foster* life or *disallow* it to the point of death. This is perhaps what explains that disqualification of death which marks the recent wane of the rituals that accompanied it. That death is so carefully evaded is linked less to a new anxiety which makes death unbearable for our societies than to the fact that the procedures of power have not ceased to turn away from death. In the passage from this world to the other, death was the manner in which a terrestrial sovereignty was relieved by another, singularly more powerful sovereignty; the pageantry that surrounded it was in the category of political ceremony. Now it is over life, throughout its unfolding, that power establishes its dominion; death is power's limit, the moment that escapes it; death becomes the most secret aspect of existence, the most "private." It is not surprising that suicide – once a crime, since it was a way to usurp the power of death which the sovereign alone, whether the one here below or the Lord above, had the right to exercise – became, in the course of the nineteenth century, one of the first conducts to enter into the sphere of sociological analysis; it testified to the individual and private right to die, at the borders and in the interstices of power that was exercised over life. This determination to die, strange and yet so persistent and constant in its manifestations, and consequently so difficult to explain as being due to particular circumstances or individual accidents, was one of the first astonishments of a society in which political power had assigned itself the task of administering life.

In concrete terms, starting in the seventeenth century, this power over life evolved in two basic forms; these forms were not antithetical, however; they constituted rather two poles of development linked together by a whole intermediary cluster of relations. One of these poles – the first to be formed, it seems – centered on the body as a machine: its disciplining, the optimization of its capabilities, the extortion of its forces, the parallel increase of its usefulness and its docility, its integration into systems of efficient and economic controls, all this was ensured by the procedures of power that characterized the *disciplines*: an *anatomo-politics of the human body*. The second, formed somewhat later, focused on the species body, the body imbued with the mechanics of life and serving as the basis of the biological processes: propagation, births and mortality, the level of health, life expectancy and longevity, with all the conditions that can cause these to vary. Their supervision was effected through an entire series of interventions and *regulatory controls*: a *biopolitics of the population*. The disciplines of the body and the regulations of the population constituted the two poles around which the organization of power over life was deployed. The setting up, in the course of the classical age, of this great bipolar technology – anatomic and biological, individualizing and specifying, directed toward the performances of the body, with attention to the processes of life – characterized a power whose highest function was perhaps no longer to kill, but to invest life through and through.

The old power of death that symbolized sovereign power was now carefully supplanted by the administration of bodies and the calculated management of life. During the classical period, there was a rapid development of various disciplines – universities, secondary schools, barracks, workshops; there was also the emergence, in the field of political practices and economic observation, of the problems of birthrate, longevity, public health, housing, and migration. Hence there was an explosion of numerous and diverse techniques for achieving the subjugation of bodies and the control of populations, marking the beginning of an era of “biopower.” The two directions taken by its development still appeared to be clearly separate in the eighteenth century. With regard to discipline, this development was embodied in institutions such as the army and the schools, and in reflections on tactics, apprenticeship, education, and the nature of societies, ranging from the strictly military analyses of Marshal de Saxe to the political reveries of Guibert or Servan. As for population controls, one notes the emergence of demography, the evaluation of the relationship between resources and inhabitants, the constructing of tables analyzing wealth and its circulation: the work of Quesnay, Moreau, and Süssmilch. The philosophy of the “Ideologists,” as a theory of ideas, signs, and the individual genesis of sensations, but also a theory of the social composition of interests – Ideology being a doctrine of apprenticeship, but also a doctrine of contracts and the regulated formation of the social body – no doubt constituted the abstract discourse in which one sought to coordinate these two techniques of power in order to construct a general theory of it. In point of fact, however, they were not to be joined at the level of a speculative discourse, but in the form of concrete arrangements (*agencements concrets*) that would go to make up the great technology of power in the nineteenth century: the deployment of sexuality would be one of them, and one of the most important.

This bio-power was without question an indispensable element in the development of capitalism; the latter would not have been possible without the controlled insertion of bodies into the machinery of production and the adjustment of the phenomena of population to economic processes. But this was not all it required; it also needed the growth of both these factors, their reinforcement as well as their availability and docility; it had to have methods of power capable of optimizing forces, aptitudes, and life in general without at the same time making them more difficult to govern. If the development of the great instruments of the state, as *institutions* of power, ensured the maintenance of production relations, the rudiments of anatomo- and bio-politics, created in the eighteenth century as *techniques* of power present at every level of the social body and utilized by very diverse institutions (the family and the army, schools and the police, individual medicine and the administration of collective bodies), operated in the sphere of economic processes, their development, and the forces working to sustain them. They also acted as factors of segregation and social hierarchization, exerting their influence on the respective forces of both these movements, guaranteeing relations of domination and effects of hegemony. The adjustment of the accumulation of men to that of capital, the joining of the growth of human groups to the expansion of productive forces and the differential allocation of profit, were made possible in part by the exercise of bio-power in its many forms and modes of application. The investment of the body, its valorization, and the distributive management of its forces were at the time indispensable.

One knows how many times the question has been raised concerning the role of an ascetic morality in the first formation of capitalism; but what occurred in the eighteenth century in some Western countries, an event bound up with the development of capitalism, was a different phenomenon having perhaps a wider impact than the new morality;

this was nothing less than the entry of life into history, that is, the entry of phenomena peculiar to the life of the human species into the order of knowledge and power, into the sphere of political techniques. It is not a question of claiming that this was the moment when the first contact between life and history was brought about. On the contrary, the pressure exerted by the biological on the historical had remained very strong for thousands of years; epidemics and famine were the two great dramatic forms of this relationship that was always dominated by the menace of death. But through a circular process, the economic – and primarily agricultural – development of the eighteenth century, and an increase in productivity and resources even more rapid than the demographic growth it encouraged, allowed a measure of relief from these profound threats: despite some renewed outbreaks, the period of great ravages from starvation and plague had come to a close before the French Revolution; death was ceasing to torment life so directly. But at the same time, the development of the different fields of knowledge concerned with life in general, the improvement of agricultural techniques, and the observations and measures relative to man's life and survival contributed to this relaxation: a relative control over life averted some of the imminent risks of death. In the space for movement thus conquered, and broadening and organizing that space, methods of power and knowledge assumed responsibility for the life processes and undertook to control and modify them. Western man was gradually learning what it meant to be a living species in a living world, to have a body, conditions of existence, probabilities of life, an individual and collective welfare, forces that could be modified, and a space in which they could be distributed in an optimal manner. For the first time in history, no doubt, biological existence was reflected in political existence; the fact of living was no longer an inaccessible substrate that only emerged from time to time, amid the randomness of death and its fatality; part of it passed into knowledge's field of control and power's sphere of intervention. Power would no longer be dealing simply with legal subjects over whom the ultimate dominion was death, but with living beings, and the mastery it would be able to exercise over them would have to be applied at the level of life itself; it was the taking charge of life, more than the threat of death, that gave power its access even to the body. If one can apply the term *bio-history* to the pressures through which the movements of life and the processes of history interfere with one another, one would have to speak of *bio-power* to designate what brought life and its mechanisms into the realm of explicit calculations and made knowledge-power an agent of transformation of human life. It is not that life has been totally integrated into techniques that govern and administer it; it constantly escapes them. Outside the Western world, famine exists, on a greater scale than ever; and the biological risks confronting the species are perhaps greater, and certainly more serious, than before the birth of microbiology. But what might be called a society's "threshold of modernity" has been reached when the life of the species is wagered on its own political strategies. For millennia, man remained what he was for Aristotle: a living animal with the additional capacity for a political existence; modern man is an animal whose politics places his existence as a living being in question.

This transformation had considerable consequences. It would serve no purpose here to dwell on the rupture that occurred then in the pattern of scientific discourse and on the manner in which the twofold problematic of life and man disrupted and redistributed the order of the classical episteme. If the question of man was raised – insofar as he was a specific living being, and specifically related to other living beings – the reason for this is to be sought in the new mode of relation between history and life: in this dual position of life that placed it at the same time outside history, in its biological environment,

and inside human historicity, penetrated by the latter's techniques of knowledge and power. There is no need either to lay further stress on the proliferation of political technologies that ensued, investing the body, health, modes of subsistence and habitation, living conditions, the whole space of existence.

Another consequence of this development of bio-power was the growing importance assumed by the action of the norm, at the expense of the juridical system of the law. Law cannot help but be armed, and its arm, *par excellence*, is death; to those who transgress it, it replies, at least as a last resort, with that absolute menace. The law always refers to the sword. But a power whose task is to take charge of life needs continuous regulatory and corrective mechanisms. It is no longer a matter of bringing death into play in the field of sovereignty, but of distributing the living in the domain of value and utility. Such a power has to qualify, measure, appraise, and hierarchize, rather than display itself in its murderous splendor; it does not have to draw the line that separates the enemies of the sovereign from his obedient subjects; it effects distributions around the norm. I do not mean to say that the law fades into the background or that the institutions of justice tend to disappear, but rather that the law operates more and more as a norm, and that the judicial institution is increasingly incorporated into a continuum of apparatuses (medical, administrative, and so on) whose functions are for the most part regulatory. A normalizing society is the historical outcome of a technology of power centered on life. We have entered a phase of juridical regression in comparison with the pre-seventeenth-century societies we are acquainted with; we should not be deceived by all the Constitutions framed throughout the world since the French Revolution, the Codes written and revised, a whole continual and clamorous legislative activity: these were the forms that made an essentially normalizing power acceptable.

Moreover, against this power that was still new in the nineteenth century, the forces that resisted relied for support on the very thing it invested, that is, on life and man as a living being. Since the last century, the great struggles that have challenged the general system of power were not guided by the belief in a return to former rights, or by the age-old dream of a cycle of time or a Golden Age. One no longer aspired toward the coming of the emperor of the poor, or the kingdom of the latter days, or even the restoration of our imagined ancestral rights; what was demanded and what served as an objective was life, understood as the basic needs, man's concrete essence, the realization of his potential, a plenitude of the possible. Whether or not it was Utopia that was wanted is of little importance; what we have seen has been a very real process of struggle; life as a political object was in a sense taken at face value and turned back against the system that was bent on controlling it. It was life more than the law that became the issue of political struggles, even if the latter were formulated through affirmations concerning rights. The "right" to life, to one's body, to health, to happiness, to the satisfaction of needs, and beyond all the oppressions or "alienations," the "right" to rediscover what one is and all that one can be, this "right" – which the classical juridical system was utterly incapable of comprehending – was the political response to all these new procedures of power which did not derive, either, from the traditional right of sovereignty.

This is the background that enables us to understand the importance assumed by sex as a political issue. It was at the pivot of the two axes along which developed the entire political technology of life. On the one hand it was tied to the disciplines of the body: the harnessing, intensification, and distribution of forces, the adjustment and economy of energies. On the other hand, it was applied to the regulation of populations, through all

the far-reaching effects of its activity. It fitted in both categories at once, giving rise to infinitesimal surveillances, permanent controls, extremely meticulous orderings of space, indeterminate medical or psychological examinations, to an entire micro-power concerned with the body. But it gave rise as well to comprehensive measures, statistical assessments, and interventions aimed at the entire social body or at groups taken as a whole. Sex was a means of access both to the life of the body and the life of the species. It was employed as a standard for the disciplines and as a basis for regulations. This is why in the nineteenth century sexuality was sought out in the smallest details of individual existences; it was tracked down in behavior, pursued in dreams; it was suspected of underlying the least follies, it was traced back into the earliest years of childhood; it became the stamp of individuality – at the same time what enabled one to analyze the latter and what made it possible to master it. But one also sees it becoming the theme of political operations, economic interventions (through incitements to or curbs on procreation), and ideological campaigns for raising standards of morality and responsibility: it was put forward as the index of a society's strength, revealing of both its political energy and its biological vigor. Spread out from one pole to the other of this technology of sex was a whole series of different tactics that combined in varying proportions the objective of disciplining the body and that of regulating populations.

Whence the importance of the four great lines of attack along which the politics of sex advanced for two centuries. Each one was a way of combining disciplinary techniques with regulative methods. The first two rested on the requirements of regulation, on a whole thematic of the species, descent, and collective welfare, in order to obtain results at the level of discipline; the sexualization of children was accomplished in the form of a campaign for the health of the race (precocious sexuality was presented from the eighteenth century to the end of the nineteenth as an epidemic menace that risked compromising not only the future health of adults but the future of the entire society and species); the hysterization of women, which involved a thorough medicalization of their bodies and their sex, was carried out in the name of the responsibility they owed to the health of their children, the solidity of the family institution, and the safeguarding of society. It was the reverse relationship that applied in the case of birth controls and the psychiatrization of perversions: here the intervention was regulatory in nature, but it had to rely on the demand for individual disciplines and constraints (*dressages*). Broadly speaking, at the juncture of the “body” and the “population,” sex became a crucial target of a power organized around the management of life rather than the menace of death.

The blood relation long remained an important element in the mechanisms of power, its manifestations, and its rituals. For a society in which the systems of alliance, the political form of the sovereign, the differentiation into orders and castes, and the value of descent lines were predominant; for a society in which famine, epidemics, and violence made death imminent, blood constituted one of the fundamental values. It owed its high value at the same time to its instrumental role (the ability to shed blood), to the way it functioned in the order of signs (to have a certain blood, to be of the same blood, to be prepared to risk one's blood), and also to its precariousness (easily spilled, subject to drying up, too readily mixed, capable of being quickly corrupted). A society of blood – I was tempted to say, of “sanguinity” – where power spoke *through* blood: the honor of war, the fear of famine, the triumph of death, the sovereign with his sword, executioners, and tortures; blood was *a reality with a symbolic function*. We, on the other hand, are in a society of “sex,” or rather a society “with a sexuality”: the mechanisms of power are addressed to the body, to life, to what causes it to proliferate, to what reinforces the

species, its stamina, its ability to dominate, or its capacity for being used. Through the themes of health, progeny, race, the future of the species, the vitality of the social body, power spoke *of* sexuality and *to* sexuality; the latter was not a mark or a symbol, it was an object and a target. Moreover, its importance was due less to its rarity or its precariousness than to its insistence, its insidious presence, the fact that it was everywhere an object of excitement and fear at the same time. Power delineated it, aroused it, and employed it as the proliferating meaning that had always to be taken control of again lest it escape; it was *an effect with a meaning-value*. I do not mean to say that a substitution of sex for blood was by itself responsible for all the transformations that marked the threshold of our modernity. It is not the soul of two civilizations or the organizing principle of two cultural forms that I am attempting to express; I am looking for the reasons for which sexuality, far from being repressed in the society of that period, on the contrary was constantly aroused. The new procedures of power that were devised during the classical age and employed in the nineteenth century were what caused our societies to go from *a symbolics of blood* to *an analytics of sexuality*. Clearly, nothing was more on the side of the law, death, transgression, the symbolic, and sovereignty than blood; just as sexuality was on the side of the norm, knowledge, life, meaning, the disciplines, and regulations.

Sade and the first eugenists were contemporary with this transition from “sanguinity” to “sexuality.” But whereas the first dreams of the perfecting of the species inclined the whole problem toward an extremely exacting administration of sex (the art of determining good marriages, of inducing the desired fertilities, of ensuring the health and longevity of children), and while the new concept of race tended to obliterate the aristocratic particularities of blood, retaining only the controllable effects of sex, Sade carried the exhaustive analysis of sex over into the mechanisms of the old power of sovereignty and endowed it with the ancient but fully maintained prestige of blood; the latter flowed through the whole dimension of pleasure – the blood of torture and absolute power, the blood of the caste which was respected in itself and which nonetheless was made to flow in the major rituals of parricide and incest, the blood of the people, which was shed unreservedly since the sort that flowed in its veins was not even deserving of a name. In Sade, sex is without any norm or intrinsic rule that might be formulated from its own nature; but it is subject to the unrestricted law of a power which itself knows no other law but its own; if by chance it is at times forced to accept the order of progressions carefully disciplined into successive days, this exercise carries it to a point where it is no longer anything but a unique and naked sovereignty: an unlimited right of all-powerful monstrosity.

While it is true that the analytics of sexuality and the symbolics of blood were grounded at first in two very distinct regimes of power, in actual fact the passage from one to the other did not come about (any more than did these powers themselves) without overlappings, interactions, and echoes. In different ways, the preoccupation with blood and the law has for nearly two centuries haunted the administration of sexuality. Two of these interferences are noteworthy, the one for its historical importance, the other for the problems it poses. Beginning in the second half of the nineteenth century, the thematics of blood was sometimes called on to lend its entire historical weight toward revitalizing the type of political power that was exercised through the devices of sexuality. Racism took shape at this point (racism in its modern, “biologizing,” statist form): it was then that a whole politics of settlement (*peuplement*), family, marriage, education, social hierarchization, and property, accompanied by a long series of permanent interventions at the level of the body, conduct, health, and everyday life, received their color

and their justification from the mythical concern with protecting the purity of the blood and ensuring the triumph of the race. Nazism was doubtless the most cunning and the most naïve (and the former because of the latter) combination of the fantasies of blood and the paroxysms of a disciplinary power. A eugenic ordering of society, with all that implied in the way of extension and intensification of micro-powers, in the guise of an unrestricted state control (*étatisation*), was accompanied by the oneiric exaltation of a superior blood; the latter implied both the systematic genocide of others and the risk of exposing oneself to a total sacrifice. It is an irony of history that the Hitlerite politics of sex remained an insignificant practice while the blood myth was transformed into the greatest blood bath in recent memory.

At the opposite extreme, starting from this same end of the nineteenth century, we can trace the theoretical effort to reinscribe the thematic of sexuality in the system of law, the symbolic order, and sovereignty. It is to the political credit of psychoanalysis – or at least, of what was most coherent in it – that it regarded with suspicion (and this from its inception, that is, from the moment it broke away from the neuropsychiatry of degenerescence) the irrevocably proliferating aspects which might be contained in these power mechanisms aimed at controlling and administering the everyday life of sexuality: whence the Freudian endeavor (out of reaction no doubt to the great surge of racism that was contemporary with it) to ground sexuality in the law – the law of alliance, tabooed consanguinity, and the Sovereign-Father, in short, to surround desire with all the trappings of the old order of power. It was owing to this that psychoanalysis was – in the main, with a few exceptions – in theoretical and practical opposition to fascism. But this position of psychoanalysis was tied to a specific historical conjuncture. And yet, to conceive the category of the sexual in terms of the law, death, blood, and sovereignty – whatever the references to Sade and Bataille, and however one might gauge their “subversive” influence – is in the last analysis a historical “retro-version.” We must conceptualize the deployment of sexuality on the basis of the techniques of power that are contemporary with it.

People are going to say that I am dealing in a historicism which is more careless than radical; that I am evading the biologically established existence of sexual functions for the benefit of phenomena that are variable, perhaps, but fragile, secondary, and ultimately superficial; and that I speak of sexuality as if sex did not exist. And one would be entitled to object as follows: “You claim to analyze in detail the processes by which women’s bodies, the lives of children, family relationships, and an entire network of social relations were sexualized. You wish to describe that great awakening of sexual concern since the eighteenth century and our growing eagerness to suspect the presence of sex in everything. Let us admit as much and suppose that the mechanisms of power were in fact used more to arouse and ‘excite’ sexuality than to repress it. But here you remain quite near to the thing you no doubt believe you have gotten away from; at bottom, when you point out phenomena of diffusion, anchorage, and fixation of sexuality, you are trying to reveal what might be called the organization of ‘erotic zones’ in the social body; it may well be the case that you have done nothing more than transpose to the level of diffuse processes mechanisms which psychoanalysis has identified with precision at the level of the individual. But you pass over the thing on the basis of which this sexualization was able to develop and which psychoanalysis does not fail to recognize – namely, sex. Before Freud, one sought to localize sexuality as closely as possible: in sex, in its reproductive functions, in its immediate anatomical localizations; one fell

back upon a biological minimum: organ, instinct, and finality. You, on the other hand, are in a symmetrical and inverse position: for you, there remain only groundless effects, ramifications without roots, a sexuality without a sex. What is this if not castration once again?"

Here we need to distinguish between two questions. First, does the analysis of sexuality necessarily imply the elision of the body, anatomy, the biological, the functional? To this question, I think we can reply in the negative. In any case, the purpose of the present study is in fact to show how deployments of power are directly connected to the body – to bodies, functions, physiological processes, sensations, and pleasures; far from the body having to be effaced, what is needed is to make it visible through an analysis in which the biological and the historical are not consecutive to one another, as in the evolutionism of the first sociologists, but are bound together in an increasingly complex fashion in accordance with the development of the modern technologies of power that take life as their objective. Hence I do not envisage a "history of mentalities" that would take account of bodies only through the manner in which they have been perceived and given meaning and value; but a "history of bodies" and the manner in which what is most material and most vital in them has been invested.

Another question, distinct from the first one: this materiality that is referred to, is it not, then, that of sex, and is it not paradoxical to venture a history of sexuality at the level of bodies, without there being the least question of sex? After all, is the power that is exercised through sexuality not directed specifically at that element of reality which is "sex," sex in general? That sexuality is not, in relation to power, an exterior domain to which power is applied, that on the contrary it is a result and an instrument of power's designs, is all very well. But as for sex, is it not the "other" with respect to power, while being the center around which sexuality distributes its effects? Now, it is precisely this idea of sex *in itself* that we cannot accept without examination. Is "sex" really the anchorage point that supports the manifestations of sexuality, or is it not rather a complex idea that was formed inside the deployment of sexuality? In any case, one could show how this idea of sex took form in the different strategies of power and the definite role it played therein.

All along the great lines which the development of the deployment of sexuality has followed since the nineteenth century, one sees the elaboration of this idea that there exists something other than bodies, organs, somatic localizations, functions, anatomo-physiological systems, sensations, and pleasures; something else and something more, with intrinsic properties and laws of its own: "sex." Thus, in the process of hysterization of women, "sex" was defined in three ways: as that which belongs in common to men and women; as that which belongs, *par excellence*, to men, and hence is lacking in women; but at the same time, as that which by itself constitutes woman's body, ordering it wholly in terms of the functions of reproduction and keeping it in constant agitation through the effects of that very function. Hysteria was interpreted in this strategy as the movement of sex insofar as it was the "one" and the "other," whole and part, principle and lack. In the sexualization of childhood, there was formed the idea of a sex that was both present (from the evidence of anatomy) and absent (from the standpoint of physiology), present too if one considered its activity, and deficient if one referred to its reproductive finality; or again, actual in its manifestations, but hidden in its eventual effects, whose pathological seriousness would only become apparent later. If the sex of the child was still present in the adult, it was in the form of a secret causality that tended to nullify the sex of the latter (it was one of the tenets of eighteenth- and nineteenth-century medicine that precocious sex would eventually result in sterility, impotence, frigidity, the inability

to experience pleasure, or the deadening of the senses); by sexualizing childhood, the idea was established of a sex characterized essentially by the interplay of presence and absence, the visible and the hidden; masturbation and the effects imputed to it were thought to reveal in a privileged way this interplay of presence and absence, of the visible and the hidden.

In the psychiatrization of perversions, sex was related to biological functions and to an anatomo-physiological machinery that gave it its “meaning,” that is, its finality; but it was also referred to an instinct which, through its peculiar development and according to the objects to which it could become attached, made it possible for perverse behavior patterns to arise and made their genesis intelligible. Thus “sex” was defined by the interlacing of function and instinct, finality and signification; moreover, this was the form in which it was manifested, more clearly than anywhere else, in the model perversion, in that “fetishism” which, from at least as early as 1877, served as the guiding thread for analyzing all the other deviations. In it one could clearly perceive the way in which the instinct became fastened to an object in accordance with an individual’s historical adherence and biological inadequacy. Lastly, in the socialization of procreative behavior, “sex” was described as being caught between a law of reality (economic necessity being its most abrupt and immediate form) and an economy of pleasure which was always attempting to circumvent that law – when, that is, it did not ignore it altogether. The most notorious of “frauds,” coitus interruptus, represented the point where the insistence of the real forced an end to pleasure and where the pleasure found a way to surface despite the economy dictated by the real. It is apparent that the deployment of sexuality, with its different strategies, was what established this notion of “sex”; and in the four major forms of hysteria, onanism, fetishism, and interrupted coition, it showed this sex to be governed by the interplay of whole and part, principle and lack, absence and presence, excess and deficiency, by the function of instinct, finality, and meaning, of reality and pleasure.

The theory thus generated performed a certain number of functions that made it indispensable. First, the notion of “sex” made it possible to group together, in an artificial unity, anatomical elements, biological functions, conducts, sensations, and pleasures, and it enabled one to make use of this fictitious unity as a causal principle, an omnipresent meaning, a secret to be discovered everywhere: sex was thus able to function as a unique signifier and as a universal signified. Further, by presenting itself in a unitary fashion, as anatomy and lack, as function and latency, as instinct and meaning, it was able to mark the line of contact between a knowledge of human sexuality and the biological sciences of reproduction; thus, without really borrowing anything from these sciences, excepting a few doubtful analogies, the knowledge of sexuality gained through proximity a guarantee of quasi-scientificity; but by virtue of this same proximity, some of the contents of biology and physiology were able to serve as a principle of normality for human sexuality. Finally, the notion of sex brought about a fundamental reversal; it made it possible to invert the representation of the relationships of power to sexuality, causing the latter to appear, not in its essential and positive relation to power, but as being rooted in a specific and irreducible urgency which power tries as best it can to dominate; thus the idea of “sex” makes it possible to evade what gives “power” its power; it enables one to conceive power solely as law and taboo. Sex – that agency which appears to dominate us and that secret which seems to underlie all that we are, that point which entralls us through the power it manifests and the meaning it conceals, and which we ask to reveal what we are and to free us from what defines us – is doubtless but an ideal point made necessary by the deployment of sexuality and its operation. We must not make

the mistake of thinking that sex is an autonomous agency which secondarily produces manifold effects of sexuality over the entire length of its surface of contact with power. On the contrary, sex is the most speculative, most ideal, and most internal element in a deployment of sexuality organized by power in its grip on bodies and their materiality, their forces, energies, sensations, and pleasures.

It might be added that “sex” performs yet another function that runs through and sustains the ones we have just examined. Its role in this instance is more practical than theoretical. It is through sex – in fact, an imaginary point determined by the deployment of sexuality – that each individual has to pass in order to have access to his own intelligibility (seeing that it is both the hidden aspect and the generative principle of meaning), to the whole of his body (since it is a real and threatened part of it, while symbolically constituting the whole), to his identity (since it joins the force of a drive to the singularity of a history). Through a reversal that doubtless had its surreptitious beginnings long ago – it was already making itself felt at the time of the Christian pastoral of the flesh – we have arrived at the point where we expect our intelligibility to come from what was for many centuries thought of as madness; the plenitude of our body from what was long considered its stigma and likened to a wound; our identity from what was perceived as an obscure and nameless urge. Hence the importance we ascribe to it, the reverential fear with which we surround it, the care we take to know it. Hence the fact that over the centuries it has become more important than our soul, more important almost than our life; and so it is that all the world’s enigmas appear frivolous to us compared to this secret, minuscule in each of us, but of a density that makes it more serious than any other. The Faustian pact, whose temptation has been instilled in us by the deployment of sexuality, is now as follows: to exchange life in its entirety for sex itself, for the truth and the sovereignty of sex. Sex is worth dying for. It is in this (strictly historical) sense that sex is indeed imbued with the death instinct. When a long while ago the West discovered love, it bestowed on it a value high enough to make death acceptable; nowadays it is sex that claims this equivalence, the highest of all. And while the deployment of sexuality permits the techniques of power to invest life, the fictitious point of sex, itself marked by that deployment, exerts enough charm on everyone for them to accept hearing the grumble of death within it.

By creating the imaginary element that is “sex,” the deployment of sexuality established one of its most essential internal operating principles: the desire for sex – the desire to have it, to have access to it, to discover it, to liberate it, to articulate it in discourse, to formulate it in truth. It constituted “sex” itself as something desirable. And it is this desirability of sex that attaches each one of us to the injunction to know it, to reveal its law and its power; it is this desirability that makes us think we are affirming the rights of our sex against all power, when in fact we are fastened to the deployment of sexuality that has lifted up from deep within us a sort of mirage in which we think we see ourselves reflected – the dark shimmer of sex.

“It is sex,” said Kate in *The Plumed Serpent*. “How wonderful sex can be, when men keep it powerful and sacred, and it fills the world! like sunshine through and through one!”

So we must not refer a history of sexuality to the agency of sex; but rather show how “sex” is historically subordinate to sexuality. We must not place sex on the side of reality, and sexuality on that of confused ideas and illusions; sexuality is a very real historical formation; it is what gave rise to the notion of sex, as a speculative element necessary to its operation. We must not think that by saying yes to sex, one says no to power; on the contrary, one tracks along the course laid out by the general deployment of sexuality. It

is the agency of sex that we must break away from, if we aim – through a tactical reversal of the various mechanisms of sexuality – to counter the grips of power with the claims of bodies, pleasures, and knowledges, in their multiplicity and their possibility of resistance. The rallying point for the counterattack against the deployment of sexuality ought not to be sex-desire, but bodies and pleasures.

"There has been so much action in the past," said D. H. Lawrence, "especially sexual action, a wearying repetition over and over, without a corresponding thought, a corresponding realization. Now our business is to realize sex. Today the full conscious realization of sex is even more important than the act itself."

Perhaps one day people will wonder at this. They will not be able to understand how a civilization so intent on developing enormous instruments of production and destruction found the time and the infinite patience to inquire so anxiously concerning the actual state of sex; people will smile perhaps when they recall that here were men – meaning ourselves – who believed that therein resided a truth every bit as precious as the one they had already demanded from the earth, the stars, and the pure forms of their thought; people will be surprised at the eagerness with which we went about pretending to rouse from its slumber a sexuality which everything – our discourses, our customs, our institutions, our regulations, our knowledges – was busy producing in the light of day and broadcasting to noisy accompaniment. And people will ask themselves why we were so bent on ending the rule of silence regarding what was the noisiest of our preoccupations. In retrospect, this noise may appear to have been out of place, but how much stranger will seem our persistence in interpreting it as but the refusal to speak and the order to remain silent. People will wonder what could have made us so presumptuous; they will look for the reasons that might explain why we prided ourselves on being the first to grant sex the importance we say is its due and how we came to congratulate ourselves for finally – in the twentieth century – having broken free of a long period of harsh repression, a protracted Christian asceticism, greedily and fastidiously adapted to the imperatives of bourgeois economy. And what we now perceive as the chronicle of a censorship and the difficult struggle to remove it will be seen rather as the centuries-long rise of a complex deployment for compelling sex to speak, for fastening our attention and concern upon sex, for getting us to believe in the sovereignty of its law when in fact we were moved by the power mechanisms of sexuality.

People will be amused at the reproach of pansexualism that was once aimed at Freud and psychoanalysis. But the ones who will appear to have been blind will perhaps be not so much those who formulated the objection as those who discounted it out of hand, as if it merely expressed the fears of an outmoded prudishness. For the first, after all, were only taken unawares by a process which had begun long before and by which, unbeknown to them, they were already surrounded on all sides; what they had attributed solely to the genius of Freud had already gone through a long stage of preparation; they had gotten their dates wrong as to the establishment, in our society, of a general deployment of sexuality. But the others were mistaken concerning the nature of the process; they believed that Freud had at last, through a sudden reversal, restored to sex the rightful share which it had been denied for so long; they had not seen how the good genius of Freud had placed it at one of the critical points marked out for it since the eighteenth century by the strategies of knowledge and power, how wonderfully effective he was – worthy of the greatest spiritual fathers and directors of the classical period – in giving a new impetus to the secular injunction to study sex and transform it into discourse.

We are often reminded of the countless procedures which Christianity once employed to make us detest the body; but let us ponder all the ruses that were employed for centuries to make us love sex, to make the knowledge of it desirable and everything said about it precious. Let us consider the stratagems by which we were induced to apply all our skills to discovering its secrets, by which we were attached to the obligation to draw out its truth, and made guilty for having failed to recognize it for so long. These devices are what ought to make us wonder today. Moreover, we need to consider the possibility that one day, perhaps, in a different economy of bodies and pleasures, people will no longer quite understand how the ruses of sexuality, and the power that sustains its organization, were able to subject us to that austere monarchy of sex, so that we became dedicated to the endless task of forcing its secret, of exacting the truest of confessions from a shadow.

The irony of this deployment is in having us believe that our “liberation” is in the balance.

### Notes

- 2 “Just as a composite body can have properties not found in any of the simple bodies of which the mixture consists, so a moral body, by virtue of the very union of persons of which it is composed, can have certain rights which none of the individuals could expressly claim and whose exercise is the proper function of leaders alone.” Pufendorf, *Le Droit de la nature*, p. 452.

# CHAPTER 8

## *Homo Sacer*

*Giorgio Agamben*

Giorgio Agamben is an Italian philosopher whose works include *The Open* (2004), *Homo Sacer* (2004), and *State of Exception* (2004).

### Introduction

The Greeks had no single term to express what we mean by the word “life.” They used two terms that, although traceable to a common etymological root, are semantically and morphologically distinct: *zoē*, which expressed the simple fact of living common to all living beings (animals, men, or gods), and *bios*, which indicated the form or way of living proper to an individual or a group. When Plato mentions three kinds of life in the *Philebus*, and when Aristotle distinguishes the contemplative life of the philosopher (*bios theōrētikos*) from the life of pleasure (*bios apolaustikos*) and the political life (*bios politikos*) in the *Nichomachean Ethics*, neither philosopher would ever have used the term *zoē* (which in Greek, significantly enough, lacks a plural). This follows from the simple fact that what was at issue for both thinkers was not at all simple natural life but rather a qualified life, a particular way of life. Concerning God, Aristotle can certainly speak of a *zoē aristē kai aidios*, a more noble and eternal life (*Metaphysics*, 1072b, 28), but only insofar as he means to underline the significant truth that even God is a living being (similarly, Aristotle uses the term *zoē* in the same context – and in a way that is just as meaningful – to define the act of thinking). But to speak of a *zoē politikē* of the citizens of Athens would have made no sense. Not that the classical world had no familiarity with the idea that natural life, simple *zoē* as such, could be a good in itself. In a passage of the *Politics*, after noting that the end of the city is life according to the good, Aristotle expresses his awareness of that idea with the most perfect lucidity:

This [life according to the good] is the greatest end both in common for all men and for each man separately. But men also come together and maintain the political community in view of simple living, because there is probably some kind of good in the mere fact of living

*Original publication details:* Giorgio Agamben, “Introduction” and “The Paradox of Sovereignty,” from *Homo Sacer*, trans. Daniel Heller-Roazen, pp. 1–29. Stanford University Press, 1998.

itself [*kata to zēn auto monon*]. If there is no great difficulty as to the way of life [*kata ton bion*], clearly most men will tolerate much suffering and hold on to life [*zoē*] as if it were a kind of serenity [*euēmeria*, beautiful day] and a natural sweetness. (1278b, 23–31)

In the classical world, however, simple natural life is excluded from the *polis* in the strict sense, and remains confined – as merely reproductive life – to the sphere of the *oikos*, “home” (*Politics*, 1252a, 26–35). At the beginning of the *Politics*, Aristotle takes the greatest care to distinguish the *oikonomos* (the head of an estate) and the *despotēs* (the head of the family), both of whom are concerned with the reproduction and the subsistence of life, from the politician, and he scorns those who think the difference between the two is one of quantity and not of kind. And when Aristotle defined the end of the perfect community in a passage that was to become canonical for the political tradition of the West (1252b, 30), he did so precisely by opposing the simple fact of living (*to zēn*) to politically qualified life (*to eu zēn*): *ginomenē men oun tou zēn heneken, ousa de tou eu zēn*, “born with regard to life, but existing essentially with regard to the good life” (in the Latin translation of William of Moerbeke, which both Aquinas and Marsilius of Padua had before them: *facta quidem igitur vivendi gratia, existens autem gratia bene vivendi*).

It is true that in a famous passage of the same work, Aristotle defines man as a *politikon zōon* (*Politics*, 1253a, 4). But here (aside from the fact that in Attic Greek the verb *bionai* is practically never used in the present tense), “political” is not an attribute of the living being as such, but rather a specific difference that determines the genus *zōon*. (Only a little later, after all, human politics is distinguished from that of other living beings in that it is founded, through a supplement of politicity [*policitā*] tied to language, on a community not simply of the pleasant and the painful but of the good and the evil and of the just and the unjust.)

Michel Foucault refers to this very definition when, at the end of the first volume of *The History of Sexuality*, he summarizes the process by which, at the threshold of the modern era, natural life begins to be included in the mechanisms and calculations of State power, and politics turns into *biopolitics*. “For millennia,” he writes, “man remained what he was for Aristotle: a living animal with the additional capacity for political existence; modern man is an animal whose politics calls his existence as a living being into question” (*La volonté*, p. 188).

According to Foucault, a society’s “threshold of biological modernity” is situated at the point at which the species and the individual as a simple living body become what is at stake in a society’s political strategies. After 1977, the courses at the Collège de France start to focus on the passage from the “territorial State” to the “State of population” and on the resulting increase in importance of the nation’s health and biological life as a problem of sovereign power, which is then gradually transformed into a “government of men” (*Dits et écrits*, 3: 719). “What follows is a kind of bestialization of man achieved through the most sophisticated political techniques. For the first time in history, the possibilities of the social sciences are made known, and at once it becomes possible both to protect life and to authorize a holocaust.” In particular, the development and triumph of capitalism would not have been possible, from this perspective, without the disciplinary control achieved by the new bio-power, which, through a series of appropriate technologies, so to speak created the “docile bodies” that it needed.

Almost twenty years before *The History of Sexuality*, Hannah Arendt had already analyzed the process that brings *homo laborans* – and, with it, biological life as such – gradually to occupy the very center of the political scene of modernity. In *The Human Condition*,

Arendt attributes the transformation and decadence of the political realm in modern societies to this very primacy of natural life over political action. That Foucault was able to begin his study of biopolitics with no reference to Arendt's work (which remains, even today, practically without continuation) bears witness to the difficulties and resistances that thinking had to encounter in this area. And it is most likely these very difficulties that account for the curious fact that Arendt establishes no connection between her research in *The Human Condition* and the penetrating analyses she had previously devoted to totalitarian power (in which a biopolitical perspective is altogether lacking), and that Foucault, in just as striking a fashion, never dwelt on the exemplary places of modern biopolitics: the concentration camp and the structure of the great totalitarian states of the twentieth century.

Foucault's death kept him from showing how he would have developed the concept and study of biopolitics. In any case, however, the entry of *zoē* into the sphere of the *polis* – the politicization of bare life as such – constitutes the decisive event of modernity and signals a radical transformation of the political-philosophical categories of classical thought. It is even likely that if politics today seems to be passing through a lasting eclipse, this is because politics has failed to reckon with this foundational event of modernity. The “enigmas” (Furet, *L'Allemagne nazi*, p. 7) that our century has proposed to historical reason and that remain with us (Nazism is only the most disquieting among them) will be solved only on the terrain – biopolitics – on which they were formed. Only within a biopolitical horizon will it be possible to decide whether the categories whose opposition founded modern politics (right/left, private/public, absolutism/democracy, etc.) – and which have been steadily dissolving, to the point of entering today into a real zone of indistinction – will have to be abandoned or will, instead, eventually regain the meaning they lost in that very horizon. And only a reflection that, taking up Foucault's and Benjamin's suggestion, thematically interrogates the link between bare life and politics, a link that secretly governs the modern ideologies seemingly most distant from one another, will be able to bring the political out of its concealment and, at the same time, return thought to its practical calling.

One of the most persistent features of Foucault's work is its decisive abandonment of the traditional approach to the problem of power, which is based on juridico-institutional models (the definition of sovereignty, the theory of the State), in favor of an unprejudiced analysis of the concrete ways in which power penetrates subjects' very bodies and forms of life. As shown by a seminar held in 1982 at the University of Vermont, in his final years Foucault seemed to orient this analysis according to two distinct directives for research: on the one hand, the study of the *political techniques* (such as the science of the police) with which the State assumes and integrates the care of the natural life of individuals into its very center; on the other hand, the examination of the *technologies of the self* by which processes of subjectivization bring the individual to bind himself to his own identity and consciousness and, at the same time, to an external power. Clearly these two lines (which carry on two tendencies present in Foucault's work from the very beginning) intersect in many points and refer back to a common center. In one of his last writings, Foucault argues that the modern Western state has integrated techniques of subjective individualization with procedures of objective totalization to an unprecedented degree, and he speaks of a real “political ‘double bind,’ constituted by individualization and the simultaneous totalization of structures of modern power” (*Dits et écrits*, 4: 229–32).

Yet the point at which these two faces of power converge remains strangely unclear in Foucault's work, so much so that it has even been claimed that Foucault would have consistently refused to elaborate a unitary theory of power. If Foucault contests the traditional approach to the problem of power, which is exclusively based on juridical models ("What legitimates power?") or on institutional models ("What is the State?"), and if he calls for a "liberation from the theoretical privilege of sovereignty" in order to construct an analytic of power that would not take law as its model and code, then where, in the body of power, is the zone of indistinction (or, at least, the point of intersection) at which techniques of individualization and totalizing procedures converge? And, more generally, is there a unitary center in which the political "double bind" finds its *raison d'être*? That there is a subjective aspect in the genesis of power was already implicit in the concept of *servitude volontaire* in Étienne de La Boétie. But what is the point at which the voluntary servitude of individuals comes into contact with objective power? Can one be content, in such a delicate area, with psychological explanations such as the suggestive notion of a parallelism between external and internal neuroses? Confronted with phenomena such as the power of the society of the spectacle that is everywhere transforming the political realm today, is it legitimate or even possible to hold subjective technologies and political techniques apart?

Although the existence of such a line of thinking seems to be logically implicit in Foucault's work, it remains a blind spot to the eye of the researcher, or rather something like a vanishing point that the different perspectival lines of Foucault's inquiry (and, more generally, of the entire Western reflection on power) converge toward without reaching.

The present inquiry concerns precisely this hidden point of intersection between the juridico-institutional and the biopolitical models of power. What this work has had to record among its likely conclusions is precisely that the two analyses cannot be separated, and that the inclusion of bare life in the political realm constitutes the original – if concealed – nucleus of sovereign power. *It can even be said that the production of a biopolitical body is the original activity of sovereign power.* In this sense, biopolitics is at least as old as the sovereign exception. Placing biological life at the center of its calculations, the modern State therefore does nothing other than bring to light the secret tie uniting power and bare life, thereby reaffirming the bond (derived from a tenacious correspondence between the modern and the archaic which one encounters in the most diverse spheres) between modern power and the most immemorial of the *arcana imperii*.

If this is true, it will be necessary to reconsider the sense of the Aristotelian definition of the *polis* as the opposition between life (*zēn*) and good life (*eu zēn*). The opposition is, in fact, at the same time an implication of the first in the second, of bare life in politically qualified life. What remains to be interrogated in the Aristotelian definition is not merely – as has been assumed until now – the sense, the modes, and the possible articulations of the "good life" as the *telos* of the political. We must instead ask why Western politics first constitutes itself through an exclusion (which is simultaneously an inclusion) of bare life. What is the relation between politics and life, if life presents itself as what is included by means of an exclusion?

The structure of the exception delineated in the first part of this book appears from this perspective to be consubstantial with Western politics. In Foucault's statement according to which man was, for Aristotle, a "living animal with the additional capacity for political existence," it is therefore precisely the meaning of this "additional capacity"

that must be understood as problematic. The peculiar phrase “born with regard to life, but existing essentially with regard to the good life” can be read not only as an implication of being born (*ginomenē*) in being (*ousa*), but also as an inclusive exclusion (an *exceptio*) of *zōē* in the *polis*, almost as if politics were the place in which life had to transform itself into good life and in which what had to be politicized were always already bare life. In Western politics, bare life has the peculiar privilege of being that whose exclusion founds the city of men.

It is not by chance, then, that a passage of the *Politics* situates the proper place of the *polis* in the transition from voice to language. The link between bare life and politics is the same link that the metaphysical definition of man as “the living being who has language” seeks in the relation between *phonē* and *logos*:

Among living beings, only man has language. The voice is the sign of pain and pleasure, and this is why it belongs to other living beings (since their nature has developed to the point of having the sensations of pain and pleasure and of signifying the two). But language is for manifesting the fitting and the unfitting and the just and the unjust. To have the sensation of the good and the bad and of the just and the unjust is what is proper to men as opposed to other living beings, and the community of these things makes dwelling and the city. (1253a, 10–18)

The question “In what way does the living being have language?” corresponds exactly to the question “In what way does bare life dwell in the *polis*? ” The living being has *logos* by taking away and conserving its own voice in it, even as it dwells in the *polis* by letting its own bare life be excluded, as an exception, within it. Politics therefore appears as the truly fundamental structure of Western metaphysics insofar as it occupies the threshold on which the relation between the living being and the *logos* is realized. In the “politicization” of bare life – the metaphysical task *par excellence* – the humanity of living man is decided. In assuming this task, modernity does nothing other than declare its own faithfulness to the essential structure of the metaphysical tradition. The fundamental categorial pair of Western politics is not that of friend/enemy but that of bare life/political existence, *zōē/bios*, exclusion/inclusion. There is politics because man is the living being who, in language, separates and opposes himself to his own bare life and, at the same time, maintains himself in relation to that bare life in an inclusive exclusion.

The protagonist of this book is bare life, that is, the life of *homo sacer* (sacred man), who *may be killed and yet not sacrificed*, and whose essential function in modern politics we intend to assert. An obscure figure of archaic Roman law, in which human life is included in the juridical order [*ordinamento*]<sup>1</sup> solely in the form of its exclusion (that is, of its capacity to be killed), has thus offered the key by which not only the sacred texts of sovereignty but also the very codes of political power will unveil their mysteries. At the same time, however, this ancient meaning of the term *sacer* presents us with the enigma of a figure of the sacred that, before or beyond the religious, constitutes the first paradigm of the political realm of the West. The Foucauldian thesis will then have to be corrected or, at least, completed, in the sense that what characterizes modern politics is not so much the inclusion of *zōē* in the *polis* – which is, in itself, absolutely ancient – nor simply the fact that life as such becomes a principal object of the projections and calculations of State power. Instead the decisive fact is that, together with the process by which the exception everywhere becomes the rule, the realm of bare life – which is originally

situated at the margins of the political order – gradually begins to coincide with the political realm, and exclusion and inclusion, outside and inside, *bios* and *zōē*, right and fact, enter into a zone of irreducible indistinction. At once excluding bare life from and capturing it within the political order, the state of exception actually constituted, in its very separateness, the hidden foundation on which the entire political system rested. When its borders begin to be blurred, the bare life that dwelt there frees itself in the city and becomes both subject and object of the conflicts of the political order, the one place for both the organization of State power and emancipation from it. Everything happens as if, along with the disciplinary process by which State power makes man as a living being into its own specific object, another process is set in motion that in large measure corresponds to the birth of modern democracy, in which man as a living being presents himself no longer as an *object* but as the *subject* of political power. These processes – which in many ways oppose and (at least apparently) bitterly conflict with each other – nevertheless converge insofar as both concern the bare life of the citizen, the new biopolitical body of humanity.

If anything characterizes modern democracy as opposed to classical democracy, then, it is that modern democracy presents itself from the beginning as a vindication and liberation of *zōē*, and that it is constantly trying to transform its own bare life into a way of life and to find, so to speak, the *bios* of *zōē*. Hence, too, modern democracy's specific aporia: it wants to put the freedom and happiness of men into play in the very place – “bare life” – that marked their subjection. Behind the long, strife-ridden process that leads to the recognition of rights and formal liberties stands once again the body of the sacred man with his double sovereign, his life that cannot be sacrificed yet may, nevertheless, be killed. To become conscious of this aporia is not to belittle the conquests and accomplishments of democracy. It is, rather, to try to understand once and for all why democracy, at the very moment in which it seemed to have finally triumphed over its adversaries and reached its greatest height, proved itself incapable of saving *zōē*, to whose happiness it had dedicated all its efforts, from unprecedented ruin. Modern democracy's decadence and gradual convergence with totalitarian states in post-democratic spectacular societies (which begins to become evident with Alexis de Tocqueville and finds its final sanction in the analyses of Guy Debord) may well be rooted in this aporia, which marks the beginning of modern democracy and forces it into complicity with its most implacable enemy. Today politics knows no value (and, consequently, no nonvalue) other than life, and until the contradictions that this fact implies are dissolved, Nazism and fascism – which transformed the decision on bare life into the supreme political principle – will remain stubbornly with us. According to the testimony of Robert Antelme, in fact, what the camps taught those who lived there was precisely that “calling into question the quality of man provokes an almost biological assertion of belonging to the human race” (*L'espèce humaine*, p. 11).

The idea of an inner solidarity between democracy and totalitarianism (which here we must, with every caution, advance) is obviously not (like Leo Strauss's thesis concerning the secret convergence of the final goals of liberalism and communism) a historiographical claim, which would authorize the liquidation and leveling of the enormous differences that characterize their history and their rivalry. Yet this idea must nevertheless be strongly maintained on a historico-philosophical level, since it alone will allow us to orient ourselves in relation to the new realities and unforeseen convergences of the end of the millennium. This idea alone will make it possible to clear the way for the new politics, which remains largely to be invented.

In contrasting the “beautiful day” (*euēmeria*) of simple life with the “great difficulty” of political *bios* in the passage cited above, Aristotle may well have given the most beautiful formulation to the aporia that lies at the foundation of Western politics. The 24 centuries that have since gone by have brought only provisional and ineffective solutions. In carrying out the metaphysical task that has led it more and more to assume the form of a biopolitics, Western politics has not succeeded in constructing the link between *zōē* and *bios*, between voice and language, that would have healed the fracture. Bare life remains included in politics in the form of the exception, that is, as something that is included solely through an exclusion. How is it possible to “politicize” the “natural sweetness” of *zōē*? And first of all, does *zōē* really need to be politicized, or is politics not already contained in *zōē* as its most precious center? The biopolitics of both modern totalitarianism and the society of mass hedonism and consumerism certainly constitute answers to these questions. Nevertheless, until a completely new politics – that is, a politics no longer founded on the *exceptio* of bare life – is at hand, every theory and every praxis will remain imprisoned and immobile, and the “beautiful day” of life will be given citizenship only either through blood and death or in the perfect senselessness to which the society of the spectacle condemns it.

Carl Schmitt’s definition of sovereignty (“Sovereign is he who decides on the state of exception”) became a commonplace even before there was any understanding that what was at issue in it was nothing less than the limit concept of the doctrine of law and the State, in which sovereignty borders (since every limit concept is always the limit between two concepts) on the sphere of life and becomes indistinguishable from it. As long as the form of the State constituted the fundamental horizon of all communal life and the political, religious, juridical, and economic doctrines that sustained this form were still strong, this “most extreme sphere” could not truly come to light. The problem of sovereignty was reduced to the question of who within the political order was invested with certain powers, and the very threshold of the political order itself was never called into question. Today, now that the great State structures have entered into a process of dissolution and the emergency has, as Walter Benjamin foresaw, become the rule, the time is ripe to place the problem of the originary structure and limits of the form of the State in a new perspective. The weakness of anarchist and Marxian critiques of the State was precisely to have not caught sight of this structure and thus to have quickly left the *arcانum imperii* aside, as if it had no substance outside of the simulacra and the ideologies invoked to justify it. But one ends up identifying with an enemy whose structure one does not understand, and the theory of the State (and in particular of the state of exception, which is to say, of the dictatorship of the proletariat as the transitional phase leading to the stateless society) is the reef on which the revolutions of our century have been shipwrecked.

This book, which was originally conceived as a response to the bloody mystification of a new planetary order, therefore had to reckon with problems – first of all that of the sacredness of life – which the author had not, in the beginning, foreseen. In the course of the undertaking, however, it became clear that one cannot, in such an area, accept as a guarantee any of the notions that the social sciences (from jurisprudence to anthropology) thought they had defined or presupposed as evident, and that many of these notions demanded – in the urgency of catastrophe – to be revised without reserve.

## PART ONE

### The Logic of Sovereignty

#### §1 The Paradox of Sovereignty

1.1. The paradox of sovereignty consists in the fact the sovereign is, at the same time, outside and inside the juridical order. If the sovereign is truly the one to whom the juridical order grants the power of proclaiming a state of exception and, therefore, of suspending the order's own validity, then "the sovereign stands outside the juridical order and, nevertheless, belongs to it, since it is up to him to decide if the constitution is to be suspended *in toto*" (Schmitt, *Politische Theologie*, p. 13). The specification that the sovereign is "*at the same time* outside and inside the juridical order" (emphasis added) is not insignificant: the sovereign, having the legal power to suspend the validity of the law, legally places himself outside the law. This means that the paradox can also be formulated this way: "the law is outside itself," or: "I, the sovereign, who am outside the law, declare that there is nothing outside the law [*che non c'è un fuori legge*]."

The topology implicit in the paradox is worth reflecting upon, since the degree to which sovereignty marks the limit (in the double sense of end and principle) of the juridical order will become clear only once the structure of the paradox is grasped. Schmitt presents this structure as the structure of the exception (*Ausnahme*):

The exception is that which cannot be subsumed; it defies general codification, but it simultaneously reveals a specifically juridical formal element: the decision in absolute purity. The exception appears in its absolute form when it is a question of creating a situation in which juridical rules can be valid. Every general rule demands a regular, everyday frame of life to which it can be factually applied and which is submitted to its regulations. The rule requires a homogeneous medium. This factual regularity is not merely an "external presupposition" that the jurist can ignore; it belongs, rather, to the rule's immanent validity. There is no rule that is applicable to chaos. Order must be established for juridical order to make sense. A regular situation must be created, and sovereign is he who definitely decides if this situation is actually effective. All law is "situational law." The sovereign creates and guarantees the situation as a whole in its totality. He has the monopoly over the final decision. Therein consists the essence of State sovereignty, which must therefore be properly juridically defined not as the monopoly to sanction or to rule but as the monopoly to decide, where the word "monopoly" is used in a general sense that is still to be developed. The decision reveals the essence of State authority most clearly. Here the decision must be distinguished from the juridical regulation, and (to formulate it paradoxically) authority proves itself not to need law to create law. ... The exception is more interesting than the regular case. The latter proves nothing; the exception proves everything. The exception does not only confirm the rule; the rule as such lives off the exception alone. A Protestant theologian who demonstrated the vital intensity of which theological reflection was still capable in the nineteenth century said: "The exception explains the general and itself. And when one really wants to study the general, one need only look around for a real exception. It brings everything to light more clearly than the general itself. After a while, one becomes disgusted with the endless talk about the general – there are exceptions. If they cannot be explained, then neither can the general be explained. Usually the difficulty is not noticed, since the general is thought about not with passion but only with comfortable superficiality. The exception, on the other hand, thinks the general with intense passion." (*Politische Theologie*, pp. 19–22)

It is not by chance that in defining the exception Schmitt refers to the work of a theologian (who is none other than Søren Kierkegaard). Giambattista Vico had, to be sure,

affirmed the superiority of the exception, which he called “the ultimate configuration of facts,” over positive law in a way which was not so dissimilar: “An esteemed jurist is, therefore, not someone who, with the help of a good memory, masters positive law [or the general complex of laws], but rather someone who, with sharp judgment, knows how to look into cases and see the ultimate circumstances of facts that merit equitable consideration and exceptions from general rules” (*De antiquissima*, chap. 2). Yet nowhere in the realm of the juridical sciences can one find a theory that grants such a high position to the exception. For what is at issue in the sovereign exception is, according to Schmitt, the very condition of possibility of juridical rule and, along with it, the very meaning of State authority. Through the state of exception, the sovereign “creates and guarantees the situation” that the law needs for its own validity. But what is this “situation,” what is its structure, such that it consists in nothing other than the suspension of the rule?

¶ The Vichian opposition between positive law (*ius theticum*) and exception well expresses the particular status of the exception. The exception is an element in law that transcends positive law in the form of its suspension. The exception is to positive law what negative theology is to positive theology. While the latter affirms and predicates determinate qualities of God, negative (or mystical) theology, with its “neither ... nor ...,” negates and suspends the attribution to God of any predicate whatsoever. Yet negative theology is not outside theology and can actually be shown to function as the principle grounding the possibility in general of anything like a theology. Only because it has been negatively presupposed as what subsists outside any possible predicate can divinity become the subject of a predication. Analogously, only because its validity is suspended in the state of exception can positive law define the normal case as the realm of its own validity.

1.2. The exception is a kind of exclusion. What is excluded from the general rule is an individual case. But the most proper characteristic of the exception is that what is excluded in it is not, on account of being excluded, absolutely without relation to the rule. On the contrary, what is excluded in the exception maintains itself in relation to the rule in the form of the rule’s suspension. *The rule applies to the exception in no longer applying, in withdrawing from it.* The state of exception is thus not the chaos that precedes order but rather the situation that results from its suspension. In this sense, the exception is truly, according to its etymological root, *taken outside (ex-capere)*, and not simply excluded.

It has often been observed that the juridico-political order has the structure of an inclusion of what is simultaneously pushed outside. Gilles Deleuze and Félix Guattari were thus able to write, “Sovereignty only rules over what it is capable of interiorizing” (Deleuze and Guattari, *Mille plateaux*, p. 445); and, concerning the “great confinement” described by Foucault in his *Madness and Civilization*, Maurice Blanchot spoke of society’s attempt to “confine the outside” (*enfermer le dehors*), that is, to constitute it in an “interiority of expectation or of exception.” Confronted with an excess, the system interiorizes what exceeds it through an interdiction and in this way “designates itself as exterior to itself” (*L’entretien infini*, p. 292). The exception that defines the structure of sovereignty is, however, even more complex. Here what is outside is included not simply by means of an interdiction or an internment, but rather by means of the suspension of the juridical order’s validity – by letting the juridical order, that is, withdraw from the exception and abandon it. The exception does not subtract itself from the rule; rather, the rule, suspending itself, gives rise to the exception and, maintaining itself in relation to the exception, first constitutes itself as a rule. The particular “force” of law consists

in this capacity of law to maintain itself in relation to an exteriority. We shall give the name *relation of exception* to the extreme form of relation by which something is included solely through its exclusion.

The situation created in the exception has the peculiar characteristic that it cannot be defined either as a situation of fact or as a situation of right, but instead institutes a paradoxical threshold of indistinction between the two. It is not a fact, since it is only created through the suspension of the rule. But for the same reason, it is not even a juridical case in point, even if it opens the possibility of the force of law. This is the ultimate meaning of the paradox that Schmitt formulates when he writes that the sovereign decision “proves itself not to need law to create law.” What is at issue in the sovereign exception is not so much the control or neutralization of an excess as the creation and definition of the very space in which the juridico-political order can have validity. In this sense, the sovereign exception is the fundamental localization (*Ortung*), which does not limit itself to distinguishing what is inside from what is outside but instead traces a threshold (the state of exception) between the two, on the basis of which outside and inside, the normal situation and chaos, enter into those complex topological relations that make the validity of the juridical order possible.

The “ordering of space” that is, according to Schmitt, constitutive of the sovereign *nomos* is therefore not only a “taking of land” (*Landesnahme*) – the determination of a juridical and a territorial ordering (of an *Ordnung* and an *Ortung*) – but above all a “taking of the outside,” an exception (*Ausnahme*).

¶ Since “there is no rule that is applicable to chaos,” chaos must first be included in the juridical order through the creation of a zone of indistinction between outside and inside, chaos and the normal situation – the state of exception. To refer to something, a rule must both presuppose and yet still establish a relation with what is outside relation (the nonrelational). The relation of exception thus simply expresses the originary formal structure of the juridical relation. In this sense, the sovereign decision on the exception is the originary juridico-political structure on the basis of which what is included in the juridical order and what is excluded from it acquire their meaning. In its archetypal form, the state of exception is therefore the principle of every juridical localization, since only the state of exception opens the space in which the determination of a certain juridical order and a particular territory first becomes possible. As such, the state of exception itself is thus essentially unlocalizable (even if definite spatiotemporal limits can be assigned to it from time to time).

The link between localization (*Ortung*) and ordering (*Ordnung*) constitutive of the “*nomos* of the earth” (Schmitt, *Das Nomos*, p. 48) is therefore even more complex than Schmitt maintains and, at its center, contains a fundamental ambiguity, an unlocalizable zone of indistinction or exception that, in the last analysis, necessarily acts against it as a principle of its infinite dislocation. One of the theses of the present inquiry is that in our age, the state of exception comes more and more to the foreground as the fundamental political structure and ultimately begins to become the rule. When our age tried to grant the unlocalizable a permanent and visible localization, the result was the concentration camp. The camp – and not the prison – is the space that corresponds to this originary structure of the *nomos*. This is shown, among other things, by the fact that while prison law only constitutes a particular sphere of penal law and is not outside the normal order, the juridical constellation that guides the camp is (as we shall see) martial law and the state of siege. This is why it is not possible to inscribe the analysis of the camp in the trail opened by the works of Foucault, from *Madness and Civilization* to *Discipline and Punish*.

As the absolute space of exception, the camp is topologically different from a simple space of confinement. And it is this space of exception, in which the link between localization and ordering is definitively broken, that has determined the crisis of the old “*nomos of the earth*.”

1.3. The validity of a juridical rule does not coincide with its application to the individual case in, for example, a trial or an executive act. On the contrary, the rule must, precisely insofar as it is general, be valid independent of the individual case. Here the sphere of law shows its essential proximity to that of language. Just as in an occurrence of actual speech, a word acquires its ability to denote a segment of reality only insofar as it is also meaningful in its own non-denoting (that is, as *langue* as opposed to *parole*, as a term in its mere lexical consistency, independent of its concrete use in discourse), so the rule can refer to the individual case only because it is in force, in the sovereign exception, as pure potentiality in the suspension of every actual reference. And just as language presupposes the nonlinguistic as that with which it must maintain itself in a virtual relation (in the form of a *langue* or, more precisely, a grammatical game, that is, in the form of a discourse whose actual denotation is maintained in infinite suspension) so that it may later denote it in actual speech, so the law presupposes the nonjuridical (for example, mere violence in the form of the state of nature) as that with which it maintains itself in a potential relation in the state of exception. *The sovereign exception (as zone of indistinction between nature and right) is the presupposition of the juridical reference in the form of its suspension.* Inscribed as a presupposed exception in every rule that orders or forbids something (for example, in the rule that forbids homicide) is the pure and unsanctionable figure of the offense that, in the normal case, brings about the rule’s own transgression (in the same example, the killing of a man not as natural violence but as sovereign violence in the state of exception).

¶ Hegel was the first to truly understand the presuppositional structure thanks to which language is at once outside and inside itself and the immediate (the nonlinguistic) reveals itself to be nothing but a presupposition of language. “Language,” he wrote in the *Phenomenology of Spirit*, “is the perfect element in which interiority is as external as exteriority is internal” (see *Phänomenologie des Geistes*, pp. 527–29). We have seen that only the sovereign decision on the state of exception opens the space in which it is possible to trace borders between inside and outside and in which determinate rules can be assigned to determinate territories. In exactly the same way, only language as the pure potentiality to signify, withdrawing itself from every concrete instance of speech, divides the linguistic from the nonlinguistic and allows for the opening of areas of meaningful speech in which certain terms correspond to certain denotations. Language is the sovereign who, in a permanent state of exception, declares that there is nothing outside language and that language is always beyond itself. The particular structure of law has its foundation in this presuppositional structure of human language. It expresses the bond of inclusive exclusion to which a thing is subject because of the fact of being in language, of being named. To speak [*dire*] is, in this sense, always to “speak the law,” *ius dicere*.

1.4. From this perspective, the exception is situated in a symmetrical position with respect to the example, with which it forms a system. Exception and example constitute the two modes by which a set tries to found and maintain its own coherence. But while the exception is, as we saw, an *inclusive exclusion* (which thus serves to include what is excluded), the example instead functions as an *exclusive inclusion*. Take the case of the grammatical example (Milner, “L’exemple,” p. 176): the paradox here is that a single utterance in no way distinguished from others of its kind is isolated from them precisely

insofar as it belongs to them. If the syntagm “I love you” is uttered as an example of a performative speech act, then this syntagm both cannot be understood as in a normal context and yet still must be treated as a real utterance in order for it to be taken as an example. What the example shows is its belonging to a class, but for this very reason the example steps out of its class in the very moment in which it exhibits and delimits it (in the case of a linguistic syntagm, the example thus *shows* its own signifying and, in this way, suspends its own meaning). If one now asks if the rule applies to the example, the answer is not easy, since the rule applies to the example only as to a normal case and obviously not as to an example. The example is thus excluded from the normal case not because it does not belong to it but, on the contrary, because it exhibits its own belonging to it. The example is truly a *paradigm* in the etymological sense: it is what is “shown beside,” and a class can contain everything except its own paradigm.

The mechanism of the exception is different. While the example is excluded from the set insofar as it belongs to it, the exception is included in the normal case precisely because it does not belong to it. And just as belonging to a class can be shown only by an example – that is, outside of the class itself – so non-belonging can be shown only at the center of the class, by an exception. In every case (as is shown by the dispute between anomalists and analogists among the ancient grammarians), exception and example are correlative concepts that are ultimately indistinguishable and that come into play every time the very sense of the belonging and commonality of individuals is to be defined. In every logical system, just as in every social system, the relation between outside and inside, strangeness and intimacy, is this complicated.

¶ The *exceptio* of Roman court law well shows this particular structure of the exception. The *exceptio* is an instrument of the defendant’s defense that, in the case of a judgment, functions to neutralize the conclusiveness of the grounds proffered by the plaintiff and thus to render the normal application of the *ius civile* impossible. The Romans saw it as a form of exclusion directed at the application of the *ius civile* (*Digesta*, 44. 1. 2; Ulpianus, 74: *Exceptio dicta est quasi quaedam exclusio, quae opponi actioni solet ad excludendum id, quod in intentionem condemnationemve deductum est*, “It is said to be an exception because it is almost a kind of exclusion, a kind of exclusion that is usually opposed to the trial in order to exclude what was argued in the *intentio* and the *condemnatio*”). In this sense, the *exceptio* is not absolutely outside the law, but rather shows a contrast between two juridical demands, a contrast that in Roman law refers back to the opposition between *ius civile* and *ius honorarium*, that is, to the law introduced by the magistrate to temper the excessive generality of the norms of civil law.

In its technical expression in the law of the Roman court, the *exceptio* thus takes the form of a conditional negative clause inserted between the *intentio* and the *condemnatio*, by means of which the condemnation of the defendant is subordinated to the nonexistence of the fact excepted by both *intentio* and *condemnatio* (for example: *si in ea re nihil malo A. Agerii factum sit neque fiat*, “if there has not been malice”). The case of the exception is thus excluded from the application of the *ius civile* without, however, thereby calling into question the belonging of the case in point to the regulative provision. The sovereign exception represents a further dimension: it displaces a contrast between two juridical demands into a limit relation between what is inside and what is outside the law.

It may seem incongruous to define the structure of sovereign power, with its cruel factual implications, by means of two innocuous grammatical categories. Yet there is a case in which the linguistic example’s decisive character and ultimate indistinguishability from the exception show an unmistakable involvement with the power of life and

death. We refer to the episode in *Judges* 12: 6 in which the Galatians recognize the fleeing Ephraimites, who are trying to save themselves beyond the Jordan, by asking them to pronounce the word “Shibboleth,” which the Ephraimites pronounce “Sibboleth” (“The men of Gilead said unto him, ‘Art thou an Ephraimite?’ If he said, ‘Nay’; then they said unto him, ‘Say now Shibboleth’: and he said Sibboleth: for he could not frame to pronounce it right. Then they took him, and slew him at the passages of Jordan”). In the Shibboleth, example and exception become indistinguishable: “Shibboleth” is an exemplary exception or an example that functions as an exception. (In this sense, it is not surprising that there is a predilection to resort to exemplary punishment in the state of exception.)

1.5. Set theory distinguishes between membership and inclusion. A term is included when it is part of a set in the sense that all of its elements are elements of that set (one then says that  $b$  is a subset of  $a$ , and one writes it  $b \subset a$ ). But a term may be a member of a set without being included in it (membership is, after all, the primitive notion of set theory, which one writes  $b \in a$ ), or, conversely, a term may be included in a set without being one of its members. In a recent book, Alain Badiou has developed this distinction in order to translate it into political terms. Badiou has membership correspond to presentation, and inclusion correspond to representation (re-presentation). One then says that a term is *a member of* a situation (in political terms, these are single individuals insofar as they belong to a society). And one says that a term is *included* in a situation if it is represented in the metastructure (the State) in which the structure of the situation is counted as one term (individuals insofar as they are recodified by the State into classes, for example, or into “electorates”). Badiou defines a term as *normal* when it is both presented and represented (that is, when it both is a member and is included), as *excrescent* when it is represented but not presented (that is, when it is included in a situation without being a member of that situation), and as *singular* when it is presented but not represented (a term that is a member without being included) (*L'être*, pp. 95–115).

What becomes of the exception in this scheme? At first glance, one might think that it falls into the third case, that the exception, in other words, embodies a kind of membership without inclusion. And this is certainly Badiou's position. But what defines the character of the sovereign claim is precisely that it applies to the exception in no longer applying to it, that it includes what is outside itself. The sovereign exception is thus the figure in which singularity is represented as such, which is to say, insofar as it is unrepresentable. What cannot be included in any way is included in the form of the exception. In Badiou's scheme, the exception introduces a fourth figure, a threshold of indistinction between excrescence (representation without presentation) and singularity (presentation without representation), something like a paradoxical inclusion of membership itself. *The exception is what cannot be included in the whole of which it is a member and cannot be a member of the whole in which it is always already included.* What emerges in this limit figure is the radical crisis of every possibility of clearly distinguishing between membership and inclusion, between what is outside and what is inside, between exception and rule.

¶ Badiou's thought is, from this perspective, a rigorous thought of the exception. His central category of the event corresponds to the structure of the exception. Badiou defines the event as an element of a situation such that its membership in the situation is undecidable from the perspective of the situation. To the State, the event thus necessarily appears as an excrescence. According to Badiou, the relation between membership and inclusion is also marked by a fundamental lack of correspondence, such that inclusion

always exceeds membership (theorem of the point of excess). The exception expresses precisely this impossibility of a system's making inclusion coincide with membership, its reducing all its parts to unity.

From the point of view of language, it is possible to assimilate inclusion to sense and membership to denotation. In this way, the fact that a word always has more sense than it can actually denote corresponds to the theorem of the point of excess. Precisely this disjunction is at issue both in Claude Lévi-Strauss's theory of the constitutive excess of the signifier over the signified ("there is always a lack of equivalence between the two, which is resolvable for a divine intellect alone, and which results in the existence of a superabundance of the signifier over the signifieds on which it rests" [Introduction à Mauss, p. xlxi]) and in Émile Benveniste's doctrine of the irreducible opposition between the semiotic and the semantic. The thought of our time finds itself confronted with the structure of the exception in every area. Language's sovereign claim thus consists in the attempt to make sense coincide with denotation, to stabilize a zone of indistinction between the two in which language can maintain itself in relation to its *denotata* by abandoning them and withdrawing from them into a pure *langue* (the linguistic "state of exception"). This is what deconstruction does, positing undecidables that are infinitely in excess of every possibility of signification.

1.6. This is why sovereignty presents itself in Schmitt in the form of a decision on the exception. Here the decision is not the expression of the will of a subject hierarchically superior to all others, but rather represents the inscription within the body of the *nomos* of the exteriority that animates it and gives it meaning. The sovereign decides not the licit and illicit but the originary inclusion of the living in the sphere of law or, in the words of Schmitt, "the normal structuring of life relations," which the law needs. The decision concerns neither a *quaestio iuris* nor a *quaestio facti*, but rather the very relation between law and fact. Here it is a question not only, as Schmitt seems to suggest, of the irruption of the "effective life" that, in the exception, "breaks the crust of a mechanism grown rigid through repetition" but of something that concerns the most inner nature of the law. The law has a regulative character and is a "rule" not because it commands and proscribes, but because it must first of all create the sphere of its own reference in real life and *make that reference regular*. Since the rule both stabilizes and presupposes the conditions of this reference, the originary structure of the rule is always of this kind: "If (a real case in point, e.g.: *si membrum rupsit*), then (juridical consequence, e.g.: *talio esto*)," in which a fact is included in the juridical order through its exclusion, and transgression seems to precede and determine the lawful case. That the law initially has the form of a *lex talionis* (*talio*, perhaps from *talis*, amounts to "the thing itself") means that the juridical order does not originally present itself simply as sanctioning a transgressive fact but instead constitutes itself through the repetition of the same act without any sanction, that is, as an exceptional case. This is not a punishment of this first act, but rather represents its inclusion in the juridical order, violence as a primordial juridical fact (*permittit enim lex parem vindictam*, "for the law allows equitable vengeance" [Pompeius Festus, *De verborum significatione*, 496. 15]). In this sense, the exception is the originary form of law.

The cipher of this capture of life in law is not sanction (which is not at all an exclusive characteristic of the juridical rule) but guilt (not in the technical sense that this concept has in penal law but in the originary sense that indicates a being-in-debt: *in culpa esse*), which is to say, precisely the condition of being included through an exclusion, of being in relation to something from which one is excluded or which one cannot fully assume.

*Guilt refers not to transgression, that is, to the determination of the licit and the illicit, but to the pure force of the law, to the law's simple reference to something.* This is the ultimate ground of the juridical maxim, which is foreign to all morality, according to which ignorance of the rule does not eliminate guilt. In this impossibility of deciding if it is guilt that grounds the rule or the rule that posits guilt, what comes clearly to light is the indistinction between outside and inside and between life and law that characterizes the sovereign decision on the exception. The “sovereign” structure of the law, its peculiar and original “force,” has the form of a state of exception in which fact and law are indistinguishable (yet must, nevertheless, be decided on). Life, which is thus obliged, can in the last instance be implicated in the sphere of law only through the presupposition of its inclusive exclusion, only in an *exceptio*. There is a limit-figure of life, a threshold in which life is both inside and outside the juridical order, and this threshold is the place of sovereignty.

The statement “The rule lives off the exception alone” must therefore be taken to the letter. Law is made of nothing but what it manages to capture inside itself through the inclusive exclusion of the *exceptio*: it nourishes itself on this exception and is a dead letter without it. In this sense, the law truly “has no existence in itself, but rather has its being in the very life of men.” The sovereign decision traces and from time to time renews this threshold of indistinction between outside and inside, exclusion and inclusion, *nomos* and *physis*, in which life is originally excepted in law. Its decision is the position of an undecidable.

¶ Not by chance is Schmitt’s first work wholly devoted to the definition of the juridical concept of guilt. What is immediately striking in this study is the decision with which the author refutes every technico-formal definition of the concept of guilt in favor of terms that, at first glance, seem more moral than juridical. Here, in fact, guilt is (against the ancient juridical proverb “There is no guilt without rule”) first of all a “process of inner life,” which is to say, something essentially “intrasubjective,” which can be qualified as a real “ill will” that consists in “knowingly positing ends contrary to those of the juridical order” (*Über Schuld*, pp. 18–24, 92).

It is not possible to say whether Benjamin was familiar with this text while he was writing “Fate and Character” and “Critique of Violence.” But it remains the case that his definition of guilt as an originary juridical concept unduly transferred to the ethico-religious sphere is in perfect agreement with Schmitt’s thesis – even if Benjamin’s definition goes in a decisively opposed direction. For Benjamin, the state of demonic existence of which law is a residue is to be overcome and man is to be liberated from guilt (which is nothing other than the inscription of natural life in the order of law and destiny). At the heart of the Schmittian assertion of the juridical character and centrality of the notion of guilt is, however, not the freedom of the ethical man but only the controlling force of a sovereign power (*katechon*), which can, in the best of cases, merely slow the dominion of the Antichrist.

There is an analogous convergence with respect to the concept of character. Like Benjamin, Schmitt clearly distinguishes between character and guilt (“the concept of guilt,” he writes, “has to do with an *operari*, and not with an *esse*” [*Über Schuld*, p. 46]). Yet in Benjamin, it is precisely this element (character insofar as it escapes all conscious willing) that presents itself as the principle capable of releasing man from guilt and of affirming natural innocence.

1.7. If the exception is the structure of sovereignty, then sovereignty is not an exclusively political concept, an exclusively juridical category, a power external to law

(Schmitt), or the supreme rule of the juridical order (Hans Kelsen): it is the originary structure in which law refers to life and includes it in itself by suspending it. Taking up Jean-Luc Nancy's suggestion, we shall give the name *ban* (from the old Germanic term that designates both exclusion from the community and the command and insignia of the sovereign) to this potentiality (in the proper sense of the Aristotelian *dynamis*, which is always also *dynamis mē energein*, the potentiality not to pass into actuality) of the law to maintain itself in its own privation, to apply in no longer applying. The relation of exception is a relation of ban. He who has been banned is not, in fact, simply set outside the law and made indifferent to it but rather *abandoned* by it, that is, exposed and threatened on the threshold in which life and law, outside and inside, become indistinguishable. It is literally not possible to say whether the one who has been banned is outside or inside the juridical order. (This is why in Romance languages, to be "banned" originally means both to be "at the mercy of" and "at one's own will, freely," to be "excluded" and also "open to all, free.") It is in this sense that the paradox of sovereignty can take the form "There is nothing outside the law." *The originary relation of law to life is not application but Abandonment.* The matchless potentiality of the *nomos*, its originary "force of law," is that it holds life in its ban by abandoning it. This is the structure of the ban that we shall try to understand here, so that we can eventually call it into question.

¶ The ban is a form of relation. But precisely what kind of relation is at issue here, when the ban has no positive content and the terms of the relation seem to exclude (and, at the same time, to include) each other? What is the form of law that expresses itself in the ban? The ban is the pure form of reference to something in general, which is to say, the simple positing of relation with the nonrelational. In this sense, the ban is identical with the limit form of relation. A critique of the ban will therefore necessarily have to put the very form of relation into question, and to ask if the political fact is not perhaps thinkable beyond relation and, thus, no longer in the form of a connection.

### Note

- 1 "Order" renders the Italian *ordinamento*, which carries the sense not only of order but of political and juridical rule, regulation, and system. The word *ordinamento* is also the Italian translation of Carl Schmitt's *Ordnung*. Where the author refers to *ordinamento* as *Ordnung*, the English word used is the one chosen by Schmitt's translators, "ordering." — Trans.

# CHAPTER 9

## New Historicisms

*Louis Montrose*

The New Historicism was a reaction against Post-Structuralism as well as a further iteration of some of its assumptions. Post-Structuralism (especially "Deconstruction") had focused on literary texts without any consideration of history. And deconstruction especially seemed to deny the possibility of any reference from text to extra-textual world. The New Historicists (especially Stephen Greenblatt and Catherine Gallagher) renewed a sense of the importance of history to literary studies. The New Historicists were "new" because they eschewed traditional fact-based historiography and focused instead on the way text and context are interwoven. History is itself textual in the sense that many forms of power depend on signification to be effective. Michel Foucault's work on "panopticism," the way discipline is maintained in modern capitalist societies without the need for force, was especially influential on their work.

### I

In the 1980s, literary studies in the American academy came to be centrally concerned with the historical, social, and political conditions and consequences of literary production and interpretation. From a multiplicity of sometimes convergent and sometimes incompatible perspectives, the writing and reading of texts, as well as the processes by which they are circulated and categorized, analyzed and taught, are now being construed as historically determined and determining modes of cultural work. What have often been taken to be self-contained aesthetic and academic issues are being reunderstood as inextricably linked to other social discourses, practices, and institutions; and such overdetermined and unstable linkages are apprehended as constitutive of the ideological field within which individual subjectivities and collective structures are mutually shaped.

In various combinations and with varying degrees of consistency and effectiveness, the intellectual forces identifiable as new historicism or cultural poetics, cultural materialism,

*Original publication details:* Louis Montrose, "New Historicisms" from *Redrawing the Boundaries*, ed. Stephen Greenblatt, pp. 392–418. Modern Language Association, 1992.

feminism, and revisionist forms of Marxism have been engaged in redrawing the boundaries and restructuring the content of English and American literary studies during the past decade. My assigned task in this essay is to discuss “the new historicism.” I place this term inside quotation marks to indicate my resistance to its now-conventional representation within critical discourse as a fixed and homogeneous body of doctrines and techniques. As such, the new historicism is the invention of its critics and commentators. The motives and methods of this invention are part of my present concern. But I also, and primarily, wish to discuss some of the heterogeneous and changing dimensions of the work frequently designated as new historicist and to situate it within the larger field configured by the mutually conditioning forces I have enumerated.

The critical forces I have conveniently if simplistically labeled as new historicism or cultural poetics, cultural materialism, feminism, and Marxism have in common a concern at once to affirm and to problematize the connections between literary and other discourses, the dialectic between the text and the world. In recent years, these forces have challenged, with considerable success, the dominant paradigms of New Critical rhetorical analysis and positivist historical scholarship in Anglo-American literary criticism. The enabling conditions of this challenge have been various in their origins and complex in their interactions (Boose; W. Cohen; Gallagher, “Marxism”; Wayne, “Power, Politics”). Here I shall merely suggest three factors that appear to be of widespread relevance. First, there has been taking place, for some time, an opening of the profession of English to scholars whose gender, ethnicity, religious or class origins, political allegiances, or sexual preferences (or some combination of these) complicate their participation in the cultural and ideological traditions enshrined in the canonical works they study and teach. Experiences of exclusion or otherness may, of course, provoke a compensatory embrace of the dominant culture, a desire for acceptance and assimilation; but they may also (and, perhaps, simultaneously) provoke attitudes of resistance or contestation. Such divided and dissonant positions may provide vantage points for the appropriation and critique of particular canonical texts – and, more important, for an appropriation and critique of the constitutive categories and normative procedures of literary studies. Second, the reorientation in the field under way since at least the beginning of the 1980s is largely the work of critics whose values were formed while they were students during the culturally experimental and politically turbulent 1960s. The burgeoning of the women’s movement and of feminism during the 1970s, when most of them were seeking to establish their careers, had a profound social, institutional, and intellectual impact on this generation of critics – although, of course, the contours and consequences of that impact varied enormously, not only with the gender but also with the particular gender identities and attitudes of individuals and subgroups. In general, these critics responded to the radically altered sociopolitical climate of the 1980s – and, perhaps, for some of them, to the uneasy comfort they had now achieved within its academic establishment – with work that confronted ideologies and cultural politics of other times and places but resisted the articulation of its own assumptions and commitments. Third, the modes of criticism to which I have referred have variously reacted against and contributed to the intellectual ferment of the past two decades. Such ferment, summed up in the word *theory*, has challenged the assumptions and procedures of normative discourses in several academic disciplines. And in our own discipline, it has shaken if not undermined the aesthetic, moral, and ontological principles that prescribe the ideological dispositions of traditional literary studies. The theoretical field of poststructuralism is inhabited by a multiplicity of unstable, variously conjoined and conflicting discourses. Among the principles some of them share are

a problematization of those processes by which meaning and value are produced and grounded; a shift from an essential or immanent to a historical, contextual, and conjunctural model of signification; and a general suspicion of closed systems, totalities, and universals.

In the United States, feminism and the women's movement have provided, in recent years, the most powerful infusions of intellectual and social energy into the practices of cultural critique, both written and lived. Across the disciplines, feminist theory and practice have called attention to the discursive construction of gender and sexuality and of social and domestic relations generally, and to the role of such constructs in the formation and regulation of exploitative social and cultural relations. In turn, this perspective has foregrounded the different subject positions from which readers interpret texts and from which they may negotiate or resist inscription into the positions constructed for them by the texts that they read. During the past decade, feminist analyses of discourses that construct and regulate hierarchies of gender and sexuality have increased in cultural and historical specificity; and, at the same time, they have analyzed with increasing subtlety the shifting articulations of gender and sexuality with each other and with the discourses of class and ethnicity. Such scholarship has explored the ways in which women's voices are marginalized, suppressed, ventriloquized, or appropriated in various literary and dramatic works – and in previous commentaries on those works; and it has spurred the recovery of marginalized or suppressed texts written by women. These projects have challenged liberal humanist claims that the literary and critical canons embody an essential and inclusive range of human experience and expression. By seeking openly and collectively to connect the spheres of critical practice, academic policy, and sociopolitical activity, feminist academics have demystified claims that scholarship and the academy stand apart from or above the interests, biases, and struggles of material existence; they have, as well, provided a model for the mutual articulation of intellectual, professional, and social concerns.

The recent revival of interest in historical, social, and political questions in literary and cultural studies is also, no doubt, a response to the acceleration in the forgetting of history that seems to characterize an increasingly technocratic and commodified American academy and society. A primary task for those who profess the humanities must be to disabuse students of the notion that history is what's over and done with; to bring them to a realization that they themselves live *in* history and that the form and pressure of history are made manifest in their subjective thoughts and actions, in their beliefs and desires. Of course, there is more than one way to implement a return to history. Disturbed by "the erosion of historical consciousness" in our society, the chair of the National Endowment for the Humanities has written that "by reaching into the past, we affirm our humanity. And we inevitably come to the essence of it. Because we cannot encompass the totality of other lives and times, we strip away the thousand details of existence and come to its heart" (Cheney, *American Memory* 7, 6). To resolve history into a simple antinomy of myriad expendable details and a single irreducible essence is precisely to refuse history – to refuse history by utterly effacing its *constitutive* differences, by effacing those complex historical formations in which not only the details but also the essences are produced, revised, challenged, and transformed. The emergent social-political-historical orientation in literary studies is characterized by an antireflectionist perspective on cultural work, by a shift in emphasis from the aesthetic analysis of verbal artifacts to the ideological analysis of discursive *practices*, and by an understanding of meaning as situationally and provisionally constructed. This orientation is pervasively

concerned with writing, reading, and teaching as modes of *action*. And such academic concerns with the sociopolitical instrumentality of cultural and intellectual work are themselves forms of a sociopolitical praxis – although of highly variable and always conjunctural import and efficacy.

This general reorientation in literary and cultural studies is the unhappy subject of J. Hillis Miller's 1986 Presidential Address to the Modern Language Association. In his speech, Miller noted with some dismay – and with some hyperbole – that

literary study in the past few years has undergone a sudden, almost universal turn away from theory in the sense of an orientation toward language as such and has made a corresponding turn toward history, culture, society, politics, institutions, class and gender conditions, the social context, the material base. ("Triumph" 283)

By such a formulation, Miller polarizes the discursive and the social domains. However, the prevailing tendency across cultural studies has been to emphasize their reciprocity and mutual constitution: on the one hand, the social is understood to be discursively constructed; and on the other, language use is understood to be necessarily dialogical, to be socially and materially determined. Thus Fredric Jameson can retheorize a Marxist concept of the social by appropriating a poststructuralist concept of the textual. He writes that history as material necessity “ – Althusser's 'absent cause,' Lacan's 'Real' – is *not* a text, for it is fundamentally non-narrative and non-representational; what can be added, however, is the proviso that history is inaccessible to us except in textual form” (*Political Unconscious* 82). Miller identifies “theory” exclusively with domesticated varieties of deconstruction, conformable to formalist critical traditions in the United States. Theory so construed he privileges ethically and epistemologically in relation to what he scorns as “ideology” – an impassioned and delusional condition that “the critics and antagonists of deconstruction on the so-called left and so-called right” (“Triumph” 289) are said to share. Although his polemic indiscriminately (though hardly unintentionally) lumps them with the academy's intellectually and politically reactionary forces, the various modes of socio-political and historical criticism have not only been challenged and influenced by the theoretical developments of the past two decades but have been vitally engaged in their definition and direction. And one such direction is the understanding that “theory” does not reside serenely above “ideology” but rather is mired within it.

Miller's categorical opposition of “reading” to cultural critique, of “theory” to the discourses of “history, culture, society, politics, institutions, class and gender conditions,” seems to me not only an oversimplification of both sets of terms but also a suppression of their points of contact and compatibility. The propositions and techniques of deconstruction are employed as powerful tools of ideological analysis when they are trained on the overdetermined and hierarchically structured binary oppositions that constitute the central tradition in Western thought. Derrida himself has suggested that “deconstructive readings and writings are concerned not only with ... discourses, with conceptual and semantic contents. ... Deconstructive practices are also and first of all political and institutional practices” (“But, beyond” 168). The notorious Derridean aphorism “*Il n'y a pas de hors-texte*” may be invoked to abet an escape from the necessities of history, to sanction a self-abandonment to the indeterminate pleasures and/or terrors of the text. However, the phrase may also be construed in terms of the Jamesonian “proviso that history is inaccessible to us except in

textual form." That is to say, it may signify the pervasive ideological force of discourse in general and, in particular, the specific ideological force of those discourses that seek to reduce the work of discourse to the mere reflection of an ontologically prior, essential or empirical reality.

Traditionally, *ideology* has referred to the system of ideas, values, and beliefs common to any social group; in recent years, this vexed but indispensable term has come to be associated with the processes by which social subjects are formed, re-formed, and enabled to perform in an apparently meaningful world. In the well-known formulation of Althusser's essay "Ideology and Ideological State Apparatuses," "Ideology is a 'Representation' of the Imaginary Relationship of Individuals to their Real Conditions of Existence," a representation that "Interpellates Individuals as Subjects" (Althusser, *Lenin* 162, 170; Eagleton, *Ideology: An Introduction*). Representations of the world in written discourse participate in the construction of the world: they are engaged in shaping the modalities of social reality and in accommodating their writers, performers, readers, and audiences to multiple and shifting subject positions within the world that they themselves both constitute and inhabit. In such terms, our professional practice is, like our subject matter, a production of ideology. By this I mean that it bears traces of the professor's values, beliefs, and experiences – his or her socially constructed subjectivity – and also that it actively – if not always consciously, and rarely consistently – instantiates those values, beliefs and experiences. Like anyone else's, my readings of cultural texts cannot but be partial – by which I mean incapable of offering an exhaustive description, a complete explanation; but also incapable of offering any description or explanation that is disinterested, that is located at some Archimedean point outside the history I study, in some ideal space that transcends the coordinates of gender, ethnicity, class, age, and profession that plot my own shifting and potentially contradictory subject positions. In its pursuit of knowledge and virtue, the academic profession of literature is necessarily impure. From this perspective, any claim for what Miller calls an "orientation to language *as such*" (my emphasis) is itself – always already – an orientation to language that is being produced from a position *within* "history, culture, society, politics, institutions, class and gender conditions."

## II

In an essay published in 1986, I attempted briefly to articulate and scrutinize some of the theoretical, methodological, and political assumptions and implications of the kind of work produced since the late 1970s by those Renaissance specialists (including myself) who were then coming to be labeled as "new historicists" (Montrose, "Renaissance"). The focus of such work had been on a refiguration of the sociocultural field within which now-canonical Renaissance literary and dramatic works had been originally produced, on situating them in relation not only to various other genres and modes of writing from beyond the literary canon but also to other cultural domains, including the social practices and political institutions of early modern England (Goldberg, *James I*; Greenblatt; Montrose; Mullaney; Wayne; Whigham). The dominant mode of interpretation in English literary studies had long been to combine techniques of formal and rhetorical analysis with the elaboration of relatively self-contained histories of "ideas" or of literary genres and topoi – histories abstracted from their social matrices. In addition to such literary histories, we may

note two other traditional practices of “history” in English literary studies. One comprises those commentaries on political commonplaces in which the dominant ideology – the unreliable machinery of sociopolitical legitimization – is celebrated by the historical critic as being the morally, intellectually, and aesthetically satisfying structure of understanding and belief, the stable and coherent world picture, that is shared by all members of the social body. The canonical literary works of the period in question are then discovered to reproduce, by synecdoche, the lucid organic form inhabited by the spirit of the age. The other historical practice is an erudite antiquarian scholarship that, by treating texts as elaborate ciphers, seeks to fix the meaning of fictional characters and actions in their reference to specific historical persons and events. Though sometimes reproducing the methodological shortcomings of such older idealist and empiricist modes of historical criticism, but often appropriating their prodigious scholarly labors to good effect, the newer historical criticism could claim to be new in refusing unexamined distinctions between “literature” and “history,” between “text” and “context,” in resisting a tendency to posit and privilege an autonomous individual – whether an author or a work – to be set against a social or literary background.

In his introduction to a 1982 essay collection, Stephen J. Greenblatt distinguished what he dubbed the “new historicism,” both from an older, reflectionist, and positivist literary historical scholarship and from New Critical formalism. He commented that “Renaissance literary works are no longer regarded either as a fixed set of texts that are set apart from all other forms of expression and that contain their own determinate meanings or as a stable set of reflections of historical facts that lie beyond them” (Introduction 6). Furthermore, he suggested that the contours of art and literature are socially and historically configured: distinctions “between artistic production and other kinds of social production … are not intrinsic to the texts; rather they are made up and constantly redrawn by artists, audiences, and readers.” We might now add that the very identities, expectations, and practices associated with the positions termed artist, audience, and reader are themselves “made up and constantly redrawn” by the discursive processes in which they are engaged and that condition their own engagement with texts. Such a reciprocal fashioning is emphasized in Tony Bennett’s concept of the “reading formation,” described as

an attempt to identify the determinations which, in operating on both texts and readers, mediate the relations between text and context, connecting the two and providing the mechanisms through which they productively interact in representing context not as a set of extra-discursive relations but as a set of intertextual and discursive relations which produce readers for texts and texts for readers. … Texts, readers and contexts … are variable functions within a discursively ordered set of relations. Different reading formations … produce their own texts, their own readers and their own contexts. (74)

This concept implicates critics in historically and institutionally situated roles as privileged readers, whose specialized though hardly disinterested knowledge constitutes the past that they undertake to elucidate. From this perspective, a new historicism, or cultural poetics, must be positioned within our own reading formation.

The symbolic anthropology of Clifford Geertz conspicuously influenced work identifiable as new historicism, or cultural poetics, produced during the later 1970s and early 1980s (*Interpretation; Local Knowledge; Negara*). Geertz himself seems to have been engaged in a liberal humanist response to the quantifying scientism of American social

science, on the one hand, and to the totalizing theoretical discourses of structuralism and Marxism, on the other. For Geertz,

the term “culture” … denotes an historically transmitted pattern of meanings embodied in symbols, a system of inherited conceptions expressed in symbolic forms by means of which men communicate, perpetuate, and develop their knowledge about and attitudes toward life. (*Interpretation* 89)

In Geertzian symbolic anthropology, culture is the medium of semiosis, “a set of control mechanisms – plans, recipes, rules, instructions … – for the governing of behavior” (44); a system of codes regulates social life by “governing” the production of those ensembles of conventions, practices, and artifacts to which the word *culture* is often loosely applied. It is a version of what Marshall Sahlins has called “the symbolic or meaningful” concept of culture, in which “human action in the world is to be understood as mediated by the cultural design, which gives order at once to practical experience, customary practice, and the relationship between the two” (*Culture* viii, 55).

Geertz’s work offered to literary critics and cultural historians not so much a powerful *theory* of culture as an exemplary and eminently literary *method* for narrating culture in action, culture as lived in the performances and narratives of individual and collective human actors. Geertz called his rhetorically self-conscious ethnographic practice “thick description” (*Interpretation* 3–30). “It is explication I am after,” he avers, “construing social expressions on their surface enigmatical” (5). The ethnographer’s enterprise is “like that of the literary critic” (9) – and, we might add, like that of a New Critic. Thus he describes his “concept of culture” in a metaphysical conceit:

Believing … that man is an animal suspended in webs of significance he himself has spun, I take culture to be those webs, and the analysis of it to be therefore not an experimental science in search of law but an interpretive one in search of meaning. (5)

“Thick description” might be more accurately described as “interpretive narration”: it seizes on an event, performance, or other practice and, through the interrogation of its minute particulars, seeks to reveal the ethos of an alien culture.

Unsurprisingly, Geertz’s method and style have probably been more admired and imitated beyond the discipline of anthropology than within it. Anthropologists of various persuasions have been sharply critical of Geertz’s tendency to sublimate the dynamics of material struggle into the forms of collective imagination; of what some see as his impressionistic descriptions of alien worldviews; and of the isolated or fragmentary “local knowledge” produced by thick description, its failure to relate “cultural texts” … to each other or to general processes of economic and social change” (Walters 551–52; see also Asad; Shankman; Crapanzano).

Geertz focuses on indigenous cultural meanings rather than on general social laws, on cultural cohesion rather than on social struggle. The latter interpretive bias – and its consequences for the work of social historians and literary critics influenced by Geertzian symbolic anthropology – has been the subject of considerable recent criticism, trenchantly summarized in Roger Keesing’s remark that “cultures are webs of mystification as well as signification. We need to ask who *creates* and who *defines* cultural meanings, and to what ends” (161–62; see also LaCapra, *Soundings*; Pecora; Biersack). In other words, critique of the Geertzian mode of analysis concentrates on the ways in which a cultural poetics suppresses or subsumes a cultural politics.

## III

In a typical new-historicist essay or book chapter, the Geertzian model of thick description is evident in the initial deployment of an exemplary anecdote as a strategy of cultural and historical estrangement. In some examples of new-historicist work, such anecdotes may be elaborated into the interpretive units from which a sustained argument emerges; in others, the method may seem merely fashionable and formulaic, a vaguely associative accumulation of historical curiosities. Thus Walter Cohen characterizes new-historicist method (or, perhaps, antimethod) as “arbitrary connectedness”: “The strategy is governed methodologically by the assumption that any one aspect of a society is related to any other. No organizing principle determines these relationships” (34). And in order to describe this phenomenon, Dominick LaCapra offers the generous choice of “facile associationism, juxtaposition, or pastiche … weak montage, or, if you prefer, cut-and-paste bricolage” (*Soundings* 193). New-historicist work has been particularly susceptible to such responses because it has frequently failed to theorize its method or its model of culture in any sustained way. Proceeding on the basis of tacit and perhaps inconsistent notions about cultural dynamics, new-historicist studies may sometimes seem to imply that the objects they analyze are connected merely by a principle of cultural contingency or by the wit of the critic (“arbitrary connectedness”); or, on the contrary, that they have a necessary connection that is grounded in a principle of cultural determinism (“containment”).

Having first called his critical project a “cultural poetics” in *Renaissance Self-Fashioning* (4–5), Greenblatt returns to and develops the term in *Shakespearean Negotiations*. This enterprise is now defined as a “study of the collective making of distinct cultural practices and inquiry into the relations among these practices”; its relevant concerns are “how collective beliefs and experiences were shaped, moved from one medium to another, concentrated in manageable aesthetic form, offered for consumption [and] how the boundaries were marked between cultural practices understood to be art forms and other, contiguous, forms of expression” (5). Described, in conspicuously formalist and structuralist terms, as a study of distinctions among “*contiguous* … forms of expression” (my emphasis), cultural poetics tends to emphasize structural relations at the expense of sequential processes; in effect, it orients the axis of intertextuality synchronically, as the text of a cultural system, rather than diachronically, as the text of an autonomous literary history.

One of the implications of Greenblatt’s formulation – an implication already present in the widespread early new-historicist reliance on Geertzian notions of culture – is that “art forms and other, contiguous, forms of expression” are expressive of some underlying causal principle or generative and restrictive cultural code, that they are thus organically related to one another, and that this genetic relationship among practices is manifested in their surface articulation as a topological system. Thus Greenblatt writes in the essay “Fiction and Friction”:

The relation I wish to establish between medical and theatrical practice is not one of cause and effect or source and literary realization. We are dealing rather with a shared code, a set of interlocking tropes and similitudes that function not only as objects but as the conditions of representation. (*Shakespearean* 86)

The cultural model implicit in such new-historicist work seems to have its origins in a cross between Geertzian and Foucauldian conceptual schemes: specifically,

between Geertz's integrative sense of culture, his construal of culture as a localized and collective system of symbols, and Foucault's early epistemic history, which elucidates similitudes and rejects causality "in order to establish those diverse converging, and sometimes divergent, but never autonomous series that enable us to circumscribe the 'locus' of an event, the limits to its fluidity and the conditions of its emergence" (Foucault, "Discourse" 230). Some elements of new-historicist critical practice that have puzzled or irritated its critics may be explicable (though not, therefore, always or easily defensible) as consequences of this implicit cultural model. Certain examples of new-historicist work imply that a culture is a shared system of symbols expressive of a cohesive and closed (a "restricted" or "sutured") ideology. The problematic or contested consequences of such a model tend to suggest its affinities with formalist modes of analysis. They include the methodological assumption of topological rather than causal relations among new historicism's objects of study; the emphasis on culture as a text, on the discursivity of material life and of social and political relations; the critic's self-imposed limitation to the study of synchronic intracultural processes, exemplified in particular texts and textualized performances; and the apparent incompatibility of the cultural paradigm with the dynamics of ideological resistance, conflict, and change.

The terms in which the problematic of ideology and resistance came to be posed in new-historicist studies of the Renaissance – terms that have now become widely established in other fields of specialization – are those of a simplistic, reductive, and hypostatized opposition between "containment" and "subversion." These terms – which appear to be residues of a cold war ideology that had pernicious consequences in both international and domestic policy – prove once again to be wholly inadequate instruments of analysis and debate. Nevertheless, they are significant indicators of a shift of perspective within Anglo-American literary criticism and its ambient political culture. As the problem of ideology has become an acceptable and even a central topic of critical discourse in the American academy, so the emphases in sociocultural analysis have shifted from unity, reciprocity, and consent to difference, domination, and resistance. It is precisely this shift of emphasis from canonicity and consensus to diversity and contestation that, during the past decade, has been the focus of the national debate about the direction of the humanities – a debate that has been waged on the campuses and on the best-seller lists, in the public media and in the policy statements and funding priorities of government agencies. It is within the context of these cultural politics – and as their displacement – that the "new historicism" has been constituted as an academic site of ideological struggle between containment and subversion. This struggle may be reduced to the following scenario. Critics who emphasize the possibilities for the effective agency of individual or collective subjects against forms of domination, exclusion, and assimilation have energetically contested critics who stress the capacity of the early modern state, as personified in the monarch, to *contain* apparently subversive gestures, or even to *produce* them precisely in order to contain them. According to a now-notorious argument in Greenblatt's essay "Invisible Bullets," the ability of the dominant order to generate subversion so as to use it to its own ends marks "the very condition of power" (45). Thus a generalized argument for the "containment of subversion" is itself subversive of arguments for the agency of subjects, which it reduces to the illusory and delusive effects of a dominant order. The binary logic of subversion-containment produces a closed conceptual structure of reciprocally defining and dependent terms, terms that are complementary and mutually complicit.

One can readily see that the larger assumptions and implications of a “containment” position concerning the operations of ideology might be suspect or even alarming, not only to traditionalists who cherish liberal humanist ideals of individual self-determination but also to those cultural critics who have a stake in making their own discursive practice a direct intervention in the process of ideological reproduction. At its extreme, the “containment of subversion” position suggests a reading of Foucault that emphasizes the discontinuity of history and the inescapable subjection of subjects; it makes no theoretical space for change or for contestation. Such a position might be said to reinstate the Elizabethan world picture, but now transposed into the ironic mode. Recent commentators have, with increasing frequency, seized on the provocative argument of “Invisible Bullets,” misleadingly ascribed to the essay the claims of a cultural law, and then inaccurately represented it as the central tenet of the new historicism – sometimes using it to characterize the work of those who have been explicitly engaged in contesting Greenblatt’s thesis. Such assertions gain credibility and authority simply from their frequent repetition in print; nevertheless, subscription to the “containment hypothesis” in no way characterizes the work of all those writers identified as new historicists, any more than it characterizes all of Greenblatt’s work – or, for that matter, all of Foucault’s.

The putatively Foucauldian new-historicist argument for the dominant’s production and containment of subversion is pungently characterized by Frank Lentricchia as “a prearranged theatre of struggle set upon the substratum of a monolithic agency which produces ‘opposition’ as one of its delusive political effects” (“Foucault’s Legacy” 234). However, such a strict containment argument oversimplifies Foucault’s subtle, flexible, and dynamic conception of power by suggesting that the volatile and contingent relations of power that saturate social space are actually determined by the crystallization of power in the state apparatus. Foucault emphasizes that

power’s condition of possibility ... must not be sought in the primary existence of a central point, in a unique source of sovereignty from which secondary and descendent forms would emanate; it is the moving substrate of force relations which, by virtue of their inequality, constantly engender states of power, but the latter are always local and unstable. (*History* 1: 93)

For Foucault, power is never monolithic; and power relations always imply multiple sites not only of power but also of resistance. He writes that such sites of resistance are of variable configuration, intensity, and effectiveness:

The strictly relational character of power relationships ... depends on a multiplicity of points of resistance: these play the role of adversary, target, support, or handle in power relations. ... Resistance ... can only exist in the strategic field of power relations. But this does not mean that they are only a reaction or rebound, forming with respect to the basic domination an underside that is in the end always passive, doomed to perpetual defeat. ... The points, knots, or focuses of resistance are spread over time and space at varying densities. ... Are there no great radical ruptures, massive binary divisions, then? Occasionally, yes. But more often one is dealing with mobile and transitory points of resistance, producing cleavages in a society that shift about, fracturing unities and effecting regroupings, furrowing across individuals themselves. ... It is doubtless the strategic codification of these points of resistance that makes a revolution possible, somewhat similar to the way in which the state relies on the institutional integration of power relationships. (1: 95–96)

Foucault's flexible conception of power relations may accommodate local instances of a subversion that is produced for containment, but it also acknowledges revolutionary social transformations and other possible modalities of power and resistance. If, on the one hand, ideological dominance can never be monolithic, total, and closed, then, on the other hand, revolutionary upheavals occur relatively rarely; modes and instances of resistance – subversions, contestations, transgressions, appropriations – tend to be local and dispersed in their occurrences, variable and limited in their consequences. Thus one need look no further than Foucault's own work for confirmation of the hopeless inadequacy of subversion-containment as an explanatory model for the dynamism and specificity of relations of power, and for the necessity to make more subtle discriminations among the modalities of resistance and among their various conditions of possibility.

Within the context of the containment-subversion debate, my own position has been that a closed and static, monolithic and homogeneous notion of ideology must be replaced by one that is heterogeneous and unstable, permeable and processual. Raymond Williams's invaluable *Marxism and Literature* theorizes ideology in just such dynamic and dialogic terms. By emphasizing "interrelations between movements and tendencies both within and beyond a specific and effective dominance" (121), Williams clarifies the existence, at any point in time, of residual and emergent, oppositional and alternative values, meanings, and practices. The shifting conjunctures of such "movements and tendencies" may create conceptual sites within the ideological field from which the dominant can be contested, and against which it must be continuously redefined and redefended – and so, perforce, continuously transformed. An ideological dominance is qualified by the specific conjunctures of ethnic, gender, class, profession, age, and other social positions occupied by individual cultural producers; by the heterogeneous positionality of the spectators, auditors, and readers who consume, appropriate, and resist cultural productions; and by the relative autonomy – the properties, possibilities, and limitations – of the cultural medium being worked. In other words, allowance must be made for the manifold mediations involved in the production, reproduction, and appropriation of an ideological dominance: for the collective, sectional, and individual agency of the state's subjects, and for the resources, conventions, and modes of production and distribution of the representational forms that they employ. In its emphasis on a dynamic, agonistic, and temporal model of culture and ideology – a ceaseless contest among dominant and subordinate positions, a ceaseless interplay of continuity and change, of identity and difference – such a perspective opens cultural poetics to history.

Such binary terms as *containment* and *subversion*, *dominance* and *contestation* are always dialectical and relative; their configuration, content, and effect are produced in specific and changing conjunctures. During the 1940s and 1950s, literary-historical scholarship was much concerned to demonstrate the ideological orthodoxy of such canonical authors as Shakespeare. In the climate of recent cultural politics, however, it has become fashionable for critics to affirm their favorite canonical literary works to be "subversive" of their own canonicity. Frequently, such claims are based on analyses that are less historical and dialectical than formal and immanent, implying that "subversiveness" is an essence secreted in particular texts or classes of texts. However, as Jonathan Dollimore points out in his introduction to *Political Shakespeare*:

Nothing can be intrinsically or essentially subversive in the sense that prior to the event subversiveness can be more than potential; in other words it cannot be guaranteed a priori, independent of articulation, context and reception. Likewise the mere thinking of

a radical idea is not what makes it subversive: typically it is the context of its articulation: to whom, how many and in what circumstances; one might go further and suggest that not only does the idea have to be conveyed, it has also actually to be used to refuse authority or be seen by authority as capable and likely of being so used. It is, then, somewhat misleading to speak freely and only of “subversive thought”; what we are concerned with ... is a social process. (13)

Crucial here is the concept of a “context of ... articulation,” which must include not only the social effectivity of a particular notion, formulation, or action but also the historical and social specificity of its subsequent representations; in other words, it must include the context of articulation – or, following Tony Bennett, what we might also call the reading formation – within which we retrospectively inscribe, identify, and interpret “subversion.” Ideology can be said to exist only as it is instantiated in particular cultural forms and practices, including those traditionally categorized as literature and as criticism. All texts are ideologically marked, however multivalent or inconsistent that inscription may be. And if the ideological status of texts in the literary canon is necessarily overdetermined and unstable, it is so precisely as a condition and consequence of their canonicity. If, for example, I characterize *Hamlet* as a “complex” text, I am not reverting to an aesthetics of immanence, unity, and closure; rather, I am describing the transformation of a *text* into an open, changing, and contradictory *discourse* that is cumulatively produced and appropriated within history and within a history of other productions and appropriations. In so historically and socially sedimented a textual space – an always-occupied space that signifies to a historically and ideologically sited reader – so many cultural codes converge and interact that ideological coherence and stability are scarcely possible.

## IV

In “Renaissance Literary Studies and the Subject of History,” I did not characterize new historicism as a school, movement, or program but merely as an emergent historical orientation within our field of study. It seemed to me then that those identified with this orientation, by themselves or by others, were heterogeneous in their critical practices and, for the most part, reluctant to theorize those practices. The very lack of such explicit articulations was itself symptomatic of the residual elements of empiricism, formalism, and humanism that undermined attempts to distinguish any new critical paradigm from an older one. Furthermore – and in marked contrast to both their feminist and Marxist contemporaries in the United States and their cultural materialist colleagues in Britain – American male academics producing new-historicist work in Renaissance studies during the past decade tended to displace and contain the cultural politics of their own practice by at once foregrounding relations of power and confining them to the English past that was presently under study. In Britain – where class barriers remain more clearly articulated than in the United States; where, too, radical politics enjoy stronger traditions; and where the coercive pressure of the state on centralized educational institutions and practices has for some time been direct and intense – there has been a polemical emphasis by cultural materialist critics on the uses to which a historical present puts its versions of the national past (see Dollimore and Sinfield, “Culture” and *Political Shakespeare*). Such scholars have been concerned with the processes by which

the canon of English Authors and Works incorporated into English culture and into the British educational system has helped to forge the ideology of the dominant social class and to perpetuate its hegemony. Cultural materialism derives its name, principles, and politics from the later, Gramsci-inspired work of Raymond Williams. In their brief, programmatic foreword to *Political Shakespeare*, Jonathan Dollimore and Alan Sinfield propound “a combination of historical context, theoretical method, political commitment and textual analysis” (vii) as the four principles of cultural materialism. Among these, explicit “political commitment” of the sort they suggest – “socialist and feminist commitment [that] confronts the conservative categories in which most criticism has hitherto been conducted” – is conspicuously absent from the American new-historicist work with which they align their own. Analogous projects in the United States have been more feminist or Marxist than new historicist.

A complex amalgam of geographical, social, ethnic, institutional, and gender-specific factors were at work in producing, in the work of American new historicists, a domesticated Foucauldian emphasis on historical and cultural discontinuities, on the radical and fascinating otherness of the Renaissance. To the degree that it recuperated in practice the critical traditions and values that it (sometimes nostalgically) repudiated in principle, the emergent new historicism may have been perceived by some discomfited English professors as more palatable than the Marxist and feminist projects with which it was ambiguously linked. Such a response may partially explain the rapid installation of “The New Historicism” as the newest academic orthodoxy, its rapid assimilation and varying appropriations by the fractious “interpretive community” of Renaissance literary studies – and, too, the waves of opposition and attack following almost immediately on its canonization. Certainly, some who have been identified as exemplary new historicists now enjoy the material and symbolic tokens of academic success; and any number of clearly labeled new-historicist dissertations, conferences, and publications testify to an institutional authority and prestige. However, it remains unclear whether this “ism,” with its appeal to our commodifying cult of the “new,” will have been more than another passing intellectual fancy in what Jameson would call the academic marketplace under late capitalism. The new historicism has not yet faded from the academic scene, nor has it quietly taken its place in the assortment of critical approaches on the interpreter’s shelf. But neither has it become any clearer that “the new historicism” designates any agreed-on intellectual and institutional program. There has been no coalescence of the various identifiably new-historicist practices into a systematic and authoritative interpretive paradigm, nor does the emergence of such a paradigm seem either likely or desirable. Instead, what we have been witnessing is the convergence of various special interests on an unstable signifier: *New historicism* has been constituted as a terminological site of intense debate, of multiple appropriations and contestations, not only within Renaissance studies but in other areas of literary criticism, in history and anthropology, and within the cross-disciplinary space of cultural studies.

During the past decade, as some historians and anthropologists have become increasingly concerned with the cognitive and ideological importance of narrative forms and rhetorical strategies, literary theory has come to exert an unprecedented extradisciplinary influence in the humanities and interpretive social sciences. For example, in a discussion of recent controversies in history, Lynn Hunt characterizes that discipline as “an ongoing tension between stories that have been told and stories that might be told. In this sense, it is more useful to think of history as an ethical and political practice than as an epistemology with a clear ontological status” (“History” 103). And, in anthropology,

the ambiguous status of the ethnographer as participant-observer of the alien culture that is the object of study has been reproblematised by a focus on textual and ideological dimensions of ethnographic discourse (Clifford and Marcus; Marcus and Fischer; Wagner). It should be noted, however, that such trends have also met with considerable hostility from some historians and anthropologists, and that the opposition manifests a range of positions analogous to those critical of poststructuralist and new-historicist directions in literary studies. For example, some scholars in the tradition of empiricist Marxist historiography have produced their own version of the opposition between textuality and materiality; and having done so, they are compelled to insist on the logical and the political priority of the latter term (Fox-Genovese). At the other end of the political-intellectual spectrum, guardians of the Humanist tradition engage in an idealist and essentialist polemic against poststructuralist, textualist, and new-historicist modes of historiography (Himmelfarb).

Much of the most interesting work now being produced within our discipline is by younger scholars whose graduate studies have endowed them with a poststructuralist sensitivity to both the *instability* and the *instrumentality* of representation. In their dissertations and publications, these younger scholars are synthesizing elements of the engaged theoretical discourses of feminism, Marxism, postcolonialism, and gay and lesbian studies. Some of this work demonstrates that avowedly new-historicist perspectives are compatible with, and enabling of, such projects of cultural-political analysis and critique. It seems to me, however, that although it is sometimes construed as a cultural-political project unto itself, the merely academic phenomenon of new historicism is incommensurable with the worldwide social movements articulated by feminist, Marxist, postcolonial, and gay and lesbian discourses. A partial explanation of why *new historicism* has been at once so central and so contested a term may lie in the relative availability of new-historicist methods for deployment in projects of widely varying or obscure ideological direction.

Right-wing critics in the academy, the popular press, and the federal government have yoked new historicism with Marxism and feminism in an unholy trinity bent on sullying, with its political credo of race, class, and gender, the enduring and universal concerns of the great authors and works (D. Brooks; Cheney, *Humanities*; Pechter; Will). At the same time, some self-identified Marxist critics have been actively indicting new historicism for its reluctance to address processes of historical change, for its evasion of political commitments, for its tendency to confine its analyses to the texts of men working within the dominant discourse, and thus for its inadequate attention to the marginalized or suppressed voices of the colonized and the commons, as well as those of women (W. Cohen; Gallagher, "Marxism"; Holstun; Porter "Are We Being Historical" and "History"). While some scholars, including both women and men, are fruitfully combining new-historicist and feminist perspectives in their research and teaching, others have represented these projects in terms of a gender-specific antagonism. This hostility seems to have its origin in a complex amalgam of gender politics, intellectual antipathies between new historicism and modes of psychoanalytic and essentialist feminism, and professional and institutional rivalries symptomatic of the academy at large. New historicist work by men has been indicted for its effacements, objectifications, marginalizations, and appropriations of feminist discourses and/or of women (Boose; P. Erickson; Neely, "Constructing"; J. Newton; Waller). Whatever the critical practice of particular new historicists, there has never seemed to me to be any *necessary* problem of theoretical, methodological, or political incompatibility between new historicism and materialist and

historicist modes of feminist criticism. And, indeed, work that is both feminist and new historicist is increasingly evident in many areas of literary and cultural studies. While some see new historicism as one of several modes of criticism engaged in constructing a theoretically informed, poststructuralist problematic of historical study, others see it as aligned with a neopragmatist and cynically professionalist reaction against all claims for the theorization of practice and all calls for an oppositional cultural politics. If some see new-historicist preoccupation with ideology and social context as threatening to traditional idealist and humanist values, others see a new-historicist delight in anecdote, narrative and “thick description” as an imperialistic will to appropriate *all* of culture at the domain of literary criticism – to construe the world as an aesthetic macrotext to be cleverly interpreted by means of a formalist cultural poetics.

Inhabiting the discursive spaces currently traversed by the term *new historicism* are some of the most complex, persistent, and unsettling problems that professors of literature attempt to confront or to evade – among them the conflict between essentialist and historically specific perspectives on the category of literature and its relations with other discourses; the possible relations between cultural practices and social, political, and economic institutions and processes; the consequences of poststructuralist theories of textuality for historical or materialist criticism; the means by which ideologies are produced, sustained, and contested; the operations that construct, maintain, destabilize, and alter subjectivity through the shifting conjunctures of multiple subject positions. My point is not that “the new historicism” as a definable project, or the work of individuals identified by themselves or by others as new historicists, can provide even provisional answers to each of these questions but rather that “the new historicism” is currently being invoked in order to bring such problems into play, and to stake out, or to hunt down, specific positions on the ideological terrain mapped by them.

The poststructuralist orientation to history now emerging in literary studies I characterize chiastically, as a reciprocal concern with the historicity of texts and the textuality of histories. By the *historicity of texts*, I mean to suggest the historical specificity, the social and material embedding, of all modes of *writing* – including not only the texts that critics study but also the texts in which we study them; thus, I also mean to suggest the historical, social, and material embedding of all modes of *reading*. By the *textuality of histories*, I mean to suggest, in the first place, that we can have no access to a full and authentic past, to a material existence that is unmediated by the textual traces of the society in question; and, furthermore, that the survival of those traces rather than others cannot be assumed to be merely contingent but must rather be presumed to be at least partially consequent on subtle processes of selective preservation and effacement – processes like those that have produced the traditional humanities curriculum. In the second place, those victorious traces of material and ideological struggle are themselves subject to subsequent mediations when they are construed as the “documents” on which those who profess the humanities ground their own descriptive and interpretive texts. As Hayden White and others have forcefully reminded us, such textual histories and ethnographies necessarily although incompletely constitute, in their own narrative and rhetorical forms, the past or alien actions and meanings – the “history” or “culture” – to which they offer access.

In *After the New Criticism*, Lentricchia links “the antihistorical impulses of formalist theories of literary criticism” with monolithic and teleological theories of history (xiii–xiv) – visions of history that, in their unity, totality, and inexorability, can be grounded only on essentialist or metaphysical premises. I assume that among such visions of

history belongs not only the great code of Christian figural and eschatological history but also the master narrative of classical Hegelian Marxism. The latter has been characterized by Jameson as “history now conceived in its vastest sense of the sequence of modes of production and the succession and destiny of the various human social formations”; this he projects as the “untranscendable horizon” of interpretive activity, subsuming “apparently antagonistic or incommensurable critical operations, assigning them an undoubted sectoral validity within itself, and thus at once cancelling and preserving them” (*Political Unconscious* 75, 10). (Perhaps we should now add, as a bathetic coda to the history of grand historical narratives, the recent pop theory that, with the collapse of totalitarian Communist regimes in eastern Europe, History as such has suddenly ended – the end having come somewhat short of the Marxian trajectory, in the supposed universal embrace of liberal democracy and consumer capitalism.) One of the most powerful theoretical challenges to the Marxian master narrative has come from within the Marxist tradition itself, in the post-Marxist analysis of Ernesto Laclau and Chantal Mouffe. In the polemical introduction to *Hegemony and Socialist Strategy*, they write that

there is not *one* discourse and *one* system of categories through which the “real” might speak without mediations. In operating deconstructively within Marxist categories, we do not claim to be writing “universal history,” to be inscribing our discourse as a moment of a single, linear process of knowledge. Just as the era of normative epistemologies has come to an end, so too has the era of universal discourses. (3)

Accordingly, “the rejection of privileged points of rupture and the confluence of struggles into a unified political space, and the acceptance, on the contrary, of the plurality and indeterminacy of the social, seem to us the two fundamental bases from which a new political imaginary can be constructed” (152). Similarly, against the monstrous marriage of unhistoricized formalisms and totalized history, Lentricchia opposes the multiplicity of “histories,” characterized by “forces of heterogeneity, contradiction, fragmentation, and difference” (*New Criticism* xiv). It seems to me that the various modes of what could be called poststructuralist historical criticism – including new historicism or cultural poetics, as well as modes of revisionist, or post-, Marxism – can be characterized by such a shift from History to histories.

The conjunction of the terms *new historicism* and *cultural poetics* points to the characteristic mixture, in exemplary new-historicist work, of historicist and formalist, materialist and textualist or tropological, interests and analytical techniques (Liu, “Power”; Wayne, “New Historicism”). As I have suggested, this mixture is sometimes criticized as being – and may sometimes merely be – the symptom of a fundamentally antimaterialist, residual, or recuperative formalism. But it has also demonstrated the potential for development in the direction of a genuinely materialist and historicist formalism – a historical analysis of what Jameson calls “the ideology of form,” which is inseparable from a historical analysis of the form of ideology. “The ideology of form and the form of ideology”; “the historicity of texts and the textuality of histories”: if such chiastic formulations are in fashion today – when, in the wake of deconstruction, referentiality has become so vexed and tropology so conspicuous – it may be because they figure forth from within discourse itself the model of a reciprocally constitutive and transformative relation between the discursive and material domains. Rejecting “the distinction between discursive and non-discursive practices,” Laclau and Mouffe

have asserted that “every object is constituted as an object of discourse, insofar as no object is given outside every discursive condition of emergence.” They hasten to add that “the fact that every object is constituted as an object of discourse has *nothing to do* with whether there is a world external to thought, or with the realism / idealism opposition”; against the assumption that discourse is merely mental in character, they affirm “the *material* character of every discursive structure” (109, 110). One important implication for literary studies is the possibility of transcending the formalist-historicist opposition in a new mode of textualist-materialist critical practice:

The main consequence of a break with the discursive/extra-discursive dichotomy is an abandonment of the thought/reality opposition, and hence a major enlargement of the field of those categories which can account for social relations. Synonymy, metonymy, metaphor are not forms of thought that add a second sense to a primary, constitutive literality of social relations; instead, they are part of the primary terrain itself in which the social is constituted. (110)

From a perspective that affirms *figuration* to be *materially* constitutive of society and history, the reorientation in literary studies of which Hillis Miller has complained – the turn from “language as such … toward history, culture, society, politics, institutions” – might be better construed as a widening and deepening of our central scholarly concern with language and reading. Literary criticism has for some time been making its traditional analytical strengths useful to new transdisciplinary projects of cultural analysis, and it has been doing so by studying the ways in which discursive forms and processes constitute “history, culture, society, politics, institutions.”

## V

Recent invocations of *history* (which, like *power*, is a term now in constant danger of hypostatization) have often appeared to be responses to – or, in certain cases, nothing more than positivistic retrenchments against – various structuralist and poststructuralist formalisms that have seemed, to some, to question the very possibility of historical understanding and historical experience; that have threatened to dissolve history into what Perry Anderson has suggested is an antinomy of objectivist determinism and subjectivist free play, an antinomy that allows no possibility for historical agency on the part of individual or collective human subjects (*In the Tracks*). *Subject*, both a grammatical and a political term, has come into widespread use not merely as a fashionable synonym for *the individual* but precisely as a means of emphasizing that individuals and the very concept of the individual are historically constituted in language and society. Although it continues to thrive in the mass media, in political rhetoric, and in undergraduate essays, the freely self-creating and world-creating individual of so-called bourgeois humanism has, for quite some time, been defunct in the texts of academic theory. Against the beleaguered category of the historical agent, contending armies of theory have opposed the specters of structural determinism and poststructural contingency – the latter tartly characterized by Anderson as “subjectivism without a subject” (54). We now behold, on the one hand, the implacable code, and on the other, the slippery signifier – the contemporary equivalents of Predestination and Fortune.

Anderson remarks that the “one master-problem around which *all* contenders have revolved” on the battlefield of contemporary social theory is “the nature of the relationships between structure and subject in human history and society” (33). Variations on this problematic might juxtapose structure to history or to practice; might oppose system or totality, on the one hand, to strategy or agency, on the other. And, indeed, one such version has characterized the interplay of current historical-social-political orientations to English and American literary studies in the form of containment versus subversion. As I have already suggested, such formulations are no more adequate to our own situation than to that of Elizabethan England. I believe that we should resist the reductive tendency to formulate our conceptual terms in binary oppositions; rather, we should construe them as joined in a mutually constitutive, recursive, and transformative *process*.

I have in mind here such recent work in social theory as Anthony Giddens’s concept of *structuration*:

The structural properties of social systems are both the medium and the outcome of the practices that constitute those systems. . . .

Rules and resources are drawn upon by actors in the production of interaction, but are thereby also reconstituted through such interaction. (*Central Problems* 69, 71)

Pierre Bourdieu’s concept of *habitus*:

Systems of durable, transposable *dispositions*, structured structures predisposed to function as structuring structures, that is, as principles of the generation and structuring of practices and representations. . . . (*Outline* 72)

and Marshall Sahlins’s concept of the *structure of the conjuncture*:

History is culturally ordered, differently so in different societies, according to meaningful schemes of things. The converse is also true: cultural schemes are historically ordered, since to a greater or lesser extent the meanings are revalued as they are practically enacted. . . .

By the “structure of the conjuncture” I mean the practical realization of the cultural categories in a specific historical context, as expressed in the interested action of the historical agents. (*Islands* vii, xiv)

With such perspectives in mind, we might entertain the following propositions: that the processes of subjectification and structuration are both interdependent and ineluctably historical; that the apparent systematicity of society is produced, adjusted, and transformed by means of the interactive social practices of individuals and groups; and that there is no necessary relationship between the intentions of actors and the outcomes of their actions – in other words, that their effectivity is conjunctural or situational and, to varying degrees, contingent. The possibilities for action are always socially and historically situated, always limited and limiting. Nevertheless, collective structures may enable as well as constrain individual agency; and they may be potentially enabling precisely when they are experienced by the subject as multiple, heterogeneous, and even contradictory in their imperatives. Paul Smith articulates such a concept of agency:

The symbolic realm, the *place* where we are in language and in social formations and which is also the *process* whereby we fit into them, *constructs* the ideological. . . . Resistance does take place, but it takes place only within a social context which has already construed

subject-positions for the human agent. The place of that resistance has, then, to be glimpsed somewhere in the interstices of the subject-positions which are offered in any social formation. More precisely, resistance must be regarded as the by-product of contradictions in and among subject-positions. ... Resistance is best understood as a specific twist in the dialectic between individuation and ideological interpellation. (25)

The possibility of social and political agency cannot be based on the illusion that consciousness is a condition somehow beyond ideology. However, the very process of subjectively *living* the contradictions *within* or *among* ideological formations may allow us to experience facets of our own subjection at shifting internal distances – to read, as in a refracted light, one fragment of our ideological inscription by means of another. A reflexive knowledge so partial and unstable may, nevertheless, provide subjects with a means of empowerment as agents. Thus my invocation of the term *subject* is meant to suggest an equivocal process of *subjectification*: on the one hand, it shapes individuals as loci of consciousness and initiators of action, endowing them with *subjectivity* and with the capacity for agency; and, on the other hand, it positions, motivates, and constrains them within – it *subjects them to* – social networks and cultural codes, forces of necessity and contingency, that ultimately exceed their comprehension or control.

The refiguring of the relation between the verbal and the social, between the text and the world, involves a rejection of some still-prevalent, alternative idealist, empiricist, and materialist conceptions of literature: as an autonomous aesthetic, moral, or intellectual order that transcends the shifting and conflicting pressures of material needs and interests; as a collection of inert discursive records of “real events”; as the superstructural reflection produced by a determining economic base. Recent theories of textuality have argued persuasively that the referent of a linguistic sign cannot be fixed, that the meaning of a text cannot be stabilized. However, writing and reading are always historically and socially situated events, performed *in* the world and *upon* the world by ideologically situated individual and collective human agents. In any situation of signification, the theoretical indeterminacy of the signifying process is delimited by the historical specificity of discursive practices, by the constraints and resources of the reading formation within which that signification takes place. The project of a new sociohistorical criticism in literary studies is, then, to analyze the interplay of culture-specific discursive practices, including those by which cultural canons are formed and reformed. By such discursive means, versions of the real, of history, are experienced, deployed, reproduced, and by such means they may also be appropriated, contested, transformed.

Any collective critical project must be mindful that it, too, is a social practice that participates in the very interplay of interests and perspectives that it seeks to analyze. All academic texts selectively constitute the objects of their literary-historical knowledge, and do so on frequently unexamined and inconsistent grounds. Integral to any genuinely new-historicist project, however, must be a realization and acknowledgment that our analyses necessarily proceed from our own historically, socially, and institutionally shaped vantage points and that the pasts we reconstruct are, at the same time, the textual constructs of critics who are, ourselves, historical subjects. Our comprehension and representation of the texts of the past proceed by a mixture of estrangement and appropriation, as a reciprocal conditioning by the discourses of the past and our discourses about the past (McCanles; LaCapra, “Rethinking”). Scholarship actively constructs and delimits its object of study, and the scholar is historically positioned vis-à-vis that object. Thus, a historical criticism that seeks to recover meanings that are in any final or absolute

sense authentic, correct, and complete is pursuing an illusion. It also becomes necessary to historicize the present as well as the past, and to historicize the dialectic between them – those pressures by which the past has shaped the present and the present reshapes the past. Such a critical practice constitutes a dialogue between a *poetics* and a *politics* of culture.

Since the beginning of the 1980s – the period marked, according to Miller, by the lurch of literary studies “toward history, culture, society, politics, institutions, class and gender conditions, the social context, the material base” – segments of the American political establishment, the mass media, and the neoconservative intelligentsia have been attacking what they represent as the degradation of literature and the humanities within the academy, and of cultural production and performance in society at large, as a result of the leftist agendas of professors and artists. In the very process of mobilizing their attack, these forces have made manifest their own agendas for the policing of education and the arts. The campaign for curricular reform pursued by the National Endowment for the Humanities has played on a widespread anxiety about the perceived demise of “traditional values” since the permissive 1960s. Under the successive leadership of William Bennett and Lynne V. Cheney, the NEH has focused on the preservation of curricula reflecting the dominant culture and the maintenance of syllabi that emphasize the putative stability, cohesion, and inclusiveness of American values and beliefs. A succession of official NEH reports, which have been endorsed in numerous editorials and popular commentaries, have sought to discredit cultural analyses that stress alternative and oppositional perspectives in history, politics, class, race, gender, and sexuality.

Whatever other responses it may provoke, the hostile attention paid from beyond the groves of academe to developments in literary theory, curriculum, and pedagogy confirms that the academy is perceived as a site for the contestation as well as for the reproduction of ideological dominants; that there may be something important at stake in our reading, teaching, and revision of the literary canon; and that, if we suddenly discover ourselves to be culturally and institutionally empowered, we are now compelled to choose if, when, and how to employ that power. The politics of the academy extend beyond what we casually refer to as “academic politics”: the study and teaching of cultural poetics are enmeshed in a larger cultural politics that is without disinterested parties, without objective positions. Nevertheless, the claim to just such disinterestedness, like the naive appeal beyond interpretation to “the text itself,” is a means of legitimating the dominant interest. By our choices, not only of what to read but of how to read, we may bring to our students and to ourselves a heightened awareness that we are engaged in a politics of reading, a sharper sense of our own historicity, an apprehension of our own positions within a regime of power and knowledge that at once sustains us and constrains us. It is by reconstruing “literature” within an unstable and agonistic field of verbal and social practices – by redrawing the boundaries of literary study, and then by transgressing those boundaries – that we may articulate the humanities as a site of intellectually and socially significant work in the historical present.<sup>1</sup>

### Note

1 Portions of this essay have appeared under the title “Professing the Renaissance: The Poetics and Politics of Culture” in the book *The New Historicism*, edited by H. Aram Veeser, published by Routledge in 1989.

## Selected Bibliography

This list of suggestions for further reading contains a number of studies exemplifying new-historicist and related modes of recent literary criticism. I have selected only books, emphasized collections and anthologies rather than single-author volumes, and included representative work in fields of literary study outside the English Renaissance.

- Greenblatt, Stephen J. *Renaissance Self-Fashioning: From More to Shakespeare*. Chicago: U of Chicago P, 1980. A seminal study in the cultural poetics of identity formation in Tudor and Jacobean England.
- Greenblatt, Stephen J., ed. *Representing the English Renaissance*. Berkeley: U of California P, 1988. An anthology of essays on sixteenth- and seventeenth-century English culture and ideology, reprinted from the journal *Representations*. Many of the articles are characteristic of new-historicist methods and themes.
- Hunt, Lynn, ed. *The New Cultural History*. Berkeley: U of California P, 1989. A stimulating collection of original essays on current methods and topics in the practice of cultural history, by scholars from the United States, Britain, and France.
- Levinson, Marjorie, Marilyn Butler, Jerome McGann, and Paul Hamilton. *Rethinking Historicism: Critical Readings in Romantic History*. Oxford: Blackwell, 1989. A collection of revisionist studies of English Romanticism by British and American critics.
- Michaels, Walter Benn, and Donald E. Pease, eds. *The American Renaissance Reconsidered: Selected Papers from the English Institute, 1982–83*. Baltimore: Johns Hopkins UP, 1985. Revisionist studies of canonical and noncanonical American Renaissance writers in relation to nineteenth-century socioeconomic issues, and of the critical history of the American Renaissance in relation to twentieth-century ideologies.
- Patterson, Lee, ed. *Literary Practice and Social Change in Britain, 1380–1530*. The New Historicism: Studies in Cultural Poetics 8. Berkeley: U of California P, 1990. Critical historicist essays on writing practices in late medieval England and on the discipline of medieval studies.
- Veeser, H. Aram, ed. *The New Historicism*. New York: Routledge, 1989. A lively collection of analytical and polemical essays from a variety of critical and disciplinary perspectives, on the genealogy, methods, and politics of the new historicism.

# CHAPTER 10

## Theory in Practice *Reason and Need: King Lear and the Crisis of the Aristocracy*

*Rosalie Colie*

Rosalie Colie's essay is a good example of traditional literary historiography. She considers Shakespeare's play in relation to events of the time. In this case, those events consisted of the decline of the aristocracy, as a new mercantile social class began to emerge in the late sixteenth and early seventeenth centuries. Whilst the aristocracy relied largely on held land and its income to maintain their lifestyle (which did not involve work), the new merchants were entrepreneurs, investors, bankers, traders, and small industrialists who worked and made their own money. The laws of inheritance left many aristocrats without land, since property went to the eldest son in each family. So there was a downward movement economically on the part of many aristocrats. At the same time, the merchant class sought to increase its status by purchasing honors and titles. The identity of the aristocracy and its social ascendancy began to become unstable and precarious. Tensions mounted and, by the middle of the seventeenth century, a revolution occurred against the monarchy and the aristocratic class. *King Lear* resonates with these issues, as some undeserving sons strive to rise and take property from their elder, more legitimate brothers, and an aristocrat deals with the loss of power, land, and authority.

No; he's a yeoman that has a gentleman to his son; for he's a mad yeoman that sees his son a gentleman before him. (3.6.12–14)

When every case in law is right;  
No squire in debt, nor no poor knight ... (3.2.85–6)

Prithee, tell him, so much the rent of his land comes to ... (1.4.140–1)

*Original publication details:* Rosalie Colie, "Reason and Need: *King Lear* and the Crisis of the Aristocracy" from *Some Facets of "King Lear": Essays in Prismatic Criticism*, ed. Rosalie Colie and F.T. Flahiff, pp. 185–220. University of Toronto Press, 1978. Reproduced with permission from University of Toronto Press.

Love cools, friendship falls off, brothers divide: in cities, mutinies; in countries, discord; in palaces, treason; and the bond crack'd 'twixt son and father. (1.2.110–14)

... unnaturalness between the child and the parent; death, dearth, dissolutions of ancient amities; divisions in state; menaces and maledictions against King and nobles; needless diffidences, banishment of friends, dissipation of cohorts, nuptial breaches, and I know not what. (1.2.151–6)

These comments from *King Lear* show some of the topsy-turvyness in the social order that informs the play, which has often been criticized as if its tragedy sprang from the simple disruption of an hieratic, orderly, customary society in which each man knew his place and responsibilities and kept to them both, in which duty and deference were expected and exacted in proportion to a man's known social and political status. According to one interpretation of *Lear* (as of many Shakespearean and other Renaissance dramas) the plot itself, with its manifold difficulties and sufferings, results from the deliberate abrogation of responsibility by the ruler. This Love-jovian or Tillyardian view has ruled for some time in criticism of the English Renaissance,<sup>1</sup> and only recently has it begun to be criticized, both by literary students who find in the abrogations of degree, priority, and place a less than necessary cause for tragic, or even significant action; and by historians who have consistently found the English Renaissance (like any other historical 'period') full of inconsistency, anomaly, disorder, and disruption.<sup>2</sup> Without quarrelling deeply with the Tillyardian notion of the Elizabethan world-picture, I want to pillage from quite a different historical scheme to illustrate some aspects of the social tensions involved in *King Lear*; that is, from Lawrence Stone's *Crisis of the Aristocracy, 1558–1641*, a rich, suggestive analysis of a major social class over a long period of time.<sup>3</sup>

Mr Stone's 'crisis' was a prolonged affair,<sup>4</sup> during which the aristocracy, although it never lost its favourable position in English society, lost its relative importance and was forced to alter its own self-image from that of an entrenched chivalric and 'feudal' group, with particular military obligations of service and general obligations of largesse, to that of a group involved in private lives and obligations precariously facing the problems of an expanding economy and a society increasingly articulate. Although the Tudors elevated themselves above their erstwhile peers, they came out of the aristocratic class and shared, as a family, some of the social and personal problems of that class.

Yet they sought to identify themselves with their state and its administration. Thus public policy underlined their differences from the nobility rather than their likenesses, and the English nobility found itself, like its European cousins, increasingly threatened by the centralizing efforts of the state. Chiefly, the court set out to gentle the armigerous aristocracy, to disarm them in all kinds of ways – by charming the nobles to live at court and to involve themselves in a growing bureaucracy;<sup>5</sup> by cutting the number of armed servants and thus the private military power long enjoyed by local noblemen; by educating the nobility to the gentle pursuits of humanistic learning and artistic patronage; by allowing and even encouraging the greater participation of women in social life – especially at its centre, the court itself. In many ways, central governments sought to domesticate the aristocracy; the aristocracy, too, found some pleasure and satisfaction in domesticating itself – in building houses according to new patterns; in making collections of paintings, sculpture, furniture, and books.

Withal, the aristocracy was faced with the particular problem of self-definition. Those who had given up the sword for the chamberer's graces found their relation to the sovereign

somewhat altered: under Elizabeth and James, noble courtiers accustomed to deference themselves had to learn the importance of deferring to a monarch. The greater the family from which a courtier came, the greater the deference the monarch seemed to require. The more opulent a subject's house, the more he was expected to put it at his sovereign's service. In various rather touching ways, noblemen attempted to show their difference from other men. The great 'prodigy houses,' most of them built by Lords Treasurer, of whom Stone so amusingly speaks,<sup>6</sup> were for a while a major proof of class grandeur. With their ancient outlet in militarism gradually being closed off, noblemen and gentlemen tended to substitute the code of honour for the chivalric values. The older system of armigerous behaviour was superseded not only by modern technology and ordnance, but also by modern social arrangements: there was less and less place for the serious tournament or the trial-by-combat, as judicial settlements were otherwise reached. So a nobleman's word came to be defended and upheld by a complicated system of swordsmanship, based on the peculiar anomaly of the long, showy, dangerous rapier, which belonged neither to the old world of weaponry nor to the new. The rapier duel was an invention of a group of men trying to set themselves off socially from the 'others'; the weapon itself, carrying on a social tradition of archaism, was brilliantly and obviously nonfunctional as a practical weapon in an ordnance world.<sup>7</sup>

Another method by which noblemen set themselves off was dress. As Stone puts it, the acid test of living nobly was to have the money to spend liberally, to dress elegantly, and to entertain lavishly.<sup>8</sup> The portraits of the royal favourites, Leicester, Essex, Raleigh, and Buckingham, give some proof of the expense involved in looking the peacock courtier or the 'compleat' Queen.<sup>9</sup> Against such expenditure, even the conservative authors of the homilies sounded their injunctions: preachers never ceased to bewail the ruinous and frivolous preoccupation of the rich with their apparel.<sup>10</sup>

Thou art a lady;  
If only to go warm were gorgeous,  
Why, nature needs not what thou gorgeous wear'st,  
Which scarcely keeps thee warm

(2.4.269–72)

Lear says to Goneril, whose costume we can imagine from the opulent ladies portrayed in Renaissance pictures; and Kent's rage at Oswald – 'a tailor made thee!' – records his anger at the upstarts who imitated their social betters.

Conspicuous expenditure and consumption were frequent causes of ruin for aristocratic families: 'Put not your finger in mortar,' Coke wrote, having observed the financial difficulties incurred by many great builders. Critics of gorgeous apparel noted that men 'weare their lands upon their backes.'<sup>11</sup> Yet these particular modes of setting themselves off from other men did not protect the aristocracy from imitation by social inferiors: noble ladies were offended by the liquefaction of merchant capital that could be heard in the rustle of city wives' skirts. Satirical literature of the period is full of upstarts, crow and popinjay, 'nobodies' who deck themselves in the costumes and manners of their betters. Raleigh himself, though an intermittent profiteer from the arbitrary system of favourites, was in effect such a 'nobody': he rose by his wits, his imagination, and his *sprezzatura*, and he fell for the same qualities. Raleigh had exceptional talent and exceptional personality; the Osrics, Oswalds, and Parollees of Shakespeare's world are permitted no such virtues. Their showiness is just that: they are the froth thrown up by a

roiled social system. Clearly, then, garb and retinue were insufficient protections from social intrusion, and dressed-up nobodies offered a real critique of the methods by which noblemen defended themselves against encroachments upon their rank and exclusive privileges. One can recognize at once the superficiality of distinctions as separate from function, while acknowledging that as function declined, such distinctions seemed ever more necessary. Barred from the automatic recognition conferred by its old sumptuary monopolies,<sup>12</sup> the aristocracy had to find in just such attitudes, attributes, and costumes a substitute means of self-definition, even of self-identification. The sociological importance of the nobility's self-concentration is obvious – and it carried economic implications as well, as shoals of craftsmen, jewellers, tailors, silkworkers, cabinetmakers, stonemasons, architects, and so on, were called upon to support the aristocratic self-image in England.<sup>13</sup> The lavish expenditure characteristic of the medieval noble way of life was simple, as many commentators remarked,<sup>14</sup> compared to the new ways a nobleman might spend his money – the new commerce, the New World, and the aristocratic need for show accounted for remarkable outlays of income.

Although these signs of aristocracy were important and obvious at the time, they were by no means the only problems an aristocrat faced. Over the long span of time from the accession of Henry VII to the outbreak of the Civil War, there was obviously a slackening in the deference automatically due to a lord: the war itself is one gross measure of the change in aristocratic weight in the nation's social world. Other changes took place as well: for one thing, as Stone stresses, even among the aristocracy there was a considerable decline in paternal authority. Very few children adopted the social views Edmund attributed to Edgar, that 'sons at perfect age, and fathers declin'd, the father should be as ward to the son, and the son manage his revenue' (1.2.72–4), but the case of poor Sir Brian Annesley, whose daughters sued to declare him insane that they might get his estate,<sup>15</sup> is relevant to the general problem and perhaps even to the play of *King Lear*. In spite of marked deference shown parents by their children in England, it is clear that over the century and a half of the Renaissance, fathers lost their unquestioned authority in the disposition of their children's lives and fortunes. Legal requirements came to protect, particularly, daughters. In other cases, fathers took a more active interest in their children's individual personalities and welfare, in particular permitting them to marry with greater attention to need and temperament; often, too, fathers provided so generously for daughters and younger sons (in some cases, for bastards as well) that support for entailed estates was severely jeopardized.<sup>16</sup> As general respect for the individual came to be recognized, paternal authority counted for less; as ideals of social egalitarianism grew more widespread, aristocratic authority counted for less too. All the same, the class was, and remained, particularly privileged. Their crisis, such as it was, was as nothing to the difficulties suffered by the rural and urban poor, some of whom were not even privileged to recognize a 'crisis' in their affairs: life was certainly problematical for many segments of what is now called the middle class. But the nobility did face changes that unsettled many individuals within the class, if not the class itself. Against this particular set of problems, especially in their psychological manifestations, I want to look at *King Lear*. It is a play deeply rooted in its own period, a play which draws some of its power from the playwright's insight into the peculiar aristocratic situation of the time in which it was written, the situation Lawrence Stone has been at such pains to delineate.<sup>17</sup>

Before beginning on that task itself, I must assert something else, obvious enough. This play will not provide a proof-text for the aristocratic crisis (if that is what it was). Indeed, the adjustments described in Stone's book are too drawn out to have been

compressed into one literary work – although, for a critic dissatisfied with a ‘crisis’ lasting for nearly a century, perhaps the concentration of the play more nearly justifies the use of that term. There is, of course, much in the general aristocratic social situation that is *not* in *King Lear*: for one thing, the play does not dwell topically on a major problem occupying the nobility and their advisers, namely, education; for another, though it exploits the question in its metaphors, it does not overtly deal with economics. In the play, actual economics are vague: the curious anachronisms of this play are uncompromised by discussions of pounds, shillings, pence, guineas, rose-nobles, and so on: but it is difficult not to read from this play a profound critique of habits of quantification induced by a commercial revolution. Though certainly questions of deference, of privatism, of personal and class ethos are of the utmost significance, *King Lear* is something very much greater, very much more complex, than a mere sketch in play-form of the psycho-social problems of new-style sovereigns and magnates. As these essays exist to proclaim, *King Lear* is made up of so much that to isolate one strand of its meaning is dangerously to oversimplify its multifoliate richness. The play is only in the highest sense an historical ‘source,’ testifying but fitfully to the problems historians must face head on. Indeed *King Lear* handles what might be called sociological materials very unevenly; at some points, the text is amazingly allusive, vague, and generalized; at others, remarkably direct and precise. The problem of being ‘noble’ is no less complicated than many of the purely literary problems this book deals with: the poet is sometimes astonishingly exact in what is here taken as data, and at other times hazy. But the playwright is nonetheless remarkable for what he saw in his society – and furthermore in a segment of society not naturally ‘his’ – and in his efficient translation into *literary* structures of the social structure of these problems. Indeed, he used many social paradigms in the terms of his given literary schemes and paradigms: he was able to treat his society, then, as he treated many other non-literary materials, as something to be rendered in the terms of his craft. What is remarkable, too, is that the playwright dealt analytically, even-handedly, and problematically with social problems, even as he consistently did with literary problems, and, thus, with the same striking insight and originality. If one may turn things about somewhat, the hypothesis might be offered that the play gives us, in its own laying out of social problems untouched by the benefits of modern analytical techniques, one bulwark to Lawrence Stone’s massive analytic reconstruction of aristocratic society.

Within the play, historical structures are oddly treated. First of all, English ‘history’ is telescoped. According to chronicle-myth, the troubles of the Lear family did not end with the king’s death; his daughters quarrelled fatally, and Cordelia’s sons (imagine Cordelia with her sons!) did too. A train of Celtic king-figures had to reign before the historical Edgar could join the kingdom under a single strong rule.<sup>18</sup> The very names of the major figures in this play serve to fuse the layers of the English past – Lear and his daughters come from the catalogue of British royalty; Edgar and his wicked brother bear Anglo-Saxon names, one of them of the greatest significance in the roster of English kings; Gloucester was a Plantagenet royal title until the fifteenth century and would again become a royal title; the earls of Kent were local noblemen who had died out early in the sixteenth century; the title revived under Elizabeth in 1572. Albany and Cornwall were imaginable titles in the English Renaissance;<sup>19</sup> the earls of Cornwall had been both Plantagenets and Piers Gaveston; the kings of Scotland descended from a darkling Duke of Cornwall, and Albany was one of James I’s titles as well.<sup>20</sup> The names ‘Albany’ and

'Cornwall' are realistic enough, then, but they recall something as well of Arthurian intermarriage. These names reverberate symbolically with English historical meaning; they do for the vertical range of time past what Edgar and Kent between them do for the horizontal range, across the social estates, of English speech, as those figures shift their dialects to offer a schematic section of the local and class languages of the nation. But Shakespeare was careful, too, in his use of title: he observed the rules of precedence, so that the blood royal takes precedence over all others, dukes take precedence over earls, and earls over the rest of the play's population.<sup>21</sup>

By such simple means, then, great implications are suggested. For all its moments of exact social observation and commentary, *King Lear* is surrounded by questions neither directly met nor directly answered. The action is mysteriously sited both in time and in place. The great rituals of the first scene echo with reverberations of something far deeper than specific reason or policy. We never know the practical details about the kingdom Lear rules and divides. Where does Lear hold court? Where was his palace before he went to lodge with his daughters in turn? That palace vanishes like Prospero's: indeed, except for Dover, we never know where anything takes place. In *1 Henry IV*, the rebels divide the kingdom precisely, even arguing about its boundaries – Lear simply draws on a great map we never see. Obviously Gloucester's 'little' house (apparently a small castle of the old nobility rather than a great house of the new, but even so, peculiarly situated: 'for many miles about / There's scarce a bush' [2.4.303–4]) lies within the district allotted to Regan, for Cornwall becomes, Gloucester says, his 'patron.' Where Regan's house is in relation to it, or Goneril's in relation to either, we do not discover: simply, Lear's palace dissolves with his power, and the 'court' is concentrated on where power subsequently is rather than in a specific town or at a specific seat.

Other things are odd, too. Letters pass at an amazing rate from hand to hand – but there is no hint of how they do so. Nor do we know why the Gentleman (evidently the messenger between Cordelia and Kent) so readily trusts Kent on the heath; simply, we must accept that two good-hearted people, devoted to the king and Cordelia, trust one another on sight and do each other's offices willingly for that trust. All we know is that letters and people pass from here and there to Dover; even a beggar can lead a blind man to that critical port.

As with geography, so with other things: much is left unclear. Did Oswald do the act of darkness with Goneril, and if he did, why was he so willing to act as go-between for his mistress and Edmund? What happens to the Fool in fact and (more critical even) what kind of 'journey' must Kent go on, at the end of the play? Albany is left sole ruler of the kingdom, a position to which, judging from the first speech of the play, he had aspired; but without explanation or anything like the ritual fuss of the first act he resigns his rule first to Lear, then to Edgar. Most important of all, does Lear die thinking Cordelia dead or alive – can we tell, or should we try to tell? Within these areas of non-definition, of vagueness and mystery, the lives of King Lear and his three daughters, of the Earl of Gloucester and his two sons, of Kent, the Fool, and the rest are nonetheless lived to an extraordinary degree within the terms of sixteenth-century English society. Maynard Mack has pointed to one thematic and poetic gamut operating in this play, that from morality abstraction to naturalistic imitation of actions; the play moves along another gamut, from ritual and myth to an extremely practical and accurate grasp of local affairs.<sup>22</sup> There are things in this huge, difficult, and shocking play that become a little clearer when we apply to it some of the categories laid out by Stone's paradigm of the English aristocracy in the Renaissance.

Indeed, the more we look at the play, the more clearly we can see in it Stone's schema for the problems of the aristocracy. As he put it, 'the aristocratic ethic [*sic*] is one of voluntary service to the State, generous hospitality, clear class distinctions, social stability, tolerant indifference to the sins of the flesh, inequality of opportunity based on the accident of inheritance, arrogant self-confidence, a paternalist and patronizing attitude towards economic dependants and inferiors, and an acceptance of the grinding poverty of the lower classes as part of the natural order of things.'<sup>23</sup> These values are striking illuminations of the value-system of the play. For one thing, Kent's extraordinary loyalty to the king is a mark of his commitment to the aristocratic ethos. His behaviour within the play, evidently, is no less consistently loyal than his behaviour before the play began:

My life I never held but as a pawn  
To wage against thine enemies.  
(1.1.155–6)

As a private person Lear assumes the hospitality and generosity of his daughters; and Gloucester's touching confidence that Cornwall cannot mean either his extreme rudeness to the old king or his cruelty to Gloucester's own person is based on his view of the unchangeable relation between host and guest – 'You are my guests,' he says (3.7.31) and 'I am your host' (3.7.39). The class distinctions of the play are clear enough, although the play's action in part consists in showing how tenuous they are when faith is bad. Gloucester's tenant comes on stage, it seems, solely to demonstrate how greatly Gloucester's landlordism attached the loyalty of his dependants; Lear shows gentleness, even on the heath, to his dependant, the Fool. Gloucester's repetitious *sententiae* about the breaking of social bonds are one measure of the limitations of his imagination – he recognizes that social bonds are being broken around him, but not why that is so. For him, as for the composers of the homilies, the social order 'ought' to remain constant, even when he sees it fall into disruption. Hence Gloucester's defencelessness against the deceptions of his son and the brutality of his lieges. Both Gloucester and Kent, adherents of the old aristocratic mores, are tolerant of the sins of the flesh, as we learn in the play's opening interlude; the Fool conforms to the manners of his social betters when, at the end of act 1, he suggests his love-play with the castle maids.

The problems raised by the inequality of inheritance are twice dramatized and very differently stressed. Lear takes a 'modern' solution to his predicament, the absence of a male heir: he divides his kingdom justly among his co-heiresses, attempting to prevent strife later. Gloucester, on the other hand, acts as the old aristocrat would, not noticing, until he thinks himself betrayed by Edgar, the injustice of what Stone calls 'the winner-take-all doctrine of primogeniture';<sup>24</sup> Edmund's bastardy-speech is, in fact, not a paradox only: it bespeaks a new and fairer view of individual worth in rejecting the automatic second-classness of bastards. These aristocrats are all arrogant, in different personal idioms; Kent never entirely forgets who he is, even when he is stocked for his apparent presumption to Cornwall. Cornwall is wantonly confident of his own power and safety among his servants, as he mutilates his elderly, aristocratic host. Goneril and Regan are high-handed with all others; both Lear and Cordelia are extravagantly high-minded and proud. As Sigurd Burckhardt has beautifully pointed out, Lear's absolute trust in his own and other people's 'word' is an outmoded social habit, but one entirely appropriate to his rank and style.<sup>25</sup> Of the noblemen, only Edgar demonstrates his independent awareness of the plight of the kingdom's poor – and yet this same Edgar, companion of

poverty, becomes the champion of the whole kingdom, on whose swordsmanship the national virtue must be risked. He ranges along the whole social scale, from beggar and Bedlamite, doubly outcast, to the rituals of high-born conflict.

As against the ‘paternalistic and patronizing attitude toward economic dependants and acceptance of the grinding poverty of the lower classes as part of the natural order of things,’ one must note that Stone’s aristocrats were also astonishingly open-handed.<sup>26</sup> Their testamentary charities may not have reached the standards set by the middle class<sup>27</sup> in this period, but their daily and weekly support of the poor and of other odd folk was both steady and generous.<sup>28</sup> In his dealings with the Fool and with Tom, Lear shows some of that characteristic paternalism – in his case, the more poignant because of his personal problems as a father. From his behaviour to the Fool, we can realize both Lear’s automatic aristocratic kindness and his personal gentleness:

My wits begin to turn.  
 Come on, my boy. How dost, my boy? Art cold?  
 I am cold myself. Where is this straw, my fellow?  
 The art of our necessities is strange,  
 And can make vile things precious. Come, your hovel.  
 Poor Fool and knave, I have one part in my heart  
 That’s sorry yet for thee.

(3.2.67–73)

Finally, in the king’s awareness of the plight of the truly poor in his kingdom, lies his achievement of a responsibility which, without his tribulations, he might never have won. There is nothing in the past life of King Lear – indeed, nothing in the play itself – to suggest that ‘the people’ were important in either the private or the public economy of the nation or of its rulers. Of all Shakespeare’s political plays (in which I include all his late tragedies), this one most overtly closes off considerations of subjects, populace, and the non-noble life. In the history plays, in the other tragedies, there is much reference made to the people, English, Scottish, Danish, Roman, even Cypriot; in both *Hamlet* and *Macbeth* we are ever aware of potential rebellion against the centres of power. In *King Lear*, though, the great ones fight out their battles within their own class, and such realization as the audience has of other groups is skimpy and schematic. The more remarkable, then, that from this background and in this setting, King Lear, having renounced his kingdom, comes to realize, at the stretch of his extremity, what it means to be really poor. In his ‘houseless poverty’ speech ring the echoes of a common configuration of ideas of poverty, charity, clothing, and food:<sup>29</sup>

Poor naked wretches, whereso’er you are,  
 That bide the pelting of this pitiless storm,  
 How shall your houseless heads and unfed sides,  
 Your loop’d and window’d raggedness, defend you  
 From seasons such as these? O! I have ta’en  
 Too little care of this. Take physic, Pomp;  
 Expose thyself to feel what wretches feel,  
 That thou mayst shake the superflux to them,  
 And show the Heavens more just.

(3.4.28–36)

As in so much else, Gloucester echoes both the king’s predicament and his insight; in his blindness, exposed to the miseries the Bedlam beggar illustrates for him, he says, too:

Heavens, deal so still!

Let the superfluous and lust-dicted man,  
That slaves your ordinance, that will not see  
Because he does not feel, feel your power quickly;  
So distribution should undo excess,  
And each man have enough.

(4.1.66–71)

Both old men began the play securely enclosed in their own convictions of rightness and security; both undergo indescribable psychological torment, Gloucester paying with his eyes for not having ‘seen’ aright, Lear with his reason for not having understood how to be a proper parent. Both emerge from their class-bound view to ‘see feelingly,’ as kings and aristocrats were generally spared from seeing and feeling, what it meant to be a plain poor man in the kingdoms of this world. Both men are remarkably modernized by their sufferings, enlarged from the conscriptions of their social status. It comes with some irony that these undefended old men reach their new insights, their astonishing sympathies, under the guidance and by means of the emblematic beggar who seems to them ‘the thing itself; unaccommodated man,’ but whose unaccommodated state is simply a disguise.

To say that Lear and Gloucester achieve some of their greatness because they break out of the limitations of high-born assumptions does scant justice to the richness of their experience. Yet no more than in real life can this play be presented by some abstraction or social paradigm. In different ways, Lear, Gloucester, and Kent are old-fashioned aristocrats, theirs the noble ethos in the process of erosion during the Renaissance; equally, Albany, Cornwall, Goneril, Regan, and Edmund are domesticated in a ‘new’ world of power and might, which they intend to keep well within their own control. But just because we prefer Lear, Kent, and Gloucester to the scheming members of the next generation, we cannot explain the play by the glib assumption that Shakespeare asserted his characteristic conservatism by the play’s means, praising an old if outmoded way of life for its moral symmetry and beauty; nor can we claim that human virtues are assigned to the old way, vices consigned to the new. Like Shakespeare’s other great plays, *King Lear* deals in problems and problematics: neither way of life is sanctified, neither is regarded as an unqualified success.

This play begins with the situation feared by all men, kings and noblemen alike, with an inheritance to leave behind them, the absence of a male – that is, an obvious – heir. The number of noble families that died out in the period between Elizabeth’s accession and the outbreak of the Civil War was frighteningly large.<sup>30</sup> Of royal families, the Tudors themselves died out, and in spite of Henry II’s quiverful of sons, the Valois died out too. For a time Philip II feared to die without a male heir; the Stuarts survived by the puny breath of James VI; the nearly-royal Oranges twice just escaped heirlessness, both times at a period critical to the Netherlands’ turbulent history. Great families had to worry about male issue, and kings more than others. Shakespeare followed his sources in providing King Lear with no male heir, but he stressed that critical fact not at all, though his sources, including the earlier play, make much of it. We see, then, the king coping with his problem and deciding to deal with his three daughters as co-heiresses. This is not an English or French royal habit – or, at least, not a modern habit, though Charlemagne had split his kingdom three ways long before Lear treats his girls in a thoroughly modern

manner, as noblemen and commercial grandees without sons had begun to treat their daughters. Shakespeare followed these same sources in making the king relinquish sovereignty before his own death, and Lear's reason for doing so makes political sense in either a primitive or an early modern kingdom. Lear wanted to be sure, before he died, that his division of the kingdom was acceptable both to his beneficiaries and to the subjects over whom, after all, the girls with their husbands would rule. The division was proclaimed in public, before the lords and with the acquiescence of daughters and sons-in-law, 'that future strife / May be prevented now' (1.1.44–5). As a generation of students has written in criticism of this play, Lear's unwisdom is 'proved' by just this gesture – no king 'ought' to relinquish rule before it has formally ended with his mortal death. Historical rulers were not so obedient to this regulation as critical orthodoxy would suggest – against the rule there are several counter-cases. Not only was there no rule against abdication – Charles V, after all, voluntarily gave up his great Empire; Mary Stuart had perforce abdicated; though Shakespeare's Richard II may have been an anointed king, the playwright does not conceal his unfitness to rule, all the same – but also Lear was unlucky. In cases where a male heir lacked, was young, or was weak, political disruption could be expected, as Machiavelli taught; it could be argued that in trying to secure assent to the division of his kingdom, Lear showed foresight of an unexpected sort.<sup>31</sup>

Although Lear never complains of having only daughters, his assumption that continuance is crucial emerges clearly from his speeches to his daughters: he says to Goneril, 'to thine and Albany's issues / Be this perpetual' (1.1.66–7), and to Regan, 'To thee and thine, hereditary ever, / Remain this ample third of our fair kingdom' (1.1.79–80). The significance of his later cursing Goneril with sterility becomes even more profound when we consider his preoccupation with issue.<sup>32</sup> Apparently, too, Lear was less satisfied with one son-in-law than with the other. In the first words of the play, Kent says, 'I thought the King had more affected the Duke of Albany than Cornwall' (a preference which does the king credit, after all); later we hear of 'inevitable' dissent between the sons-in-law. But, as Gloucester says, Lear had resolved for strict justice between the dukes –

It did always seem so to us; but now, in the division of the kingdom, it appears not which of the Dukes he values most; for equalities are so weigh'd that curiosity in neither can make choice of either's moiety. (1.1.3–7)

In the first scene, the emotional weight of Lear's imposition of the competitive declarations of love for him tends to overbear the fact that, in spite of his psychological inequity, his division of the kingdom was 'just.' He divided the land into three rich parts, intending for his favourite child a third evidently not larger, but 'more opulent,' than those assigned her sisters. There is in the ritual charting of the new rule more than the suggestion that, before he allowed his psychological needs expression in the competition, Lear had taken thought for the political needs of the nation: he was not, in fact, dividing his kingdom solely in response to his daughters' declarations of devotion.

Looked at in the context of contemporary behaviour, Lear's solution for his kingdom was in line with modern aristocratic providence about rule, and with modern aristocratic treatment of daughters, by which the strongly paternalist father strove to provide generously for their futures.<sup>33</sup> The difficulty with Lear's situation is that it did not allow for the roles both of ruler and of father; he did not recognize his situation as unique – though Charlemagne, another dimly historical ruler in Elizabethan imaginations, divided his kingdom into three, British and English rulers customarily did not. But there is an

interesting record of aristocratic division of wealth: consideration of daughters' material prosperity often contributed to the financial difficulty of noble families, some of which collapsed at the centre because of generosity in dowries and jointure-arrangements. By treating his kingdom as if it were simply 'his land,' an estate, Lear threatened his land, his 'country,' at its centre, too. It might be said that Lear's kingdom *figuratively* came to grief just because of his generous division of it among his heiresses. To say this, though, is to offer material substitutes for eventuations in the play sufficiently grounded in character and psychology, to say nothing of the ritual folklore of the deed itself. We do not need to know that, as a matter of economic and social fact, great holdings were often dissolved by division among children, especially female children, to realize that there is something fatal in Lear's act of division; but the modern relevance of that problematic gesture deepens the play's reference to a felt reality. One simplistic observation might be that in making Lear regard his kingdom as his property, Shakespeare made his profoundest comment on kingly misapprehension of rule and on ancient modes of governing.

Just the same, in at least two ways, Lear's disposition of the kingdom *did* observe modern rules of prudence and justice. In many ways doubtless more important, Lear must be ranged with the conservative noblemen of the play as an adherent, even a blinkered adherent, of the old ethos, dependent upon its values and profoundly endangered by their abrogation. His notion of *himself*, if not of his daughters and his kingdom, is entirely in terms of the old modes: though divesting himself of 'the sway Revenue, execution' of kingship, Lear chooses to retain 'only,' as he says, 'The name and all th'addition to a king' (1.1.136). In practice, what this means is that Lear wants to spend his latter days surrounded by his familiar household and the signs of his former greatness (in this case, a retinue of a hundred armed knights, a clever Fool, and whatever servants he may require for his personal needs), domiciled with his daughters by turn, on a perpetual royal progress. Under normal circumstances, this arrangement could very well have been made for an old patriarch and even for a self-retired king, at his life's end turning in legitimately upon private and familial pleasures. Furthermore, a great social figure would have had a household – witness Catherine of Aragon after her repudiation, or Mary Stuart in her detention – distinguished by a train of retainers. Retainers were not only a sign of an aristocrat's prestige but a defence of his prerogatives.<sup>34</sup> The sovereign often attempted to cut down on retaining because of its potential danger, but no ex-king could imagine himself entirely without retainers, simply to show his rank. One deep theme of this play is the *meaning* of deference to those who expected it as their due. The significance of *King Lear* would be greatly lessened if we could not understand what it meant to the king, to his children, to his nobles and servants, that men were deferred to according to their rank in society. From the vantage-point of the aristocratic ethos, there was nothing odd about Lear's wanting to maintain the 'exhibition' of his former greatness, even after he had delegated its great function to others. From the point of view of the new functionalism, equally, there was nothing peculiar about Goneril's and Regan's attempts to cut down their father's retinue: Elizabeth never allowed Mary Stuart a quota of *armed* servants.

Since so much of the struggle between early modern rulers and their nobility was over the monopoly on violence, it is obvious that retainers were looked at darkly by the sovereign.<sup>35</sup> The physical inconvenience and danger surrounding a retinue was one thing, the *psychological* importance of such a train was another. Rulers intent on their own security were unlikely to tolerate a mighty subject surrounded by proofs of his power; a retinue was, as Lear called it in that quantitative language so characteristic of his utterance before the storm, the 'addition' by which a grandee could reckon his importance.

Thus when Goneril says, ‘His knights grow riotous,’ Elizabethans would scarcely have found her remark incredible – if they knew of Sir Richard Cholmley’s liveried retainers, who sneaked into the kitchen and speared the meat out of the pot with their daggers,<sup>36</sup> they might well have sympathized with her. On the face of it, her complaint carried weight; her insistence on the retainers’ ‘rank and not-to-be-endured riots’ was hardly different from Henry’s or Elizabeth’s. Goneril was, by her father’s donation, sovereign in her portion of the country, and certainly in her house. As sovereign, she simply acted the efficient ruler striving for order in her palace and, by extension, her kingdom:

A hundred knights!  
 ’Tis politic and safe to let him keep  
 At point a hundred knights; yes, that on every dream,  
 Each buzz, each fancy, each complaint, dislike,  
 He may enguard his dotage with their powers,  
 And hold our lives in mercy.

(1.4.332–7)

Later, as the size of Lear’s retinue is ruthlessly cut down (only thirty-five or thirty-six of his knights join the king’s forces at Dover), Regan states the general argument against a mobile retinue in a speech far more neutral and sensible, in social terms, than it is usually considered:

what! fifty followers  
 Is it not well? What should you need of more?  
 Yea, or so many, sith that both charge and danger  
 Speak ’against so great a number? *How, in one house,*  
*Should many people, under two commands,*  
*Hold amity?* ’Tis hard; almost impossible.

(2.4.239–44; italics mine)

The objections the daughters raised against the knights were those of a practical, modern, civilizing, rationalizing social orderliness; their objections were, in fact, received opinion. Further, from Goneril’s remarks about Lear’s servitors, we realize what sort of household *she* kept:

Hear me, my Lord.  
 What need you five-and-twenty, ten, or five,  
 To follow in *a house where twice so many*  
 Have a command to tend you?

(2.4.262–5; italics mine)

From this hint, we may assume that Goneril’s house was – in contrast to Gloucester’s isolated little house, typical of the parochial older nobility – a truly ‘great’ house, a palace, a prodigy house; she had a staff of at least fifty servants, from whom a sufficient number could always be spared to tend to her father’s needs.<sup>37</sup> With this glimpse into Goneril’s milieu, we suddenly see the degree of pride, of self-indulgence, involved in the lives lived by ‘these daughters and these sisters.’ They have their modern ways of conspicuous consumption no less grandiose than their father’s old-fashioned train – and far more centred on themselves, on their own comforts and the projected image of their

own greatness. Coupled with the fact that Shakespeare makes us witnesses to Goneril's plotting with Oswald to offend the king ('Put on what weary negligence you please' [1.3.13]), this glimpse into her values and manner of living makes us realize that her objections to Lear's knights are *not* simply those of a sovereign lady intent on maintaining civil peace. Indeed, just as with Edmund, at first sympathetically presented and only later revealed as the cheat he is, the playwright is careful to deny Goneril her claims to justification in this respect. So also with Cornwall, commanding that Kent and Oswald put up their swords – 'Keep peace, upon your lives: / He dies that strikes again' (2.2.48–9) – his words are those of any sensible ruler concerned for civil order.<sup>38</sup> We might take them at face value if we were not in the next act to see how Cornwall behaves when he thinks the monopoly on violence securely his. Shakespeare never leaves us long in doubt about these 'new' statesmen.

That Lear's knights *were* troublesome, we have only Goneril's authority; when we hear Regan linking Edgar and the knights, an association clearly false, we must wonder about the knights' behaviour altogether. Of Lear's 'riotous' train, only a single gentle figure says anything at all, and what he says is, it seems, a remarkable understatement of the actual situation:

My Lord, I know not what the matter is; but, to my judgment, your Highness is not entertain'd with that ceremonious affection as you were wont; there's a great abatement of kindness appears as well in the general dependants as in the Duke himself also and your daughter. (1.4.60–5)

'Ceremonious affection' is entirely absent from this house, as we know from Goneril's planning with Oswald to withhold deference from her father. Gradually we realize the symbolic importance of withholding the ceremony normally due a father and a king: Goneril seeks to destroy the old man's sense of himself long before king-killing becomes part of the action.

Goneril and Regan were, of course, afraid of something other than mere inconvenience; they were afraid that their father, invested with his military power, might discover their aims and seek to stop them by turning that power against them. Their eagerness to strip Lear of his symbols of personal greatness is one thing; but it was quite another matter, a matter of pure power, to want out of the way those hundred knights who might have made up a Lear faction. Since the remnant of the retinue *did* join Cordelia at Dover, if Oswald's words are accurate, we may assume that at least those knights knew the proper duty of their allegiance and followed it.

One problem of the Tudor monarchs was that, like King Lear, they lacked soldiers. In times of crisis, Elizabeth had to depend upon a very mixed army, composed of trained bands, pressmen<sup>39</sup> (some little better than the crew gathered by Falstaff), and the cohorts of her great lords contributed as private trains, in the old-fashioned way, to the sovereign's cause.<sup>40</sup> During the period studied by Stone, loyalty was never entirely diverted from the great lords to the Crown, for all of Henry VIII's statutes and propaganda of the 'Faerie Queene'; the dutiful behaviour of Lear's knights was still quite understandable to a Jacobean audience. As far as the play itself is concerned, though, the knights barely appear; they are a shadow-retinue, whose importance depends entirely upon the director's, not upon the playwright's, injunctions. Their behaviour is undefined, largely attributed to them by the daughters' unreliable words. Lear is effectively stripped of his strong bodyguard, left destitute and alone save for his Fool and a disguised servant.

He has not forgotten the orthodox meaning of his retinue, however, as on the heath he recruits the Bedlam beggar as its replacement – ‘You, sir, I entertain for one of my hundred’ (3.6.80). That his retinue wore his colours is evident from his next remark to Tom, famous for its beautifully learned associations: ‘only I do not like the fashion of your garments: you will say they are Persian; but let them be chang’d’ (3.6.80–3). It is important to notice throughout these scenes, the great gentleness of the king. While he has control of his retainers, he never thinks to call them in his own defence against the extraordinary behaviour of his daughters, never thinks of himself as the leader of a band of *armed* men. For all his childishness, his irascibility, his arrogance, Lear is a civilized man, thinking himself in a civilized country. He lets his defenders slip away from him as if their ‘real’ function had never crossed his mind. Indeed, for him, the knights *were* simply a means of signalling his dignity to himself and others, never defences against his nearest kin.

The astonishing breaches in decorum in this play are not so immediately obvious to us as to an audience trained in the deference society. When Oswald refuses to stop at the king’s command, when he identifies the king as ‘My Lady’s father,’ the shock was almost as severe to the audience as to the defenceless and unprepared Lear. That Oswald ‘would not’ do the king’s bidding utterly shatters Lear; when he finds his servant stocked, he says,

They durst not do’t,  
They could not, would not do’t; *'tis worse than murther,*  
To do upon respect such violent outrage.  
(2.4.22–4; italics mine)

Lear’s awareness of criminal degree is imperfect, one might say; because, as Kent sits outside the house in which Gloucester’s mutilation is soon to take place, we shortly realize how insignificant, beside that crime, the stocking of the king’s servant is. But at the time, that punishment is part of the ruthless imposition of their will and rule on Lear and his kingdom that the daughters’ party puts into effect. Lear must learn that he is no longer sovereign in Britain; his daughters undertake to teach him.

Of course Lear was arbitrary. Sovereigns were – and could count on absolute deference, even in their tantrums. Hence Lear’s fury at Kent’s gainsaying him, his attack on Kent in terms of the feudal bond – ‘Hear me, recreant! / On thine allegiance, hear me!’ It is one measure of Shakespeare’s art that we come to see Lear’s autocratic demands for his dinner naturalistically, as the signs of the childish greed in an old man, rather than as one automatic prerogative of royal position.<sup>41</sup> Goneril has, after all, commanded that dinner be made ready; why should not the king, hungry from hunting, have it when he likes? That Goneril orders her *servants* to slight the king shows how far she was willing to go, disgracing him, her kin, her father, before outsiders; Regan, literally, went further to show Lear incivility. When he rushes from Goneril’s house to hers, Lear could expect (as any sovereign could) to be received. But Regan did what only a few landowners dared to do to Elizabeth; she left her house empty, so that the king was unable to rest on his progress. That she could do such a thing, unthinkable either to a father or to a sovereign, makes it less incredible that Regan could take such an active part in the blinding of her host shortly after.

In terms of the deference society, Kent’s behaviour is interesting. He is round with the king, but obviously loyal and dutiful. With Oswald he is violent, outraged that a

'clotpoll' should so treat a king, outraged that his clotpoll should so flout *him*, even when he is in disguise. When Cornwall makes to stock him, Kent cannot believe that such a punishment, from which noblemen were securely exempt, could possibly be meted out to him; both he and Gloucester remonstrate with Cornwall in vain, urging him not to punish the king's servant.<sup>42</sup> Kent's reaction, like his overreaction to Oswald, is a remnant of his own aristocratic experience. Such things simply cannot be done to a man like him. That they are somehow prepares us for the outrage done Gloucester within doors.

Indeed, in spite of the control he achieves at stress-points, Kent's reactions are not always under his own control. His outburst against Oswald is that of the old aristocrat, against the falsity of a cowardly, braggart 'new' man, a nobody, a butterfly made by a tailor – 'That such a slave as this should wear a sword!'<sup>43</sup> Kent too lacks deference, lacks 'reverence' for those apparently his superiors; his gorgeous rudeness to Cornwall may endear him to the audience, but it brings him to suffer punishments expressly forbidden to be applied to aristocrats. Still, no servingman Caius could speak as Kent spoke to the Duke and Duchess of Cornwall. For all his willing self-degradation in the service of his degraded king, Kent has difficulty in maintaining his servant role, although the violent language he uses to Oswald is certainly matched by other historical noblemen and gentlemen.<sup>44</sup> That difficulty shows in one very interesting context: Kent evidently did not share his master's fellow-feeling for the Bedlam beggar, who later says of him that he, 'having seen me in my worst estate, / Shunn'd my abhor'd society' (5.3.209–10). When he comes to recognize in the beggar his old friend's son, Kent is joyously reconciled to Edgar – but a remnant of his fastidiousness remained during their time of common disguise.

The question of rank is relevant also to the 'punishment' of Gloucester. Though noblemen could be, and were, put under attainder and executed for treason, they could not be hanged, as Regan suggested, and certainly could not be blinded. Neither were they properly subject to the summary 'justice' meted out by Cornwall (who was himself uneasy about it [3.7.24–7]). The blinding of Gloucester is shocking dramatically, humanly, and socially: the First Servant's reaction to the deed sprang from his outraged sense of decorum as well as from his shock at the cruelty of the deed. The Servant is interesting: he dares give an order to his lord –

Hold your hand, my Lord.  
*I have serv'd you ever since I was a child,*  
 But better service have I never done you  
 Than now to bid you hold.  
 (3.7.71–4; italics mine; cf. 4.2.73–8)

'Ever since I was a child': the Servant's devotion to Cornwall, which should have been automatic, could only be broken by the horror of what he was forced to witness, this wanton brutality against an old man, a peer, and his master's host. To Regan the Servant speaks as boldly,

If you did wear a beard upon your chin  
 I'd shake it on this quarrel,  
 (3.7.75–6)

which causes Cornwall, in turn stunned by the disruption of received decorum in his train, to cry, 'My villain!' Unthinkable – 'My villain!' Obviously Cornwall and Regan,

recognizing their youth, power, and strength, think themselves immune from opposition and above social regulations; but that they too live within the conventions of deference is shown by their shock that a ‘peasant’ should ‘stand up thus!’ Regan is never more herself than when she stabs the man, and from behind. For Regan, as she makes plain later, is sovereign and intends to make the most of her independence. She and her husband simply take over Gloucester’s house; later, in the rivalry for Edmund, she plays her advantageous widowhood against Goneril. Her ‘rights’ are in her own gift, and she can ‘invest’ Edmund with them so that he then ‘compeers the best’ (5.3.69–70). Regan knows her power and uses her precedence for her own ends.

The rise of Edmund, the bastard, the nobody, the new man, is indeed spectacular. He appears at the beginning, acknowledged but unprovided, a victim of his father’s callousness to his predicament. Gloucester says of him, quite calmly, ‘He hath been out nine years, and away he shall again,’ never thinking that a nice-looking young man (who also happened to be his son) might prefer to stay ‘in,’ at court.<sup>45</sup> To Cordelia’s and Edgar’s disinheritance Edmund stands as emblem: we see in Gloucester’s carelessness toward this child of his flesh (whose mother he does not even name) a failure of paternity which slightly prepares us for the king’s abrupt rejection of his child and for Gloucester’s speedy rejection of Edgar later. Cordelia is, of course, incapable of policy altogether, and Edgar’s dissimulations trouble him; Edmund’s nature, on the contrary, mates with his condition to make of him a natural machiavel, a new man, outside the customary values, as careless of privileged lives as his father had been of Edmund’s unprivileged existence. Edmund follows his version of ‘nature,’ an impartial naturalistic goddess who, with other gods unnamed, stands up for bastards. At first, it seems to be only ‘land,’ or position, that he wants – and Edgar’s, not his father’s. That is, as a bastard he wishes simply to stand in his brother’s legitimate place, content at the time simply to be his father’s heir.<sup>46</sup> That Gloucester took it for granted that an heir he must have, is evident from his remarks to Edmund at Edgar’s supposed treachery. Like King Lear and like Henry VIII (who, despairing of a legitimate son, for a while considered legitimating the Duke of Richmond), Gloucester knew the importance of male issue. Thus he can say, almost without thinking, ‘of my land, ... I’ll work the means / To make thee capable’ (2.1.83–5), acknowledging both the need for an heir and the legal difficulties involved in such a transfer of rights. It turns out that Edmund need not – perhaps could not – wait out his father’s natural life; perceiving the means, he betrays Gloucester, and Cornwall takes over the punishment of the old man’s ‘treason,’ sequestering his estates and awarding them to Edmund, who by his father’s attainer becomes Goneril’s ‘most dear Gloucester.’ The young simply cancel out the older generation; later, we can read Albany’s re-alliance from his refusal to accept Edmund’s new title and his references to the old Earl as ‘Gloucester.’ Once an earl, why not more? So Edmund makes his loves to the two queens, evidently indifferent to their relative charms.<sup>47</sup> As the example of the Earl of Essex attests, if one is granted private privileges by a ruler, it is an easy temptation to fancy one’s self as ruler. When Edmund sees the two women dead before him, he says with a pardonable pride but an unpardonable self-centredness, ‘Yet Edmund was belov’d’ – with never a word to spare for them.

Edmund brutally illustrates the ambitious ethos of the new man (in this respect he is unlike Essex and his aristocratic crew, rather men failed in their ranks than new men aspiring to greater noble position); Edmund is the natural talent unsupported by background who makes his way into the chancy world of Renaissance opportunity. Without respect for the privileged, he nonetheless covets their privileges; his parallel at a lower

rank is the opportunist Oswald, a clothes rack, a mock-man, a braggart soldier, a go-between. Whatever can be done for his advancement, Oswald does, in ways that have their real analogue in the disoriented men of Essex's train. Oswald's view of the world as made for him emerges from his horrible remarks just before he blunders upon his own death. Seeing the blind Gloucester, on whose head a price has been set, he cries:

A proclaim'd prize! Most happy!  
That eyeless head of thine was first fram'd flesh  
To raise my fortunes.

(4.6.227–9)

'To raise *my* fortunes'! After this, the audience can see him dispatched without the least qualm. 'Advancement' and 'fortune' are associated with this whole party: Goneril promises Oswald advancement; Edmund purchases the murder of Lear and Cordelia. To his tool, the Captain, he says,

One step I have advanc'd thee; if thou dost  
As this instructs thee, thou dost make thy way  
To noble fortunes; know thou this, that men  
Are as the time is; to be tender-minded  
Does not become a sword; thy great employment  
Will not bear question; either say thou'l do't,  
Or thrive by other means.

(5.3.29–35)

Actually, the 'other means' of thriving is illustrated in the play. When he asks Tom to direct him to Dover, Gloucester gives him a purse, at that point speaking of aristocratic charity not as an automatic duty, but in terms of social justice (4.1.70–1); when he believes himself on the point of dying, he gives Tom another purse, 'in it a jewel / Well worth a poor man's taking' (4.6.28–9). At the end of his 'every inch a king' speech, Lear in turn gives money to the blinded Gloucester, whose condition he recognizes – 'No eyes in your head, nor no money in your purse?' (4.6.146–7) – before he admits to recognizing the man himself: 'I know thee well enough; thy name is Gloucester' (4.6.179). The almsgiving of both Lear and Gloucester has become something more meaningful than that largesse traditional to aristocrats: Gloucester at least begins to speak in full awareness of what destitution means, and to realize in personal terms what money can do for a beggar (4.1.76–7), and Lear has made his astonishing remarks about his poor subjects, about those denied justice by their poverty, and about 'the thing itself.'

For the old men, the realization that some men are poor comes as an immense revelation. Unlike them, and in spite of his naïveté about his brother's motives, Edgar possesses remarkable social experience for a young aristocrat. His description of Bedlam beggars may argue a mere sightseeing visit to a madhouse, but his knowing how beggars 'Enforce their charity' (2.3.9–20) and are 'whipp'd from tithing to tithing, and stock-punish'd, and imprison'd' (3.4.137–9) suggests that he has already paid considerable attention to contemporary customs outside the normal purview of the heir to an earldom. This sort of knowledge, got we know not how, argues for Edgar's ultimate fitness to rule the kingdom: he will not, one assumes, take 'Too little care of this.' As king he will be, it is implied, a just judge, a 'justicer' in reality for whom 'Robes and furr'd gowns' shall not 'hide all,' fulfilling the ancient duties ascribed to an earl, or 'Iudex.'<sup>48</sup>

Edgar may seem surprisingly democratic in this respect, but he is impeccably trained in the old aristocratic ethos – his training offers one explanation, indeed, of how he was so easily duped by his half-brother, from whom he could not imagine treachery; and why he was unable to do his father hurt, sorely though that father had hurt him. Edgar's nature makes him the ideal *preux chevalier* to challenge Edmund; in that short episode of trial-by-combat, when Edmund receives his mortal wound, much is involved. First, Edmund is arrested for 'capital treason' on a charge familiar enough in sixteenth-century England, adultery with the Queen. Second, he is to prove himself by an old-fashioned and quintessentially aristocratic method, the formal trial-at-arms outmoded in the late sixteenth century as a customary proof. The modern equivalent of this sort of combat was the duel, a far more private affair than Edgar's challenge to Edmund; treason trials were judicial, carried on *in camera*. The anachronism stresses the play's archaism; further, it sets the struggle between factions into a simple morality-context, where virtue must be victorious. With this episode we are back in the world of chivalry of which we have heard nothing in the play and to which, under normal circumstances, Edmund the bastard could never have aspired. The new man, intent only on the main chance, ought to have looked on such an outmoded, hazardous process with contempt – but Edmund found himself subtly flattered by being party to such a procedure, the signature, after all, of the aristocratic life which he had usurped.<sup>49</sup> From his answer to Edgar's formal challenge we can hear how attracted Edmund was to the idea of himself as a 'real' aristocrat, the true inheritor of this beautiful, dangerous, elaborate ritual:

In wisdom I should ask thy name;  
 But since thy outside looks so fair and war-like,  
 And that thy tongue some say of breeding breathes,  
 What safe and nicely I might well delay  
 By rule of knighthood, I disdain and spurn ...

(5.3.141–5)

Edmund adapts his language to the archaic formalities of chivalric address; his behaviour assimilates to that of the nobleman born. In this hour of his greatest danger, Edmund is at least offered a chance to act with the full dignity of the high-born, to take up the class-legacy his father did not leave him. Evidently, too, there is something purgative about this gesture; though he speaks to Edgar with a condescension disallowed by the real facts ('If thou'rt noble, / I do forgive thee' [5.3.165–7]) he admits his guilt and acknowledges the ironic justice of fortune's wheel, to which he was bound from the beginning (5.3.173–4). He resolves to do 'some good' by sending to stop the execution of Lear and Cordelia, and is borne off to die with some dignity before that terrible *pietà* of parent and child takes place.

Beside the bodies of Goneril and Regan, the bodies of Cordelia and Lear come to lie. Before our eyes, the greatest family in England is brought to its end. What every patriarch feared – even Lear, who could invoke sterility upon Goneril – has come to pass. From 'the promis'd end,' or 'image of that horror' the survivors must build back to some restoration of order, of justice. Kent refuses the commission of the kingdom, resigning his share to Edgar; Albany, who has begun the play ambitious for rule, is glad to relinquish its responsibility; Edgar, who never wished any such thing, lives to rule, his father's surviving son and godson to the dead king. A dynasty has ended, and a different rule is about to begin.

We do not know what the reign will be like: we can only assume that Edgar, having profited from knowing ‘The worst’ in his own experience, his father’s, and his godfather’s, having travelled the long road from the heath to the combat at Dover, from destitution to sovereignty, will rule as a Lear ‘improv’d.’ Just as at the play’s beginning we are given no hint of what went before the day of division, at the play’s end we are given no warranty of the future, but are simply asked to commit ourselves to Edgar’s experience, sense of justice, and human-kindness. As the play began, *in medias res*, without explanation or motivation offered, to present us with the agonizing exemplum of the complexity of human life and human intents, inexplicable often even to the actors themselves, so it ends without explanation, prophecy, or promise.

That contemporary social problems were analysed and exploited to make up much of the substance of this play may strike us as astonishing, although readers of Shakespeare’s history plays will not be surprised at this further link between them and *King Lear*. Some of the elements of the aristocratic ‘crisis’ – for example, primogeniture, retinue and service, exhibition of power, and actual power – are obvious enough in plot and theme; but other aspects of the problem, on their face less apparent in society, as well as less prominent in the play, turn out to be crucial. I have spoken of the importance of deference to both old and new aristocrats; Stone regards the decline of respect to the nobility as one of the major social changes that class had to face,<sup>50</sup> and, obviously, monarchs had to come to terms, after 1647, with the regicidal ideas subjects could afford to entertain. Stone gives many reasons for the decline of automatic deference to aristocrats – the passing of aristocratic military power, the relative rise of the gentry and the commercial classes with respect to the nobility, the creation of a ‘rival’ ethos involving prudence and frugality rather than openhandedness and magnificence, the venality of some noblemen and the wickedness of others, together with a communications system that permitted open criticism of such foibles and faults. Shakespeare, of course, concentrates, translates, and transvalues this process of devaluation in dramatic and symbolic rather than realistic or reportorial terms. For example, the terrible poignancy of the play’s situation is heightened by the fact that it is Lear’s daughters who, instead of jealously guarding the prerogatives of their rank and family (as would have been the normal ‘real’ behaviour of even unloving daughters), so calculatingly rob Lear of the deference due him. But ‘rule’ enforces high stakes: in his private capacity, Lear might expect family solidarity, but as ruler he risked great dangers particularly from members of his family.

A rather silly way of speaking of this play is to suggest that it dramatizes, as no other piece of literature in the period does, the actual decline of paternal authority that Stone has tried to measure in the English Renaissance.<sup>51</sup> Some of the power noble fathers exercised over their children, as we have seen, they themselves relinquished, and did so gladly for the children’s sake. Some of the decline in parental authority is related to the gradual softening of behaviour between the generations, as noblemen allowed themselves a greater preoccupation with private pleasures and satisfactions. This tendency toward privatism – symbolically crucial in the play, and ironically expressed in Lear’s joy at the prospect of sharing his prison with Cordelia – is apparent also in his early speeches, when he clearly looked forward to retirement in his daughters’ houses, especially Cordelia’s: ‘I lov’d her most, and thought to set my rest / On her kind nursery’ (1.1.123–4). Unlike Richard II, whose preference for private pleasure brought an end to his rule, King Lear had evidently fulfilled his public obligations during his reign; but that he could take such pleasure in withdrawing from public power is one mark of the period in

which this play was written, rather than the primitive period in which it is supposed to have taken place. Obviously, Lear thinks that he has come to deserve the delights of retirement on his own terms.

In England, a mark of respect paid parents by their children was kneeling for their blessing: in a sermon of 1629, far later than this play, Donne wrote, ‘Children kneele to aske blessing of Parents in England, but where else?’ Still later, Evelyn commented on the childish dutifulness of grown children before their parents.<sup>52</sup> Against such a background, Lear’s cursing his daughters (Cordelia, 1.1.108–20; Goneril, 1.4.284–98; 2.4.147, 163–9), and his denial of benison to Cordelia (1.1.264–5) gain great force, and bring the play out of its Celtic pre-christianity into the sixteenth century; so also does his bitter mockery of the forgiveness Regan counsels him to ask of Goneril:

Ask her forgiveness?  
Do you but mark *how this becomes the house*:  
‘Dear daughter, I confess that I am old;  
Age is unnecessary: on my knees I beg  
That you’ll vouchsafe me raiment, bed, and food.’  
(2.4.153–7; italics mine)

The king’s gesture of kneeling to his children is not just a momentary criticism of the children’s behaviour to him, but also a confirmation of the Fool’s sharp words, that he has made ‘[his] daughters [his] mothers,’ and must kneel to them to supplicate the elemental support that fathers without question provide for their children and can in turn expect from them.<sup>53</sup> From Cordelia, much later, he does receive raiment, bed, and food: she becomes his real mother, on whose kind nursery he can set his brief rest. Not only that, Cordelia asserts her daughterhood the while, by asking the blessing he had withheld from her when they parted –

O! look upon me, Sir,  
And hold your hand in benediction o’er me,  
(4.7.57–8)

she says, cancelling out the harshness of that last exchange. And Lear, as befits the moral and social dependant, kneels to her, a gesture which her dutiful daughterhood cannot permit: ‘No, Sir, you must not kneel’ (4.7.59). He is still her father and, for her, still king as well (4.7.44). The significance of these gestures of reconciliation sticks in Lear’s mind, so that when Edmund’s guard carries him and Cordelia off to prison, he welcomes the respite from warlike life and plans, in the safety of the birdcage endlessly to recapitulate his reunion with Cordelia:

When thou dost ask me blessing, I’ll kneel down,  
And ask of thee forgiveness: so we’ll live,  
And pray, and sing, and tell old tales, and laugh  
At gilded butterflies ...  
(5.3.10–13)<sup>54</sup>

The old man’s union with his child is, in fact, their fusion: each as parent blesses the other, who asks blessing as a child. The paternal and filial functions, so long misused,

skewed, and uncommunicated in the play, finally interchange to become one. When it is too late to do more than assert their value, the old bonds are confirmed and made stronger than ever.

Lear becomes reconciled to his child, and to his own paternity. Stable values are corroborated as he comes to rest, for a tragically brief moment, confident of the security of Cordelia's 'bond.' In other ways, Lear shows traces of 'modern' attitudes toward sexuality and paternity, some pleasant and some unpleasant. Although the play's skilful arrangements with its secondary plot both corroborate and counterpoint the main plot, in one social respect Lear and Gloucester, so often alike, differ markedly. Betrayed as he is by the fruit of his adultery, Gloucester might have been expected to denounce aristocratic licence. Not so, however; the harshest comments on sexuality come from Edgar, puritanical in his view of his father's behaviour, and from Lear, who suffers an extraordinary revulsion from sexuality altogether. Although, presumably, aristocratic tolerance of sexual laxity remained greater than that of other social classes, it too underwent some stiffening over the period of the Renaissance, in part because marriages had more to do with love than hitherto, in part because women emerged as a stronger social force within the class, and in part because real pressure was exerted on the nobility by chaplains, ministers, and disapproving puritan commentators on sexual habits.<sup>55</sup> Lear's attacks on Goneril's sexuality, his comments on the 'rascal beadle' standing in for lustful humanity at large, and his backhanded encomium of adultery and luxury all testify to his obsession with his own begetting, but also represent the greater preoccupation of noblemen with the question of sexual standards, earlier rarely considered at all. As a whole, the play condemns sexual licence and casts doubt on the values of sexuality: Gloucester suffers extremely for his early adultery, and their sexuality is one mark of the monstrousness and inhumanity of Goneril, Regan, and Edmund.

In quite a different range of language, another major theme of *King Lear* is tied to the problems of an aristocracy caught between an old ethos of unreckoned generosity, magnificence, and carelessness, and new values stressing greater providence, frugality, and even calculation. The economic alterations characteristic of the period struck the aristocracy, as everyone else; noblemen made various kinds of compromise with new economic exigencies – dowries and jointures, for example, were initiated as prudential arrangements; some noblemen were faced with choosing between imposing higher rents and receiving still the unqualified reverence of grateful tenants. Old-fashioned aristocrats tended to maintain old ways, with their concomitant bonds of service, in the teeth of economic difficulty; newfangled lords often put their relations with their dependants upon a businesslike basis unknown earlier.<sup>56</sup>

We might well expect Goneril, Regan, and Edmund to think quantitatively – to fractionate and even annihilate Lear's retinue, to set prices on Gloucester's head and Lear's and Cordelia's lives; we might expect, too, that Oswald and the Captain should seek their material advancement by the deaths of these great ones. Such people represent and act out their lives in terms of the material values of both power and accounting. They can always go one arithmetical step farther – 'What need one?' 'Till noon! till night, my Lord; and all night'; 'Hang him instantly.' – 'Pluck out his eyes.' They know the minimum and the maximum – Goneril calculates to the last, assuring her mortally wounded lover that he had not had to answer the challenge of 'An unknown opposite.' Their naked calculation reduces all human values to quantitative measurement and thus easily loses sight of the 'need' underlying such values, to slip easily over into the utmost barbarity. But the fractionating by Goneril and Regan of their father's train, after all, echoes the

same habit of mind and spirit exercised by the king himself, who set a price on his daughters' love and divided his kingdom in relation to their assertions of quantitative devotion. Again and again, characters take account, reckon their own and others' emotions: even the saintly Cordelia (perhaps pedagogically) speaks to her father of bonds and fractions – half her love for her husband, half left with her father. Gloucester tells Kent that Edgar is 'no dearer in [his] account' than Edmund; Kent speaks metaphorically of fee, as does the Fool later. For Lear, bestowing his disinherited daughter as a bad investment, Cordelia's 'price is fallen'; for France, brought up to admire magnanimity, 'She is herself a dowry.' Later, when Goneril's husband tells her she is not 'worth the dust which the rude wind / Blows in your face' (4.2.30–1), we realize how much he has begun to learn of calculation's values. Finally, the language of number is dissolved into paradoxes of 'all' and 'nothing,' thereby running out into areas of meaninglessness and incalculability. Need cannot be reasoned, or measured – nor can love, fidelity, or truth. It takes Lear a long time to come to that lesson: on his way to it, he can still say to Goneril,

Thy fifty yet doth double five-and-twenty,  
And thou art twice her love,

(2.4.261–2)

only to hear Regan ask a moment after, 'What need one?' Reduced to nothing, he has reached the point of non-support implied when the Fool asked Kent, 'Prithee, tell him, so much the rent of his land comes to' (1.4.140–1) – that is, to nothing. Lear, like Gloucester, passes through a stage of thought involving 'distribution' and 'superflux,' the language of justice in which he arraigns his daughters and criticizes the exercise of authority. He must evidently pass through that stage, which is after all simply another kind of reasoning of need (exposed in Goneril's hard statement of power, 'Who can arraign me for't?')<sup>57</sup> to realize that there are senses, good and bad, in which 'None does offend, none, I say, none' (4.6.170) – and in which even those with cause to harm or punish reject the bargaining code implied by the concept of 'cause': 'No cause, no cause.'

In all kinds of ways, in many ranges of expression and of art, this play passes through ordinary human experience to insist upon the greatness and the abyss of human life. From the simplest, and often the silliest, aspects of human behaviour, its morality is made to open upon an almost metaphysical amplitude. The play forces upon us a realization of the limitations of being human, as well as of humanity's potentiality for transcending and even transvaluing itself. In one particular literary type, the figure of the Fool, we have an example of this transfiguration from naturalistic representation to reverberating symbol. Fools, as the books assure us,<sup>58</sup> were typical appendages of both medieval and Renaissance courts. Interestingly enough, in England James I (famous for his fools and his foolishness, though perhaps not yet for the latter when this play was first put on) was the last English monarch to patronize professional fools; they too went out in the peculiar, muted modernization of life resulting from the War and the Interregnum. Of the figures in the play, the Fool most of all moves along the gamut from morality to naturalism: the Fool speaks both *in propria persona* and in the stylized persona of the official fool, sometimes 'all-licens'd' and satirical, sometimes sad and despondent, sometimes mixing modes of actuality and metaphor. His 'prophecy' is one such mixture (3.2.81–95); at first he seems to project a utopian world 'When priests are more in word than matter,' at other times a world upside down in unpleasantness – 'When brewers mar their malt with water.' From that point on, the prophecy jumbles ideal with deformed

elements, and we are never sure what the measuring-rod is. Why should it be better, or worse, if ‘No heretics’ are ‘burn’d, but wenches’ suitors? Though it would indeed be utopian if ‘No squire’ were ‘in debt, nor no poor knight,’ and if usurers could ‘tell their gold i’ th’ field’ secure from theft, still it is an imperfect England that harbours usurers at all; there is, too, no particular virtue in bawds’ and whores’ building churches. The world of the Fool’s prophecy is no schematic world of handy-dandy, where evil systematically replaces good or good evil: the Fool recognizes, even in this utterance, that the world in which he lives is deeply confused. His words to Kent in the stocks, too, both the prose comment on fortune and favour and the little poem reiterating the theme, seem to say that wise men ought not to follow declining patrons; yet he calls those who fly such patrons ‘knaves’ and insists with pride upon his own ‘foolish’ loyalty to his powerless lord. The Fool knows the ways of Goneril and Regan – and rejects them. Perhaps it is not so grotesque, after all, that he is one of the justicers of the crazy King’s Bench which arraigns Goneril, the joint-stool in a symbolic gesture whose meaning the real woman could never recognize. Like Erasmus’ Folly, Lear’s Fool knows truth from fiction, and knows their complicated interdependence as well.

The Fool disappears – from the play as from English courts, and for just the reason Lear’s Fool gives: ‘Lords and great ones’ usurp his monopoly. The Fool’s comment is extremely shrewd. For a time folly was the monopoly, granted by monarchs, as the exclusive privilege of fools, but as the social distinctions upon which such regulated mockery depended fell away, so everyone ‘snatched’ at all privilege, even the dubious one of folly. Along with the gentleman and yeoman of the riddle, even a king can be a fool. When that happens, deference offers no defence against folly, and professional fools must be got rid of.

Lear becomes, by his own admission, a fool – an old king, caught in the conflict of one ethos with another, trying to be fair by the new standards and yet relying on the privileges granted by the old, becomes a child again, with all the nonsense and the clarity of a child. He fails in the impossible task of doing right by a double standard he cannot even define, but after he *has* failed, he comes to understand, reject, and transcend those standards to assert a vision even truer than the normal ones, a reason purer than the customary assessments of either need or logic, and a charity greater than even royal munificence could show. One way we can perceive Lear’s poignant predicament and accomplishment is to reckon it by the real problems that faced his peers, as Stone’s book enables us to do. Shakespeare has not let Lear off easily; as so often, the playwright, for all that his heart lay with the old mores of abundance, kindness, and carelessness, scrupulously shows the problems and limits of such a code. Magnanimous noblemen were careless of costs, wasted human potential in their easy acceptance of the old customs. Ambitious ‘new’ noblemen may have corrected some of the errors of their conservative elders – but the cost of their correction, as this play demonstrates, is prohibitive. We are forced to acknowledge that there is a crisis of values in this play, and that neither ethos will do – and, though there is no doubt which side the playwright preferred, he was too scrupulous to present the problem simply as a morality, or simply as a conservative argument for ‘order’ and ‘degree.’ He saw both the practical rightness of the position Goneril, Regan, and Edmund abused, and the social grace of the position Lear and Gloucester exploited. But however we come to love and pity the old aristocrats, we know that their unconsidered acceptance of their own values was too expensive, in terms of their own families. Those lapsing fathers counted on unexamined social custom for protection against everything, even against the mysteries of hard hearts and calculating

brains. The moral weight of the play comes down decisively with the advocates of old values, but not without having hesitated long enough to show how crucially those values fell short.

### Notes

- 26 *Crisis* 42–9, 50, 187 ff.
- 27 *Ibid* 44–7, referring to W.K. Jordan's voluminous work. As Stone points out, although noble testamentary charities were relatively smaller than those of the merchant class, or the whole 'middle' class, there was some reason for this apparent limit on almsgiving by the facts of noble inheritance. All noblemen, in effect, had fixed heirs with respect to the bulk of their estates, and middle-class patriarchs, with no such restrictions on legacies, were free to dispose of their estates as they wished, or as they thought God wished.
- 28 See *Ibid* 47–8, for some samples of noble support to others.
- 29 *Cyvile and Uncyvile Life* 35, for charity properly bestowed on beggars; Humfrey *The Nobles* II, on liberality; III, on apparel, and on beggars.
- 30 Stone *Crisis* 167–9, 171.
- 31 The division is all the same ambivalent, though: apparently Lear had already divided his kingdom among his co-heiresses, reserving simply the part 'more opulent' for his favourite daughter. Otherwise, principally to prevent potential strife between these sons-in-law, the division appears to have been conceived as just. The relation of the rhetorical contest among the daughters, then, to the original political division remains, like so much else in the play, mysterious and irrational.
- 32 See Stone *Crisis* 167, 197.
- 33 *Ibid* 170–5.

- 52 Quoted in *ibid* 592.
- 53 See, for example, Robert Cleaver *A Godlie Forme of Household Government* (London 1598) for the duties of parents to children and of children to parents.
- 54 This quotation actually has one of the few direct references to ‘the court’ – ‘Who’s in, who’s out’ – in the entire play.
- 55 See Stone *Crisis* 660–9; and *Certaine Sermons*, homily against adultery.
- 56 Stone *Crisis* 273–334, for estate management.
- 57 F.T. Flahiff has written, in an unpublished paper, about the separation in this play of judgment and power: Lear’s arraignment of his daughters on the heath is purely symbolic, and the blinding of Gloucester is done without the ceremony of justice.
- 58 Enid Welsford *The Fool* (London 1935); Barbara Swain *Fools and Folly during the Middle Ages and the Renaissance* (New York 1932).

# CHAPTER 11

## Theory in Practice

### *Social Class in Alice Munro's "Sunday Afternoon" and "Hired Girl"*

*Isla Duncan*

Many of Alice Munro's stories concern the lives of poor people, and several concern moments of tension between them and those with more money and social power. In this essay, British scholar Isla Duncan discusses two stories that focus on clashes between social classes and explores changes Munro made in one of the stories to sharpen its social criticism. Dr. Duncan teaches Canadian Literature and contemporary women's writing at the University of Chichester.

In an interview with Alice Munro published over twenty years ago, Geoff Hancock suggests to the writer that her stories 'contain a veiled social commentary', adding that there is a 'kind of class system at work' in which 'we go down the ladder in Hanratty to the other side of the tracks' (Hancock 1987: 205).<sup>1</sup> In reply, Munro explains that when she returned to her homeland, Huron County, having spent a long time away from it in British Columbia, she became instantly aware of and 'awfully interested in' class differences (p. 206). That class distinctions matter to some of her readers is richly illustrated in an anecdote Munro tells Hancock about the student who, during a seminar on *Lives of Girls and Women* (1971) taught by a friend of Munro, declared that 'the class should know that Alice Munro came from the wrong side of the tracks' (Hancock 1987: 206).

The arrogance and petty-minded snobbery displayed by this attitude are recurring traits in the less attractive Munrovian characters, from her earliest fiction to her most recent. There are several instances of what Hancock refers to as 'social commentary' in *The Beggar Maid* (1980), for example in the title story, where Patrick dismisses Rose's home town as a 'dump' (Munro 1980: 91) and does not disguise his contempt for it and for Rose's family. In 'Chaddeleys and Flemings: Connection', from *The Moons of Jupiter*

*Original publication details:* Isla Duncan, "Social Class in Alice Munro's 'Sunday Afternoon' and 'Hired Girl'" from *British Journal of Canadian Studies* 22.1, pp. 15–30. Liverpool University Press, 2009. Reproduced with permission from Liverpool University Press.

(1982), Richard, a character similar to Patrick, wants his wife (the narrator) to be 'amputated from [a past] which seemed to him such shabby baggage' (Munro 1982: 13). He is derogatory about her accent, her native town and the relatives who come to visit her, referring to her aunt as 'a pathetic old tart' (p. 17). Munro's continuing concern with social class is evident in later fiction, most notably in 'Family Furnishings' from *Hateship, Friendship, Courtship, Loveship, Marriage* (2001), a story whose female narrator chronicles events in 'a ramshackle background' that her fiancé disapproves of, regarding all 'failures in life ... as lapses' (Munro 2001: 87).

The writer's humble upbringing in Wingham, Ontario, is chronicled by Munro herself (notably in 'Working for a Living'), while further insights are gleaned from biographies and the thought-provoking memoir, published in 2003, by Munro's eldest daughter. From such sources we learn that before leaving for university, the young Alice Laidlaw worked as a maid for a family in Rosedale, an affluent neighbourhood in Toronto. This family also owned a summer cottage on an island in Georgian Bay, near Pointe au Baril (Thacker 2005: 82). Munro explains to Catherine Sheldrick Ross that when working for her rich employers, she 'felt set apart from the people around [her], and the experience sharpened [her] sense of class differences' (Ross 1992: 46). The writer also confides to Eleanor Wachtel: 'It was probably a very important experience that way, because I saw all sorts of class things... Being a servant in a household ... you see things about you and them – the barrier – which totally surprised me' (Wachtel 1991: 49).

The 'barrier' between wealthy employer and poor servant is explored in 'Hired Girl', a story anthologised in *The View from Castle Rock* (2006) but first published twelve years previously in the *New Yorker*. Munro's revisions of this story are worthy of detailed analysis, for, as I shall argue, they reveal not only her sedulous craft, but also her purposeful desire to make social class and its concomitant inequities a more salient theme in the later work. In its depiction of the narrator's fierce resentment of her status, and her calculated antagonism towards her employer, the narrative differs from Munro's earlier treatment of the 'social embarrassment' (Coldwell 1983: 537) that coming from a poor family causes characters such as Del, Rose, Janet and the unnamed narrator of 'Family Furnishings'.

In *Remnants of Nation: On Poverty Narratives by Women* (2001), Roxanne Rimstead argues that, while Munro in her fiction often 'draws attention to poverty and cross-class experiences', she does so with 'a distanced gaze' (Rimstead 2001: 105), from a position that is intended 'to control and survey the scene of poverty for its representational and aesthetic impact' (p. 216).<sup>2</sup> In this respect, Rimstead asserts, her perspective is unlike that of Margaret Laurence, whose fictive portrayals of the poor are more political, and more engaging of the reader's empathy. It seems to Rimstead that Laurence, in, for example, *The Diviners* (1974), invites the reader to share in the sense of outrage at the poverty that is being described, and the social injustices exposed as unacceptable. Rimstead's remarks on the 'distanciation' of Munro's gaze (p. 105) are more pertinent to Munro's earlier work, particularly *The Beggar Maid* (1980), where the protagonist Rose is shown playing 'an onlooker's part' (Munro 1980: 42) in the theatrical presentation of a past variously transformed or disguised, or offered as diversion to a dinner party audience (p. 91). In her acquiescence to the 'obedient image' (p. 85) of a less vulgar self, prescribed by rich, snobbish Patrick, Rose does not question why his family needs their ostentatious wealth, their abundant luxury; instead, she awkwardly pretends to be at ease amid such surroundings (pp. 86–8), even although, as the narrator explains, she 'was destroying herself', allowing her accent to 'be eliminated, her friends ... discredited and removed' (p. 85).

In 'Hired Girl', there is little evidence of this self-conscious shame about a less privileged background. Indeed, in her revision of the story, for *The View of Castle Rock*, Munro presents a narrator who regales her addressee with 'poverty narratives': these, however, are not delivered for their aesthetic value, but as weapons of instruction and retaliation. In terms of its setting and characterisation, the story is reminiscent of a much earlier piece, 'Sunday Afternoon'. Although it is sometimes cited, briefly, as exemplary of her early fiction, 'Sunday Afternoon' has not attracted sustained critical attention. George Woodcock, in his essay on realism in Munro's fiction, describes the story as a 'little social study, highly class-conscious for a Canadian writer' (Woodcock 1986: 240). The class-consciousness is immediately discernible in the story's first paragraph, in the presentation of the employer, Mrs Gannett, as leisured and glamorous: 'flashing the polished cotton skirts of a flowered sundress', she enters the kitchen where her maid, Alva, is 'washing glasses', and delivers instructions on what and how to serve the guests, 'the usual people' who have arrived for lunch (Munro 1968: 161).

The incongruity of Alva in Mrs Gannett's world is systematically developed in a series of discrepant juxtapositions and contrasts. Thus, the 'tones of shrill and happy outrage' Alva hears from the patio, where the guests are drinking freely, make her keenly aware that she is not permitted 'to show a little relaxation and excitement' (p. 163). The narrator's wry, bathetic observation, that 'Of course, she was not drinking, except out of the bottoms of glasses' (p. 163) conjures up the image of an unaccustomed luxury, guiltily snatched. Alva keenly feels her own gaucheness, in her utility uniform, and in the 'heavy, purposeful, plebeian sound' her 'white Cuban-heeled shoes [make] on the stones of the patio ... in contrast to the sandals and pumps' (p. 164); the description of the room she occupies, tellingly above the garage, continues the theme of inconsonance, for it is the 'only place in the house where you could find things unmatched, unrelated to each other' (p. 167). The stark distinction between the servant's life and that of her employer is encapsulated in two successive sentences: 'She could not actually leave the house; Mrs Gannett might want her for something. And she could not go outside; they were out there' (p. 165). The sentences are similarly constructed, for both consist of coordinate clauses, the first expressing a negation, the second explaining it. By such construction, Munro conveys two antitheses: between freedom and incarceration, and between inside and outside.

The story is told by an extradiegetic narrator, but there are several occasions when Alva becomes the subject of the focalisation, such as when the reader learns of how Mrs Gannett summons her maid, using her voice like a bell: 'It was queer to hear her call this, in the middle of talking to someone, and then begin laughing again; it seemed as if she had a mechanical voice, even a button she pushed, for Alva' (p. 164). The informality of diction ('it was queer'), the use of the proximal deictic 'this', and the reformulation in the similes, are all hallmarks of free indirect discourse, and they serve to instantiate Alva's perspective on events. It is clear from glimpses of this perspective that Alva feels she is of little consequence, a sort of inanimate labour-saving device available to order.

Alva is further belittled at the story's conclusion, when she is the subject of the sexual advances of Mrs Gannett's cousin, although the interpretation of this encounter, as with many endings in Munro narratives, is indeterminate. The narrator explains that Alva is somehow 'eased' by 'the stranger's touch' (p. 170) and excited by the prospect of meeting the young man once again, at the Gannetts' cottage, later in the summer. The reader may be heartened by the protagonist's pleasure in a new 'lightness and confidence she had not known in this house' (p. 170); Ildiko de Papp Carrington, however, reads Alva's

experience as further evidence of inequality in the relationship between privileged class and servant (Carrington 1989: 105), and I would agree. The story ends on the word 'humiliation': Alva is described as looking forward to a 'tender spot, a new and still mysterious humiliation', and this description surely undermines the confidence she feels after the 'stranger's touch' (Munro 1968: 170). A closer study of Alva's meeting with the amorous young man exposes vestiges of both social and sexual inequality.

The nameless cousin is from 'Mrs Gannett's side of the family' which, as noted at the start of the narrative, is 'the right side' (p. 161); interestingly, he is twice referred to, in the space of four lines, as 'Mrs Gannett's cousin', the repeated relational term somehow reinforcing his social credentials. He has his cousin's peremptory authority, one he flirtatiously wields, demanding that Alva 'Say thanks' (p. 170) when he passes her a glass to wash. After he has kissed her, he returns to the patio, to the outside Alva is excluded from, walking 'with the rather graceful, mocking stealth of some slight people' (p. 170). Even in such a brief vignette one can discern the assured and practised condescension that Alva is subject to throughout the narrative.

This early story, in its depiction of the barrier between privileged employer and underprivileged servant, foreshadows the fuller exploration of that relationship in 'Hired Girl'. Its narrator is a more complex, and more substantially developed character than Alva. At the very outset, she makes it clear that she is not comfortable with the role of maid, that she resents her status, and dislikes her affluent employer, Mrs Montjoy. In the revised version of 'Hired Girl', published over a decade after its first appearance in *New Yorker*, Munro intensifies the narrator's feelings of discomfort and antipathy; she widens the chasm between employer and maid, holding up to scrutiny and ridicule the mores and social pretensions of Mrs Montjoy and her summer cottage guests. It is primarily through the commentary of her feisty, sharp-eyed narrator that Munro can more critically examine that chasm.

There are several differences between the *New Yorker* version of 'Hired Girl' (1994) and the one published in the anthology *The View from Castle Rock* (2006). Drawing on the disciplines of literary linguistics, pragmatics and politeness theory, I consider these differences, focusing on the presentation of Mrs Montjoy and her treatment of the narrator; the narrator's interaction with other characters; her commentary on her status and situation, and the nature of her self-knowledge at the conclusion. In her revision of this narrative, Munro, I shall argue, sharpens the narrator's consciousness of class difference, making it a more salient theme for the reader.

The authority of the employer and the passivity of the employee are reflected in the syntax of the initiating sentence – 'Mrs Montjoy was showing me how to put the pots and pans away' (Munro 1994: 228) – in which Mrs Montjoy is the subject, the narrator the indirect object.<sup>3</sup> The reader learns that the narrator had been collected from Pointe au Baril station some days before and had been brought to the island by boat. The unflattering description of Mrs Montjoy is common to both versions, but while in the first the narrator concedes that her employer's 'commonest expression [was] one of impatience held decently in check' (Munro 1994: 82, emphasis added), in the second the judgement is harsher, for the 'impatience [is] barely held in check' (Munro, 2006: 229, emphasis added). The difference in adverbial choice is sufficient to suggest that the woman's 'impatience' verges on irascibility. It is during the journey from Pointe au Baril that Mrs Montjoy asks the narrator if she is 'Feeling a tad sick?' (p. 229), a question that differs from that of the earlier version, in the addition of 'a tad', an adverbial that in speech act theory would be categorised as a 'hedge', a qualification or toning down of an utterance.

The *Oxford English Dictionary* determines the status label of this lexical item, when it means ‘a little’ or ‘slightly’, as ‘*colloq.* (orig. and chiefly *N. Amer.*)’, its first recorded usage being in 1940.<sup>4</sup> All the citations given are from US or Canadian sources; most of the later ones exemplify the same facetious understatement discernible in Mrs Montjoy’s question.

In both versions of the story, the narrator notes that this question is accompanied by ‘the briefest possible smile … like the signal for a smile, when the occasion did not warrant the real thing’ (Munro 1994: 82, and 2006: 229). The inappropriateness that the narrator implies derives from the fact that Mrs Montjoy is flouting one of the four maxims of conversation that, according to the philosopher H.P. Grice, express the general cooperative principle in language (Levinson 1983: 101–18). The four maxims in Grice’s theory of conversational implicature (the additional levels of meaning beyond the semantic meaning of the words uttered) refer to quantity, quality, relation and manner; in the context of Mrs Montjoy’s question, quality is the pertinent term.

*The maxim of quality*

Try to make your contribution one that is true, specifically:

Do not say what you believe to be false.

Do not say that for which you lack adequate evidence.

(Levinson 1983: 101)

The shivering narrator is holding on to the sides of a boat ‘flung out on the choppy evening waters of Georgian Bay’ (Munro 2006: 229). It is clear that she is unwell; yet Mrs Montjoy makes her jocular, pseudosolicitous enquiry, perhaps, the narrator suspects, because she senses fear rather than nausea. In any case, she has flouted the maxim of quality, firstly by asking a question whose answer she must know, and, secondly, by deliberately qualifying and diminishing her concern, to the extent that it is difficult to construe as heartfelt. The fleeting, perfunctory smile seems to undermine the genuineness of ‘Feeling a tad sick?’ a question that is pragmatically anomalous because it ‘contradicts the standard quality implicature, that one believes what one asserts and [that] when one asks a question, one may standardly be taken to be asking sincerely’ (Levinson 1983: 105). I would argue that the insertion of the informal, hedging, and often intentionally ironic ‘a tad’ serves to expose this character’s insincerity.

There is abundant evidence, in both versions of the narrative, that Mrs Montjoy regards the narrator as someone of little consequence, merely a maid hired for summer help. In the later version, Munro makes the older woman’s attitude towards her maid seem more functionalist; for example, when the narrator overhears Mrs Montjoy talk to a guest about the problems they share, keeping domestic staff happy, she remembers her comment: ‘So you just make allowances … You do the best with them you can’ (Munro 2006: 237). In the same scene in the *New Yorker* story, the statement of resignation reads: ‘You do the best you can’ (Munro 1994: 84). The third person pronoun reference reduces the humanity of the subjects, presenting them as an undifferentiated mass. Another remarkable instance of Mrs Montjoy’s tendency to refer to her maid as inconsequential occurs in a scene when she helps her husband find a book that he has mislaid. She advises him, correctly, that he has left it in the living-room, where the narrator is working. Because she has picked it up, and is eagerly reading it, Mr Montjoy thanks her, remarking on the ‘queer kind of book’ that he considers it to be (it is Isak Dinesen’s *Seven Gothic Tales*).

At this point, his wife enters the room, declaring: 'We'll have to get out of the way here and let her get on with the vacuuming' (Munro 2006: 242). In the *New Yorker*, Mrs Montjoy's words are: 'We'll have to get out of the way here – Elsa has to get on with the vacuuming' (Munro 1994: 85). There are two noteworthy points to be made here, and both serve to substantiate my claim that, in her later presentation of Mrs Montjoy, Munro wishes to accentuate her lack of empathy, her superiority and her rudeness.

First of all, the reader will note that, in the earlier version of the story, the narrator has a forename that is not retained in the later one. This subsequent anonymity is, I will argue, of particular importance when the narrator is addressed by one of Mrs Montjoy's flirtatious male guests. For the moment, it is the use of the third person pronoun that merits my attention. As the writer has decided that her narrator will be nameless, she has to opt for pronominal reference, but its use in this scene is marked. The syntax of the utterance makes it even more so, for, while in the earlier version, the narrator is the subject of the second clause, in the second she has become the object, a change in syntactic relations that reduces the narrator's agency.

The use of the third person pronoun in this speech event is revealing. The situation consists of two speakers, with a third party present, who is spoken of by one of the interlocutors. In his discussion of deixis, the general term for the various lexical and grammatical features that relate utterances to contexts, Lyons reminds us of the exact nature of the grammatical category, third person, in relation to first and second:

It is important to note that only the speaker [first person] and the addressee [second person] are participating in the drama. The term 'third person' is negatively defined with respect to 'first person' and 'second person': it does not correlate with any positive participant role. (Lyons 1977: 638)

In *Personal Pronouns in Present-day English* (1996), the first book-length analysis of the subject, the British linguist Katie Wales examines third person forms and speech roles. She notes that there are many kinds of communication, in various contexts, when the role of listener is shared between third party and addressee, and that what distinguishes the latter from the former is that the addressee knows s/he is being addressed. Wales explains that '[t]his third party may be referred to exophorically, for some reason, by the speaker' (Wales 1996: 54). In the social code of politeness, Wales observes, a person's name is preferred to the pronoun, when the referent is present; when the speaker breaches this code, s/he may do so out of embarrassment, or perhaps animosity (p. 44). When Mrs Montjoy refers to her maid exophorically, excluding her from any 'positive participant role', she breaks a fundamental maxim of politeness. This is not because she is embarrassed, or feeling particularly inimical, but because she regards the young woman as irrelevant, to the company and to the conversation.

Like Mrs Gannett in 'Sunday Afternoon', Mrs Montjoy is also anxious to establish the boundary between the hired girl's milieu and that of the family and guests. The narrator is quickly made to understand that, when she is not working, she cannot occupy the same space as the adults she serves. When she carries her own meal out to the deck from the kitchen, she is reminded by her employer, with elliptical urgency: 'Three plates there? Oh, yes, two out on the deck and yours in here. Right?' (Munro 2006: 237). The proximal deictic, 'here' represents, as it did for Alva, the domestic sphere where the maid belongs. This particular episode, new to the 2006 version of 'Hired Girl', further illustrates the elaborate demarcation between the territories of servant and employer that seems more sharply defined in Munro's revision.

In her permitted interaction with Mrs Montjoy's ten-year-old daughter, Mary Anne, the narrator can express her resentment at this delimitation; what Munro remembers, from her own experience, as a 'setting apart' from others. When she is asked by the younger girl about the sports she is best at, the narrator begins, 'Everybody I know works too hard to do any sports' (p. 238), and then she launches into a detailed account of the poverty-stricken, work-beleaguered lives of people in her hometown. Her 'exaggerations or near lies' (p. 239) allow her to give vent to a sense of injustice at the chasm in wealth and opportunity between her own class and that of the Montjoy family. While in the earlier version the narrator acknowledges that her hometown had once boasted a tennis court and a golf course 'in the thirties' (Munro 1994: 84), in the revision the period is more precisely named 'the Depression' (Munro 2006: 239), the initial capital indicating its historical importance as a time of industrial and financial decline. The referential term 'the thirties' does not have the same emotive impact.

It is in order to achieve maximum impact on the young and impressionable Mary Anne that the narrator dramatises and exaggerates the hardships of her own way of life. But she also recognises that another purpose is to 'make clear the differences' (p. 241) between her home circumstances and those of her employer's daughter. It is this urge to differentiate between one way of life (characterised by affluence and privilege) and another (characterised by penury and denial) that, I think, furnishes evidence of a less objective, more empathetic view of poverty. Roxanne Rimstead maintains that Munro's 'gaze ... towards the poor' is 'so distancing' as to suggest 'powerlessness and neutrality' (Rimstead 2001: 105); in addition, she opines that her protagonist's or narrator's recollections of an impoverished upbringing are a source of 'primarily personal shame, melancholy or aesthetic enthralment', rather than as 'matters of political importance and community alliances' (p. 215). But in 'Hired Girl' there is little vestige of the narrator's shame or sadness; on the contrary, she fulminates against her listener's ignorance of how less fortunate people, namely, the self-sufficient people of her community, cope with privation.

She succeeds in stimulating her listener's conscience, as well as her inventiveness: "That isn't fair," said Mary Anne. "That's awful. I didn't know people could eat dandelion leaves." But then she brightened. "Why don't they go and catch some fish?" (p. 240). The equivalent passage in the 1994 story is exactly the same, except for one revealing verb phrase: by substituting 'brightened' for 'added', in the original, Munro makes Mary Anne's suggestion seem like part of an entertaining parlour game, where the most imaginative ideas are awarded points for ingenuity. Try as she might, the young girl cannot envisage the kind of poverty that the narrator describes, for it is so far outwith her cosseted experience. While the narrator acknowledges that her tales are exaggerated, she is certain that 'not one of these statements – even the one about the dandelion leaves – was completely a lie' (p. 239).

The narrator's intention to widen the gulf between two households, between two classes, is confirmed in the following statement, the climax to her evocative description of the family kitchen at home:

[I]t seemed as if I had to protect it from contempt – as if I had to protect a whole precious and intimate though hardly pleasant way of life from contempt. Contempt was what I imagined to be always waiting, swinging along on live wires, just under the skin and just behind the perceptions of people like the Montjoys. (p. 240)

The corresponding section from the 1994 version reads:

[I]t seemed that I had to protect it from contempt – that I had to protect a whole precious and intimate though often unpleasant way of life from contempt, which I supposed to be nourished in the icy hearts of people like the Montjoys. (Munro 1994: 85)

Munro has effected important changes in her revision. Firstly, she has made the word 'contempt' stand out: this she has done by using a rhetorical device called anadiplosis, which is the repetition of the last word of one clause at the beginning of the following clause (Corbett and Connors 1999: 392). Because the normal sequence of clause elements (subject–verb) is subsequently reversed, the word 'contempt', the object, is foregrounded, as it is not in the original. Indeed, attention is somewhat deflected in the *New Yorker* version, as a result of the reformulation initiated by the dash. Another change worth commenting upon is the greater elaboration of the *source* of the contempt. While Munro originally locates it in the 'icy hearts of people like the Montjoys', where it is 'nourished', in her revision she presents the contempt as pervasive, a latent, reflexive reaction, always there beneath the surface.

I believe that the changes that Munro has wrought in this scene underscore the narrator's angry defensiveness of her own class, and they heighten her antipathy towards wealthy, privileged people she thinks have no understanding of, or respect for, her class. The hired girl is presented as a more politically motivated spokeswoman for her family and class, endeavouring to ascribe dignity to their struggles.

In the narrator's interaction with some of Mrs Montjoy's summer guests, their lack of respect is clearly discernible. Her encounter with the 'courtly' Mr Hammond exposes the same kind of patronising sexual arrogance displayed by the employer's cousin in 'Sunday Afternoon'. The changes Munro has made in her revision intensify the condescension. In the earlier story, the character, having entered the kitchen for more gin, addresses the narrator firstly as 'Minnie' but, after being told by his wife that Minnie is not her name, addresses her, several times thereafter, as 'Elsa'. In the revised version, as I explained above, the narrator is purposefully nameless; so the correct forename is not given, although Mr Hammond is informed that he is mistaken in calling the young girl 'Minnie'. He continues to do so, however, speaking 'in an artificial, dreamy voice' that the narrator recognises as 'deeply sceptical and sophisticated' (p. 246, p. 247). In his first few addresses to the narrator, he uses what he thinks is her forename five times; over 20 per cent of his spoken words consist of the vocative. Such a high proportion of these nominal elements is unusual, in an exchange between strangers.

In a corpus-based paper he describes as 'a more focused treatment of vocatives in present-day English' (Leech 1999: 108), the grammarian and linguist Geoffrey Leech sub-divides vocatives into semantic categories. The address form 'Minnie' would be termed a 'familiarised first name' and it is the vocative type that predominates in the linguistic corpora amassed by Leech and his colleagues. In his analysis, he notes that 'familiarising vocatives, including first-name address, typically signal acquaintanceship or friendship' (p. 116). In this scene from 'Hired Girl', the vocative is linguistically marked, for its repetition is excessive, and it is used by an addresser who is *unknown* to the addressee. Sara Mills points out that while first names are exchanged between interlocutors on equal terms, 'those in asymmetrical power relations will use differential naming patterns' (Mills 1995: 110). Such asymmetry certainly exists in the relationship between the young maid and the much older, more sophisticated, wealthy man whose

meals she serves. I would argue that Munro, in her revision, portrays the character of Mr Hammond as more patronising, and more inappropriately flirtatious, so that the asymmetry is magnified. In the *New Yorker* story, he similarly overuses the vocative, but he addresses the hired girl by her given forename when told, and when he reverts to ‘Minnie’, he appears to do so because he is inebriated. There is not the same sustained, mocking condescension in his manner.

Immediately following the episode in the kitchen, the narrator recounts another belittling experience at the hands of the Montjoys’ guests. As she heads to her room in the boathouse, she meets a couple of young guests, girls her own age, who are returning from their swim. By their behaviour towards the narrator, they make plain their belief in their social superiority. The *New Yorker* version reads: ‘They stepped aside when they saw me but did not quite stop laughing. They made way for my body without looking at me’ (Munro 1994: 87). The revised version is as follows: ‘They stepped aside politely, not to drip water on me, but did not stop laughing. Making way for my body without a glance at my face’ (Munro 2006: 248). The changes are not radical but they do make more of the guests’ dismissive attitude towards the maid. For example, in the earlier version, the adverb ‘quite’, termed a ‘downtoner’ by Quirk et al. (1990: 597), denotes that the laughter does not cease but it is diminished; in the latter excerpt, however, there is no attempt to suppress it. In both versions, the narrator comments on the girls’ failure to make eye contact with her, but in the passage immediately above, the rudeness appears more of a slight, for the supplementive clause on its own separates the ignoring from the stepping aside, somehow making it more of a consequent and conscious act.

The narrator’s commentary on her relationship with Mrs Montjoy, her family and her guests, constitutes a remarkably accurate assessment of her social status in the household. She not only identifies material differences between her own rural background and the affluent world of the summer cottage in Georgian Bay, but she also becomes aware of attitudinal differences, noting how strange it is that Mrs Montjoy’s daughter should bemoan her intelligence, when, in the narrator’s township, clever boys are more likely to be looked on with suspicion, even disparaged as ‘sissies’ (Munro 2006: 231). Although she acknowledges that she feels incongruous in the island setting, sensing the ubiquitous presence of ‘an indolent reminder. *Not for you*’, she will not admit to feeling ‘humbled or lonely, or that [she] was a real servant’ (p. 232). One assertion she makes towards the end of the narrative epitomises both her pride and her astute self-awareness; after reflecting on the hypocrisy of her behaviour towards Mrs Montjoy, the narrator declares, ‘I did not have the grace or fortitude to be a servant’ (p. 252). In the earlier version, the verb phrase is contracted (‘didn’t’) and the negation thus reduced in force. Furthermore, in her revision, Munro separates the statement in a paragraph of its own, according it greater prominence, making it seem a confident, even defiant summation.

The reflective narrator perceives, in this display of assurance, a desire for ‘equality, even with a person I did not like’ (p. 252). The assurance derives mostly from the narrator’s sense of intellectual superiority over Mrs Montjoy, expressed early in the story, when she reveals her understanding of the allusion, in the name of the family boat, to Nausicaa in Homer’s *Odyssey*, a name Mrs Montjoy mistakenly believes is ‘for some character in Shakespeare’ (p. 230). The narrator makes further discoveries that enhance her feeling of power, and lessen for her the disparity in status between servant and employer. Firstly, having learnt that Mrs Montjoy’s senile mother does not recognise her own daughter, she takes perverse pleasure in telling her so (p. 236). She also feigns ignorance about the death of her employer’s older daughter, delicately eliciting details of the

tragedy from Mrs Montjoy, all the while knowing she is being hypocritical. The narrator later evaluates her action in the confession: 'Cruelty was a thing I could not recognise in myself. I thought I was blameless here, and in my dealings with the family' (p. 252). The deictic 'here' oddly jars with the past tense verbs, its incongruity serving to distinguish her present candour from her former deceit.

The conclusion of the story published in *The View from Castle Rock* differs from that published in *New Yorker*. Both versions end with the scene in the boathouse, on the narrator's last Sunday, when she is unexpectedly visited by Mr Montjoy, who brings her the gift of his book, *Seven Gothic Tales*. In both versions, Munro conveys her narrator's awkwardly expressed gratitude, and then her swift appropriation of what she feels is rightfully hers, something that 'had always belonged to me' (1994: 88; 2006: 254). In the earlier version, Munro inserts a flashback, several paragraphs from the end, in which the narrator recalls a conversation with Mary Anne, who, in an attempt at affiliation, had explained to her that her father 'used to be poor like you'. The attempt fails, however, for the narrator refuses to 'give anybody whose father had been a doctor the credit for being poor' (1994: 88). This flashback is omitted entirely from the revised version, and its omission removes blatant evidence of the narrator's inverted prejudice, snobbery just as deplorable as Mrs Montjoy's hauteur.

In both conclusions the reader might leave with a less favourable impression of the narrator's behaviour: in the *New Yorker* story her resentment of Mr Montjoy's working-class roots seems extreme, while in the more recent story it is her peevish self-absorption that comes across, in her dismissal of 'the person who interested me least, whose regard meant the least to me' (2006: 254). But in her later version, I believe, Munro somewhat mitigates her narrator's churlishness, for in the instances of reflection can be glimpsed a pleasing humility. Thinking on Mr Montjoy's reasons for giving her the book, the narrator observes: 'Drunk or not, I see him now as pure of motive, leaning against the boat-house wall. A person who could think me worthy of this gift. Of this book' (p. 254). This self-deprecation comes much later, after the admission of 'alarm [and] resentment' at 'having a little corner of myself come to light' (p. 254). At the time, the narrator resents the possibility that she might have betrayed any vulnerability, any commonality with a member of the Montjoy family; as an older narrator, she seems able to acknowledge a kindness, and think less of the motivation behind it. This more measured evaluation serves to deepen the narrator's psychological complexity; more importantly, its reasonableness somehow authenticates the narrator's beliefs about class, which were expressed in the diatribe to Mary Anne, and in the incisive commentary on her wealthy, privileged employers and their peers. For in her retrospective wisdom she has not retracted, and does not retract a thing, nor is she afflicted by 'a sensation of moral paralysis', that, according to Roxanne Rimstead, often dissipates 'emotions such as anger, shame or resentment' (Rimstead 2001: 105) at the conclusions of Munro's poverty narratives.

The changes that Munro effects in the second version of 'Hired Girl' produce a narrator who is unlikely to hear, as Alva does in 'Sunday Afternoon', the 'plebeian sound' her footwear makes, and who freely admits that she is unsuited to the role of serving others she considers rude and uninformed, people who hold sway over her by virtue of their social category. In her revision, Munro intensifies and makes salient the class distinctions evident in the earlier *New Yorker* version, presenting them 'as matters of political importance and community alliances' (Rimstead 2001: 215). The resulting narrative is a much more incisive, more critical social commentary that could not be described as 'veiled'.

## Notes

- 1 The place-name ‘Hanratty’ in *The Beggar Maid* (1980), like ‘Jubilee’ in *Lives of Girls and Women* (1972), is assumed to be the fictional version of Wingham, Munro’s birthplace.
- 2 Frank Davey has commented on Roxanne Rimstead’s argument; see Davey 2003–2004.
- 3 In order to distinguish clearly between the two versions of the story, I use the publication dates of 2006 and 1994.

# CHAPTER 12

## Theory in Practice

### *Elizabeth Bishop, Modernism, and the Left*

*Betsy Erkkila*

Elizabeth Bishop wrote poetry that was highly formal, well-crafted, and controlled, yet she also took on topics such as imperialism, racism, economic inequality, and war. In "A Miracle for Breakfast," she describes the hardship of the Great Depression of the 1930s. In "Brazil, January 1603," she describes imperialism from the perspective of the indigenous people. And "Roosters" is a poem about militarism and war. Betsy Erkkila traces Bishop's development in relation to the institutional and cultural Left of her era. Bishop distanced herself from the spirit of mandatory leftism that prevailed in the 1930s, but by the 1960s, she was writing poems such as "Twelve O'Clock News" that mocked the American effort to subdue other nations such as Vietnam by military means, and she was conducting interviews with Black Panthers, a radical African-American organization.

*Even if one were tempted  
to literary interpretations  
such as: life/death, right/wrong, male/female  
— such notions would have resolved, dissolved, straight off  
in that watery, dazzling dialectic.*

Elizabeth Bishop, "Santarém"

*Every new tendency in art has begun with a rebellion.*

Leon Trotsky, "Art and Politics"

Given the critical construction of Elizabeth Bishop as a subsidiary in the school of Marianne Moore, "a modest expert" (Moore 354), an "unassuming," "pleasant," "charming" poet of "restraint, calm, and proportion" (Jarrell 498–99), a soft and dreamy poet who is "not likely" to be hailed as "a giant among the moderns" (Lowell 497), an "utterly feminine" poet of "mild and affectionate brooding over what she has seen"

(Alvarez 325), “a poet’s poet’s poet” (John Ashbery), and an essentially “private” poet (Millier 67), to talk about Bishop in a political context at all is to challenge traditional – and gendered – readings not only of Bishop but of literary modernism itself. Adrienne Rich’s important 1983 essay “The Eye of the Outsider: Elizabeth Bishop’s *Complete Poems, 1927–1979*,” which argues that Bishop’s “experience of outsiderhood … linked with the essential outsiderhood of a lesbian identity” enabled her “to perceive other kinds of outsiders and to identify, or try to identify, with them” (127), has triggered a new interest in the sexual “politics” of Bishop’s writing. As in Brett C. Millier’s 1993 biography of Bishop, however, recent critics have continued to emphasize the essentially formal, aesthetic, private, and psychological dimensions of her work.<sup>1</sup> Perhaps attempting to wrest Bishop from earlier “objective” approaches, these critics have erected “subjectivity,” “self-expression,” and the “private poet” as the true badge of Bishop’s seriousness, worth, and status as a major poet. Grounded in Romantic, bourgeois conceptions of the poet and the author, in the predominant psychoanalytic paradigms for reading lyric poetry, and in the gendered (including feminist) emphasis on self-expression as an essentially female mode, these newer approaches reinstate rather than challenge traditional distinctions between poetry and politics, private and public. Yet a close reading of Bishop’s work problematizes the binarisms – literature/politics, formalism/social consciousness, modernism/leftism, high culture/popular culture, subjectivity/objectivity, private/public, male/female – that have characteristically governed our reading and writing of modernist literary history.

This essay will try to unfix the “selective tradition” (Williams 32) and the settled binaries we have come to associate with modernism by locating Bishop’s work within the debates about the relation between literary modernism and the American – and international – Left.<sup>2</sup> Though she set herself against both the mythic narratives of literary modernism and the grand political narratives of the American Left, Bishop was deeply affected by the literary and political radicalism of the 1930s. Her insistence on the technical qualities “necessary to any art, to me” (qtd. in Millier 413) and the essential distinction between “politics” and “good poetry” (Millier 301) has kept us from recognizing how often her poems – even her more aestheticized and abstract early poems – take as their subjects class consciousness, race and gender struggle, the culture of the commodity and the machine, the relations of capital, property, and homelessness, and the conflict between the dominant narratives of the West and the “others” – women, lesbians, blacks, Cubans, Indians, the lower classes, the body, nature – that those narratives subjugate and colonize.

Bishop recalled that, as a student at Vassar College in the early ’30s, she had admired W. H. Auden’s ability to write leftist and politically knowledgeable poetry with “dazzling” technical skill (“Work!” 18; “From ‘A Brief Reminiscence’”). While Bishop was herself a socialist and at one time an anarchist, she sought to avoid what she called the political-consciousness writing of the time by finding models not in Auden’s work but in the seemingly more objective and nonpolitical work of T. S. Eliot, Wallace Stevens, and Moore. She said, “I stood up for T. S. Eliot when everybody else was talking about James T. Farrell. The atmosphere in Vassar was left-wing; it was the popular thing” (“Interview” 8).

Like later critical constructions of modernist literary history, Bishop misremembers her literary genealogy, erasing her own political engagements of the time. If she defended Eliot against Farrell, as a student at Vassar she published the story “Then Came the Poor,” which seems closer to Farrell in its representation of class conflict and the coming of the Red Revolution.<sup>3</sup> Published in 1933 in *Con Spirito*, an experimental journal Bishop

founded at Vassar with Mary McCarthy, Muriel Rukeyser, and Eleanor Clark, the story comically depicts the luxurious excesses of a rich New England family whose members flee the revolution with three cars and all their “goods” but forget their daughter. The daughter puts on worker’s overalls and appears to want to join the revolution, but the story – and the revolution – end anticlimactically with “a wild, magnificent lawn-party” (4) as the workers discover her father’s wine cellar and drunkenly redistribute the family property. The daughter, nevertheless, moves back into the house with several workers as part of the social redistribution. In its ironic detailing of the excesses of privilege, consumerism, and the “New England Ancestry,” its vague yearning for communalism and an alternative social order, and its simultaneous fascination with and withdrawal from the redemptive possibilities of social revolution, the story characterizes the class perspective and ambivalence about class struggle that would inform Bishop’s verse.

Although Bishop never wrote the topical poetry we associate with the social-consciousness writing of the ’30s, her work registers the “revolutionary” effects of the time as a crisis of the subject, of knowledge, of signification, and of the possibility of meaning itself. While some of Bishop’s early poems – “The Colder the Air,” “Wading at Wellfleet,” and “Paris, 7 A.M.” – seem metaphorized to the point of obscurity, others, such as the “The Map” and “The Imaginary Iceberg,” engage ’30s debates about the relation between art and life, form and history. “The Map” appears to endorse the necessary separation between artifice and history: “More delicate than the historians’ are the mapmakers’ colors.” But, like the “Imaginary Iceberg,” which “stands and stares” upon a “floating field” and “shifting stage” (*Complete Poems* 4), interrogative and continually self-revising mode of representation in “The Map” suggests the historicity of both creation and interpretation, subject and object. “Are they assigned, or can the countries pick their colors?” the speaker asks (*Complete Poems* 3), problematizing the notion of any transparent or unmediated relation between countries and the geographies – aesthetic, political, ethnographic, or otherwise – by which they have been mapped. Complicating the truth claims of ’30s debates about the relation between aesthetics and politics, Bishop suggests that the mapmaker’s art, like any art, is historically embedded and that history is, correspondingly, always and already mapped and interpreted.

“I was very aware of the Depression,” Bishop said. “[S]ome of my family were much affected by it. After all, anybody who went to New York and rode the Elevated could see that things were wrong. But I had lived with poor people and knew something of poverty at firsthand” (“Interview” 294). While Bishop was, technically speaking, neither a Lukacian nor a Brechtian, a radical realist or a radical experimentalist, several of her early poems attempt to rearticulate traditional verse forms and a symbolist and surrealist aesthetics in a form of radical social and cultural critique. In a notebook dated 1934–37, Bishop describes looking out the window on a rainy day and hallucinating one of the raindrops as a “lonely, magnificent human eye, wrapped in its own tear.” The image combines naturalistic detail with surrealistic perspective in what she would later call “glimpses of the always-more-successful surrealism of everyday life” (Letter to Anne Stevenson).

In “A Miracle for Breakfast,” which Bishop described as “my Depression poem,” “my ‘social conscious’ poem, a poem about hunger” (“Interview” 13), she conjoins the contemporary politics of want, a surrealist perspective, and the sestina form to represent the class struggle and hunger of the Depression. A group of people wait in the streets for “a man” and his “servant” to distribute coffee and loaves of bread “from a certain balcony”:

He stood for a minute alone on the balcony  
 looking over our heads toward the river.  
 A servant handed him the makings of a miracle,  
 consisting of one lone cup of coffee  
 and one roll, which he proceeded to crumb,  
 his head, so to speak, in the clouds – along with the sun.

Was the man crazy? What under the sun  
 was he trying to do, up there on his balcony!  
 Each man received one rather hard crumb,  
 which some flicked scornfully into the river,  
 and, in a cup, one drop of the coffee.  
 Some of us stood around, waiting for the miracle.

(*Complete Poems* 18)

Associating the historical struggle between rich and poor in the Depression-era US with the monarchical and feudal orders of the past, the biblical miracle of the bread and blood of Christ, and Romantic mythologies of natural plenitude, the poem ironically critiques not only the American myth of abundance but also myths of natural providence or religio-spiritual grace. The failure of man, God, nature, or America to provide is reinforced by the formal constraints of the sestina form, whose repetition of end words suggests the almost ritualistic repetition of the class struggle through time and the miracle's failure to transpire either in the natural, feudal, or religio-spiritual orders of the past or in the putatively democratic order of the present. An understated envoi associates the American dream – and the failure of progressive history – with the phantasm and perversity of the surreal: “We licked up the crumb and swallowed the coffee. / A window across the river caught the sun / as if the miracle were working, on the wrong balcony” (*Complete Poems* 19).

“I think that it is in the city alone, maybe New York alone, that one gets in this country these sudden intuitions into the whole of contemporaneity” (*Notebook*), Bishop noted while she was living in New York City after graduation from Vassar. “Love Lies Sleeping,” first published in the *Partisan Review* in 1938 side by side with John Dos Passos’s proletarian story “Migratory Worker,” represents a powerful, though understated, protest against the invasiveness and pain of the city, the industrial work-place, and modern technology. Ironically combining the traditional form of the aubade with a surrealist poetics and modern urban critique, “Love Lies Sleeping” breaks down the distinction between dream and reality, body and city, the surreal and everyday life. The “coupling” tracks, “neon shapes,” “twitching signs,” and “exploding” sounds of the city penetrate and become indistinguishable from the dream life, the body, the erotic, and the “coupling” lovers themselves. The artificial and potentially poisonous figure of the city as a “little chemical ‘garden’ in a jar” reverses the myth of the garden – and the West. Both the landscape and the industrial workplace become spaces of physical and psychological violence that terrorize the workers even in their sleep:

The sparrows hurriedly begin their play.  
 Then, in the West, “Boom!” and a cloud of smoke.  
 “Boom!” and the exploding ball  
 of blossom blooms again.

(And all the employees who work in plants  
 where such a sound says “Danger,” or once said “Death,”  
 turn in their sleep and feel  
 the short hairs bristling

on backs of necks.) The cloud of smoke moves off.

(*Complete Poems* 16–17)

As for Walter Benjamin’s Baudelaire, the “shock experience” of the modern city is at the center of Bishop’s early work (163). But while the conflict between “Spleen” and “Ideal” distances this “shock” in Baudelaire, Bishop’s work rejects any vertical leap toward the “Ideal.” As the title of the poem and its surreal “coupling” of trains and lovers suggests, love itself becomes locked in the urban economies of capital and consumption. “[Y]ou will dine well / on his heart, on his, and his” (*Complete Poems* 17), says the lover to the city, anticipating the more cynical refrain of “Varick Street” (1947), where the economics of capital becomes constitutive of the love relation: “*And I shall sell you sell you / sell you of course, my dear, and you’ll sell me*” (*Complete Poems* 75).

“Love Lies Sleeping” ends by conjoining psyche and city in the gaze of a drunken or dead man:

the city grows down into his open eyes  
 inverted and distorted. No. I mean  
 distorted and revealed,  
 if he sees it at all.

(*Complete Poems* 17)

The poem’s conjunction of waking, the city, modern technology, and death seems curiously reminiscent of the proletarian poem “Dilemma of a Dead Man about to Wake Up,” which appeared in Stanley Burnshaw’s *The Iron Land* (1936). Burnshaw’s lines “The dynamos whir in the sheds of steel. / The powerhouse of steel distributes pain –” (76) share Bishop’s perception of the physical and psychic “pain” and “daily murdering hands” (Burnshaw 76) of the new technological landscape. Although Burnshaw’s realistic and proletarian aesthetics contrasts with Bishop’s symbolism and surrealism, both poems protest against urbanization, mechanization, the industrial workplace, and the new technologies of iron and steel.

Bishop’s relationship with the New York intellectuals and the *Partisan Review*, where much of her work in the ’30s appeared, was cordial but distant. “I’m a ‘Radical,’ of course,” she wrote to Frani Blough in 1938, but her radicalism did not encompass either the Trotskyist politics of the *Partisan Review* editors (Phillip Rahv, William Phillips, Dwight MacDonald, and Mary McCarthy) or their high modernist faith in the role of the artist and the intellectual in the modern world. Although Bishop refers to her daily reading of Russian Marxist criticism in a 1936 letter to Moore, her distrust of the doctrinaire in all party ideology – Left, Right, or center – and her firsthand experience of the desecrations of Communism and the Popular Front during a trip to Spain in 1936, set her against all forms of Communist party ideology. In “Lullaby for the Cat,” an unpublished 1937 lyric, she playfully mocked the idealistic rhetoric and wildly utopian faith of many on the American Left: “Darling Minnow, drop that frown, / Just cooperate, / Not a kitten shall be drowned / In the Marxist State” (*Complete Poems* 204).

Although she sympathized with the *Partisan Review* editors' distinction, after 1937, between literature and practical politics, she did not share their correspondingly exalted notion of the oppositional role of art and artist in the modern world. Her comic evocation of Moore as a kind of good witch of modernist decorum in "Invitation to Miss Marianne Moore" (1948) and her later evocation of Ezra Pound as a pitiable and tragically deluded nursery-rhyme Jack in "Visits to St. Elizabeths" (1957) both enact this resistance. In the mid '30s, however, she herself began to move toward an increasingly self-conscious attempt to give her work more social weight and significance. Her notebooks of the time speculate on the uses she might make of contemporary events reported in the New York *Daily News*. Her short story "The Sea and Its Shore" was published as the lead story in a volume that *New Masses* literary editor Horace Gregory – in an attempt to articulate a more inclusive Popular Front poetics – presented as a kind of contemporary American writing that is not necessarily "useful" for the purposes of "immediate political action" (14) but is nevertheless dialectically engaged in and with the history of its time. In 1938 a selection of Bishop's '30s poems ("The Unbeliever," "Quai d'Orléans," and "Late Air") appeared along with Trotsky's important essay "Art and Politics" in the *Partisan Review*.

At the very moment, in fact, when the *Partisan Review* editors began to move away from realism and proletarianism toward the high modernist canon of Eliot, Kafka, Joyce, Proust, William Butler Yeats, and others, Bishop was moving away from the Eurocentric aesthetics of her early poems toward a more socially embedded and class-conscious art. This move was reinforced geographically in 1938 when she retreated from the centers of literary power in New York and bought a house with Louise Crane in Key West, Florida. "The town was absolutely broke then," Bishop said. "Everybody lived on the W. P. A. I seemed to have a taste for impoverished places in those days" ("Interview" 16). Amid the racially mixed and economically depressed landscape of Key West, Bishop moved toward an even more emphatic social and political focus, as she turned away from symbolist and surrealist aesthetics toward an experimental use of popular forms (nursery rhymes, lullabies, songs) and the aesthetics of everyday life she began to define in the materially conditioned and commemorative art of "The Monument" (1939):

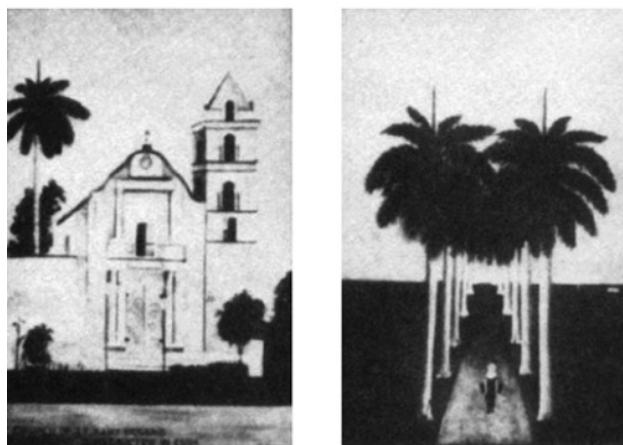

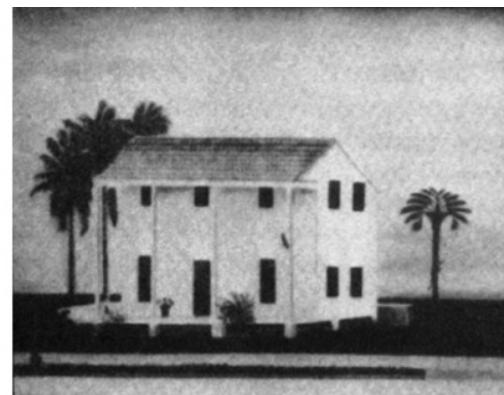

The monument's an object, yet those decorations,  
carelessly nailed, looking like nothing at all,  
give it away as having life, and wishing;  
wanting to be a monument, to cherish something.  
The crudest scroll-work says "commemorate."

(Collected Poetry 24)

Bishop's essay "Gregorio Valdes," written to commemorate the death of the Key West Cuban factory worker and painter in 1939, is at once a proletarian portrait and an attempt to define a popular, communal, working-class art:

The first painting I saw by Gregorio Valdes was in the window of a barbershop on Duval Street, the main street of Key West. The shop is in a block of cheap liquor stores, shoeshine parlors and poolrooms, all under a long wooden awning shading the sidewalk. The picture leaned against a cardboard advertisement for Eagle Whiskey, among other window decorations of red-and-green crepe-paper rosettes and streamers left over from Christmas and the announcement of an operetta at the Cuban school – all covered with dust and fly spots and littered with termites' wings. (Collected Prose 51)

Bishop makes no grand claims for Valdes, a cigar factory worker, an ice cream peddler, a photographer, a sign painter, a painter: “Gregorio was not a great painter at all, and although he certainly belongs to the class of painters we call ‘primitive,’ sometimes he was not even a good ‘primitive’” (*Collected Prose* 58). Almost all his paintings are “copies of photographs or of reproductions of other pictures,” Bishop tells us, but when he “copied” “from a photograph of something he knew and liked, such as palm trees, he managed to make just the right changes in perspective and coloring to give it a peculiar and captivating freshness, flatness, and remoteness” (*Collected Prose* 58) (see Fig. 1). Through the work of Valdes Bishop defines a literal, mimetic, working-class art that is both embedded in the material conditions of Key West life and that nevertheless slips almost imperceptibly through the local knowledges and desire of the factory worker/sign painter/painter into a kind of magical realism, a perspective that is “mysterious,” uncanny, and alluring. In doing so Bishop perhaps comes closer to negotiating the putative conflict between proletarianism and aesthetics than other more earnest commentators on the respective claims of politics and art, such as Rahv at the *Partisan Review* or Mike Gold at the *New Masses*.

**Figure 1** Paintings by Gregorio Valdes reproduced in Elizabeth Bishop's commemorative article “Gregorio Valdes, 1879–1939,” which was published in the *Partisan Review* in the summer issue of 1939.

While the *Partisan Review* editors were wondering – in the same issue in which Bishop's Valdes essay appeared – whether Henry James rather than Walt Whitman might be “more relevant to the present and future of American writing” (“Situation in American Writing” 25), as they turned increasingly to Europe, and particularly to Paris, as site and source of modern art's renewal, Bishop was seeking to achieve some of the uncanny literalism of Valdes in the local ground of Key West: its “flat” landscape, its impoverished and primarily Cuban inhabitants, its class struggles, and its forms of communal art. In “Jerónimo's House” (1941), Bishop presents the speaker as a figure at once of dispossession, local inventiveness, and survival:

My house, my fairy  
palace, is  
of perishable  
clapboards with  
three rooms in all,  
my gray wasps' nest  
of chewed-up paper  
glued with spit.  
*(Complete Poems* 34)

The spare, nursery rhyme lines underscore the artifice and flimsiness of this home as “fairy palace” “glued with spit,” which, with its plastic ferns, leftover Christmas decorations, pink tissue-paper roses, and painted and repainted decor represents a form of communal or mass art that enables adaptability to and survival against the material conditions of continual displacement and dispossession:

When I move  
I take these things,  
not much more, from  
my shelter from  
the hurricane  
*(Complete Poems* 34).<sup>4</sup>

Rather than privileging class in a classically Marxist analysis, Bishop focuses on the intimate, interdependent, but also strained relations between blacks, whites, and Hispanics, servants and masters, rich and poor, woman and woman in the complex social landscape of Key West. “Cootchie” (1941) and “Faustina, or Rock Roses” (1947), both based on persons Bishop actually knew in Key West, represent the class and race struggle not as a struggle between a prototypically male worker and employer in the workplace, but as a struggle between master and servant, white and black, that takes place between women in the home. As in Bishop's Brazil poems, these Key West poems conjoin active displacements in scale and perspective with a dialectical representation that poses contradictory, alternative, and resistant points of view. In “Faustina, or Rock Roses,” the relationship between an enfeebled and dying white woman and her “sinister kind” servant, Faustina, is represented from the not always distinguishable points of view of the narrator, a visitor (Bishop), the dying woman, and Faustina herself. When a question is posed about the relationship between the white woman and her black Cuban servant, it proliferates, like the poem's perspective, into a “dazzling dialectic,” refusing to pose any single or simple answer to the simultaneous affection,

dependency, hate, and fear – the “dream of protection and rest?” or “the very worst, / the unimaginable nightmare?” – that informs the relationship between master and servant. “There is,” as the poem says, “no way of telling. / The eyes say only either” (*Complete Poems* 73–74).

In 1945 Bishop wrote to Houghton Mifflin about her first volume of poems *North & South* (1946): “The fact that none of these poems deal directly with the war, at a time when so much war poetry is being published, will, I am afraid, leave me open to reproach” (*One Art* 125). She asked that her publisher insert a “disclaimer” at the front of *North & South* that reads: “Most of these poems were written, or partly written, before 1942.” Despite the disclaimer, tropes of militarism and violence, sometimes accompanied by dim predictions of apocalypse and doom, pervade the volume, informing even the seemingly natural landscapes of “Florida,” “Little Exercise,” “The Fish,” and “Late Air.” Moreover, Bishop admitted that her 1941 poem “Roosters” was inspired by events of the war. “In the first part,” she wrote to Moore in 1940, “I was thinking of Key West, and also of those aerial views of dismal little towns in Finland and Norway, when the Germans took over, and their atmosphere of poverty” (*One Art* 96). More than an antiwar poem, “Roosters” is a stark and unsparing evocation of the impulses toward brutality, domination, and colonial conquest that motivated World War II and were in evidence in Key West as well as in Fascist-dominated Europe. Like Virginia Woolf’s *Three Guineas* (1938) and H. D.’s *Trilogy* (1944–46), it is also an angry protest against the patriarchal orders in which war, militarism, fascism, and violence are grounded. Crowing “uncontrolled, traditional cries” in the “gun-metal” dawn, Bishop’s cocks

planned to command and terrorize the rest,

the many wives  
who lead hens’ lives  
of being courted and despised;

deep from raw throats  
a senseless order floats  
all over town. A rooster gloats

over our beds  
from rusty iron sheds  
and fences made from old bedsteads,

over our churches  
where the tin rooster perches,  
over our little wooden northern houses

(Complete Poems 35–36)

Insisting on the relationship between the cocks who “command and terrorize” women in the private sphere and the “senseless order” of war, militarism, and violence in the public sphere, “Roosters” is also a kind of veiled “coming out” poem in which Bishop registers her personal protest against the “senseless order” of marriage and heterosexuality that “floats / all over town” and “gloats” over the bed of lesbian love. “Roosters, what are you projecting?” the speaker asks,

what right have you to give  
commands and tell us how to live,  
  
cry "Here!" and "Here!"  
and wake us here where are  
unwanted love, conceit and war?  
(*Complete Poems* 36)

The speaker's questions protest against the scenes of private and public violation – of “unwanted love, conceit and war” – to which she is awakened by the heterosexual order of the rooster as cock or phallus.<sup>5</sup>

The continued influence of the '30s on Bishop's social and political perspective is particularly evident in her 1944 poem “Songs for a Colored Singer.” During that decade she had met and become friendly with Billie Holiday, and she said that her four “Songs for a Colored Singer” were written for music with “Billie Holiday in mind” (“Interview” 296). At the time the poem was written, Bishop was beginning to experiment with the more personal lyric expression of female subjectivity and sexuality, specifically lesbian sexuality, that would inform the poems of *A Cold Spring* (1955).<sup>6</sup> Making use of blues rhythms, the black vernacular, lullaby, the popular song, Bishop's “Songs for a Colored Singer” speaks not only *for* but *as* and *through* a black blues-woman. As such the poem is emblematic of the ways Bishop's work refuses to distinguish between “private” and “public” as separate and discrete realms. Whereas Bishop's earlier poems evoke rather than resolve or call for a change in the dynamics of race, class, and gender relations, “Songs for a Colored Singer” not only describes the material conditions of black, specifically black female, oppression but also calls for – and indeed prophesies – the transformation of black sorrow and tears into “seeds” of black revolution, “beating, beating on the ground” (*Complete Poems* 50).

In *North & South* “Songs for a Colored Singer” appears just before the final poem “Anaphora,” which records a fall into time and history as the dream of earthly plenitude, perhaps associated with the promise of the Left and the hopes of the '30s, “instantly, instantly falls / victim of long intrigue,”

suffers our uses and abuses,  
sinks through the drift of bodies,  
sinks through the drift of classes  
to evening to the beggar in the park  
(*Complete Poems* 52)

Coming just before the seemingly pessimistic reading of the possibilities of class revolution in “Anaphora,” “Songs for a Colored Singer” suggests that the real revolution, if it comes, will be propelled not by class but by the “black seeds” and “conspiring root” of race struggle: “They're too real to be a dream” (*Complete Poems* 50–51).

In 1951 Bishop moved to Brazil, where she would live for 16 years with her aristocratic Brazilian lover, Lota de Macedo Soares. As many proletarian writers and radicals of the '30s, including the editors of the *Partisan Review*, were retreating into the consoling ideologies of Americanism, the New Criticism, and the Cold War, Bishop focused in her Brazil poems on a densely textured intersection of race, class, and gender ideologies with the politics of colonialism and colonial conquest in the New World. This focus set Bishop apart from many of the white North American poets writing during the '50s and

early '60s. At a time when Rich's poems were still informed by the allusive and symbolic structures of high formalism, when the Beat poets were affirming an insistently white male ethos of "cock" and "cunt" and "endless balls" (Ginsberg 9), and when the confessional poems of Robert Lowell, Anne Sexton, Sylvia Plath, John Berryman, and others were focusing on the dark interiors of self as historical allegory, Bishop's poems seem at once more postmodern and more postcolonial in their focus on "questions" of cultural encounter, difference, knowledge, and representation.

*Questions of Travel* (1965), which bears on its cover a map of the *Nuevo Mundo* drawn from the *Cosmographia* of the sixteenth-century cartographer Sebastian Munster (see Fig. 2), opens with scenes of colonial encounter not only between Old World and New but between North and South America. In "Arrival at Santos," the first poem in the

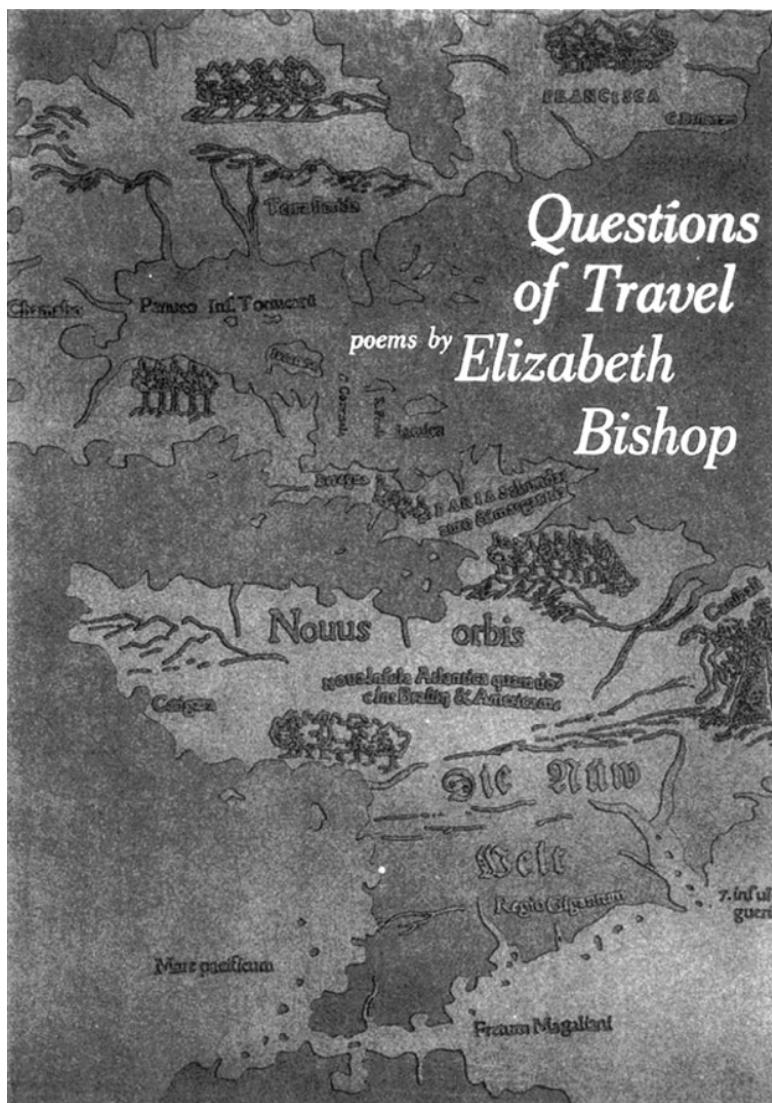

Figure 2 Cover of Bishop's *Questions of Travel* (1965), which bears a map of the *Nuevo Mundo* drawn from the *Cosmographia* of the sixteenth-century cartographer Sebastian Munster.

“Brazil” section, Bishop mocks her own imperialist and, to use Edward Said’s term, “Orientalist” gestures as a white middle-class North American woman. Encountering a Brazil that resists her imaginary – and colonizing – desire for an erotic and exotic other, she asks:

Oh, tourist,  
is this how this country is going to answer you  
  
and your immodest demands for a different world,  
and a better life, and complete comprehension  
of both at last, and immediately,  
after eighteen days of suspension?  
(*Complete Poems* 89)

This question, about the colonizing relation of North to South America and Bishop’s own location within these structures of dominance, is at the center of the questions about the politics and problematics of cultural encounter that inform the volume. Bishop’s dialectical approach to cultural encounter – her willingness to reverse, question, destabilize, and ironize the gaze of the colonizer, including her own, and thus to pose resistant points of view – keeps her Brazil poems from becoming mere exercises in political and aesthetic tourism.<sup>7</sup> The question of aestheticization underlies Bishop’s “questions of travel,” subverting any easy slide into what Robert von Hallberg has called literary “tourism” (62–92) and what Millier calls Bishop’s “wholly esthetic appreciation of the country, the landscape, and the people” (274).

Bishop arrived in Brazil when the former fascist dictator, Getúlio Vargas, had just been popularly elected to a second term as president. Under Vargas’s former rule Macedo Soares’s father, a wealthy aristocratic newspaper owner and a leftist, was imprisoned and exiled several times. In the post-World War II period, however, Vargas began to court popular discontent and the Left as a means of regaining political power. Bishop’s residence in Brazil in the ’50s and ’60s coincided with a period of rapid industrialization and modernization, runaway inflation, and an increasingly violent struggle between the landless, impoverished, and mostly illiterate urban and rural masses and an essentially feudal system of land ownership by a few powerful aristocrats. As a white middle-class North American woman living with an aristocratic Brazilian woman who owned an apartment on Copacabana Beach in Rio de Janeiro and a country estate in Petrópolis with several servants, Bishop was a benefactor of the system. She was simultaneously drawn to the communal rhythms and seemingly harmonious race and class relations of precapitalist Brazil and repelled by the massive poverty, illiteracy, and governmental corruption that were the marks of the old patrimonial system.

Bishop’s ambivalence, and the mounting tensions in the countryside between land-owners and peasants that would give rise to Francisco Julião’s radical peasant organizations in the late ’50s, is evident in “Manuelzinho,” a poem – according to Bishop – about Macedo Soares’s relationship with her impoverished and illiterate gardener:

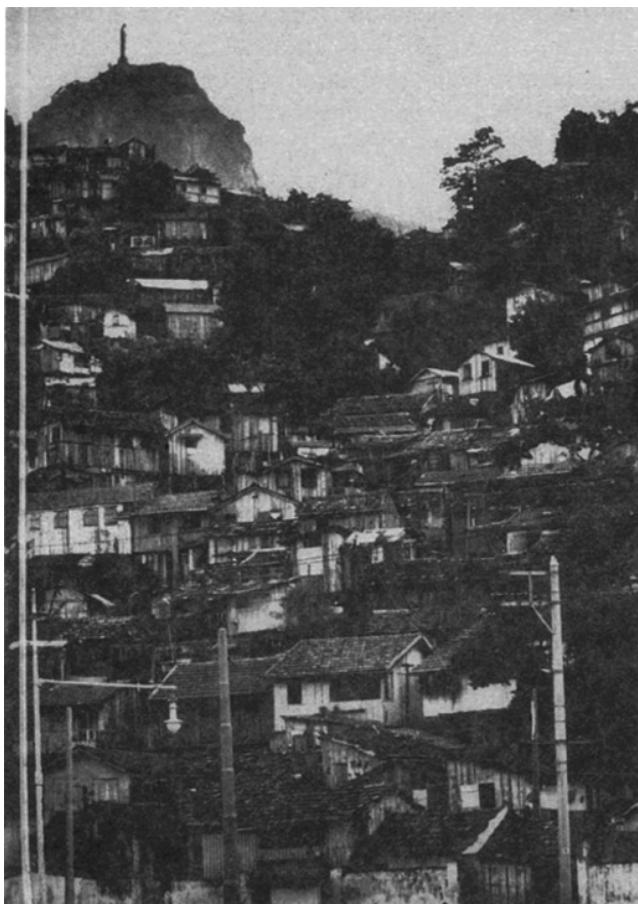

Half squatter, half tenant (no rent) –  
a sort of inheritance; white,  
in your thirties now, and supposed  
to supply me with vegetables,  
but you don’t; or you won’t; or you can’t

get the idea through your brain –  
the world's worst gardener since Cain.  
(*Complete Poems* 96)

Although the account is given from the point of view of an aristocratic “friend of the writer,” who expresses the affectionate, familial, hereditary, and strained relations between landlord and tenant, the poem’s sympathies appear to be on the side of the resistant and carnivalesque figure of Manuelzinho, who refuses to play the landlord’s game of mine and yours.<sup>8</sup> “[I]mprovident as the dawn,” Manuelzinho’s gardens fail to produce, his paths (or his father’s or his grandfather’s) traverse the master’s “property,” and when he comes to settle his “accounts” – “with two old copybooks, / one with flowers on the cover, / the other with a camel” – his “numbers mount to millions” with an excess of zeros (*Complete Poems* 98). While the master speaks in the poem, her voice is ironized not only by the poem’s descriptions of hunger, poverty, sickness, and death but also by the endlessly inventive folk energies of Manuelzinho, who doesn’t, or “won’t,” or “can’t” submit to the master’s demands for order, boundaries, and control.

Despite Bishop’s engagement with political problems in Brazil, critics have continued to stress the essentially apolitical nature of her work. “‘Suicide of a Moderate Dictator,’” writes Thomas Travisano of Bishop’s unpublished verse response to Vargas’s suicide in 1954, “represents a category for which examples exist only in Bishop’s unpublished *oeuvre*: the political poem” (“With an eye” 613). “[W]hether from temperament, or from the insoluble puzzle of redefining her use of the lyric,” writes Lorrie Goldensohn, “the leap from imagined to actual public event, the move from the fancied to the historic somehow was not possible” (239). Commenting on several unpublished Bishop poems addressing issues of slavery (“A Trip to the Mines”), poverty (“Capricorn”), infant mortality (“A Baby Found in the Garbage”), inflation and government corruption (“Brasil, 1959”), and Vargas’s suicide (“a report in verse & prose”), Victoria Harrison also observes: “With irony and hope, mockery and earnestness, Bishop entered the political fray, though privately, since she published none of this writing either in Brazil or in the United States” (166). Millier similarly describes “Brasil, 1959” as “the sort of poem that Elizabeth could never write and that she condemned when other poets did” (301). It shows “her attempts at and her frustrations with trying to speak in poetry about Brazil as a political entity. She is far more comfortable with a personal point of departure” (300).

While Bishop did not publish her poems on Vargas’s suicide, slavery in the mines, or social conditions under Juscelino Kubitschek’s government, she did, in fact, write them. And it is simply not true to say that Bishop did not “speak in poetry about Brazil as a political entity.” Bishop’s focus is, however, local and immediate, embedded in the economic relations and social, sexual, and political practices of everyday life. If she never published her journalistic poems about Vargas, Kubitschek, and Jânio Quadros, she did publish “The Burglar of Babylon,” a folk ballad based on newspaper accounts, about Micuçu, “a burglar and killer” whose pursuit by soldiers she watched from her balcony. “The Burglar of Babylon” registers the disruptive social effects of industrialization and modernization on the Brazilian masses, the “hysterics” of the military (who shoot each other with “tommy guns”), and the apparent indifference of the rich (who watch “through binoculars”) in their response to the endless cycle of poverty, military violence, and crime that repeats itself, like the ballad’s refrain: “On the fair green hills of Rio / There grows a fearful stain: / The poor who come to Rio / And can’t go home again” (*Complete Poems* 117) (see Fig. 3).

**Figure 3** Photograph of the *favelas* (slums) in the hills above Rio de Janeiro, which appeared in Bishop's Time-Life book on *Brazil* (1962).

As in “The Burglar of Babylon,” which juxtaposes modern technologies of surveillance and violence with folk traditions and mass poverty in the Rio slums, Bishop’s Brazil poems insist on the material conditions and social embeddedness of race, class, gender, and colonial ideologies: the imperialist relation of North to South America in “Arrival at Santos” and “Questions of Travel”; the (hetero)sexual and racial politics of colonial conquest in “Brazil, January 1, 1502”; the relations of property and propertylessness in “Squatter’s Children” and “Twelfth Morning; Or What You Will”; the dialectics of class dominance and resistance in “Manuelzinho”; hunger, child prostitution, and homelessness in “Going to the Bakery”; the “soiled and thirsty” conditions of village life in “Under the Window: Ouro Preto”; and the murder of beggars in “The Pink Dog.” These material conditions and “lived” social relations of dominance and subordination appear to remain the same as the country changes political regimes from Left to center to Right during the ’50s and ’60s. Indeed, as recent reports of the shooting of eight homeless children by military police on the streets of Rio de Janeiro suggest, despite the putative return to democratic government in 1985 (after 21 years of military dictatorship), not much has changed for “The poor who come to Rio / And can’t go home again.”

Bishop's reputation as apolitical modernist has also tended to erase or mute the fact that after 1960 – when Quadros was elected to the presidency and Macedo Soares went to work (for free) as Rio park designer for Carlos Lacerda, the right-wing governor of Guanabara – she and Macedo Soares moved from the margins to the very center of the increasingly polarized conflict between Left and Right in Brazil. In an April 1962 letter to the *New Republic*, Bishop addressed the question of US Cold War policy in Brazil. Registering “a strong protest against” the article “Which Revolution for Brazil?” by Brazilian correspondent Louis L. Wiznitzer, she criticizes “the distorted view it gives your American readers of the Brazilian situation and its personalities.” She corrects Wiznitzer’s notion that Quadros – who had unexpectedly resigned the presidency in 1961 after only seven months in office – was about to return to power; she defends Lacerda against charges of terrorism and political blackmail, which “exactly follow the line of Communist propaganda here”; and she questions Wiznitzer’s assertion that “in the past 12 months the masses of people have been made politically conscious” (qtd. in Bishop, Letter). “It is because, in their poverty and misery, they are still politically completely ignorant,” Bishop responds, “that they are at the mercy of political opportunists – and malicious tale-spreaders like Mr. Wiznitzer.” Although Bishop turned down an offer to write a regular “Brazil letter” for the *New Republic*, her desire to explain Brazil to North American readers, “to make Brazil seem less remote and less an object of picturesque fancy” (“Interview” 19), is evident not only in her poetry but in her prose translation of *The Diary of “Helena Morely”* (1957), her Time-Life book *Brazil* (1962), her translations of Brazilian poets and prose writers (including several anonymous “sambas” from Carnival), her *Anthology of Twentieth-Century Brazilian Poetry* (1972), which she co-edited with Emanuel Brasil, and a collection of essays on Brazil entitled *Black Beans and Diamonds*, which she planned but never published.

Two years after *Brazil* was published, the leftist João Goulart, who had succeeded Quadros as president in 1961, was overthrown by a military coup in order to avert the possibility of a communist takeover. At the time of the coup, Bishop, who had consistently opposed militarism and totalitarianism on the Left and the Right – in both Khrushchev’s Russia and Eisenhower’s America – found herself in the contradictory position of supporting a military government that, with the help of the political police of her friend Lacerda, was arresting and torturing known or suspected communist organizers in the name of economic stabilization and democracy. Like many in Brazil, Bishop appeared to believe (or hope) that military rule under the leadership of General Castelo Branco was only a temporary stage on the way to restoring popularly elected government. But by 1965, in a *New York Times Magazine* article, she noted that “a conviction ... of ‘betrayal’ seems to be the attitude of both rich and poor” (“On the Railroad” 86). The article criticizes the army coup, Lacerda, the “shabby” conditions and “general decrepitude” of Rio, the shortages and inflation, and the “national disgrace” of the “political arrests” and “torture” conducted by the military government (“On the Railroad” 30, 84–86).<sup>9</sup>

In Bishop’s view the political situation in Brazil was largely responsible for the emotional stress that led to the death of Macedo Soares – an apparent suicide – in 1967. After Macedo Soares’s death Bishop returned to the US of the ’60s. Although she continued to write about Brazil for the rest of her life, in her final collection of poems, *Geography III* (1976), she turned to a more autobiographical focus on her personal past. Recent critical accounts have used this volume to foreground a subjective and apolitical trajectory for Bishop’s life and work. As David Kalstone writes of *Geography III*: “The time

and the space these poems lay claim to are more peculiarly Elizabeth Bishop's own – less geological, less historical, less vastly natural; her poems are more openly inner landscapes than ever before" (31).<sup>10</sup>

To get this reading, however, several clear markers need to be erased. The title *Geography III* draws attention to the subject's location within a larger historical world, and the front cover depicts a surveyor's level, a globe, books, ink, and other instruments for mapping the earth's surface, boundaries, and inhabitants (see Fig. 4). On the back cover John Ashbery comments that Bishop's poetry "renders obsolete" the "artificial distinctions" between "a public and a private poet." The volume opens with a series of questions, taken from *First Lessons in Geography* (1884), which further draw attention to the questions of geographical location, mapping, and representation, and the fluid and shifting boundaries between private and public, subject and object, map-maker and world. Even in these seemingly more personal poems, Bishop maps her subject's temporal, geographical, and historical location, returning over and over again to scenes of cultural encounter with otherness, whether in the form of the young girl's encounter during World War I with "those awful hanging breasts" (7) of the "black, naked women" (4) in *National Geographic* in "In the Waiting Room"; or Crusoe's recollection of his "still / un-rediscovered, un-renamable" (9) island in "Crusoe in England"; or the communal and ultimately utopian social encounter with a "grand, otherworldly" (30) "she"-moose in "The Moose."

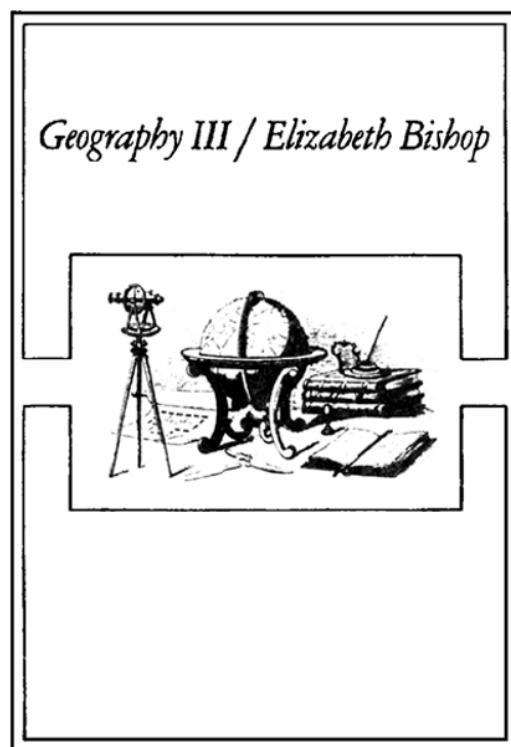

Figure 4 Cover of Bishop's *Geography III* (1976), which bears images of the instruments and historical effects of geographical mapping.

Insisting on the essentially personal signature of *Geography III*, most critics have (mis)read “12 O’Clock News” by moving what is literally on the margins of the poem (the description of the objects on a desk) to the center of the poem and completely ignoring the content of the poem’s prose paragraphs, which mock the Cold War politics and imperial gaze of a newscaster attempting to describe “the lay of the land and the present situation” of a “small, backward country, one of the most backward left in the world today” (*Complete Poems* 174). It is unclear, finally, whether the poem alludes to US foreign policy in South America, Southeast Asia, Africa, or elsewhere. The point seems to be that any “small, backward country” – or even the contents of a desk – will fit the seemingly objective but in fact politically inflected geography of the newscaster’s Cold War script.

Although Bishop said she was, in 1966, “much more interested in social problems and politics now than I was in the ’30s” (“Interview” 9), she opposed some of the more self-indulgent and, in her terms, vulgar cultural and social forms of the ’60s revolution. While she believed that some form of radical literary response to the times was necessary, she did not believe that flow poetry, confessionalism, or the work of the beat writers was it. In a letter to Lowell, Bishop commented on the even greater need for a revolutionary poetic articulation in the present than in the past: “[I]t’s terribly hard to find the exact and right and surprising enough, or un-surprising enough, point at which to revolt now[.] The beats have just fallen back on an old corpse-strewn or monument-strewn battle-field – the real protest I suspect is something quite different – (If only I could find it …).”

In seeking that exact “point at which to revolt,” Bishop was drawn to the black revolution as it was being propelled by Huey Newton, Eldridge Cleaver, Kathleen Cleaver, and the Black Panther Party in California. In February 1969 Bishop interviewed Kathleen Cleaver with the intent of writing an article or poem on her and the Black Panther Party for the *New York Review of Books*. The interview is in some sense anomalous, corresponding with nothing we know – or think we need to know – about Bishop, modernism, and the Left. Perhaps, however, it is a good place to conclude for it returns us to the revolutionary moment of “Then Came the Poor,” only now Bishop’s confrontation is with the black rather than the Red revolution, the time is the ’60s rather than the ’30s, and the subject is the new rather than the old Left.

At the time that the interview took place, Kathleen Cleaver had gone underground because her husband, Eldridge Cleaver, had been jailed. On one level this 30-page interview, which has never been published and is half-owned by Bishop and Cleaver, seems like a profound and at times even comic study in cultural dissonance as Cleaver seeks to (re)educate Bishop in the politics of race, colonialism, and the black revolution in lengthy, angry, and sometimes eloquent passages, and Bishop responds politely and monosyllabically – Yes; Yes; Yes. This cultural dissonance is nowhere more evident than in the fact that the phrase “Right on! Right on!” which punctuates Cleaver’s language – and which was the powerful and fisted cry and symbol of black revolution at the time – is transcribed by Bishop and her friend, Roxanne Cumming, as “Ride on, Ride on,” as if the black struggle was about a train ride rather than a revolution.

Perhaps we should marvel that the interview took place at all. As so often in Bishop’s work, the encounter and the struggle is not between two men but between two women, one a seeming representative, in her own words, “of the eastern establishment to everyone here, and definitely passee” (Letter to James Merrill), and the other an articulate representative of the black revolution, a high-ranking member of the Black Panther Party, a recent candidate for the California Assembly, and one of the most prominent black women in the country.

Both women seem to agree on the general failures of the American system – institutional, educational, economic, racial, and political – and that a social revolution is at hand. Moreover, there are moments when real exchange seems to take place, as when Bishop listens intently to Cleaver's explanation of the origins of the notion of blacks as a colonized people in the US, and they both realize they share an admiration for Frantz Fanon's *The Wretched of the Earth* (1963). Or when they debate whether race (Cleaver) or economics (Bishop) is at the source of oppression and poverty in Brazil. Or when Bishop corrects Cleaver's generalizations about race, slavery, and colonialism in Brazil. "The Catholic Church was much more benevolent towards the slaves than the Protestant Church," Cleaver argues. "Oh, that isn't true –," Bishop responds, "It was just as bad" (Cleaver 13).

Cleaver responds enthusiastically to Bishop's description of Palmares, a slave republic in Brazil. "It was a separate republic," says Bishop, "built by runaway slaves in the North of Brazil which held out for over 60 years against the combined forces of Portugal and Holland. I'm trying to write a piece about it for my book on Brazil." "That's out of sight," Cleaver responds. "Not many people know about it. I'm trying to gather material on it now," Bishop says. "Course not," Cleaver agrees, "because any history that says that the Black man was in a position of power has been deleted" (Cleaver 29–30). When Bishop sent a transcribed copy of the interview to Cleaver a few months later, she wondered if "Mrs. Cleaver" "would come in for a drink some evening" so that she could get to know her better "in a more informal visit."

In the poem "Santarém," published shortly before her death in 1979, Bishop writes of the dazzlingly dialectical "conflux of two rivers, Tapajós, Amazon," in the ancient town of Santarém:

Here only two  
and coming together. Even if one were tempted  
to literary interpretations  
such as: life/death, right/wrong, male/female  
– such notions would have resolved, dissolved, straight off  
in that watery, dazzling dialectic.

*(Complete Poems 185)*

Like the politically inflected and dazzlingly dialectical poetry that Bishop began to write under the influence of '30s radicalism and continued to write throughout her life, Bishop's interview with Cleaver does not fit the binarized "literary interpretations" of Bishop's life and work as a modernist poet. And yet, it is finally precisely because it does not fit that it forces us to press beyond the binarisms – Right/Left, aesthetics/politics, high culture/popular culture, modernism/proletarianism, poetry/revolution, male/female, white/black – that have governed literary interpretations not only of Bishop's life and work but of the, yes, similarly "watery" and dazzlingly dialectical relation of modernism and the Left.

## Notes

1 See, e.g., Kalstone. In the introduction to her 1993 collection *Elizabeth Bishop: The Geography of Gender*, Marilyn May Lombardi writes: "This anthology gathers together the work of pioneering scholars in the field, critics who are exploring the psychosexual tensions within Bishop's vision and

the uncanny way her poetics of dislocation challenge our assumptions about placement and orientation” (4). Although their approaches are quite different, like Lee Edelman’s ground-breaking 1985 essay “The Geography of Gender: Elizabeth Bishop’s ‘In the Waiting Room,’” recent books by Diehl, Goldensohn, and Harrison all emphasize “psychosexual tensions” as what Harrison calls “the personal ground springs” of Bishop’s work (73). In his important study *Elizabeth Bishop: Her Artistic Development*, Thomas Travisano stresses “the vital role of history in Bishop’s work” (123), but, he notes, “Her readings are in private and cultural history, not political history” (132). Harrison similarly argues that by enacting “subject-subject relations in their dailiness” Bishop “avoids ideological stances” (11, 16); and Goldensohn asserts that “[n]either war nor politics was ever her ostensible subject” (182).

- 2 In *The Politics of Modernism*, Raymond Williams notes that “the extraordinary innovations” of nineteenth-century social realism were themselves regarded as a vanguard of modernism until the “moment of Modernism” was fixed in the “selective tradition” we have come to associate with the work of Marcel Proust, Franz Kafka, and James Joyce (32).
- 3 See also Bishop’s story “Chimney Sweepers.” For a discussion of Bishop in relation to ’30s debates about the role of the poet, see Palattella.
- 4 Bishop is drawn over and over to instances of a socially embedded aesthetics of local invention and folk art: “a bamboo church of Jesuit baroque: / three towers, five silver crosses” in “Questions of Travel” (*Complete Poems* 94); Manuelzinho’s painted hat, “limbs” “draped in blueprints,” and “two old copybooks, / one with flowers on the cover, / the other with a camel” in “Manuelzinho” (*Complete Poems* 98–99); the “fire balloons” in “The Armadillo” (*Complete Poems* 103); “the rows of cans” arranged “so that they softly say: ESSO–SO–SO–SO” in “Filling Station” (*Complete Poems* 128); Crusoe’s “home-made flute” in “Crusoe in England” (*Complete Poems* 164); “an empty wasps’ nest … / small, exquisite, clean matte white, / and hard as stucco,” in “Santarém” (*Complete Poems* 186–87).
- 5 For a detailed discussion of “Roosters” in the context of World War II, see Schweik 213–41; see also Erkkila 125–28 for a discussion of the political and specifically lesbian dimensions of the poem.
- 6 See, e.g., Goldensohn’s discussion of Bishop’s unpublished lesbian aubade, “It is marvellous to wake up together” (27–52). See also Erkkila 137–41 for a discussion of the female and lesbian-centered focus of *A Cold Spring*.
- 7 In his discussion of “Dialectic in General,” Kenneth Burke includes among his “definitions of dialectic” “any development (in organisms, works of art, stages of history) got by the interplay of various factors that mutually modify one another, and may be thought of as voices in a dialogue or roles in a play, with each voice or role in its partiality contributing to the development of the whole; or the placement of one thought or thing in terms of its opposite” (403).
- 8 Manuelzinho is a perfect example of the carnivalesque – the “boundless world” of “folk carnival humor” – as it is described by Mikhail Bakhtin in his introduction to *Rabelais and His World* (4). Bishop’s “queer” interest in figures who refuse to be contained by Western, rationalistic bounds is particularly evident in “The Riverman,” where she speaks from the point of view of an Amazonian villager who has, in effect, crossed over into the magical spirit world beyond life and death (*Complete Poems* 105–09).
- 9 See also Bishop’s translation of the 1965 “Sambas” critical of the “rightest revolution” and conditions under the government of Castelo Branco reprinted in *Ploughshares*.
- 10 This emphasis on the “inner” landscape of Bishop’s work is also evident in Helen Vendler’s observation that “Bishop’s mother, confined for life in a hospital for the insane[,] … remained the inaccessible blank at the center of all Bishop’s travel” (829). In their introduction to *Elizabeth Bishop and Her Art*, Lloyd Schwartz and Sybil P. Estess note that all the critical essays in their collection “dovetail in their common underlying conviction of Bishop’s powerful moral, psychological, and emotional force” (xviii). In his introduction to *Elizabeth Bishop: Modern Critical Views*, Harold Bloom also focuses on Bishop’s “poetry of deep subjectivity” (1). See also Goldensohn; Diehl; Millier; and the essays collected by Lombardi in *The Geography of Gender*.

## **Gender Studies and Queer Theory**

---

# CHAPTER 1

## Introduction *Feminist Paradigms/Gender Effects*

*Julie Rivkin and Michael Ryan*

Contemporary feminist literary criticism begins as much in the women's movement of the late 1960s and early 1970s as it does in the academy. Its antecedents go back much further, of course, whether one takes Virginia Woolf's *A Room of One's Own* or an even earlier text as a point of departure (Maggie Humm cites *Inanna*, a text written 2000 years before the Bible, which presents the fate of a goddess who questions sexual discourse). Feminist criticism's self-transformations over the past several decades as it engages with both critiques from within and encounters from without – encounters with psychoanalysis, Marxism, Post-Structuralisms, ethnic studies, post-colonial theory, Lesbian and Gay Studies, Queer Theory – have produced a complex proliferation of work not easily subsumed to a single description. The title of the collection of essays – *Conflicts in Feminism*<sup>1</sup> – speaks to the situation of feminist criticism: equality versus difference, cultural feminism versus Post-Structuralist feminism, essentialism versus social constructionism. Feminism *and* gender theory? Feminism *or* gender theory? Feminism with ethnic specificity or with other crossings? Feminism national or feminism international? If the student of literature in the early 1970s was moved to ask why is there not a *feminist* criticism, the student of literary theory in the next century might well be moved to shift the emphasis and ask but why is there not *a* feminist criticism? The frustrations of proliferation can also be construed as the pains of progress, and if the tone of feminist criticism has lost the celebratory solidarity of its early days, it has gained a much-needed complexity of analysis. An analysis of gender that "ignores" race, class, nationality, and sexuality is one that assumes a white, middle-class, heterosexual woman inclined towards motherhood as the subject of feminism; only by questioning the status of the subject of feminism – "woman" – does a feminist criticism avoid replicating the masculinist cultural error of taking the dominant for the universal.

For the women's movement of the 1960s and early 1970s the subject of feminism was women's experience under patriarchy, the long tradition of male rule in society which silenced women's voices, distorted their lives, and treated their concerns as peripheral. To be a woman under such conditions was in some respects not to exist at all. "When We Dead Awaken" seemed to Adrienne Rich a justified title for an address regarding women at the Modern Language Association in 1970.<sup>2</sup> With other noteworthy feminists of the 1960s and 1970s like Germaine Greer (*The Female Eunuch*) and Kate Millett (*Sexual*

*Politics*), Rich inspired into life a school of feminist literary criticism that took the history of women's oppression and the silencing of their voices as twin beacons to guide its work. But how was that history to be interpreted, those voices to be read? Were they the voices of fellow beings who shared a common biology or ontology? Or were history and social context so constitutive of all being that no thing called "woman" could be said to exist outside them? Was "woman" something to be escaped from or into?

Early on, feminist scholars realized that the "canon" taught in schools was overwhelmingly male. To be a woman graduate student in the 1960s was to hear recognizably male points of view, some of which were noticeably misogynist, declared to be "universal." Were there no women writers, then, aside from George Eliot and Jane Austen, Willa Cather or Emily Dickinson? And how were feminist scholars to deal with the canon? Elaine Showalter set about reconstructing a history of women writers (*A Literature of Their Own*). Judith Fetterley took up the question of how women are represented in "great" American literature (*The Resisting Reader*). And Sandra Gilbert and Susan Gubar examined the issue of what it meant for women writers to seek entry to a tradition dominated by images that did such violence to women (*The Madwoman in the Attic*).

The movement very quickly leapt across ethnic and gender boundaries (if indeed, given Rich's work both on her own ethnicity and her own gender difference, it might not be said to always have been across such boundaries). African-American feminist scholars like Mary Helen Washington, Barbara Smith, and bell hooks depicted a history of African-American women's experience along the twin axes of race and gender that had a unique specificity. Lesbian feminist critics like Bonnie Zimmerman and Susan Griffin reconstructed a hidden tradition of lesbian writing and explored the experience of radical alterity within a heterosexist world. Feminist literary scholarship in the 1970s and early 1980s was a rich, sometimes vexed, sometimes convivial, world in which words like "sisterhood" had a certain currency.

This early period is sometimes described as having two stages, one concerned with the critique of misogynist stereotypes in male literature, the other devoted to the recovery of a lost tradition and to the long labor of historical reconstruction. Banished from education and from public life, women writers had found refuge in literary forms despised by men, in diaries and letters and in sentimental fiction. Feminist scholars began to notice how the seemingly disinterested aesthetic categories that imbued literary scholarship in the academy automatically disqualified such writing from consideration for inclusion in the canon.

The mid-1980s are in retrospect a moment of great change in feminist criticism. What is called "French feminism" – essentially the work of Julia Kristeva, Luce Irigaray, and Hélène Cixous – began to have an impact on how feminist scholars thought about their work and about the assumptions that inspired it. "Woman," that unproblematic "character" of feminist stories about the world, suddenly became a matter of interpretation. Gender, rather than be the sight line that allowed one to trace woman's banishment from an androcentric culture, might instead be a construct of culture, something written into the psyche by language. Liberal and radical feminists had been in disagreement since the 1970s regarding the direction the women's movement should take – toward a deeper identification with a female "essence" or toward a departure from the way women had been made to be by patriarchy, the very thing radical feminists construed as essentially female. That difference now gained volatility within feminist literary critical discussions, and two perspectives began to form, one "constructionist" or accepting of the idea that gender is made by culture in history, the other "essentialist," more inclined

to the idea that gender reflects a natural difference between men and women that is as much psychological, even linguistic, as it is biological. And there was no possible meeting of minds between the two, for each necessarily denied the other. Feminism was suddenly feminisms.

Each perspective derived support from different theoretical sources, and both, curiously enough, found support in French Post-Structuralism. The essentialists looked to the work of feminist psychoanalyst Nancy Chodorow (*The Reproduction of Mothering*), ethical philosopher Carol Gilligan (*In a Different Voice*), and French feminist philosopher Luce Irigaray (*Speculum of the Other Woman* and *This Sex Which Is Not One*) and argued that women's physical differences alone (birthing, lactation, menstruation, etc.) make them more connected with matter or with the physical world than men. Luce Irigaray distinguishes between blood and sham, between the direct link to material nature in women's bodies and the flight from such contact that is the driving force of male abstraction, its pretense to be above matter and outside of nature (in civilization). She notes how matter (which she links etymologically to maternity and to the matrix, the space that is the prop for male philosophical speculation or abstract thinking) is irreducible to male Western conceptuality; outside and making possible, yet impossible to assimilate to male reason, matter is what makes women women, an identity and an experience of their own, forever apart from male power and male concepts.

Women, essentialists argued, are innately capable of offering a different ethics from men, one more attuned to preserving the earth from destruction by weapons devised by men. Men must abstract themselves from the material world as they separate from mothers in order to acquire a license to enter the patriarchate, and they consequently adopt a violent and aggressive posture towards the world left behind, which is now construed as an "object." The primary matter they must separate from is the mother, who for them represents the tie to nature that must be overcome by the cut into abstraction that inaugurates civilization as men understand it (a set of abstract rules for assigning identities, appropriate social roles and the like that favor male power over women). Women, on the other hand, are not required to separate from the mother as they acquire a gender identity; they simply identify with the closest person to them as they grow up, their own mother. No cut is required, no separation that launches a precarious journey towards a fragile "identity" predicated on separation that simply denies its links to the physical world. Essentialist feminists argued that men think in terms of rights when confronted with ethical issues, while women think in terms of responsibilities to others. Women are more caring because their psychological and physical ties to physical being remain unbroken.

While one strand of essentialist theory finds common ground with Post-Structuralism around the body (that which male-defined reason must transcend but which includes and exceeds it always), another finds in Post-Structuralism an argument against all identity. What lies outside male reason is precisely everything such reason abhors – contradiction, non-identity, fluidity, non-rationality, illogicality, mixing of genres, etcetera. Domination through categorical analysis (the violent cut of distinction) is impossible in the realm of matter where things flow into one another and are unamenable to philosophical opposition. Woman names this non-identity, and her language, what the French feminists call *écriture féminine* or feminine writing, is exercised in a heterogeneous style that deliberately undermines all the hierarchical orders of male rationalist philosophy by breaking from the ideal of coherent meaning and good rational style. (It should be noted that for writers like Cixous, feminine writing also characterizes the work of male writers like Joyce.)

The constructivist position took inspiration from the Marxist theory of the social construction of individual subjectivity (Althusser) and from the Post-Structuralist idea that language writes rather than reflects identities. Gender identity is no less a construction of patriarchal culture than the idea that men are somehow superior to women; both are born at the same time and with the same stroke of the pen. The psychology or identity that feminist essentialists think is different from men's is merely the product of conditioning under patriarchy, a conditioning to be caring, relational, and maternal that may make women seem more ethical than men, but a conditioning nonetheless. The constructionists worried that the essentialists were taking an effect to be a cause, interpreting the subordination of women as women's nature. What must change, they contended, is not the way androcentric culture traps and stifles a woman's identity that should be liberated into separation, but rather the way all gender, both male and female, is fabricated. Marxist feminists especially noted that much of what the essentialists took to be signs of a good female nature were in fact attributes assigned women in capitalist culture to make them better domestic laborers, better angels in the house.

At its most radical, the constructivist counter-paradigm embraces such categories as performativity, masquerade, and imitation, which are seen as cultural processes that generate gender identities that only appear to possess a pre-existing natural or material substance. Of more importance than physical or biological difference might be psychological identity (across a range from "masculine" to "feminine," from aggressivity and self-assertiveness to emotional flexibility and psychological relationality). Women can be just as much "masculine" as men, and biological men might simply be "masculine" (or pretend to be such) only out of obedience to cultural codes. Feminist critics like Judith Butler began to argue in the mid-1980s that all gender is "performative," an imitation of a code that refers to no natural substance. Masculine means not feminine as much as it means anything natural. Susan Jeffords in *The Remasculinization of American Culture* notices, for example, that male masculinity in US culture after the Vietnam War is constructed through an expulsion of emotional traits associated with femininity.

The encounter with psychoanalysis has been crucial to the development of contemporary feminist thinking about literature and culture. Millett attacked Freud's most noteworthy mistakes regarding women, but later feminists have argued that the engagement with psychoanalysis should not be one entirely of rejection. Juliet Mitchell has argued that what is important about Freud is the theory of engendering. Gender is socially constructed, and although Freud's own account is patriarchal, other accounts are possible, as are other ways of constructing human subjectivity. While Freud favored the Oedipal drama of gender inscription, whereby the father's intervention between mother and son initiates the separation that preserves civilization, feminists have urged that greater attention be given the pre-Oedipal period, one shaped by the child's relationship with its mother (at least in traditional households in which men work and women do domestic labor). In the mother-child relationship might be found more of the constituents of identity (as object relations psychoanalytic theory claims) than are given during the later Oedipal stage. This shift in attention has the virtue of displacing a central theoretical premise of patriarchal culture – that fathers determine sexual identity – but it broaches the dangerous possibility of reducing a sociological postulate – mothering – to a biological destiny. Is "mothering" constructed within patriarchy as the other of "fathering" (understood as non-domestic labor), or is it a value, an ideal, and a human relationship that offers a way out of patriarchy, a different voice and perhaps even a different language?

Feminist literary criticism moves with time from the criticism of writing by men and the exploration of writing by women to a questioning of what it means at all to engage with or in language. If all language carries worlds within it, assumptions and values that lie embedded in the simplest of utterances, then how can women take up such language, the language of patriarchy, and hope to use it to forge a better world for women? Or is language neutral, an indifferent instrument that can be wielded in any number of socially constructive ways? And what does it mean here to speak of "a better world for women"? Is that not to nominate into an indifferent identity a splintered multiplicity of women's lives around the world and around any one community or society? And if feminism, in its inspiration, is about the painful particularities of any one person's experience, their right to be heard despite centuries of deafness and deliberate, systematic muting, then how can it especially name into silence voices that know no language with which to speak? Shouldn't women especially know what it means to need to speak and be denied a language with which to speak? Yet isn't to speak for "other" women, women outside the glow of the tent lights of highly literate literary culture, even if it is to take up their cause and stand in for them at the podium of history, to do what men have always done for women? How can language be given when it takes so much away? Yet a woman was stoned to death on March 30, 1997, for being in the company of someone not of her "kin." If silence is complicity, what form should speech take in such a situation? Should it adopt the language of rights, the one created by men? Or is there a different construction of the problem, one less abstract, made more angry by painful experience, that is more appropriately "feminist"?

At its outer boundary, the feminist literary criticism that arose in the 1960s and 1970s in the US and the Commonwealth countries discovers the conditions as well as the limits of its own possibility in language and in literacy. And by looking beyond the boundary it encounters its own origin in the pain of denied speech and the presumption of assigned speech. There as well, perhaps, from the achieved vantage of an international, trans-ethnic, parasexual perspective, it discovers a field of work that takes it back beyond its own beginning in the emergence from silence into language – to undo the silence of those who still do not speak.

In 1969 a revolution occurred. It seemed small at first, but like many other small gestures of rebellion, it represented the first significant fissure in the crystalline edifice of a certain social order. Ultimately that fissure widened, and in spreading broke the system that defined what otherwise might have been a night's fun as a gesture of rebellion. In retrospect, the fact that a group of gays, lesbians, and transvestites should resist undergoing the by-then routine procedure of being harassed and arrested by the New York police seems fairly happenstance. But something much bigger was at stake in the riot that occurred that night. That something was the regime of what Adrienne Rich calls "compulsory heterosexuality." That regime had as a major correlate (if not presupposition) the banishment of alternative sexual practices and the violation of bearers of non-heterosexual gender identities. If women were to be compelled to be child-productive wives by the dominant social group of heterosexual men, then women's friendships would be deemed suspicious, and lesbianism would be enjoined. If men were to behave in accordance with the dictates of compulsory heterosexuality and not engage in sexual practices that placed the reigning code of heterosexual masculinity in question, then their friendships too would be suspect, and male homosexuality would also be forbidden. Those guilty of daring to challenge this social and cultural regime – Oscar Wilde comes to mind – would be the objects of calumny, if not of overt violence. And all of this

would be called “normality” while all of “that” would be stigmatized as “perversion.” That science and medicine were complicit in this regime only says once again, in case it needs repeating, that science and medicine could do to rethink their founding rationalist criteria and their principles of social constitution, two things that always coexist but whose coexistence science always has trouble recognizing.

The emergence of a Gay and Lesbian Liberation Movement in the late 1960s and early 1970s intersected necessarily with the work of feminists who were concerned with issues of sexuality and of gender identity. For a time, the two movements seemed to share a common ground; women and gays were objects of oppression by a dominant male heterosexual group. But in other respects (and in hindsight), there were grounds for difference.

In the 1980s, feminism began to change direction. For some time, feminist theorists had been discussing the idea that there might be a difference within feminism proper between biological sexual identity (the physical difference that makes women women and men men) and gender identity. If biological sexual identity belonged to nature and could allow a general class of “women” to be identified as “not male,” gender identity seemed more subject to the contingencies of culture and history, more something constructed in and variable across society and through history. It might not lend itself to an opposition such as that between “man” and “woman.” The generality of the category “women” might in fact conceal and suppress differentiations between women in regard to choice of sexual object, sexual practices, and psychological identities, some of which might be “masculine.” While a masculine woman would for feminists of the 1970s be “male-identified,” for the emerging Gender Studies and Gay/Lesbian theories of the 1980s, such a person might simply be one of a variety of possible gender and sexual locations, an intersection of biology and culture, or physicality and psychology that is not easily identified (and certainly not easily vilified). The path-breaking work of anthropologists like Gayle Rubin and historians like Alan Bray and Michel Foucault bore out the point that gender is variable: in history and between societies, there is variation between different ways of practicing sex and being one gender or another. Sexual practices like anal intercourse, intercourse between women, fellatio, and cunnilingus are coded differently across different societies and throughout history. Anal intercourse and fellatio between men were common in fifth-century Greek society, and only later (in the late nineteenth century, according to Foucault) would they be “discovered” to be signs of an identifiable “perversion.” Christianity stands between the two dates or sites and probably has a great deal to do with how non-reproductive sexual practices became stigmatized over time.

Gay and lesbian scholars during the 1970s and 1980s began to peel away the layers of prejudice that had made it almost impossible, before the Stonewall riot, to study the history of gay and lesbian writing or to analyze how gays and lesbian life and experience were distorted in cultural history. Some of this early work included Guy Hocquenghem’s examination of the psychology of homophobia, Jeffrey Weeks’s history of “coming out,” Richard Dyer’s exploration of representations of gays and lesbians in film, Terry Castle’s study of “things not fit to be mentioned” in eighteenth-century literature, Lillian Faderman’s work on love between women in the Renaissance, the Combahee River Collective’s manifesto for African-American lesbians, Andrew Britton’s rebuttal of normative homophobia on the intellectual Left, Adrienne Rich’s celebrated statement against “compulsory heterosexuality,” Sharon O’Brien’s exploration of Willa Cather’s problematic attitude towards her own lesbianism, John D’Emilio’s history of how

homosexuals were minoritized in US culture, and Jeffrey Escoffier's analysis of the need for a gay revolution equivalent to the socialist one against capitalism. One of the more attention-getting publications during this period was the translation of the first volume of Foucault's *History of Sexuality* (1978). Foucault's argument that "homosexuality" is a social, medical, and ontological category invented in the late nineteenth century and imposed on sexual practices that prior to that point had enjoyed an absence of such "scientific" scrutiny provided impetus to the idea that modern heterocentric gender culture finds itself on the anathemizing of non-reproductive sexual alternatives that are in fact everywhere present in human society.

In the mid- to late 1970s and into the early 1980s, a new field of Gender Studies constituted itself in conjunction with Gay and Lesbian Studies. It turned its attention on all gender formations, both heterosexual and homosexual. Gender scholars found that heterosexuality can be understood as forming a continuum with homosexuality in that such ideals as heterosexual masculinity seem inseparable from a "panic" component, an apotropaic move or turn away from a certain homosexuality that helps construct heterosexuality. In *Between Men* (1985), Eve Sedgwick notices that male heterosexual desire is always modeled on another male's desire and always has a "homosocial" cast. The male bonding that sutures patriarchy is necessarily homophilic and forms a continuum with homosexuality.

More so than Gay Studies, Lesbian Studies has demonstrated a tendency towards separatism, perhaps because as women, lesbians suffer a double oppression. (If one factors in ethnic prejudice, as in the case of Gloria Anzaldua (*Borderlands/La Frontera*), the sense of pain grows exponentially.) A separatist strand of Lesbian Studies was theorized by Monique Wittig ("The Straight Mind," 1980) and Luce Irigaray (in her *This Sex Which Is Not One* (1977; English translation, 1985)). Lesbian women, Irigaray argues, can only exist as such in a world of their own apart from patrocentric culture. The difference of Lesbian Studies from feminism also began to be marked at this time. Judith Butler's *Gender Trouble* (1990) made the argument against enclosing Lesbian Studies within feminism emphatic by deconstructing the very notion of an identity of "woman" and demonstrating that all gender identity is a performance, an apparent substance that is an effect of a prior act of imitation. That same year Eve Kosofsky Sedgwick published her celebrated theoretical analysis of "closeting" (*Epistemology of the Closet*). Building on her earlier work, Sedgwick contends that one cannot logically separate men-loving-men within patriarchy from homosexuality. Sedgwick's work demonstrates the significance of Post-Structuralist thinking for Gender Theory, since it underscores the contingency of all supposedly axiomatic oppositions as that between homosexuality and heterosexuality. Sexuality and gender are variable and indeterminate; they do not align with simple polarities and can take multiple, highly differentiated forms. In 1994, Lee Edelman's *Homo-graphesis* brought deconstructive theory to bear on the question of gay identity and the issue of recognizability. The gay is a "homograph," someone who simulates the "normality" of masculinity or heterosexuality only to displace them as grounding ontological categories.

In the mid- to late 1980s, Acquired Immune Deficiency Syndrome killed many people in the gay community. Queer Theory, which emerged around this time, is in some respects a response to the epidemic, both a way of providing gays and lesbians with a common term around which to unite and a more radical way of calling attention to the issues raised by them. Queer Theory adopted a term of stigmatization ("queer" being a derogatory name for a gay or lesbian person) and turned it against the perpetrator by

transforming it into a token of pride. The shift in name also indicates a shift in analytic strategy, for now gay and lesbian theorists began to explore the “queerness” of supposedly “normal” sexual culture. The controversy over the photographs of Robert Mapplethorpe, some of which depict aspects of the gay sadomasochistic subculture, helped focus attention on the mendacity of a heterosexual sex–gender system that condemned as “perversion” in others what it practiced on a routine basis in its own homes. The work of Michael Moon and Paul Morrison is especially compelling in this regard. Morrison suggests that one reason Mapplethorpe’s pictures of men in leather bound with chains sitting in living rooms and looking very normal, almost like dinner guests awaiting their cue to head for the table, were so disturbing to the dominant heterosexual community is that they draw attention to the discipline and coercion operative in those living rooms. That discipline is normal, whereas the gay mimesis or enactment of such violence in the routines of sadism or masochism is stigmatized.<sup>3</sup> In a similar fashion, Moon uses Freud’s notion of the “uncanny,” the disturbing other within, to intimate that routine male heterosexual identity is premised on violent competition between men that has a sadistic component. Where we draw the lines between normal and non-normal is, Moon suggests, entirely contingent.

Gender Studies, Gay/Lesbian Studies, and Queer Theory have delineated three broad areas of work in literary and cultural theory. First, the examination of the history of the oppression of gays, lesbians, and practitioners of sexualities other than those deemed normal by the dominant heterosexual group. Second, the exploration of the counter-cultures of gay and lesbian writing that existed in parallel fashion with the dominant heterosexual culture. And third, the analysis of the instability and indeterminacy of all gender identity, such that even “normal” heterosexuality itself might be seen as a kind of panicked closure imposed on a variable, contingent, and multiple sexuality whose mobility and potentiality is signaled by the worlds of possibility opened up by gays and lesbians.

## Notes

# CHAPTER 2

## The Traffic in Women

*Gayle Rubin*

This 1975 essay by feminist anthropologist Gayle Rubin quickly became a key text of feminist argument in the 1970s. At that time, feminists were trying to find their place in relation to three of the dominant schools of thought on the academic Left – Freudian psychoanalysis, Structural anthropology, and Marxism. Rubin's essay notes the points of helpful contact for feminists with these schools as well as the moments of dissonance.

The literature on women – both feminist and anti-feminist – is a long rumination on the question of the nature and genesis of women's oppression and social subordination. The question is not a trivial one, since the answers given it determine our visions of the future, and our evaluation of whether or not it is realistic to hope for a sexually egalitarian society. More importantly, the analysis of the causes of women's oppression forms the basis for any assessment of just what would have to be changed in order to achieve a society without gender hierarchy. Thus, if innate male aggression and dominance are at the root of female oppression, then the feminist program would logically require either the extermination of the offending sex, or else a eugenics project to modify its character. If sexism is a by-product of capitalism's relentless appetite for profit, then sexism would wither away in the advent of a successful socialist revolution. If the world historical defeat of women occurred at the hands of an armed patriarchal revolt, then it is time for Amazon guerrillas to start training in the Adirondacks.

It lies outside the scope of this paper to conduct a sustained critique of some of the currently popular explanations of the genesis of sexual inequality – theories such as the popular evolution exemplified by *The Imperial Animal*, the alleged overthrow of prehistoric matriarchies, or the attempt to extract all of the phenomena of social subordination

*Original publication details:* Gayle Rubin, "The Traffic in Women" from *Toward an Anthropology of Women*, ed. Rayna Reiter. Monthly Review Press, 1975. Reproduced with permission from Duke University Press and G. Rubin.

from the first volume of *Capital*. Instead, I want to sketch some elements of an alternate explanation of the problem.

Marx once asked: “What is a Negro slave? A man of the black race. The one explanation is as good as the other. A Negro is a Negro. He only becomes a slave in certain relations. A cotton spinning jenny is a machine for spinning cotton. It becomes capital only in certain relations. Torn from these relationships it is no more capital than gold in itself is money or sugar is the price of sugar.”<sup>1</sup> One might paraphrase: What is a domesticated woman? A female of the species. The one explanation is as good as the other. A woman is a woman. She only becomes a domestic, a wife, a chattel, a playboy bunny, a prostitute, or a human dictaphone in certain relations. Torn from these relationships, she is no more the helpmate of man than gold in itself is money ... etc. What then are these relationships by which a female becomes an oppressed woman? The place to begin to unravel the system of relationships by which women become the prey of men is in the overlapping works of Claude Lévi-Strauss and Sigmund Freud. The domestication of women, under other names, is discussed at length in both of their œuvre. In reading through these works, one begins to have a sense of a systematic social apparatus which takes up females as raw materials and fashions domesticated women as products. Neither Freud nor Lévi-Strauss sees his work in this light, and certainly neither turns a critical glance upon the processes he describes. Their analyses and descriptions must be read, therefore, in something like the way in which Marx read the classical political economists who preceded him.<sup>2</sup> Freud and Lévi-Strauss are in some sense analogous to Ricardo and Smith: They see neither the implications of what they are saying, nor the implicit critique which their work can generate when subjected to a feminist eye. Nevertheless, they provide conceptual tools with which one can build descriptions of the part of social life which is the locus of the oppression of women, of sexual minorities, and of certain aspects of human personality within individuals. I call that part of social life the “sex/gender system,” for lack of a more elegant term. As a preliminary definition, a “sex/gender system” is the set of arrangements by which a society transforms biological sexuality into products of human activity, and in which these transformed sexual needs are satisfied.

The purpose of this essay is to arrive at a more fully developed definition of the sex/gender system, by way of a somewhat idiosyncratic and exegetical reading of Lévi-Strauss and Freud. I use the word “exegetical” deliberately. The dictionary defines “exegesis” as a “critical explanation or analysis; especially, interpretation of the Scriptures.” At times, my reading of Lévi-Strauss and Freud is freely interpretive, moving from the explicit content of a text to its presuppositions and implications. My reading of certain psychoanalytic texts is filtered through a lens provided by Jacques Lacan, whose own interpretation of the Freudian scripture has been heavily influenced by Lévi-Strauss.<sup>3</sup>

I will return later to a refinement of the definition of a sex/gender system. First, however, I will try to demonstrate the need for such a concept by discussing the failure of classical Marxism to fully express or conceptualize sex oppression. This failure results from the fact that Marxism, as a theory of social life, is relatively unconcerned with sex. In Marx’s map of the social world, human beings are workers, peasants, or capitalists; that they are also men and women is not seen as very significant. By contrast, in the maps of social reality drawn by Freud and Lévi-Strauss, there is a deep recognition of the place of sexuality in society, and of the profound differences between the social experience of men and women.

## Marx

There is no theory which accounts for the oppression of women – in its endless variety and monotonous similarity, cross-culturally and throughout history – with anything like the explanatory power of the Marxist theory of class oppression. Therefore, it is not surprising that there have been numerous attempts to apply Marxist analysis to the question of women. There are many ways of doing this. It has been argued that women are a reserve labor force for capitalism, that women's generally lower wages provide extra surplus to a capitalist employer, that women serve the ends of capitalist consumerism in their roles as administrators of family consumption, and so forth.

However, a number of articles have tried to do something much more ambitious – to locate the oppression of women in the heart of the capitalist dynamic by pointing to the relationship between housework and the reproduction of labor. To do this is to place women squarely in the definition of capitalism, the process in which capital is produced by the extraction of surplus value from labor by capital.<sup>4</sup>

Briefly, Marx argued that capitalism is distinguished from all other modes of production by its unique aim: the creation and expansion of capital. Whereas other modes of production might find their purpose in making useful things to satisfy human needs, or in producing a surplus for a ruling nobility, or in producing to insure sufficient sacrifice for the edification of the gods, capitalism produces capital. Capitalism is a set of social relations – forms of property, and so forth – in which production takes the form of turning money, things, and people into capital. And capital is a quantity of goods or money which, when exchanged for labor, reproduces and augments itself by extracting unpaid labor, or surplus value, from labor and into itself.

The result of the capitalist production process is neither a mere produce (use-value) nor a commodity, that is, a use-value which has exchange-value. Its result, its product, is the creation of surplus-value for capital, and consequently the actual transformation of money or commodity into capitals.<sup>5</sup>

The exchange between capital and labor which produces surplus value, and hence capital, is highly specific. The worker gets a wage; the capitalist gets the things the worker has made during his or her time of employment. If the total value of the things the worker has made exceeds the value of his or her wage, the aim of capitalism has been achieved. The capitalist gets back the cost of the wage, plus an increment – surplus value. This can occur because the wage is determined not by the value of what the laborer makes, but by the value of what it takes to keep him or her going – to reproduce him or her from day to day, and to reproduce the entire work force from one generation to the next. Thus, surplus value is the difference between what the laboring class produces as a whole, and the amount of that total which is recycled into maintaining the laboring class.

The capital given in exchange for labor power is converted into necessities, by the consumption of which the muscles, nerves, bones, and brains of existing laborers are reproduced, and new laborers are begotten ... the individual consumption of the laborer, whether it proceed within the workshop or outside it, whether it be part of the process of production or not, forms therefore a factor of the production and reproduction of capital; just as cleaning machinery does.<sup>6</sup>

Given the individual, the production of labor-power consists in his reproduction of himself or his maintenance. For his maintenance he requires a given quantity of the means

of subsistence.... Labor-power sets itself in action only by working. But thereby a definite quantity of human muscle, brain, nerve, etc., is wasted, and these require to be restored.<sup>7</sup>

The amount of the difference between the reproduction of labor power and its products depends, therefore, on the determination of what it takes to reproduce that labor power. Marx tends to make that determination on the basis of the quantity of commodities – food, clothing, housing, fuel – which would be necessary to maintain the health, life, and strength of a worker. But these commodities must be consumed before they can be sustenance, and they are not immediately in consumable form when they are purchased by the wage. Additional labor must be performed upon these things before they can be turned into people. Food must be cooked, clothes cleaned, beds made, wood chopped, etc. Housework is therefore a key element in the process of the reproduction of the laborer from whom surplus value is taken. Since it is usually women who do housework, it has been observed that it is through the reproduction of labor power that women are articulated into the surplus value nexus which is the sine qua non of capitalism.<sup>8</sup> It can be further argued that since no wage is paid for housework, the labor of women in the home contributes to the ultimate quantity of surplus value realized.

Women are oppressed in societies which can by no stretch of the imagination be described as capitalist. In the Amazon valley and the New Guinea Highlands, women are frequently kept in their place by gang rape when the ordinary mechanisms of masculine intimidation prove insufficient. “We tame our women with the banana,” said one Mundurucu man.<sup>9</sup> The ethnographic record is littered with practices whose effect is to keep women “in their place” – men’s cults, secret initiations, arcane male knowledge, etc. And pre-capitalist, feudal Europe was hardly a society in which there was no sexism. Capitalism has taken over, and rewired notions of male and female which predate it by centuries. No analysis of the reproduction of labor power under capitalism can explain foot-binding, chastity belts, or any of the incredible array of Byzantine, fetishized indignities, let alone the more ordinary ones, which have been inflicted upon women in various times and places. The analysis of the reproduction of labor power does not even explain why it is usually women who do domestic work in the home, rather than men.

In this light it is interesting to return to Marx’s discussion of the reproduction of labor. What is necessary to reproduce the worker is determined in part by the biological needs of the human organism, in part by the physical conditions of the place in which it lives, and in part by cultural tradition. Marx observed that beer is necessary for the reproduction of the English working class, and wine necessary for the French.

[T]he number and extent of his [the worker’s] so-called necessary wants, as also the modes of satisfying them, are themselves the product of historical development, and depend therefore to a great extent on the degree of civilization of a country, more particularly on the conditions under which, and consequently on the habits and degree of comfort in which, the class of free laborers has been formed. In contradistinction therefore to the case of other commodities, there enters into the determination of the value of labor-power a historical and moral element.<sup>10</sup>

It is precisely this “historical and moral element” which determines that a “wife” is among the necessities of a worker, that women rather than men do housework, and that capitalism is heir to a long tradition in which women do not inherit, in which women do not lead, and in which women do not talk to god. It is this “historical and moral element”

which presented capitalism with a cultural heritage of forms of masculinity and femininity. It is within this “historical and moral element” that the entire domain of sex, sexuality, and sex oppression is subsumed. And the brevity of Marx’s comment only serves to emphasize the vast area of social life which it covers and leaves unexamined. Only by subjecting this “historical and moral element” to analysis can the structure of sex oppression be delineated.

## Engels

In *The Origin of the Family, Private Property, and the State*, Engels sees sex oppression as part of capitalism’s heritage from prior social forms. Moreover, Engels integrates sex and sexuality into his theory of society. *Origin* is a frustrating book. Like the nineteenth-century tomes on the history of marriage and the family which it echoes, the state of the evidence in *Origin* renders it quaint to a reader familiar with more recent developments in anthropology. Nevertheless, it is a book whose considerable insight should not be overshadowed by its limitations. The idea that the “relations of sexuality” can and should be distinguished from the “relations of production” is not the least of Engels’ intuitions:

According to the materialistic conception, the determining factor in history is, in the final instance, the production and reproduction of immediate life. This again, is of a twofold character: on the one hand, the production of the means of existence, of food, clothing, and shelter and the tools necessary for that production; on the other side, the production of human beings themselves, the propagation of the species. The social organization under which the people of a particular historical epoch and a particular country live is determined by both kinds of production: by the stage of development of labor on the one hand, and of the family on the other.<sup>11</sup>

This passage indicates an important recognition – that a human group must do more than apply its activity to reshaping the natural world in order to clothe, feed, and warm itself. We usually call the system by which elements of the natural world are transformed into objects of human consumption the “economy.” But the needs which are satisfied by economic activity even in the richest, Marxian sense, do not exhaust fundamental human requirements. A human group must also reproduce itself from generation to generation. The needs of sexuality and procreation must be satisfied as much as the need to eat, and one of the most obvious deductions which can be made from the data of anthropology is that these needs are hardly ever satisfied in any “natural” form, any more than are the needs for food. Hunger is hunger, but what counts as food is culturally determined and obtained. Every society has some form of organized economic activity. Sex is sex, but what counts as sex is equally culturally determined and obtained. Every society also has a sex gender system – a set of arrangements by which the biological raw material of human sex and procreation is shaped by human, social intervention and satisfied in a conventional manner, no matter how bizarre some of the conventions may be.<sup>12</sup>

The realm of human sex, gender, and procreation has been subjected to, and changed by, relentless social activity for millennia. Sex as we know it – gender identity, sexual desire and fantasy, concepts of childhood – is itself a social product. We need to understand the relations of its production, and forget, for a while, about food, clothing,

automobiles, and transistor radios. In most Marxist tradition, and even in Engels' book, the concept of the "second aspect of material life" has tended to fade into the background, or to be incorporated into the usual notions of "material life." Engels' suggestion has never been followed up and subjected to the refinement which it needs. But he does indicate the existence and importance of the domain of social life which I want to call the sex/gender system.

Other names have been proposed for the sex/gender system. The most common alternatives are "mode of reproduction" and "patriarchy." It may be foolish to quibble about terms, but both of these can lead to confusion. All three proposals have been made in order to introduce a distinction between "economic" systems and "sexual" systems, and to indicate that sexual systems have a certain autonomy and cannot always be explained in terms of economic forces. "Mode of reproduction," for instance, has been proposed in opposition to the more familiar "mode of production." But this terminology links the "economy" to production, and the sexual system to "reproduction." It reduces the richness of either system, since "productions" and "reproductions" take place in both. Every mode of production involves reproduction – of tools, labor, and social relations. We cannot relegate all of the multi-faceted aspects of social reproduction to the sex system. Replacement of machinery is an example of reproduction in the economy. On the other hand, we cannot limit the sex system to "reproduction" in either the social or biological sense of the term. A sex/gender system is not simply the reproductive moment of a "mode of production." The formation of gender identity is an example of production in the realm of the sexual system. And a sex/gender system involves more than the "relations of procreation," reproduction in the biological sense.

The term "patriarchy" was introduced to distinguish the forces maintaining sexism from other social forces, such as capitalism. But the use of "patriarchy" obscures other distinctions. Its use is analogous to using capitalism to refer to all modes of production, whereas the usefulness of the term "capitalism" lies precisely in that it distinguishes between the different systems by which societies are provisioned and organized. Any society will have some system of "political economy." Such a system may be egalitarian or socialist. It may be class stratified, in which case the oppressed class may consist of serfs, peasants, or slaves. The oppressed class may consist of wage laborers, in which case the system is properly labeled "capitalist." The power of the term lies in its implication that, in fact, there are alternatives to capitalism.

Similarly, any society will have some systematic ways to deal with sex, gender, and babies. Such a system may be sexually egalitarian, at least in theory, or it may be "gender stratified," as seems to be the case for most or all of the known examples. But it is important – even in the face of a depressing history – to maintain a distinction between the human capacity and necessity to create a sexual world, and the empirically oppressive ways in which sexual worlds have been organized. Patriarchy subsumes both meanings into the same term. Sex/gender system, on the other hand, is a neutral term which refers to the domain and indicates that oppression is not inevitable in that domain, but is the product of the specific social relations which organize it.

Finally, there are gender-stratified systems which are not adequately described as patriarchal. Many New Guinea societies (Enga, Maring, Bena Bena, Huli, Melpa, Kuma, Gahuku Gama, Fore, Marind Anim, ad nauseam) are viciously oppressive to women. But the power of males in these groups is not founded on their roles as fathers or patriarchs, but on their collective adult maleness, embodied in secret cults, men's houses, warfare, exchange networks, ritual knowledge, and various initiation procedures. Patriarchy is a

specific form of male dominance, and the use of the term ought to be confined to the Old Testament-type pastoral nomads from whom the term comes, or groups like them. Abraham was a Patriarch – one old man whose absolute power over wives, children, herds, and dependents was an aspect of the institution of fatherhood, as defined in the social group in which he lived.

Whichever term we use, what is important is to develop concepts to adequately describe the social organization of sexuality and the reproduction of the conventions of sex and gender. We need to pursue the project Engels abandoned when he located the subordination of women in a development within the mode of production.<sup>13</sup> To do this, we can imitate Engels in his method rather than in his results. Engels approached the task of analyzing the “second aspect of material life” by way of an examination of a theory of kinship systems. Kinship systems are and do many things. But they are made up of, and reproduce, concrete forms of socially organized sexuality. Kinship systems are observable and empirical forms of sex/gender systems.

## Kinship

(On the part played by sexuality in the transition from ape to “man.”)

To an anthropologist, a kinship system is not a list of biological relatives. It is a system of categories and statuses which often contradict actual genetic relationships. There are dozens of examples in which socially defined kinship statuses take precedence over biology. The Nuer custom of “woman marriage” is a case in point. The Nuer define the status of fatherhood as belonging to the person in whose name cattle bridewealth is given for the mother. Thus, a woman can be married to another woman, and be husband to the wife and father of her children, despite the fact that she is not the inseminator.<sup>14</sup>

In pre-state societies, kinship is the idiom of social interaction, organizing economic, political, and ceremonial, as well as sexual, activity. One’s duties; responsibilities, and privileges *vis-à-vis* others are defined in terms of mutual kinship or lack thereof. The exchange of goods and services, production and distribution, hostility and solidarity, ritual and ceremony, all take place within the organizational structure of kinship. The ubiquity and adaptive effectiveness of kinship has led many anthropologists to consider its invention, along with the invention of language, to have been the developments which decisively marked the discontinuity between semi-human hominids and human beings.<sup>15</sup>

While the idea of the importance of kinship enjoys the status of a first principle in anthropology, the internal workings of kinship systems have long been a focus for intense controversy. Kinship systems vary wildly from one culture to the next. They contain all sorts of bewildering rules which govern whom one may or may not marry. Their internal complexity is dazzling. Kinship systems have for decades provoked the anthropological imagination into trying to explain incest taboos, cross-cousin marriage, terms of descent, relationships of avoidance or forced intimacy, clans and sections, taboos on names – the diverse array of items found in descriptions of actual kinship systems. In the nineteenth century, several thinkers attempted to write comprehensive accounts of the nature and history of human sexual systems.<sup>16</sup> One of these was *Ancient Society*, by Lewis Henry Morgan. It was this book which inspired Engels to write *The Origin of the Family, Private Property, and the State*. Engels’ theory is based upon Morgan’s account of kinship and marriage.

In taking up Engels’ project of extracting a theory of sex oppression from the study of kinship, we have the advantage of the maturation of ethnology since the nineteenth

century. We also have the advantage of a peculiar and particularly appropriate book, Lévi-Strauss' *The Elementary Structures of Kinship*. This is the boldest twentieth-century version of the nineteenth-century project to understand human marriage. It is a book in which kinship is explicitly conceived of as an imposition of cultural organization upon the facts of biological procreation. It is permeated with an awareness of the importance of sexuality in human society. It is a description of society which does not assume an abstract, genderless human subject. On the contrary, the human subject in Lévi-Strauss' work is always either male or female, and the divergent social destinies of the two sexes can therefore be traced. Since Lévi-Strauss sees the essence of kinship systems to lie in an exchange of women between men, he constructs an implicit theory of sex oppression. Aptly, the book is dedicated to the memory of Lewis Henry Morgan.

“Vile and precious merchandise”  
Monique Wittig

*The Elementary Structures of Kinship* is a grand statement on the origin and nature of human society. It is a treatise on the kinship systems of approximately one-third of the ethnographic globe. Most fundamentally, it is an attempt to discern the structural principles of kinship. Lévi-Strauss argues that the application of these principles (summarized in the last chapter of *Elementary Structures*) to kinship data reveals an intelligible logic to the taboos and marriage rules which have perplexed and mystified Western anthropologists. He constructs a chess game of such complexity that it cannot be recapitulated here. But two of his chess pieces are particularly relevant to women – the “gift” and the incest taboo, whose dual articulation adds up to his concept of the exchange of women.

*Elementary Structures* is in part a radical gloss on another famous theory of primitive social organization, Mauss' *Essay on the Gift*.<sup>17</sup> It was Mauss who first theorized as to the significance of one of the most striking features of primitive societies: the extent to which giving, receiving, and reciprocating gifts dominates social intercourse. In such societies, all sorts of things circulate in exchange – food, spells, rituals, words, names, ornaments, tools, and dowers.

Your own mother, your own sister, your own pigs, your own yams that you have piled up, you may not eat. Other people's mothers, other people's sisters, other people's pigs, other people's yams that they have piled up, you may eat.<sup>18</sup>

In a typical gift transaction, neither party gains anything. In the Trobriand Islands, each household maintains a garden of yams and each household eats yams. But the yams a household grows and the yams it eats are not the same. At harvest time, a man sends the yams he has cultivated to the household of his sister; the household in which he lives is provisioned by his wife's brother.<sup>19</sup> Since such a procedure appears to be a useless one from the point of view of accumulation or trade, its logic has been sought elsewhere. Mauss proposed that the significance of gift giving is that it expresses, affirms, or creates a social link between the partners of an exchange. Gift giving confers upon its participants a special relationship of trust, solidarity, and mutual aid. One can solicit a friendly relationship in the offer of a gift; acceptance implies a willingness to return a gift and a confirmation of the relationship. Gift exchange may also be the idiom of competition and rivalry. There are many examples in which one person humiliates another by giving

more than can be reciprocated. Some political systems, such as the Big Man systems of Highland New Guinea, are based on exchange which is unequal on the material plane. An aspiring Big Man wants to give away more goods than can be reciprocated. He gets his return in political prestige.

Although both Mauss and Lévi-Strauss emphasize the solidary aspects of gift exchange, the other purposes served by gift giving only strengthen the point that it is a ubiquitous means of social commerce. Mauss proposed that gifts were the threads of social discourse, the means by which such societies were held together in the absence of specialized governmental institutions. "The gift is the primitive way of achieving the peace that in civil society is secured by the state.... Composing society, the gift was the liberation of culture."<sup>20</sup>

Lévi-Strauss adds to the theory of primitive reciprocity the idea that marriages are a most basic form of gift exchange, in which it is women who are the most precious of gifts. He argues that the incest taboo should best be understood as a mechanism to insure that such exchanges take place between families and between groups. Since the existence of incest taboos is universal, but the content of their prohibitions variable, they cannot be explained as having the aim of preventing the occurrence of genetically close matings. Rather, the incest taboo imposes the social aim of exogamy and alliance upon the biological events of sex and procreation. The incest taboo divides the universe of sexual choice into categories of permitted and prohibited sexual partners. Specifically, by forbidding unions within a group it enjoins marital exchange between groups.

The prohibition on the sexual use of a daughter or a sister compels them to be given in marriage to another man, and at the same time it establishes a right to the daughter or sister of this other man.... The woman whom one does not take is, for that very reason, offered up.<sup>21</sup>

The prohibition of incest is less a rule prohibiting marriage with the mother, sister, or daughter, than a rule obliging the mother, sister, or daughter to be given to others. It is the supreme rule of the gift....<sup>22</sup>

The result of a gift of women is more profound than the result of other gift transactions, because the relationship thus established is not just one of reciprocity, but one of kinship. The exchange partners have become affines, and their descendants will be related by blood: "Two people may meet in friendship and exchange gifts and yet quarrel and fight in later times, but intermarriage connects them in a permanent manner."<sup>23</sup> As is the case with other gift giving, marriages are not always so simply activities to make peace. Marriages may be highly competitive, and there are plenty of affines who fight each other. Nevertheless, in a general sense the argument is that the taboo on incest results in a wide network of relations, a set of people whose connections with one another are a kinship structure. All other levels, amounts, and directions of exchange – including hostile ones – are ordered by this structure. The marriage ceremonies recorded in the ethnographic literature are moments in a ceaseless and ordered procession in which women, children, shells, words, cattle names, fish, ancestors, whales' teeth, pigs, yams, spells, dances, mats, etc., pass from hand to hand, leaving as their tracks the ties that bind. Kinship is organization, and organization gives power. But who is organized?

If it is women who are being transacted, then it is the men who give and take them who are linked, the women being a conduit of a relationship rather than a partner to it.<sup>24</sup> The exchange of women does not necessarily imply that women are objectified, in the modern sense, since objects in the primitive world are imbued with highly personal

qualities. But it does imply a distinction between gift and giver. If women are the gifts, then it is men who are the exchange partners. And it is the partners, not the presents, upon whom reciprocal exchange confers its quasi-mystical power of social linkage. The relations of such a system are such that women are in no position to realize the benefits of their own circulation. As long as the relations specify that men exchange women, it is men who are the beneficiaries of the product of such exchanges – social organization.

The total relationship of exchange which constitutes marriage is not established between a man and a woman, but between two groups of men, and the woman figures only as one of the objects in the exchange, not as one of the partners.... This remains true even when the girl's feelings are taken into consideration, as, moreover, is usually the case. In acquiescing to the proposed union, she precipitates or allows the exchange to take place, she cannot alter its nature.<sup>25</sup>

To enter into a gift exchange as a partner, one must have something to give. If women are for men to dispose of, they are in no position to give themselves away.

"What woman," mused a young Northern Melpa man, "is ever strong enough to get up and say, 'Let us make *moka*, let us find wives and pigs, let us give our daughters to men, let us wage war, let us kill our enemies!' No indeed not! ... they are little rubbish things who stay at home simply, don't you see?"<sup>26</sup>

What women indeed! The Melpa women of whom the young man spoke can't get wives, they *are* wives, and what they get are husbands, an entirely different matter. The Melpa women can't give their daughters to men, because they do not have the same rights in their daughters that their male kin have, rights of bestowal (although *not* of ownership).

The "exchange of women" is a seductive and powerful concept. It is attractive in that it places the oppression of women within social systems, rather than in biology. Moreover, it suggests that we look for the ultimate locus of women's oppression within the traffic in women, rather than within the traffic in merchandise. It is certainly not difficult to find ethnographic and historical examples of trafficking in women. Women are given in marriage, taken in battle, exchanged for favors, sent as tribute, traded, bought, and sold. Far from being confined to the "primitive" world, these practices seem only to become more pronounced and commercialized in more "civilized" societies. Men are of course also trafficked – but as slaves, hustlers, athletic stars, serfs, or as some other catastrophic social status, rather than as men. Women are transacted as slaves, serfs, and prostitutes, but also simply as women. And if men have been sexual subjects – exchangers – and women sexual semi-objects – gifts – for much of human history, then many customs, clichés, and personality traits seem to make a great deal of sense (among others, the curious custom by which a father gives away the bride)....

The exchange of women is also a problematic concept. Since Lévi-Strauss argues that the incest taboo and the results of its application constitute the origin of culture, it can be deduced that the world historical defeat of women occurred with the origin of culture, and is a prerequisite of culture. If his analysis is adopted in its pure form, the feminist program must include a task even more onerous than the extermination of men; it must attempt to get rid of culture and substitute some entirely new phenomena on the face of the earth. However, it would be a dubious proposition at best to argue that if

there were no exchange of women there would be no culture, if for no other reason than that culture is, by definition, inventive. It is even debatable that “exchange of women” adequately describes all of the empirical evidence of kinship systems. Some cultures, such as the Lele and the Kuma, exchange women explicitly and overtly. In other cultures, the exchange of women can be inferred. In some – particularly those hunters and gatherers excluded from Lévi-Strauss’ sample – the efficacy of the concept becomes altogether questionable. What are we to make of a concept which seems so useful and yet so difficult?

The “exchange of women” is neither a definition of culture nor a system in and of itself. The concept is an acute, but condensed, apprehension of certain aspects of the social relations of sex and gender. A kinship system is an imposition of social ends upon a part of the natural world. It is therefore “production” in the most general sense of the term: a molding, a transformation of objects (in this case, people) to and by a subjective purpose. It has its own relations to production, distribution, and exchange, which include certain “property” forms in people. These forms are not exclusive private property rights, but rather different sorts of rights that various people have over other people. Marriage transactions – the gifts and material which circulate in the ceremonies marking a marriage – are a rich source of data for determining exactly who has which rights in whom. It is not difficult to deduce from such transactions that in most cases women’s rights are considerably more residual than those of men.

Kinship systems do not merely exchange women. They exchange sexual access, genealogical statuses, lineage names and ancestors, rights and people – men, women, and children – in concrete systems of social relationships. These relationships always include certain rights for men, others for women. “Exchange of women” is a shorthand for expressing that the social relations of a kinship system specify that men have certain rights in their female kin, and that women do not have the same rights either to themselves or to their male kin. In this sense, the exchange of women is a profound perception of a system in which women do not have full rights to themselves. The exchange of women becomes an obfuscation if it is seen as a cultural necessity and when it is used as the single tool with which an analysis of a particular kinship system is approached.

If Lévi-Strauss is correct in seeing the exchange of women as a fundamental principle of kinship, the subordination of women can be seen as a product of the relationships by which sex and gender are organized and produced. The economic oppression of women is derivative and secondary. But there is an “economics” of sex and gender, and what we need is a political economy of sexual systems. We need to study each society to determine the exact mechanisms by which particular conventions of sexuality are produced and maintained. The “exchange of women” is an initial step toward building an arsenal of concepts with which sexual systems can be described.

### Deeper into the Labyrinth

More concepts can be derived from an essay by Lévi-Strauss, “The Family,” in which he introduces other considerations into his analysis of kinship. In *The Elementary Structures of Kinship*, he describes rules and systems of sexual combination. In “The Family,” he raises the issue of the preconditions necessary for marriage systems to operate. He asks what sort of “people” are required by kinship systems, by way of an analysis of the sexual division of labor.

Although every society has some sort of division of tasks by sex, the assignment of any particular task to one sex or the other varies enormously. In some groups, agriculture is the work of women, in others, the work of men. Women carry the heavy burdens in some societies, men in others. There are even examples of female hunters and warriors, and of men performing child-care tasks. Lévi-Strauss concludes from a survey of the division of labor by sex that it is not a biological specialization, but must have some other purpose. This purpose, he argues, is to insure the union of men and women by making the smallest viable economic unit contain at least one man and one woman.

The very fact that it [the sexual division of labor] varies endlessly according to the society selected for consideration shows that ... it is the mere fact of its existence which is mysteriously required, the form under which it comes to exist being utterly irrelevant, at least from the point of view of any natural necessity ... [T]he sexual division of labor is nothing else than a device to institute a reciprocal state of dependency between the sexes.<sup>27</sup>

The division of labor by sex can therefore be seen as a “taboo”: a taboo against the sameness of men and women, a taboo dividing the sexes into two mutually exclusive categories, a taboo which exacerbates the biological differences between the sexes and thereby *creates* gender. The division of labor can also be seen as a taboo against sexual arrangements other than those containing at least one man and one woman, thereby enjoining heterosexual marriage.

The argument in “The Family” displays a radical questioning of all human sexual arrangements, in which no aspect of sexuality is taken for granted as “natural” (Hertz constructs a similar argument for a thoroughly cultural explanation of the denigration of left-handedness).<sup>28</sup> Rather, all manifest forms of sex and gender are seen as being constituted by the imperatives of social systems. From such a perspective, even *The Elementary Structures of Kinship* can be seen to assume certain preconditions. In purely logical terms, a rule forbidding some marriages and commanding others presupposes a rule enjoining marriage. And marriage presupposes individuals who are disposed to marry.

It is of interest to carry this kind of deductive enterprise even further than Lévi-Strauss does, and to explicate the logical structure which underlies his entire analysis of kinship. At the most general level, the social organization of sex rests upon gender, obligatory heterosexuality, and the constraint of female sexuality.

Gender is a socially imposed division of the sexes. It is a product of the social relations of sexuality. Kinship systems rest upon marriage. They therefore transform males and females into “men” and “women,” each an incomplete half which can only find wholeness when united with the other. Men and women are, of course, different. But they are not as different as day and night, earth and sky, yin and yang, life and death. In fact, from the standpoint of nature, men and women are closer to each other than either is to anything else – for instance, mountains, kangaroos, or coconut palms. The idea that men and women are more different from one another than either is from anything else must come from somewhere other than nature. Furthermore, although there is an average difference between males and females on a variety of traits, the range of variation of those traits shows considerable overlap. There will always be some women who are taller than some men, for instance, even though men are on the average taller than women. But the idea that men and women are two mutually exclusive categories must arise out of

something other than a nonexistent “natural” opposition.<sup>29</sup> Far from being an expression of natural differences, exclusive gender identity is the suppression of natural similarities. It requires repression: in men, of whatever is the local version of “feminine” traits; in women, of the local definition of “masculine” traits. The division of the sexes has the effect of repressing some of the personality characteristics of virtually everyone, men and women. The same social system which oppresses women in its relations of exchange, oppresses everyone in its insistence upon a rigid division of personality.

Furthermore, individuals are engendered in order that marriage be guaranteed. Lévi-Strauss comes dangerously close to saying that heterosexuality is an instituted process. If biological and hormonal imperatives were as overwhelming as popular mythology would have them, it would hardly be necessary to insure heterosexual unions by means of economic interdependency. Moreover, the incest taboo presupposes a prior, less articulate taboo on homosexuality. A prohibition against some heterosexual unions assumes a taboo against non-heterosexual unions. Gender is not only an identification with one sex; it also entails that sexual desire be directed toward the other sex. The sexual division of labor is implicated in both aspects of gender – male and female it creates them, and it creates them heterosexual. The suppression of the homosexual component of human sexuality, and by corollary, the oppression of homosexuals, is therefore a product of the same system whose rules and relations oppress women....

In fact, the situation is not so simple, as is obvious when we move from the level of generalities to the analysis of specific sexual systems. Kinship systems do not merely encourage heterosexuality to the detriment of homosexuality. In the first place, specific forms of heterosexuality may be required. For instance, some marriage systems have a rule of obligatory cross-cousin marriage. A person in such a system is not only heterosexual, but “cross-cousin-sexual.” If the rule of marriage further specifies matrilateral cross-cousin marriage, then a man will be “mother’s-brother’s-daughter-sexual” and a woman will be “father’s-sister’s-son-sexual.”

On the other hand, the very complexities of a kinship system may result in particular forms of institutionalized homosexuality. In many New Guinea groups, men and women are considered to be so imimical to one another that the period spent by a male child *in utero* negates his maleness. Since male life force is thought to reside in semen, the boy can overcome the malevolent effects of his fetal history by obtaining and consuming semen. He does so through a homosexual partnership with an older male kinsman.<sup>30</sup>

In kinship systems where bridewealth determines the statuses of husband and wife, the simple prerequisites of marriage and gender may be overridden. Among the Azande, women are monopolized by older men. A young man of means may, however, take a boy as wife while he waits to come of age. He simply pays a bridewealth (in spears) for the boy, who is thereby turned into a wife.<sup>31</sup> In Dahomey, a women could turn herself into a husband if she possessed the necessary bridewealth.<sup>32</sup>

The institutionalized “transvesticism” of the Mohave permitted a person to change from one sex to the other. An anatomical man could become a woman by means of a special ceremony, and an anatomical woman could in the same way become a man. The transvestite then took a wife or husband of her/his own anatomical sex and opposite social sex. These marriages, which we would label homosexual, were heterosexual ones by Mohave standards, unions of opposite socially defined sexes. By comparison with our society, this whole arrangement permitted a great deal of freedom. However, a person was not permitted to be some of both genders – he/she could be either male or female, but not a little of each.<sup>33</sup>

In all of the above examples, the rules of gender division and obligatory heterosexuality are present even in their transformations. These two rules apply equally to the constraint of both male and female behavior and personality. Kinship systems dictate some sculpting of the sexuality of both sexes. But it can be deduced from *The Elementary Structures of Kinship* that more constraint is applied to females when they are pressed into the service of kinship than to males. If women are exchanged, in whatever sense we take the term, marital debts are reckoned in female flesh. A woman must become the sexual partner of some man to whom she is owed as return on a previous marriage. If a girl is promised in infancy, her refusal to participate as an adult would disrupt the flow of debts and promises. It would be in the interests of the smooth and continuous operation of such a system if the woman in question did not have too many ideas of her own about whom she might want to sleep with. From the standpoint of the system, the preferred female sexuality would be one which responded to the desire of others, rather than one which actively desired and sought a response.

This generality, like the ones about gender and heterosexuality, is also subject to considerable variation and free play in actual systems. The Lele and the Kuma provide two of the clearest ethnographic examples of the exchange of women. Men in both cultures are perpetually engaged in schemes which necessitate that they have full control over the sexual destinies of their female kinswomen. Much of the drama in both societies consists in female attempts to evade the sexual control of their kinsmen. Nevertheless, female resistance in both cases is severely circumscribed.<sup>34</sup>

One last generality could be predicted as a consequence of the exchange of women under a system in which rights to women are held by men. What would happen if our hypothetical woman not only refused the man to whom she was promised, but asked for a woman instead? If a single refusal were disruptive, a double refusal would be insurrectionary. If each woman is promised to some man, neither has a right to dispose of herself. If two women managed to extricate themselves from the debt nexus, two other women would have to be found to replace them. As long as men have rights in women which women do not have in themselves, it would be sensible to expect that homosexuality in women would be subject to more suppression than in men.

In summary, some basic generalities about the organization of human sexuality can be derived from an exegesis of Lévi-Strauss' theories of kinship. These are the incest taboo, obligatory heterosexuality, and an asymmetric division of the sexes. The asymmetry of gender – the difference between exchanger and exchanged – entails the constraint of female sexuality. Concrete kinship systems will have more specific conventions, and these conventions vary a great deal. While particular socio-sexual systems vary, each one is specific, and individuals within it will have to conform to a finite set of possibilities. Each new generation must learn and become its sexual destiny, each person must be encoded with its appropriate status within the system. It would be extraordinary for one of us to calmly assume that we would conventionally marry a mother's brother's daughter, or a father's sister's son. Yet there are groups in which such a marital future is taken for granted.

Anthropology, and descriptions of kinship systems, do not explain the mechanisms by which children are engraved with the conventions of sex and gender. Psychoanalysis, on the other hand, is a theory about the reproduction of kinship. Psychoanalysis describes the residue left within individuals by their confrontation with the rules and regulations of sexuality of the societies to which they are born.

## Psychoanalysis and Its Discontents

The battle between psychoanalysis and the women's and gay movements has become legendary. In part, this confrontation between sexual revolutionaries and the clinical establishment has been due to the evolution of psychoanalysis in the United States, where clinical tradition has fetishized anatomy. The child is thought to travel through its organismic stages until it reaches its anatomical destiny and the missionary position. Clinical practice has often seen its mission as the repair of individuals who somehow have become derailed en route to their "biological" aim. Transforming moral law into scientific law, clinical practice has acted to enforce sexual convention upon unruly participants. In this sense, psychoanalysis has often become more than a theory of the mechanisms of the reproduction of sexual arrangements; it has been one of those mechanisms. Since the aim of the feminist and gay revolts is to dismantle the apparatus of sexual enforcement, a critique of psychoanalysis has been in order....

The organization of sex and gender once had functions other than itself – it organized society. Now, it only organizes and reproduces itself. The kinds of relationships of sexuality established in the dim human past still dominate our sexual lives, our ideas about men and women, and the ways we raise our children. But they lack the functional load they once carried. One of the most conspicuous features of kinship is that it has been systematically stripped of its functions – political, economic, educational, and organizational. It has been reduced to its bare bones – *sex and gender*.

Human sexual life will always be subject to convention and human intervention. It will never be completely "natural," if only because our species is social, cultural, and articulate. The wild profusion of infantile sexuality will always be tamed. The confrontation between immature and helpless infants and the developed social life of their elders will probably always leave some residue of disturbance. But the mechanisms and aims of this process need not be largely independent of conscious choice. Cultural evolution provides us with the opportunity to seize control of the means of sexuality, reproduction, and socialization, and to make conscious decisions to liberate human sexual life from the archaic relationships which deform it. Ultimately, a thorough-going feminist revolution would liberate more than women. It would liberate forms of sexual expression, and it would liberate human personality from the straitjacket of gender.

"Daddy, daddy, you bastard, I'm through."  
*Sylvia Plath*

In the course of this essay I have tried to construct a theory of women's oppression by borrowing concepts from anthropology and psychoanalysis. But Lévi-Strauss and Freud write within an intellectual tradition produced by a culture in which women are oppressed. The danger in my enterprise is that the sexism in the tradition of which they are a part tends to be dragged in with each borrowing. "We cannot utter a single destructive proposition which has not already slipped into the form, the logic, and the implicit postulations of precisely what it seeks to contest."<sup>35</sup> And what slips in is formidable. Both psychoanalysis and structural anthropology are, in one sense, the most sophisticated ideologies of sexism around.<sup>36</sup>

For instance, Lévi-Strauss sees women as being like words, which are misused when they are not "communicated" and exchanged. On the last page of a very long book, he

observes that this creates something of a contradiction in women, since women are at the same time “speakers” and “spoken.” His only comment on this contradiction is this:

But woman could never become just a sign and nothing more, since even in a man’s world she is still a person, and since insofar as she is defined as a sign she must be recognized as a generator of signs. In the matrimonial dialogue of men, woman is never purely what is spoken about; for if women in general represent a certain category of signs, destined to a certain kind of communication, each woman preserves a particular value arising from her talent, before and after marriage, for taking her part in a duet. In contrast to words, which have wholly become signs, woman has remained at once a sign and a value. *This explains why the relations between the sexes have preserved that affective richness, ardour and mystery which doubtless originally permeated the entire universe of human communications.*<sup>37</sup>

This is an extraordinary statement. Why is he not, at this point, denouncing what kinship systems do to women, instead of presenting one of the greatest rip-offs of all time as the root of romance?

A similar insensitivity is revealed within psychoanalysis by the inconsistency with which it assimilates the critical implications of its own theory. For instance, Freud did not hesitate to recognize that his findings posed a challenge to conventional morality:

We cannot avoid observing with critical eyes, and we have found that it is impossible to give our support to conventional sexual morality or to approve highly of the means by which society attempts to arrange the practical problems of sexuality in life. We can demonstrate with ease that what the world calls its code of morals demands more sacrifices than it is worth, and that its behavior is neither dictated by honesty nor instituted with wisdom.<sup>38</sup>

Nevertheless, when psychoanalysis demonstrates with equal facility that the ordinary components of feminine personality are masochism, self-hatred, and passivity,<sup>39</sup> a similar judgment is not made. Instead, a double standard of interpretation is employed. Masochism is bad for men, essential to women. Adequate narcissism is necessary for men, impossible for women. Passivity is tragic in man, while lack of passivity is tragic in a woman.

It is this double standard which enables clinicians to try to accommodate women to a role whose destructiveness is so lucidly detailed in their own theories. It is the same inconsistent attitude which permits therapists to consider lesbianism as a problem to be cured, rather than as the resistance to a bad situation that their own theory suggests.<sup>40</sup>

There are points within the analytic discussions of femininity where one might say, “This is oppression of women,” or “We can demonstrate with ease that what the world calls femininity demands more sacrifices than it is worth.” It is precisely at such points that the implications of the theory are ignored, and are replaced with formulations whose purpose is to keep those implications firmly lodged in the theoretical unconscious. It is at these points that all sorts of mysterious chemical substances, joys in pain, and biological aims are substituted for a critical assessment of the costs of femininity. These substitutions are the symptoms of theoretical repression, in that they are not consistent with the usual canons of psychoanalytic argument. The extent to which these rationalizations of femininity go against the grain of psychoanalytic logic is strong evidence for the extent of the need to suppress the radical and feminist implications of the theory of femininity (Deutsch’s discussions are excellent examples of this process of substitution and repression).

The argument which must be woven in order to assimilate Lévi-Strauss and Freud into feminist theory is somewhat tortuous. I have engaged it for several reasons. First, while neither Lévi-Strauss nor Freud questions the undoubted sexism endemic to the systems they describe, the questions which ought to be posed are blindingly obvious. Secondly, their work enables us to isolate sex and gender from "mode of production," and to counter a certain tendency to explain sex oppression as a reflex of economic forces. Their work provides a framework in which the full weight of sexuality and marriage can be incorporated into an analysis of sex oppression. It suggests a conception of the women's movement as analogous to, rather than isomorphic with, the working-class movement, each addressing a different source of human discontent. In Marx's vision, the working-class movement would do more than throw off the burden of its own exploitation. It also had the potential to change society, to liberate humanity, to create a classless society. Perhaps the women's movement has the task of effecting the same kind of social change for a system of which Marx had only an imperfect apperception. Something of this sort is implicit in Wittig – the dictatorship of the Amazon *guerillères* is a temporary means for achieving a genderless society.

The sex/gender system is not immutably oppressive and has lost much of its traditional function. Nevertheless, it will not wither away in the absence of opposition. It still carries the social burden of sex and gender, of socializing the young, and of providing ultimate propositions about the nature of human beings themselves. And it serves economic and political ends other than those it was originally designed to further.<sup>41</sup> The sex/gender system must be reorganized through political action.

Finally, the exegesis of Lévi-Strauss and Freud suggests a certain vision of feminist politics and the feminist utopia. It suggests that we should not aim for the elimination of men, but for the elimination of the social system which creates sexism and gender. I personally find a vision of an Amazon matriarchate, in which men are reduced to servitude or oblivion (depending on the possibilities for parthenogenetic reproduction), distasteful and inadequate. Such a vision maintains gender and the division of the sexes. It is a vision which simply inverts the arguments of those who base their case for inevitable male dominance on ineradicable and significant biological differences between the sexes. But we are not only oppressed as women, we are oppressed by having to be women, or men as the case may be. I personally feel that the feminist movement must dream of even more than the elimination of the oppression of women. It must dream of the elimination of obligatory sexualities and sex roles. The dream I find most compelling is one of an androgynous and genderless (though not sexless) society, in which one's sexual anatomy is irrelevant to who one is, what one does, and with whom one makes love.

## The Political Economy of Sex

It would be nice to be able to conclude here with the implications for feminism and gay liberation of the overlap between Freud and Lévi-Strauss. But I must suggest, tentatively, a next step on the agenda: a Marxian analysis of sex/gender systems. Sex/gender systems are not ahistorical emanations of the human mind; they are products of historical human activity.

We need, for instance, an analysis of the evolution of sexual exchange along the lines of Marx's discussion in *Capital* of the evolution of money and commodities. There is an economics and a politics to sex/gender systems which is obscured by the concept of

“exchange of women.” For instance, a system in which women are exchangeable only for one another has different effects on women than one in which there is a commodity equivalent for women.

That marriage in simple societies involves an “exchange” is a somewhat vague notion that has often confused the analysis of social systems. The extreme case is the exchange of “sisters,” formerly practiced in parts of Australia and Africa. Here the term has the precise dictionary meaning of “to be received as an equivalent for,” “to give and receive reciprocally.” From quite a different standpoint the virtually universal incest prohibition means that marriage systems necessarily involve “exchanging” siblings for spouses, giving rise to a reciprocity that is purely notational. But in most societies marriage is mediated by a set of intermediary transactions. If we see these transactions as simply implying immediate or long-term reciprocity, then the analysis is likely to be blurred.... The analysis is further limited if one regards the passage of property simply as a symbol of the transfer of rights, for then the nature of the objects handed over ... is of little importance.... Neither of these approaches is wrong; both are inadequate.<sup>42</sup>

There are systems in which there is no equivalent for a woman. To get a wife, a man must have a daughter, a sister, or other female kinswoman in whom he has a right of bestowal. He must have control over some female flesh. The Lele and Kuma are cases in point. Lele men scheme constantly in order to stake claims in some as yet unborn girl, and scheme further to make good their claims.<sup>43</sup> A Kuma girl’s marriage is determined by an intricate web of debts, and she has little say in choosing her husband. A girl is usually married against her will, and her groom shoots an arrow into her thigh to symbolically prevent her from running away. The young wives almost always do run away, only to be returned to their new husbands by an elaborate conspiracy enacted by their kin and affines.<sup>44</sup>

In other societies, there is an equivalent for women. A woman can be converted into bridewealth, and bridewealth can be in turn converted into a woman. The dynamics of such systems vary accordingly, as does the specific kind of pressure exerted upon women. The marriage of a Melpa woman is not a return for a previous debt. Each transaction is self-contained, in that the payment of a bridewealth in pigs and shells will cancel the debt. The Melpa woman therefore has more latitude in choosing her husband than does her Kuma counterpart. On the other hand, her destiny is linked to bridewealth. If her husband’s kin are slow to pay, her kin may encourage her to leave him. On the other hand, if her consanguineal kin are satisfied with the balance of payments, they may refuse to back her in the event that she wants to leave her husband. Moreover, her male kinsmen use the bridewealth for their own purposes, in *moka* exchange and for their own marriages. If a woman leaves her husband, some or all of the bridewealth will have to be returned. If, as is usually the case, the pigs and shells have been distributed or promised, her kin will be reluctant to back her in the event of marital discord. And each time a woman divorces and remarries, her value in bridewealth tends to depreciate. On the whole, her male consanguines will lose in the event of a divorce, unless the groom has been delinquent in his payments. While the Melpa woman is freer as a new bride than a Kuma woman, the bridewealth system makes divorce difficult or impossible.<sup>45</sup>

In some societies, like the Nuer, bridewealth can only be converted into brides. In others, bridewealth can be converted into something else, like political prestige. In this case, a woman’s marriage is implicated in a political system. In the Big Man systems of Highland New Guinea, the material which circulates for women also circulates in the

exchanges on which political power is based. Within the political system, men are in constant need of valuables to disburse, and they are dependent upon input. They depend not only upon their immediate partners, but upon the partners of their partners, to several degrees of remove. If a man has to return some bridewealth he may not be able to give it to someone who planned to give it to someone else who intended to use it to give a feast upon which his status depends. Big Men are therefore concerned with the domestic affairs of others, whose relationship with them may be extremely indirect. There are cases in which headmen intervene in marital disputes involving indirect trading partners in order that *moka* exchanges not be disrupted.<sup>46</sup> The weight of this entire system may come to rest upon one woman kept in a miserable marriage.

In short, there are other questions to ask of a marriage system than whether or not it exchanges women. Is the woman traded for a woman, or is there an equivalent? Is this equivalent only for women, or can it be turned into something else? If it can be turned into something else, is it turned into political power or wealth? On the other hand, can bridewealth be obtained only in marital exchange, or can it be obtained from elsewhere? Can women be accumulated through amassing wealth? Can wealth be accumulated by disposing of women? Is a marriage system part of a system of stratification?<sup>47</sup>

These last questions point to another task for a political economy of sex. Kinship and marriage are always parts of total social systems, and are always tied into economic and political arrangements.

Lévi-Strauss ... rightly argues that the structural implications of a marriage can only be understood if we think of it as one item in a whole series of transactions between kin groups. So far, so good. But in none of the examples which he provides in his book does he carry this principle far enough. The reciprocities of kinship obligation are not merely symbols of alliance, they are also economic transactions, political transactions, charters to rights of domicile and land use. No useful picture of "how a kinship system works" can be provided unless these several aspects or implications of the kinship organization are considered simultaneously.<sup>48</sup>

Among the Kachin, the relationship of a tenant to a landlord is also a relationship between a son-in-law and a father-in-law. "The procedure for acquiring land rights of any kind is in almost all cases tantamount to marrying a woman from the lineage of the lord."<sup>49</sup> In the Kachin system, bridewealth moves from commoners to aristocrats, women moving in the opposite direction.

From an economic aspect the effect of matrilateral cross-cousin marriage is that, on balance, the headman's lineage constantly pays wealth to the chief's lineage in the form of bridewealth. The payment can also, from an analytical point of view, be regarded as a rent paid to the senior landlord by the tenant. The most important part of this payment is in the form of consumer goods – namely cattle. The chief converts this perishable wealth into imperishable prestige through the medium of spectacular feasting. The ultimate consumers of the goods are in this way the original producers, namely, the commoners who attend the feast.<sup>50</sup>

In another example, it is traditional in the Trobriands for a man to send a harvest gift – *urigubu* – of yams to his sister's household. For the commoners, this amounts to a simple circulation of yams. But the chief is polygamous, and marries a woman from each subdistrict within his domain. Each of these subdistricts therefore sends *urigubu* to the

chief, providing him with a bulging storehouse out of which he finances feasts, craft production, and *kula* expeditions. This “fund of power” underwrites the political system and forms the basis for chiefly power.<sup>51</sup>

In some systems, position in a political hierarchy and position in a marriage system are intimately linked. In traditional Tonga, women married up in rank. Thus, low-ranking lineages would send women to higher-ranking lineages. Women of the highest lineage were married into the “house of Fiji,” a lineage defined as outside the political system. If the highest-ranking chief gave his sister to a lineage other than one which had no part in the ranking system, he would no longer be the highest-ranking chief. Rather, the lineage of his sister’s son would outrank his own. In times of political rearrangement, the demotion of the previous high-ranking lineage was formalized when it gave a wife to a lineage which it had formerly outranked. In traditional Hawaii, the situation was the reverse. Women married down, and the dominant lineage gave wives to junior lines. A paramount would either marry a sister or obtain a wife from Tonga. When a junior lineage usurped rank, it formalized its position by giving a wife to its former senior line.

There is even some tantalizing data suggesting that marriage systems may be implicated in the evolution of social strata, and perhaps in the development of early states. The first round of the political consolidation which resulted in the formation of a state in Madagascar occurred when one chief obtained title to several autonomous districts through the vagaries of marriage and inheritance.<sup>52</sup> In Samoa, legends place the origin of the paramount title – the *Tafa’ifa* – as a result of intermarriage between ranking members of four major lineages. My thoughts are too speculative, my data too sketchy, to say much on this subject. But a search ought to be undertaken for data which might demonstrate how marriage systems intersect with large-scale political processes like state-making. Marriage systems might be implicated in a number of ways: in the accumulation of wealth and the maintenance of differential access to political and economic resources; in the building of alliances; in the consolidation of high-ranking persons into a single closed strata of endogamous kin.

These examples – like the Kachin and the Trobriand ones – indicate that sexual systems cannot, in the final analysis, be understood in complete isolation. A full-bodied analysis of women in a single society, or throughout history, must take *everything* into account: the evolution of commodity forms in women, systems of land tenure, political arrangements, subsistence technology, etc. Equally important, economic and political analyses are incomplete if they do not consider women, marriage, and sexuality. Traditional concerns of anthropology and social science – such as the evolution of social stratification and the origin of the state – must be reworked to include the implications of matrilateral cross-cousin marriage, surplus extracted in the form of daughters, the conversion of female labor into male wealth, the conversion of female lives into marriage alliances, the contribution of marriage to political power, and the transformations which all of these varied aspects of society have undergone in the course of time.

This sort of endeavor is, in the final analysis, exactly what Engels tried to do in his effort to weave a coherent analysis of so many of the diverse aspects of social life. He tried to relate men and women, town and country, kinship and state, forms of property, systems of land tenure, convertibility of wealth, forms of exchange, the technology of food production, and forms of trade, to name a few, into a systematic historical account. Eventually, someone will have to write a new version of *The Origin of the Family, Private Property, and the State*, recognizing the mutual interdependence of sexuality, economics, and politics without underestimating the full significance of each in human society.

- 2 Louis Althusser and Etienne Balibar, *Reading Capital* (London: New Left Books, 1970), pp. 11–69.
- 3 Moving between Marxism, structuralism, and psychoanalysis produces a certain clash of epistemologies. In particular, structuralism is a can from which worms crawl out all over the epistemological map. Rather than trying to cope with this problem, I have more or less ignored the fact that Lacan and Lévi-Strauss are among the foremost living ancestors of the contemporary French intellectual revolution (see Michel Foucault, *The Order of Things* (New York, 1970)). It would be fun, interesting, and, if this were France, essential, to start my argument from the center of the structuralist maze and work my way out from there, along the lines of a “dialectical theory of signifying practices” (see Robert Hefner, “The *Tel Quel* Ideology: Material Practice Upon Material Practice,” *Substance* 8 (1974), pp. 127–38).
- 4 Margaret Benston, “The Political Economy of Women’s Liberation,” *Monthly Review* 21, no. (1969), pp. 13–27; Mariarosa Dalla Costa and Selma James, *The Power of Women and the Subversion of the Community* (Bristol: Falling Wall Press, 1972); Isabel Larguia and John Dumoulin, “Towards a Science of Women’s Liberation,” *NACLA Newsletter* 6, no. 10 (1972), pp. 3–20; Ira Gerstein, “Domestic Work and Capitalism,” *Radical America* 7, nos 4 and 5 (1973), pp. 101–28; Lise Vogel, “The Earthly Family,” *Radical America* 7, nos 4 and 5 (1973), pp. 9–50; Wally Secombe, “Housework Under Capitalism,” *New Left Review* 83 (1973), pp. 3–24; Jean Gardiner, “Political Economy of Female Labor in Capitalist Society,” unpublished manuscript; M. and J. Rowntree, “More on the Political Economy of Women’s Liberation,” *Monthly Review* 21, no. 8 (1970), pp. 26–32.

- 6 Karl Marx, *Capital*, vol. 1 (New York: International Publishers, 1972), p. 572.
- 7 Ibid., p. 171.
- 8 A lot of the debate on women and housework has centered around the question of whether or not housework is “productive” labor. Strictly speaking, housework is not ordinarily “productive” in the technical sense of the term (I. Gough, “Marx and Productive Labor,” *New Left Review* 76 (1972), pp. 47–72; Marx, *Theories of Surplus Value*, pp. 387–413). But this distinction is irrelevant to the main line of the argument. Housework may not be “productive,” in the sense of directly producing surplus value and capital, and yet be a crucial element in the production of surplus value and capital by the capitalist. But to explain women’s usefulness to capitalism is one thing. To argue that this usefulness explains the genesis of the oppression of women is quite another. It is precisely at this point that the analysis of capitalism ceases to explain very much about women and the oppression of women.

- 12 That some of them are pretty bizarre, from our point of view, only demonstrates the point that sexuality is expressed through the intervention of culture. (See Clellan Ford and Frank Beach, *Patterns of Sexual Behavior* (New York: Harper, 1972).) Some examples may be chosen from among the exotica in which anthropologists delight.

Among the Banaro, marriage involves several socially sanctioned sexual partnerships. When a woman is married, she is initiated into intercourse by the sib-friend of her groom's father. After bearing a child by this man, she begins to have intercourse with her husband. She also has an institutionalized partnership with the sib-friend of her husband. A man's partners include his wife, the wife of his sib-friend, and the wife of his sib-friend's son. (See Richard Thurnwald, “Banaro Society,” *Memoirs of the American Anthropological Association* 3, no. 4 (1916), pp. 251–391.) Multiple intercourse is a more pronounced custom among the Marind Anim. At the time of marriage the bride has intercourse with all of the members of the groom's clan, the groom coming last. Every major festival is accompanied by a practice known as otiv-bombari, in which semen is

- collected for ritual purposes. A few women have intercourse with many men, and the resulting semen is collected in coconut-shell buckets. A Marind male is subjected to multiple homosexual intercourse during initiation (J. Van Baal, *Dema* (The Hague: Nijhoff, 1966)). Among the Etoro, heterosexual intercourse is taboo for between 205 and 260 days a year (Raymond Kelly, "Witchcraft and Sexual Relations: An Exploration of the Social and Semantic Implications of the Structure of Belief," paper read at the 73rd Annual Meeting of the American Anthropological Association, Mexico City). In much of New Guinea, men fear copulation and think that it will kill them if they engage in it without magical precautions (R. M. Glasse, "The Mask of Venery," paper read at the 70th annual meeting of the American Anthropological Association, New York City, December 1971; M. J. Meggitt, "Male–Female Relationships in the Highlands of Australian New Guinea," *American Anthropologist* 66, no. 4, part 2 (1972), pp. 204–24). Usually, such ideas of feminine pollution express the subordination of women. But symbolic systems contain internal contradictions, whose logical extensions sometimes lead to inversions of the propositions on which a system is based. In New Britain, men's fear of sex is so extreme that rape appears to be feared by men rather than women. Women run after the men, who flee from them, women are the sexual aggressors, and it is bridegrooms who are reluctant (Jane C. Goodale and Ann Chowning, "The Contaminating Woman," paper read at the 70th annual meeting of the American Anthropological Association, 1971). Other interesting sexual variations can be found in Yalmon ("On the Purity of Women in the Castes of Ceylon and Malabar," *Journal of the Royal Anthropological Institute* 93, no. 1 (1963), pp. 25–58) and K. Gough ("The Nayars and the Definition of Marriage," *Journal of the Royal Anthropological Institute* 89 (1959), pp. 23–4).
- 13 Engels thought that men acquired wealth in the form of herds and, wanting to pass this wealth to their own children, overthrew "mother right" in favor of patrilineal inheritance. "The overthrow of mother right was the *world historical defeat of the female sex*. The man took command in the home also; the woman was degraded and reduced to servitude; she became the slave of his lust and a mere instrument for the production of children" (Engels, *Origin of the Family*, pp. 120–1; italics in original). As has been often pointed out, women do not necessarily have significant social authority in societies practicing matrilineal inheritance (David Schneider and Kathleen Gough (eds.), *Matrilineal Kinship* (Berkeley: University of California Press, 1961)).

- 23 Best, cited in Lévi-Strauss, *Elementary Structures*, p. 481.
- 24 "What, would you like to marry your sister? What is the matter with you? Don't you want a brother-in-law? Don't you realize that if you marry another man's sister and another man marries your sister, you will have at least two brothers-in-law, while if you marry your own sister you will have none? With whom will you hunt, with whom will you garden, whom will you go visit?" (Arapesh, cited in Lévi-Strauss, *Elementary Structures*, p. 485).
- 25 Lévi-Strauss, *Elementary Structures*, p. 161. This analysis of society as based on bonds between men by means of women makes the separatist responses of the women's movement thoroughly intelligible. Separatism can be seen as a mutation in social structure, as an attempt to form social groups based on unmediated bonds between women. It can also be seen as a radical denial of men's "rights" in women and as a claim by women of rights in themselves.

- 35 Jacques Derrida, "Structure, Sign, and Play," in R. Macksey and E. Donatio (eds.), *The Structuralist Controversy* (Baltimore: Johns Hopkins University Press, 1972), p. 250.
- 36 Parts of Wittig's *Les Guerillères* (New York: Avon, 1973) appear to be tirades against Lévi-Strauss and Lacan. For instance:

Has he not indeed written, power and the possession of women leisure and the enjoyment of women? He writes that you are currency, an item of exchange. He writes, barter, barter, possession and acquisition of women and merchandise. Better for you to see your guts in the sun and utter the death rattle than to live a life that anyone can appropriate. What belongs to you on this earth? Only death. No power on earth can take that away from you. And – consider, explain, tell yourself – if happiness consists in the possession of something, then hold fast to this sovereign happiness – to die. (pp. 115–16; see also pp. 106–7; 113–14; 134)

The awareness of French feminists of Lévi-Strauss and Lacan is most clearly evident in a group called "Psychoanalyse et Politique," which defined its task as a feminist use and critique of Lacanian psychoanalysis.

- 38 Sigmund Freud, *A General Introduction to Psychoanalysis* (Garden City, NY: Garden City Publishing Company, 1943), pp. 376–7.
- 39 "Every woman adores a fascist" – Sylvia Plath.
- 40 One clinician, Charlotte Wolff (*Love Between Women* (London: Duckworth, 1971)) has taken the psychoanalytic theory of womanhood to its logical extreme and proposed that lesbianism is a healthy response to female socialization.

Women who do not rebel against the status of object have declared themselves defeated as persons in their own right. (p. 65)

The lesbian girl is the one who, by all means at her disposal, will try to find a place of safety inside and outside the family, through her fight for equality with the male. She will not, like other women, play up to him: indeed, she despises the very idea of it. (p. 59)

The lesbian was and is unquestionably in the avant-garde of the fight for equality of the sexes, and for the psychical liberation of women. (p. 66)

It is revealing to compare Wolff's discussion with the articles on lesbianism in Marmor, *Sexual Inversion* (London: Basic Books, 1965).

# CHAPTER 3

## Compulsory Heterosexuality and Lesbian Experience

*Adrienne Rich*

A major American poet as well as cultural critic, Adrienne Rich was both a writer and a feminist/lesbian activist. In her writing, she examines the power of patriarchy over women and promotes their resistance to it. She also helped separate the lesbian movement from the feminist movement. In this major essay from 1980, she discusses the separateness of lesbian experience and participates in the critique of the feminist movement of the 1960s and 1970s for having ignored or marginalized lesbians. Her resonant title underscores one of the major contributions of the essay: to point out that heterosexuality is not "normal," rather, it is a compulsory form of behavior often imposed in the past on those who do not identify with it.

### I

Biologically men have only one innate orientation – a sexual one that draws them to women, – while women have two innate orientations, sexual toward men and reproductive toward their young.<sup>1</sup>

I was a woman terribly vulnerable, critical, using femaleness as a sort of standard or yardstick to measure and discard men. Yes – something like that. I was an Anna who invited defeat from men without ever being conscious of it. (But I am conscious of it. And being conscious of it means I shall leave it all behind me and become – but what?) I was stuck fast in an emotion common to women of our time, that can turn them bitter, or Lesbian, or solitary. Yes, that Anna during that time was ...<sup>2</sup>

The bias of compulsory heterosexuality, through which lesbian experience is perceived on a scale ranging from deviant to abhorrent or simply rendered invisible, could be illustrated from many texts other than the two just preceding. The assumption made by

*Original publication details:* Adrienne Rich, "Compulsory Heterosexuality and Lesbian Experience" from *Blood, Bread, & Poetry: Selected Prose*, pp. 23–75. W.W. Norton, 1986. Reproduced with permission from W.W. Norton.

Rossi, that women are “innately” sexually oriented only toward men, and that made by Lessing, that the lesbian is simply acting out of her bitterness toward men, are by no means theirs alone; these assumptions are widely current in literature and in the social sciences.

I am concerned here with two other matters as well: first, how and why women’s choice of women as passionate comrades, life partners, co-workers, lovers, community has been crushed, invalidated, forced into hiding and disguise; and second, the virtual or total neglect of lesbian existence in a wide range of writings, including feminist scholarship. Obviously there is a connection here. I believe that much feminist theory and criticism is stranded on this shoal.

My organizing impulse is the belief that it is not enough for feminist thought that specifically lesbian texts exist. Any theory or cultural/political creation that treats lesbian existence as a marginal or less “natural” phenomenon, as mere “sexual preference,” or as the mirror image of either heterosexual or male homosexual relations is profoundly weakened thereby, whatever its other contributions. Feminist theory can no longer afford merely to voice a toleration of “lesbianism” as an “alternative life style” or make token allusion to lesbians. A feminist critique of compulsory heterosexual orientation for women is long overdue. In this exploratory paper, I shall try to show why.

I will begin by way of examples, briefly discussing four books that have appeared in the last few years, written from different viewpoints and political orientations, but all presenting themselves, and favorably reviewed, as feminist.<sup>3</sup> All take as a basic assumption that the social relations of the sexes are disordered and extremely problematic, if not disabling, for women; all seek paths toward change. I have learned more from some of these books than from others, but on this I am clear: each one might have been more accurate, more powerful, more truly a force for change had the author dealt with lesbian existence as a reality and as a source of knowledge and power available to women, or with the institution of heterosexuality itself as a beachhead of male dominance.<sup>4</sup> In none of them is the question ever raised as to whether, in a different context or other things being equal, women would *choose* heterosexual coupling and marriage; heterosexuality is presumed the “sexual preference” of “most women,” either implicitly or explicitly. In none of these books, which concern themselves with mothering, sex roles, relationships, and societal prescriptions for women, is compulsory heterosexuality ever examined as an institution powerfully affecting all these, or the idea of “preference” or “innate orientation” even indirectly questioned.

In *For Her Own Good: 150 Years of the Experts’ Advice to Women* by Barbara Ehrenreich and Deirdre English, the authors’ superb pamphlets *Witches, Midwives and Nurses: A History of Women Healers* and *Complaints and Disorders: The Sexual Politics of Sickness* are developed into a provocative and complex study. Their thesis in this book is that the advice given to American women by male health professionals, particularly in the areas of marital sex, maternity, and child care, has echoed the dictates of the economic marketplace and the role capitalism has needed women to play in production and/or reproduction. Women have become the consumer victims of various cures, therapies, and normative judgments in different periods (including the prescription to middle-class women to embody and preserve the sacredness of the home – the “scientific” romanticization of the home itself). None of the “experts” advice has been either particularly scientific or women-oriented; it has reflected male needs, male fantasies about women, and male interest in controlling women – particularly in the realms of sexuality and motherhood – fused with the requirements of industrial capitalism. So much of this book is so

devastatingly informative and is written with such lucid feminist wit, that I kept waiting as I read for the basic proscription against lesbianism to be examined. It never was.

This can hardly be for lack of information. Jonathan Katz's *Gay American History*<sup>5</sup> tells us that as early as 1656 the New Haven Colony prescribed the death penalty for lesbians. Katz provides many suggestive and informative documents on the "treatment" (or torture) of lesbians by the medical profession in the nineteenth and twentieth centuries. Recent work by the historian Nancy Sahli documents the crackdown on intense female friendships among college women at the turn of the present century.<sup>6</sup> The ironic title *For Her Own Good* might have referred first and foremost to the economic imperative to heterosexuality and marriage and to the sanctions imposed against single women and widows – both of whom have been and still are viewed as deviant. Yet, in this often enlightening Marxist-feminist overview of male prescriptions for female sanity and health, the economics of prescriptive heterosexuality go unexamined.<sup>7</sup>

Of the three psychoanalytically based books, one, Jean Baker Miller's *Toward a New Psychology of Women*, is written as if lesbians simply do not exist, even as marginal beings. Given Miller's title, I find this astonishing. However, the favorable reviews the book has received in feminist journals, including *Signs* and *Spokeswoman*, suggest that Miller's heterocentric assumptions are widely shared. In *The Mermaid and the Minotaur: Sexual Arrangements and the Human Malaise*, Dorothy Dinnerstein makes an impassioned argument for the sharing of parenting between women and men and for an end to what she perceives as the male/female symbiosis of "gender arrangements," which she feels are leading the species further and further into violence and self-extinction. Apart from other problems that I have with this book (including her silence on the institutional and random terrorism men have practiced on women – and children – throughout history,<sup>8</sup> and her obsession with psychology to the neglect of economic and other material realities that help to create psychological reality), I find Dinnerstein's view of the relations between women and men as "a collaboration to keep history mad" utterly ahistorical. She means by this a collaboration to perpetuate social relations which are hostile, exploitative, and destructive to life itself. She sees women and men as equal partners in the making of "sexual arrangements," seemingly unaware of the repeated struggles of women to resist oppression (their own and that of others) and to change their condition. She ignores, specifically, the history of women who – as witches, *femmes seules*, marriage resisters, spinsters, autonomous widows, and/or lesbians – have managed on varying levels *not* to collaborate. It is this history, precisely, from which feminists have so much to learn and on which there is overall such blanketing silence. Dinnerstein acknowledges at the end of her book that "female separatism," though "on a large scale and in the long run wildly impractical," has something to teach us: "Separate, women could in principle set out to learn from scratch – undeflected by the opportunities to evade this task that men's presence has so far offered – what intact self-creative humanness is."<sup>9</sup> Phrases like "intact self-creative humanness" obscure the question of what the many forms of female separatism have actually been addressing. The fact is that women in every culture and throughout history *have* undertaken the task of independent, nonheterosexual, woman-connected existence, to the extent made possible by their context, often in the belief that they were the "only ones" ever to have done so. They have undertaken it even though few women have been in an economic position to resist marriage altogether, and even though attacks against unmarried women have ranged from aspersion and mockery to deliberate gynocide, including the burning and torturing of millions of widows and spinsters during the witch persecutions of the fifteenth, sixteenth, and seventeenth centuries in Europe.

Nancy Chodorow does come close to the edge of an acknowledgment of lesbian existence. Like Dinnerstein, Chodorow believes that the fact that women, and women only, are responsible for child care in the sexual division of labor has led to an entire social organization of gender inequality, and that men as well as women must become primary carers for children if that inequality is to change. In the process of examining, from a psychoanalytic perspective, how mothering by women affects the psychological development of girl and boy children, she offers documentation that men are “emotionally secondary” in women’s lives, that “women have a richer, ongoing inner world to fall back on … men do not become as emotionally important to women as women do to men.”<sup>10</sup> This would carry into the late twentieth century Smith-Rosenberg’s findings about eighteenth- and nineteenth-century women’s emotional focus on women. “Emotionally important” can, of course, refer to anger as well as to love, or to that intense mixture of the two often found in women’s relationships with women – one aspect of what I have come to call the “double life of women” (see below). Chodorow concludes that because women have women as mothers, “the mother remains a primary internal object [*sic*] to the girl, so that heterosexual relationships are on the model of a nonexclusive, second relationship for her, whereas for the boy they re-create an exclusive, primary relationship.” According to Chodorow, women “have learned to deny the limitations of masculine lovers for both psychological and practical reasons.”<sup>11</sup>

But the practical reasons (like witch burnings, male control of law, theology, and science, or economic nonviability within the sexual division of labor) are glossed over. Chodorow’s account barely glances at the constraints and sanctions which historically have enforced or ensured the coupling of women with men and obstructed or penalized women’s coupling or allying in independent groups with other women. She dismisses lesbian existence with the comment that “lesbian relationships do tend to re-create mother-daughter emotions and connections, but most women are heterosexual” (implied: more mature, having developed beyond the mother-daughter connection?). She then adds: “This heterosexual preference and taboos on homosexuality, in addition to objective economic dependence on men, make the option of primary sexual bonds with other women unlikely – though more prevalent in recent years.”<sup>12</sup> The significance of that qualification seems irresistible, but Chodorow does not explore it further. Is she saying that lesbian existence has become more *visible* in recent years (in certain groups), that economic and other pressures have changed (under capitalism, socialism, or both), and that consequently more women are rejecting the heterosexual “choice”? She argues that women want children because their heterosexual relationships lack richness and intensity, that in having a child a woman seeks to re-create her own intense relationship with her mother. It seems to me that on the basis of her own findings, Chodorow leads us implicitly to conclude that heterosexuality is *not* a “preference” for women, that, for one thing, it fragments the erotic from the emotional in a way that women find impoverishing and painful. Yet her book participates in mandating it. Neglecting the covert socializations and the overt forces which have channeled women into marriage and heterosexual romance, pressures ranging from the selling of daughters to the silences of literature to the images of the television screen, she, like Dinnerstein, is stuck with trying to reform a man-made institution – compulsory heterosexuality – as if, despite profound emotional impulses and complementarities drawing women toward women, there is a mystical/biological heterosexual inclination, a “preference” or “choice” which draws women toward men.

Moreover, it is understood that this “preference” does not need to be explained unless through the tortuous theory of the female Oedipus complex or the necessity for species

reproduction. It is lesbian sexuality which (usually, and incorrectly, "included" under male homosexuality) is seen as requiring explanation. This assumption of female heterosexuality seems to me in itself remarkable: it is an enormous assumption to have glided so silently into the foundations of our thought.

The extension of this assumption is the frequently heard assertion that in a world of genuine equality, where men are nonoppressive and nurturing, everyone would be bisexual. Such a notion blurs and sentimentalizes the actualities within which women have experienced sexuality; it is a liberal leap across the tasks and struggles of here and now, the continuing process of sexual definition which will generate its own possibilities and choices. (It also assumes that women who have chosen women have done so simply because men are oppressive and emotionally unavailable, which still fails to account for women who continue to pursue relationships with oppressive and/or emotionally unsatisfying men.) I am suggesting that heterosexuality, like motherhood, needs to be recognized and studied as a *political institution* – even, or especially, by those individuals who feel they are, in their personal experience, the precursors of a new social relation between the sexes.

## II

If women are the earliest sources of emotional caring and physical nurture for both female and male children, it would seem logical, from a feminist perspective at least, to pose the following questions: whether the search for love and tenderness in both sexes does not originally lead toward women; *why in fact women would ever redirect that search*; why species survival, the means of impregnation, and emotional/erotic relationships should ever have become so rigidly identified with each other; and why such violent strictures should be found necessary to enforce women's total emotional, erotic loyalty and subservience to men. I doubt that enough feminist scholars and theorists have taken the pains to acknowledge the societal forces which wrench women's emotional and erotic energies away from themselves and other women and from woman-identified values. These forces, as I shall try to show, range from literal physical enslavement to the disguising and distorting of possible options.

I do not assume that mothering by women is a "sufficient cause" of lesbian existence. But the issue of mothering by women has been much in the air of late, usually accompanied by the view that increased parenting by men would minimize antagonism between the sexes and equalize the sexual imbalance of power of males over females. These discussions are carried on without reference to compulsory heterosexuality as a phenomenon, let alone as an ideology. I do not wish to psychologize here, but rather to identify sources of male power. I believe large numbers of men could, in fact, undertake child care on a large scale without radically altering the balance of male power in a male-identified society.

In her essay "The Origin of the Family," Kathleen Gough lists eight characteristics of male power in archaic and contemporary societies which I would like to use as a framework: "men's ability to deny women sexuality or to force it upon them; to command or exploit their labor to control their produce; to control or rob them of their children; to confine them physically and prevent their movement; to use them as objects in male transactions; to cramp their creativeness; or to withhold from them large areas of the society's knowledge and cultural attainments."<sup>13</sup> (Gough does not perceive these power

characteristics as specifically enforcing heterosexuality, only as producing sexual inequality.) Below, Gough's words appear in italics; the elaboration of each of her categories, in brackets, is my own.

Characteristics of male power include *the power of men*

1. *to deny women [their own] sexuality* – [by means of clitoridectomy and infibulation; chastity belts; punishment, including death, for female adultery; punishment, including death, for lesbian sexuality; psychoanalytic denial of the clitoris; strictures against masturbation; denial of maternal and postmenopausal sensuality; unnecessary hysterectomy; pseudolesbian images in the media and literature; closing of archives and destruction of documents relating to lesbian existence]
2. *or to force it [male sexuality] upon them* – [by means of rape (including marital rape) and wife beating; father-daughter, brother-sister incest; the socialization of women to feel that male sexual “drive” amounts to a right;<sup>14</sup> idealization of heterosexual romance in art, literature, the media, advertising, etc.; child marriage; arranged marriage; prostitution; the harem; psychoanalytic doctrines of frigidity and vaginal orgasm; pornographic depictions of women responding pleasurable to sexual violence and humiliation (a subliminal message being that sadistic heterosexuality is more “normal” than sensuality between women)]
3. *to command or exploit their labor to control their produce* – [by means of the institutions of marriage and motherhood as unpaid production; the horizontal segregation of women in paid employment; the decoy of the upwardly mobile token woman; male control of abortion, contraception, sterilization, and child-birth; pimping; female infanticide, which robs mothers of daughters and contributes to generalized devaluation of women]
4. *to control or rob them of their children* – [by means of father right and “legal kidnapping”;<sup>15</sup> enforced sterilization; systematized infanticide; seizure of children from lesbian mothers by the courts; the malpractice of male obstetrics; use of the mother as “token torturer”<sup>16</sup> in genital mutilation or in binding the daughter’s feet (or mind) to fit her for marriage]
5. *to confine them physically and prevent their movement* – [by means of rape as terrorism, keeping women off the streets; purdah; foot binding; atrophying of women’s athletic capabilities; high heels and “feminine” dress codes in fashion; the veil; sexual harassment on the streets; horizontal segregation of women in employment; prescriptions for “full-time” mothering at home; enforced economic dependence of wives]
6. *to use them as objects in male transactions* – [use of women as “gifts”; bride price; pimping; arranged marriage; use of women as entertainers to facilitate male deals – e.g., wife-hostess, cocktail waitress required to dress for male sexual titillation, call girls, “bunnies,” geisha, kisaeng prostitutes, secretaries]
7. *to cramp their creativeness* – [witch persecutions as campaigns against midwives and female healers, and as pogrom against independent, “unassimilated” women;<sup>17</sup> definition of male pursuits as more valuable than female within any culture, so that cultural values become the embodiment of male subjectivity; restriction of female self-fulfillment to marriage and motherhood; sexual exploitation of women by male artists and teachers; the social and economic disruption of women’s creative aspirations;<sup>18</sup> erasure of female tradition]<sup>19</sup>

8. *to withhold from them large areas of the society's knowledge and cultural attainments – [by means of noneducation of females; the "Great Silence" regarding women and particularly lesbian existence in history and culture;<sup>20</sup> sex-role tracking which deflects women from science, technology, and other "masculine" pursuits; male social/professional bonding which excludes women; discrimination against women in the professions]*

These are some of the methods by which male power is manifested and maintained. Looking at the schema, what surely impresses itself is the fact that we are confronting not a simple maintenance of inequality and property possession, but a pervasive cluster of forces, ranging from physical brutality to control of consciousness, which suggests that an enormous potential counterforce is having to be restrained.

Some of the forms by which male power manifests itself are more easily recognizable as enforcing heterosexuality on women than are others. Yet each one I have listed adds to the cluster of forces within which women have been convinced that marriage and sexual orientation toward men are inevitable – even if unsatisfying or oppressive – components of their lives. The chastity belt; child marriage; erasure of lesbian existence (except as exotic and perverse) in art, literature, film; idealization of heterosexual romance and marriage – these are some fairly obvious forms of compulsion, the first two exemplifying physical force, the second two control of consciousness. While clitoridectomy has been assailed by feminists as a form of woman torture,<sup>21</sup> Kathleen Barry first pointed out that it is not simply a way of turning the young girl into a "marriageable" woman through brutal surgery. It intends that women in the intimate proximity of polygynous marriage will not form sexual relationships with each other, that – from a male, genital-fetishist perspective – female erotic connections, even in a sex-segregated situation, will be literally excised.<sup>22</sup>

The function of pornography as an influence on consciousness is a major public issue of our time, when a multibillion-dollar industry has the power to disseminate increasingly sadistic, women-degrading visual images. But even so-called soft-core pornography and advertising depict women as objects of sexual appetite devoid of emotional context, without individual meaning or personality – essentially as a sexual commodity to be consumed by males. (So-called lesbian pornography, created for the male voyeuristic eye, is equally devoid of emotional context or individual personality.) The most pernicious message relayed by pornography is that women are natural sexual prey to men and love it, that sexuality and violence are congruent, and that for women sex is essentially masochistic, humiliation pleasurable, physical abuse erotic. But along with this message comes another, not always recognized: that enforced submission and the use of cruelty, if played out in heterosexual pairing, is sexually "normal," while sensuality between women, including erotic mutuality and respect, is "queer," "sick," and either pornographic in itself or not very exciting compared with the sexuality of whips and bondage.<sup>23</sup> Pornography does not simply create a climate in which sex and violence are interchangeable; it widens the range of behavior considered acceptable from men in heterosexual intercourse – behavior which reiteratively strips women of their autonomy, dignity, and sexual potential, including the potential of loving and being loved by women in mutuality and integrity.

In her brilliant study *Sexual Harassment of Working Women: A Case of Sex Discrimination*, Catharine A. MacKinnon delineates the intersection of compulsory

heterosexuality and economics. Under capitalism, women are horizontally segregated by gender and occupy a structurally inferior position in the workplace. This is hardly news, but MacKinnon raises the question why, even if capitalism “requires some collection of individuals to occupy low-status, low-paying positions … such persons must be biologically female,” and goes on to point out that “the fact that male employers often do not hire qualified women, *even when they could pay them less than men* suggests that more than the profit motive is implicated” [emphasis added].<sup>24</sup> She cites a wealth of material documenting the fact that women are not only segregated in low-paying service jobs (as secretaries, domestics, nurses, typists, telephone operators, child-care workers, waitresses), but that “sexualization of the woman” is part of the job. Central and intrinsic to the economic realities of women’s lives is the requirement that women will “market sexual attractiveness to men, who tend to hold the economic power and position to enforce their predilections.” And MacKinnon documents that “sexual harassment perpetuates the interlocked structure by which women have been kept sexually in thrall to men at the bottom of the labor market. Two forces of American society converge: men’s control over women’s sexuality and capital’s control over employees’ work lives.”<sup>25</sup> Thus, women in the workplace are at the mercy of sex as power in a vicious circle. Economically disadvantaged, women – whether waitresses or professors – endure sexual harassment to keep their jobs and learn to behave in a complaisantly and ingratiatingly heterosexual manner because they discover this is their true qualification for employment, whatever the job description. And, MacKinnon notes, the woman who too decisively resists sexual overtures in the workplace is accused of being “dried up” and sexless, or lesbian. This raises a specific difference between the experiences of lesbians and homosexual men. A lesbian, closeted on her job because of heterosexist prejudice, is not simply forced into denying the truth of her outside relationships or private life. Her job depends on her pretending to be not merely heterosexual, but a heterosexual *woman* in terms of dressing and playing the feminine, deferential role required of “real” women.

MacKinnon raises radical questions as to the qualitative differences between sexual harassment, rape, and ordinary heterosexual intercourse. (“As one accused rapist put it, he hadn’t used ‘any more force than is usual for males during the preliminaries.’”) She criticizes Susan Brownmiller<sup>26</sup> for separating rape from the mainstream of daily life and for her unexamined premise that “rape is violence, intercourse is sexuality,” removing rape from the sexual sphere altogether. Most crucially she argues that “taking rape from the realm of ‘the sexual,’ placing it in the realm of ‘the violent,’ allows one to be against it without raising any questions about the extent to which the institution of heterosexuality has defined force as a normal part of ‘the preliminaries.’”<sup>27</sup> “Never is it asked whether, under conditions of male supremacy, the notion of ‘consent’ has any meaning.”<sup>28</sup>

The fact is that the workplace, among other social institutions, is a place where women have learned to accept male violation of their psychic and physical boundaries as the price of survival; where women have been educated – no less than by romantic literature or by pornography – to perceive themselves as sexual prey. A woman seeking to escape such casual violations along with economic disadvantage may well turn to marriage as a form of hoped-for protection, while bringing into marriage neither social nor economic power, thus entering that institution also from a disadvantaged position. MacKinnon finally asks:

What if inequality is built into the social conceptions of male and female sexuality, of masculinity and femininity, of sexiness and heterosexual attractiveness? Incidents of sexual harassment suggest that male sexual desire itself may be aroused by female vulnerability....

Men feel they can take advantage, so they want to, so they do. Examination of sexual harassment, precisely because the episodes appear commonplace, forces one to confront the fact that sexual intercourse normally occurs between economic (as well as physical) unequals ... the apparent legal requirement that violations of women's sexuality appear out of the ordinary before they will be punished helps prevent women from defining the ordinary conditions of their own consent.<sup>29</sup>

Given the nature and extent of heterosexual pressures – the daily “eroticization of women’s subordination,” as MacKinnon phrases it<sup>30</sup> – I question the more or less psychoanalytic perspective (suggested by such writers as Karen Horney, H. R. Hayes, Wolfgang Lederer, and, most recently, Dorothy Dinnerstein) that the male need to control women sexually results from some primal male “fear of women” and of women’s sexual insatiability. It seems more probable that men really fear not that they will have women’s sexual appetites forced on them or that women want to smother and devour them, but that women could be indifferent to them altogether, that men could be allowed sexual and emotional – therefore economic – access to women *only* on women’s terms, otherwise being left on the periphery of the matrix.

The means of assuring male sexual access to women have recently received searching investigation by Kathleen Barry.<sup>31</sup> She documents extensive and appalling evidence for the existence, on a very large scale, of international female slavery, the institution once known as “white slavery” but which in fact has involved, and at this very moment involves, women of every race and class. In the theoretical analysis derived from her research, Barry makes the connection between all enforced conditions under which women live subject to men: prostitution, marital rape, father-daughter and brother-sister incest, wife beating, pornography, bride price, the selling of daughters, purdah, and genital mutilation. She sees the rape paradigm – where the victim of sexual assault is held responsible for her own victimization – as leading to the rationalization and acceptance of other forms of enslavement where the woman is presumed to have “chosen” her fate, to embrace it passively, or to have courted it perversely through rash or unchaste behavior. On the contrary, Barry maintains, “female sexual slavery is present in ALL situations where women or girls cannot change the conditions of their existence; where regardless of how they got into those conditions, e.g., social pressure, economic hardship, misplaced trust or the longing for affection, they cannot get out; and where they are subject to sexual violence and exploitation.”<sup>32</sup> She provides a spectrum of concrete examples, not only as to the existence of a widespread international traffic in women, but also as to how this operates – whether in the form of a “Minnesota pipeline” funneling blonde, blue-eyed midwestern runaways to Times Square, or the purchasing of young women out of rural poverty in Latin America or Southeast Asia, or the providing of *maisons d’abattage* for migrant workers in the eighteenth arrondissement of Paris. Instead of “blaming the victim” or trying to diagnose her presumed pathology, Barry turns her floodlight on the pathology of sex colonization itself, the ideology of “cultural sadism” represented by the pornography industry and by the overall identification of women primarily as “sexual beings whose responsibility is the sexual service of men.”<sup>33</sup>

Barry delineates what she names a “sexual domination perspective” through whose lens sexual abuse and terrorism of women by men has been rendered almost invisible by treating it as natural and inevitable. From its point of view, women are expendable as long as the sexual and emotional needs of the male can be satisfied. To replace this perspective of domination with a universal standard of basic freedom for women from

gender-specific violence, from constraints on movement, and from male right of sexual and emotional access is the political purpose of her book. Like Mary Daly in *Gyn/Ecology*, Barry rejects structuralist and other cultural-relativist rationalizations for sexual torture and anti-woman violence. In her opening chapter, she asks of her readers that they refuse all handy escapes into ignorance and denial. “The only way we can come out of hiding, break through our paralyzing defenses, is to know it all – the full extent of sexual violence and domination of women.... In *knowing*, in facing directly, we can learn to chart our course out of this oppression, by envisioning and creating a world which will preclude sexual slavery.”<sup>34</sup>

“Until we name the practice, give conceptual definition and form to it, illustrate its life over time and in space, those who are its most obvious victims will also not be able to name it or define their experience.”

But women are all, in different ways and to different degrees, its victims; and part of the problem with naming and conceptualizing female sexual slavery is, as Barry clearly sees, compulsory heterosexuality.<sup>35</sup> Compulsory heterosexuality simplifies the task of the procurer and pimp in world-wide prostitution rings and “eros centers,” while, in the privacy of the home, it leads the daughter to “accept” incest/rape by her father, the mother to deny that it is happening, the battered wife to stay on with an abusive husband. “Befriending or love” is a major tactic of the procurer, whose job it is to turn the runaway or the confused young girl over to the pimp for seasoning. The ideology of heterosexual romance, beamed at her from childhood out of fairy tales, television, films, advertising, popular songs, wedding pageantry, is a tool ready to the procurer’s hand and one which he does not hesitate to use, as Barry documents. Early female indoctrination in “love” as an emotion may be largely a Western concept; but a more universal ideology concerns the primacy and uncontrollability of the male sexual drive. This is one of many insights offered by Barry’s work:

As sexual power is learned by adolescent boys through the social experience of their sex drive, so do girls learn that the locus of sexual power is male. Given the importance placed on the male sex drive in the socialization of girls as well as boys, early adolescence is probably the first significant phase of male identification in a girl’s life and development.... As a young girl becomes aware of her own increasing sexual feelings ... she turns away from her heretofore primary relationships with girlfriends. As they become secondary to her, recede in importance in her life, her own identity also assumes a secondary role and she grows into male identification.<sup>36</sup>

We still need to ask why some women never, even temporarily, turn away from “heretofore primary relationships” with other females. And why does male identification – the casting of one’s social, political, and intellectual allegiances with men – exist among life-long sexual lesbians? Barry’s hypothesis throws us among new questions, but it clarifies the diversity of forms in which compulsory heterosexuality presents itself. In the mystique of the overpowering, all-conquering male sex drive, the penis-with-a-life-of-its-own, is rooted the law of male sex right to women, which justifies prostitution as a universal cultural assumption on the one hand, while defending sexual slavery within the family on the basis of “family privacy and cultural uniqueness” on the other.<sup>37</sup> The adolescent male sex drive, which, as both young women and men are taught, once triggered cannot take responsibility for itself or take no for an answer, becomes, according to Barry, the norm and rationale for adult male sexual behavior: a condition of *arrested sexual development*. Women learn to accept as natural the inevitability of this “drive” because

they receive it as dogma. Hence, marital rape; hence, the Japanese wife resignedly packing her husband's suitcase for a weekend in the *kisaeng* brothels of Taiwan; hence, the psychological as well as economic imbalance of power between husband and wife, male employer and female worker, father and daughter, male professor and female student.

The effect of male identification means

internalizing the values of the colonizer and actively participating in carrying out the colonization of one's self and one's sex.... Male identification is the act whereby women place men above women, including themselves, in credibility, status, and importance in most situations, regardless of the comparative quality the women may bring to the situation.... Interaction with women is seen as a lesser form of relating on every level.<sup>38</sup>

What deserves further exploration is the doublethink many women engage in and from which no woman is permanently and utterly free: However woman-to-woman relationships, female support networks, a female and feminist value system are relied on and cherished, indoctrination in male credibility and status can still create synapses in thought, denials of feeling, wishful thinking, a profound sexual and intellectual confusion.<sup>39</sup> I quote here from a letter I received the day I was writing this passage: "I have had very bad relationships with men – I am now in the midst of a very painful separation. I am trying to find my strength through women – without my friends, I could not survive." How many times a day do women speak words like these or think them or write them, and how often does the synapse reassert itself?

Barry summarizes her findings:

Considering the arrested sexual development that is understood to be normal in the male population, and considering the numbers of men who are pimps, procurers, members of slavery gangs, corrupt officials participating in this traffic, owners, operators, employees of brothels and lodging and entertainment facilities, pornography purveyors, associated with prostitution, wife beaters, child molesters, incest perpetrators, johns (tricks) and rapists, one cannot but be momentarily stunned by the enormous male population engaging in female sexual slavery. The huge number of men engaged in these practices should be cause for declaration of an international emergency, a crisis in sexual violence. But what should be cause for alarm is instead accepted as normal sexual intercourse.<sup>40</sup>

Susan Cavin, in a rich and provocative, if highly speculative, dissertation, suggests that patriarchy becomes possible when the original female band, which includes children but ejects adolescent males, becomes invaded and outnumbered by males; that not patriarchal marriage, but the rape of the mother by the son, becomes the first act of male domination. The entering wedge, or leverage, which allows this to happen is not just a simple change in sex ratios; it is also the mother-child bond, manipulated by adolescent males in order to remain within the matrix past the age of exclusion. Maternal affection is used to establish male right of sexual access, which, however, must ever after be held by force (or through control of consciousness) since the original deep adult bonding is that of woman for woman.<sup>41</sup> I find this hypothesis extremely suggestive, since one form of false consciousness which serves compulsory heterosexuality is the maintenance of a mother-son relationship between women and men, including the demand that women provide maternal solace, nonjudgmental nurturing, and compassion for their harassers, rapists, and batterers (as well as for men who passively vampirize them).

But whatever its origins, when we look hard and clearly at the extent and elaboration of measures designed to keep women within a male sexual purlieu, it becomes an inescapable question whether the issue feminists have to address is not simple “gender inequality” nor the domination of culture by males nor mere “taboos against homosexuality,” but the enforcement of heterosexuality for women as a means of assuring male right of physical, economic, and emotional access.<sup>42</sup> One of many means of enforcement is, of course, the rendering invisible of the lesbian possibility, an engulfed continent which rises fragmentedly into view from time to time only to become submerged again. Feminist research and theory that contribute to lesbian invisibility or marginality are actually working against the liberation and empowerment of women as a group.<sup>43</sup>

The assumption that “most women are innately heterosexual” stands as a theoretical and political stumbling block for feminism. It remains a tenable assumption partly because lesbian existence has been written out of history or catalogued under disease, partly because it has been treated as exceptional rather than intrinsic, partly because to acknowledge that for women heterosexuality may not be a “preference” at all but something that has had to be imposed, managed, organized, propagandized, and maintained by force is an immense step to take if you consider yourself freely and “innately” heterosexual. Yet the failure to examine heterosexuality as an institution is like failing to admit that the economic system called capitalism or the caste system of racism is maintained by a variety of forces, including both physical violence and false consciousness. To take the step of questioning heterosexuality as a “preference” or “choice” for women – and to do the intellectual and emotional work that follows – will call for a special quality of courage in heterosexually identified feminists, but I think the rewards will be great: a freeing-up of thinking, the exploring of new paths, the shattering of another great silence, new clarity in personal relationships.

## Notes

- 1 Alice Rossi, “Children and Work in the Lives of Women,” paper delivered at the University of Arizona, Tuscon, February 1976.
- 2 Doris Lessing, *The Golden Notebook*, 1962 (New York: Bantam, 1977), p. 480.
- 3 Nancy Chodorow, *The Reproduction of Mothering* (Berkeley: University of California Press, 1978); Dorothy Dinnerstein, *The Mermaid and the Minotaur: Sexual Arrangements and the Human Malaise* (New York: Harper & Row, 1976); Barbara Ehrenreich and Deirdre English, *For Her Own Good: 150 Years of the Experts’ Advice to Women* (Garden City, N.Y.: Doubleday, Anchor, 1978); Jean Baker Miller, *Toward a New Psychology of Women* (Boston: Beacon, 1976).
- 4 I could have chosen many other serious and influential recent books, including anthologies, which would illustrate the same point: e.g., *Our Bodies, Ourselves*, the Boston Women’s Health Book Collective’s best seller (New York: Simon and Schuster, 1976), which devotes a separate (and inadequate) chapter to lesbians, but whose message is that heterosexuality is most women’s life preference; Berenice Carroll, ed., *Liberating Women’s History: Theoretical and Critical Essays* (Urbana: University of Illinois Press, 1976), which does not include even a token essay on the lesbian presence in history, though an essay by Linda Gordon, Persis Hunt, *et al.* notes the use by male historians of “sexual deviance” as a category to discredit and dismiss Anna Howard Shaw, Jane Addams, and other feminists (“Historical Phallacies: Sexism in American Historical Writing”); and Renate Bridenthal and Claudia Koonz, eds., *Becoming Visible: Women in European History* (Boston: Houghton Mifflin, 1977), which contains three mentions of male homosexuality but no materials that I have been able to locate on lesbians. Gerda Lerner, ed., *The Female Experience: An American Documentary* (Indianapolis: Bobbs-Merrill, 1977), contains an abridgment of two lesbian-feminist-

position papers from the contemporary movement but no other documentation of lesbian existence. Lerner does note in her preface, however, how the charge of deviance has been used to fragment women and discourage women's resistance. Linda Gordon, in *Woman's Body, Woman's Right: A Social History of Birth Control in America* (New York: Viking, Grossman, 1976), notes accurately that "it is not that feminism has produced more lesbians. There have always been many lesbians, despite the high levels of repression; and most lesbians experience their sexual preference as innate" (p. 410).

[A.R., 1986: I am glad to update the first annotation in this footnote. "*The New Our Bodies, Ourselves*" (New York: Simon and Schuster, 1984) contains an expanded chapter on "Loving Women: Lesbian Life and Relationships" and furthermore emphasizes *choices* for women throughout – in terms of sexuality, health care, family, politics, etc.]

- 42 For my perception of heterosexuality as an economic institution I am indebted to Lisa Leghorn and Katherine Parker, who allowed me to read the unpublished manuscript of their book *Woman's Worth: Sexual Economics and the World of Women* (London and Boston: Routledge & Kegan Paul, 1981).
- 43 I would suggest that lesbian existence has been most recognized and tolerated where it has resembled a "deviant" version of heterosexuality – e.g., where lesbians have, like Stein and Toklas, played heterosexual roles (or seemed to in public) and have been chiefly identified with male culture. See also Claude E. Schaeffer, "The Kuterai Female Berdache: Courier, Guide, Prophetess and Warrior," *Ethnohistory* 12, no. 3 (Summer 1965): 193–236. (Berdache: "an individual of a definite physiological sex [m. or f.] who assumes the role and status of the opposite sex and who is

viewed by the community as being of one sex physiologically but as having assumed the role and status of the opposite sex" [Schaeffer, p. 231].) Lesbian existence has also been relegated to an upper-class phenomenon, an elite decadence (as in the fascination with Paris salon lesbians such as Renée Vivien and Natalie Clifford Barney), to the obscuring of such "common women" as Judy Grahn depicts in her *The Work of a Common Woman* (Oakland, Calif.: Diana Press, 1978) and *True to Life Adventure Stories* (Oakland, Calif.: Diana Press, 1978).

# CHAPTER 4

## The Laugh of the Medusa

*Hélène Cixous*

Hélène Cixous is a French literary scholar, feminist philosopher, and fiction writer. Her most famous work, "The Laugh of the Medusa," was published in 1976.

I shall speak about women's writing: about *what it will do*. Woman must write her self: must write about women and bring women to writing, from which they have been driven away as violently as from their bodies – for the same reasons, by the same law, with the same fatal goal. Woman must put herself into the text – as into the world and into history – by her own movement.

The future must no longer be determined by the past. I do not deny that the effects of the past are still with us. But I refuse to strengthen them by repeating them, to confer upon them an irremovability the equivalent of destiny, to confuse the biological and the cultural. Anticipation is imperative.

Since these reflections are taking shape in an area just on the point of being discovered, they necessarily bear the mark of our time – a time during which the new breaks away from the old, and, more precisely, the (feminine) new from the old (*la nouvelle de l'ancien*). Thus, as there are no grounds for establishing a discourse, but rather an arid millennial ground to break, what I say has at least two sides and two aims: to break up, to destroy; and to foresee the unforeseeable, to project.

I write this as a woman, toward women. When I say "woman," I'm speaking of woman in her inevitable struggle against conventional man; and of a universal woman subject who must bring women to their senses and to their meaning in history. But first it must be said that in spite of the enormity of the repression that has kept them in the "dark" – that dark which people have been trying to make them accept as their attribute – there is, at this time, no general woman, no one typical woman. What they have *in common* I will say. But what strikes me is the infinite richness of their individual constitutions: you can't talk about *a* female sexuality, uniform, homogeneous, classifiable into codes – any

*Original publication details:* Hélène Cixous, "The Laugh of the Medusa" from *The Signs Reader: Women, Gender, and Scholarship*, trans. Keith and Paula Cohen, ed. Elizabeth Abel and Emily Abel, pp. 279–297. University of Chicago Press, 1983. Complete and unabridged.

more than you can talk about one unconscious resembling another. Women's imaginary is inexhaustible, like music, painting, writing: their stream of phantasms is incredible.

I have been amazed more than once by a description a woman gave me of a world all her own which she had been secretly haunting since early childhood. A world of searching, the elaboration of a knowledge, on the basis of a systematic experimentation with the bodily functions, a passionate and precise interrogation of her erotogeneity. This practice, extraordinarily rich and inventive, in particular as concerns masturbation, is prolonged or accompanied by a production of forms, a veritable aesthetic activity, each stage of rapture inscribing a resonant vision, a composition, something beautiful. Beauty will no longer be forbidden.

I wished that that woman would write and proclaim this unique empire so that other women, other unacknowledged sovereigns, might exclaim: I, too, overflow; my desires have invented new desires, my body knows unheard-of songs. Time and again I, too, have felt so full of luminous torrents that I could burst – burst with forms much more beautiful than those which are put up in frames and sold for a stinking fortune. And I, too, said nothing, showed nothing; I didn't open my mouth. I didn't repaint my half of the world. I was ashamed. I was afraid, and I swallowed my shame and my fear. I said to myself: You are mad! What's the meaning of these waves, these floods, these outbursts? Where is the ebullient, infinite woman who, immersed as she was in her naiveté, kept in the dark about herself, led into self-disdain by the great arm of parental-conjugal phallogentrism, hasn't been ashamed of her strength? Who, surprised and horrified by the fantastic tumult of her drives (for she was made to believe that a well-adjusted normal woman has a ... divine composure), hasn't accused herself of being a monster? Who, feeling a funny desire stirring inside her (to sing, to write, to dare to speak, in short, to bring out something new), hasn't thought she was sick? Well, her shameful sickness is that she resists death, that she makes trouble.

And why don't you write? Write! Writing is for you, you are for you; your body is yours, take it. I know why you haven't written. (And why I didn't write before the age of twenty-seven.) Because writing is at once too high, too great for you, it's reserved for the great – that is, for "great men"; and it's "silly." Besides, you've written a little, but in secret. And it wasn't good, because it was in secret, and because you punished yourself for writing, because you didn't go all the way; or because you wrote, irresistibly, as when we would masturbate in secret, not to go further, but to attenuate the tension a bit, just enough to take the edge off. And then as soon as we come, we go and make ourselves feel guilty – so as to be forgiven; or to forget, to bury it until the next time.

Write, let no one hold you back, let nothing stop you: not man; not the imbecilic capitalist machinery, in which publishing houses are the crafty, obsequious relayers of imperatives handed down by an economy that works against us and off our backs; and not *yourself*. Smug-faced readers, managing editors, and big bosses don't like the true texts of women – female-sexed texts. That kind scares them.

I write woman: woman must write woman. And man, man. So only an oblique consideration will be found here of man; it's up to him to say where his masculinity and femininity are at: this will concern us once men have opened their eyes and seen themselves clearly.<sup>1</sup>

Now women return from afar, from always: from "without," from the heath where witches are kept alive; from below, from beyond "culture"; from their childhood which men have been trying desperately to make them forget, condemning it to "eternal rest." The little girls and their "ill-mannered" bodies immured, well-preserved, intact unto

themselves, in the mirror. Frigidified. But are they ever seething underneath! What an effort it takes – there's no end to it – for the sex cops to bar their threatening return. Such a display of forces on both sides that the struggle has for centuries been immobilized in the trembling equilibrium of a deadlock.

Here they are, returning, arriving over and again, because the unconscious is impregnable. They have wandered around in circles, confined to the narrow room in which they've been given a deadly brainwashing. You can incarcerate them, slow them down, get away with the old Apartheid routine, but for a time only. As soon as they begin to speak, at the same time as they're taught their name, they can be taught that their territory is black: because you are Africa, you are black. Your continent is dark. Dark is dangerous. You can't see anything in the dark, you're afraid. Don't move, you might fall. Most of all, don't go into the forest. And so we have internalized this horror of the dark.

Men have committed the greatest crime against women. Insidiously, violently, they have led them to hate women, to be their own enemies, to mobilize their immense strength against themselves, to be the executants of their virile needs. They have made for women an antinarcissism! A narcissism which loves itself only to be loved for what women haven't got! They have constructed the infamous logic of antilove.

We the precocious, we the repressed of culture, our lovely mouths gagged with pollen, our wind knocked out of us, we the labyrinths, the ladders, the trampled spaces, the bevies – we are black and we are beautiful.

We're stormy, and that which is ours breaks loose from us without our fearing any debilitation. Our glances, our smiles, are spent; laughs exude from all our mouths; our blood flows and we extend ourselves without ever reaching an end; we never hold back our thoughts, our signs, our writing; and we're not afraid of lacking.

What happiness for us who are omitted, brushed aside at the scene of inheritances; we inspire ourselves and we expire without running out of breath, we are everywhere!

From now on, who, if we say so, can say no to us? We've come back from always.

It is time to liberate the New Woman from the Old by coming to know her – by loving her for getting by, for getting beyond the Old without delay, by going out ahead of what the New Woman will be, as an arrow quits the bow with a movement that gathers and separates the vibrations musically, in order to be more than her self.

I say that we must, for, with a few rare exceptions, there has not yet been any writing that inscribes femininity; exceptions so rare, in fact, that, after plowing through literature across languages, cultures, and ages,<sup>2</sup> one can only be startled at this vain scouting mission. It is well known that the number of women writers (while having increased very slightly from the nineteenth century on) has always been ridiculously small. This is a useless and deceptive fact unless from their species of female writers we do not first deduct the immense majority whose workmanship is in no way different from male writing, and which either obscures women or reproduces the classic representations of women (as sensitive – intuitive – dreamy, etc.).<sup>3</sup>

Let me insert here a parenthetical remark. I mean it when I speak of male writing. I maintain unequivocally that there is such a thing as *marked* writing; that, until now, far more extensively and repressively than is ever suspected or admitted, writing has been run by a libidinal and cultural – hence political, typically masculine – economy; that this is a locus where the repression of women has been perpetuated, over and over, more or less consciously, and in a manner that's frightening since it's often hidden or adorned with the mystifying charms of fiction; that this locus has grossly exaggerated all the signs of sexual opposition (and not sexual difference), where woman has never *her* turn to

speak – this being all the more serious and unpardonable in that writing is precisely *the very possibility of change*, the space that can serve as a springboard for subversive thought, the precursory movement of a transformation of social and cultural structures.

Nearly the entire history of writing is confounded with the history of reason, of which it is at once the effect, the support, and one of the privileged alibis. It has been one with the phallocentric tradition. It is indeed that same self-admiring, self-stimulating, self-congratulatory phallocentrism.

With some exceptions, for there have been failures – and if it weren't for them, I wouldn't be writing (I-woman, escapee) – in that enormous machine that has been operating and turning out its “truth” for centuries. There have been poets who would go to any lengths to slip something by at odds with tradition – men capable of loving love and hence capable of loving others and of wanting them, of imagining the woman who would hold out against oppression and constitute herself as a superb, equal, hence “impossible” subject, untenable in a real social framework. Such a woman the poet could desire only by breaking the codes that negate her. Her appearance would necessarily bring on, if not revolution – for the bastion was supposed to be immutable – at least harrowing explosions. At times it is in the fissure caused by an earthquake, through that radical mutation of things brought on by a material upheaval when every structure is for a moment thrown off balance and an ephemeral wildness sweeps order away, that the poet slips something by, for a brief span, of woman. Thus did Kleist expend himself in his yearning for the existence of sister-lovers, maternal daughters, mother-sisters, who never hung their heads in shame. Once the palace of magistrates is restored, it's time to pay: immediate bloody death to the uncontrollable elements.

But only the poets – not the novelists, allies of representationalism. Because poetry involves gaining strength through the unconscious and because the unconscious, that other limitless country, is the place where the repressed manage to survive: women, or as Hoffmann would say, fairies.

She must write her self, because this is the invention of a *new insurgent* writing which, when the moment of her liberation has come, will allow her to carry out the indispensable ruptures and transformations in her history, first at two levels that cannot be separated.

a) Individually. By writing her self, woman will return to the body which has been more than confiscated from her, which has been turned into the uncanny stranger on display – the ailing or dead figure, which so often turns out to be the nasty companion, the cause and location of inhibitions. Censor the body and you censor breath and speech at the same time.

Write your self. Your body must be heard. Only then will the immense resources of the unconscious spring forth. Our naphtha will spread, throughout the world, without dollars – black or gold – nonassessed values that will change the rules of the old game.

To write. An act which will not only “realize” the decensored relation of woman to her sexuality, to her womanly being, giving her access to her native strength; it will give her back her goods, her pleasures, her organs, her immense bodily territories which have been kept under seal; it will tear her away from the superegoized structure in which she has always occupied the place reserved for the guilty (guilty of everything, guilty at every turn: for having desires, for not having any; for being frigid, for being “too hot”; for not being both at once; for being too motherly and not enough; for having children and for not having any; for nursing and for not nursing...) – tear her away by means of this research, this job of analysis and illumination, this emancipation of the marvelous text of her self that she must urgently learn to speak. A woman without a body, dumb, blind,

can't possibly be a good fighter. She is reduced to being the servant of the militant male, his shadow. We must kill the false woman who is preventing the live one from breathing. Inscribe the breath of the whole woman.

b) An act that will also be marked by woman's *seizing* the occasion to *speak*, hence her shattering entry into history, which has always been based *on her suppression*. To write and thus to forge for herself the antilogos weapon. To become *at will* the taker and initiator, for her own right, in every symbolic system, in every political process.

It is time for women to start scoring their feats in written and oral language.

Every woman has known the torment of getting up to speak. Her heart racing, at times entirely lost for words, ground and language slipping away – that's how daring a feat, how great a transgression it is for a woman to speak – even just open her mouth – in public. A double distress, for even if she transgresses, her words fall almost always upon the deaf male ear, which hears in language only that which speaks in the masculine.

It is by writing, from and toward women, and by taking up the challenge of speech which has been governed by the phallus, that women will confirm women in a place other than that which is reserved in and by the symbolic, that is, in a place other than silence. Women should break out of the snare of silence. They shouldn't be conned into accepting a domain which is the margin or the harem.

Listen to a woman speak at a public gathering (if she hasn't painfully lost her wind). She doesn't "speak," she throws her trembling body forward; she lets go of herself, she flies; all of her passes into her voice, and it's with her body that she vitally supports the "logic" of her speech. Her flesh speaks true. She lays herself bare. In fact, she physically materializes what she's thinking; she signifies it with her body. In a certain way she *inscribes* what she's saying, because she doesn't deny her drives the intractable and impassioned part they have in speaking. Her speech, even when "theoretical" or political, is never simple or linear or "objectified," generalized: she draws her story into history.

There is not that scission, that division made by the common man between the logic of oral speech and the logic of the text, bound as he is by his antiquated relation – servile, calculating – to mastery. From which proceeds the niggardly lip service which engages only the tiniest part of the body, plus the mask.

In women's speech, as in their writing, that element which never stops resonating, which, once we've been permeated by it, profoundly and imperceptibly touched by it, retains the power of moving us – that element is the song: first music from the first voice of love which is alive in every woman. Why this privileged relationship with the voice? Because no woman stockpiles as many defenses for countering the drives as does a man. You don't build walls around yourself, you don't forego pleasure as "wisely" as he. Even if phallic mystification has generally contaminated good relationships, a woman is never far from "mother" (I mean outside her role functions: the "mother" as nonname and as source of goods). There is always within her at least a little of that good mother's milk. She writes in white ink.

*Woman for women.* – There always remains in woman that force which produces/is produced by the other – in particular, the other woman. *In her*, matrix, cradler; herself giver as her mother and child; she is her own sister-daughter. You might object, "What about she who is the hysterical offspring of a bad mother?" Everything will be changed once woman gives woman to the other woman. There is hidden and always ready in woman the source; the locus for the other. The mother, too, is a metaphor. It is necessary and sufficient that the best of herself be given to woman by another woman for her to be able to love herself and return in love the body that was "born" to her. Touch me, caress

me, you the living no-name, give me my self as myself. The relation to the “mother,” in terms of intense pleasure and violence, is curtailed no more than the relation to childhood (the child that she was, that she is, that she makes, remakes, undoes, there at the point where, the same, she others herself). Text: my body – shot through with streams of song; I don’t mean the overbearing, clutchy “mother” but, rather, what touches you, the equivoice that affects you, fills your breast with an urge to come to language and launches your force; the rhythm that laughs you; the intimate recipient who makes all metaphors possible and desirable; body (body? bodies?), no more describable than god, the soul, or the Other; that part of you that leaves a space between yourself and urges you to inscribe in language your woman’s style. In women there is always more or less of the mother who makes everything all right, who nourishes, and who stands up against separation; a force that will not be cut off but will knock the wind out of the codes. We will rethink woman-kind beginning with every form and every period of her body. The Americans remind us, “We are all Lesbians”; that is, don’t denigrate woman, don’t make of her what men have made of you.

Because the “economy” of her drives is prodigious, she cannot fail, in seizing the occasion to speak, to transform directly and indirectly *all* systems of exchange based on masculine thrift. Her libido will produce far more radical effects of political and social change than some might like to think.

Because she arrives, vibrant, over and again, we are at the beginning of a new history, or rather of a process of becoming in which several histories intersect with one another. As subject for history, woman always occurs simultaneously in several places. Woman un-thinks<sup>4</sup> the unifying, regulating history that homogenizes and channels forces, herding contradictions into a single battlefield. In woman, personal history blends together with the history of all women, as well as national and world history. As a militant, she is an integral part of all liberations. She must be farsighted, not limited to a blow-by-blow interaction. She foresees that her liberation will do more than modify power relations or toss the ball over to the other camp; she will bring about a mutation in human relations, in thought, in all praxis: hers is not simply a class struggle, which she carries forward into a much vaster movement. Not that in order to be a woman-in-struggle(s) you have to leave the class struggle or repudiate it; but you have to split it open, spread it out, push it forward, fill it with the fundamental struggle so as to prevent the class struggle, or any other struggle for the liberation of a class or people, from operating as a form of repression, pretext for postponing the inevitable, the staggering alteration in power relations and in the production of individualities. This alteration is already upon us – in the United States, for example, where millions of night crawlers are in the process of undermining the family and disintegrating the whole of American sociality.

The new history is coming; it’s not a dream, though it does extend beyond men’s imagination, and for good reason. It’s going to deprive them of their conceptual orthopedics, beginning with the destruction of their enticement machine.

It is impossible to *define* a feminine practice of writing, and this is an impossibility that will remain, for this practice can never be theorized, enclosed, coded – which doesn’t mean that it doesn’t exist. But it will always surpass the discourse that regulates the phallogocentric system; it does and will take place in areas other than those subordinated to philosophico-theoretical domination. It will be conceived of only by subjects who are breakers of automatisms, by peripheral figures that no authority can ever subjugate.

Hence the necessity to affirm the flourishes of this writing, to give form to its movement, its near and distant byways. Bear in mind to begin with (1) that sexual

opposition, which has always worked for man's profit to the point of reducing writing, too, to his laws, is only a historic-cultural limit. There is, there will be more and more rapidly pervasive now, a fiction that produces irreducible effects of femininity. (2) That it is through ignorance that most readers, critics, and writers of both sexes hesitate to admit or deny outright the possibility or the pertinence of a distinction between feminine and masculine writing. It will usually be said, thus disposing of sexual difference: either that all writing, to the extent that it materializes, is feminine; or, inversely – but it comes to the same thing – that the act of writing is equivalent to masculine masturbation (and so the woman who writes cuts herself out a paper penis); or that writing is bisexual, hence neuter, which again does away with differentiation. To admit that writing is precisely working (in) the in-between, inspecting the process of the same and of the other without which nothing can live, undoing the work of death – to admit this is first to want the two, as well as both, the ensemble of the one and the other, not fixed in sequences of struggle and expulsion or some other form of death but infinitely dynamized by an incessant process of exchange from one subject to another. A process of different subjects knowing one another and beginning one another anew only from the living boundaries of the other: a multiple and inexhaustible course with millions of encounters and transformations of the same into the other and into the in-between, from which woman takes her forms (and man, in his turn; but that's his other history).

In saying "bisexual, hence neuter," I am referring to the classic conception of bisexuality, which, squashed under the emblem of castration fear and along with the fantasy of a "total" being (though composed of two halves), would do away with the difference experienced as an operation incurring loss, as the mark of dreaded sectility.

To this self-effacing, merger-type bisexuality, which would conjure away castration (the writer who puts up his sign: "bisexual written here, come and see," when the odds are good that it's neither one nor the other), I oppose the *other bisexuality* on which every subject not enclosed in the false theater of phallocentric representationalism has founded his/her erotic universe. Bisexuality: that is, each one's location in self (*répérage en soi*) of the presence – variously manifest and insistent according to each person, male or female – of both sexes, nonexclusion either of the difference or of one sex, and, from this "self-permission," multiplication of the effects of the inscription of desire, over all parts of my body and the other body.

Now it happens that at present, for historic-cultural reasons, it is women who are opening up to and benefiting from this vatic bisexuality which doesn't annul differences but stirs them up, pursues them, increases their number. In a certain way, "woman is bisexual"; man – it's a secret to no one – being poised to keep glorious phallic monosexuality in view. By virtue of affirming the primacy of the phallus and of bringing it into play, phallogocentric ideology has claimed more than one victim. As a woman, I've been clouded over by the great shadow of the scepter and been told: idolize it, that which you cannot brandish. But at the same time, man has been handed that grotesque and scarcely enviable destiny (just imagine) of being reduced to a single idol with clay balls. And consumed, as Freud and his followers note, by a fear of being a woman! For, if psychoanalysis was constituted from woman, to repress femininity (and not so successful a repression at that – men have made it clear), its account of masculine sexuality is now hardly refutable; as with all the "human" sciences, it reproduces the masculine view, of which it is one of the effects.

Here we encounter the inevitable man-with-rock, standing erect in his old Freudian realm, in the way that, to take the figure back to the point where linguistics

is conceptualizing it “anew,” Lacan preserves it in the sanctuary of the phallos ( $\varphi$ ) “sheltered” from *castration’s lack!* Their “symbolic” exists, it holds power – we, the sowers of disorder, know it only too well. But we are in no way obliged to deposit our lives in their banks of lack, to consider the constitution of the subject in terms of a drama manglingly restaged, to reinstate again and again the religion of the father. Because we don’t want that. We don’t fawn around the supreme hole. We have no womanly reason to pledge allegiance to the negative. The feminine (as the poets suspected) affirms: “... And yes,” says Molly, carrying *Ulysses* off beyond any book and toward the new writing; “I said yes, I will Yes.”

*The Dark Continent is neither dark nor unexplorable.* – It is still unexplored only because we’ve been made to believe that it was too dark to be explorable. And because they want to make us believe that what interests us is the white continent, with its monuments to Lack. And we believed. They riveted us between two horrifying myths: between the Medusa and the abyss. That would be enough to set half the world laughing, except that it’s still going on. For the phallologocentric sublation<sup>5</sup> is with us, and it’s militant, regenerating the old patterns, anchored in the dogma of castration. They haven’t changed a thing: they’ve theorized their desire for reality! Let the priests tremble, we’re going to show them our sexts!

Too bad for them if they fall apart upon discovering that women aren’t men, or that the mother doesn’t have one. But isn’t this fear convenient for them? Wouldn’t the worst be, isn’t the worst, in truth, that women aren’t castrated, that they have only to stop listening to the Sirens (for the Sirens were men) for history to change its meaning? You only have to look at the Medusa straight on to see her. And she’s not deadly. She’s beautiful and she’s laughing.

Men say that there are two unrepresentable things: death and the feminine sex. That’s because they need femininity to be associated with death; it’s the jitters that gives them a hard-on! for themselves! They need to be afraid of us. Look at the trembling Perseuses moving backward toward us, clad in apotropes. What lovely backs! Not another minute to lose. Let’s get out of here.

Let’s hurry: the continent is not impenetrably dark. I’ve been there often. I was overjoyed one day to run into Jean Genêt. It was in *Pompes funèbres*.<sup>6</sup> He had come there led by his Jean. There are some men (all too few) who aren’t afraid of femininity.

Almost everything is yet to be written by women about femininity: about their sexuality, that is, its infinite and mobile complexity, about their eroticization, sudden turn-ons of a certain minuscule-immense area of their bodies; not about destiny, but about the adventure of such and such a drive, about trips, crossings, trudges, abrupt and gradual awakenings, discoveries of a zone at one time timorous and soon to be forthright. A woman’s body, with its thousand and one thresholds of ardor – once, by smashing yokes and censors, she lets it articulate the profusion of meanings that run through it in every direction – will make the old single-grooved mother tongue reverberate with more than one language.

We’ve been turned away from our bodies, shamefully taught to ignore them, to strike them with that stupid sexual modesty; we’ve been made victims of the old fool’s game: each one will love the other sex. I’ll give you your body and you’ll give me mine. But who are the men who give women the body that women blindly yield to them? Why so few texts? Because so few women have as yet won back their body. Women must write through their bodies, they must invent the impregnable language that will wreck partitions, classes, and rhetorics, regulations and codes, they must submerge, cut through,

get beyond the ultimate reserve-discourse, including the one that laughs at the very idea of pronouncing the word “silence,” the one that, aiming for the impossible, stops short before the word “impossible” and writes it as “the end.”

Such is the strength of women that, sweeping away syntax, breaking that famous thread (just a tiny little thread, they say) which acts for men as a surrogate umbilical cord, assuring them – otherwise they couldn’t come – that the old lady is always right behind them, watching them make phallus, women will go right up to the impossible.

When the “repressed” of their culture and their society returns, it’s an explosive, *utterly* destructive, staggering return, with a force never yet unleashed and equal to the most forbidding of suppressions. For when the Phallic period comes to an end, women will have been either annihilated or borne up to the highest and most violent incandescence. Muffled throughout their history, they have lived in dreams, in bodies (though muted), in silences, in aphonic revolts.

And with such force in their fragility; a fragility, a vulnerability, equal to their incomparable intensity. Fortunately, they haven’t sublimated; they’ve saved their skin, their energy. They haven’t worked at liquidating the impasse of lives without futures. They have furiously inhabited these sumptuous bodies: admirable hysterics who made Freud succumb to many voluptuous moments impossible to confess, bombarding his Mosaic statue with their carnal and passionate body words, haunting him with their inaudible and thundering denunciations, dazzling, more than naked underneath the seven veils of modesty. Those who, with a single word of the body, have inscribed the vertiginous immensity of a history which is sprung like an arrow from the whole history of men and from biblico-capitalist society, are the women, the supplicants of yesterday, who come as forebears of the new women, after whom no intersubjective relation will ever be the same. You, Dora, you the indomitable, the poetic body, you are the true “mistress” of the Signifier. Before long your efficacy will be seen at work when your speech is no longer suppressed, its point turned in against your breast, but written out over against the other.

*In body.* – More so than men who are coaxed toward social success, toward sublimation, women are body. More body, hence more writing. For a long time it has been in body that women have responded to persecution, to the familial-conjugal enterprise of domestication, to the repeated attempts at castrating them. Those who have turned their tongues 10,000 times seven times before not speaking are either dead from it or more familiar with their tongues and their mouths than anyone else. Now, I-woman am going to blow up the Law: an explosion henceforth possible and ineluctable; let it be done, right now, *in language*.

Let us not be trapped by an analysis still encumbered with the old automatisms. It’s not to be feared that language conceals an invincible adversary, because it’s the language of men and their grammar. We mustn’t leave them a single place that’s any more theirs alone than we are.

If woman has always functioned “within” the discourse of man, a signifier that has always referred back to the opposite signifier which annihilates its specific energy and diminishes or stifles its very different sounds, it is time for her to dislocate this “within,” to explode it, turn it around, and seize it; to make it hers, containing it, taking it in her own mouth, biting that tongue with her very own teeth to invent for herself a language to get inside of. And you’ll see with what ease she will spring forth from that “within” – the “within” where once she so drowsily crouched – to overflow at the lips she will cover the foam.

Nor is the point to appropriate their instruments, their concepts, their places, or to begrudge them their position of mastery. Just because there's a risk of identification doesn't mean that we'll succumb. Let's leave it to the worriers, to masculine anxiety and its obsession with how to dominate the way things work – knowing "how it works" in order to "make it work." For us the point is not to take possession in order to internalize or manipulate, but rather to dash through and to "fly."<sup>7</sup>

Flying is woman's gesture – flying in language and making it fly. We have all learned the art of flying and its numerous techniques; for centuries we've been able to possess anything only by flying; we've lived in flight, stealing away, finding, when desired, narrow passageways, hidden crossovers. It's no accident that *voler* has a double meaning, that it plays on each of them and thus throws off the agents of sense. It's no accident: women take after birds and robbers just as robbers take after women and birds. They (*illes*)<sup>8</sup> go by, fly the coop, take pleasure in jumbling the order of space, in disorienting it, in changing around the furniture, dislocating things and values, breaking them all up, emptying structures, and turning propriety upside down.

What woman hasn't flown/stolen? Who hasn't felt, dreamt, performed the gesture that jams sociality? Who hasn't crumbled, held up to ridicule, the bar of separation? Who hasn't inscribed with her body the differential, punctured the system of couples and opposition? Who, by some act of transgression, hasn't overthrown successiveness, connection, the wall of circumfusion?

A feminine text cannot fail to be more than subversive. It is volcanic; as it is written it brings about an upheaval of the old property crust, carrier of masculine investments; there's no other way. There's no room for her if she's not a he. If she's a her-she, it's in order to smash everything, to shatter the framework of institutions, to blow up the law, to break up the "truth" with laughter.

For once she blazes *her* trail in the symbolic, she cannot fail to make of it the chaosmos of the "personal" – in her pronouns, her nouns, and her clique of referents. And for good reason. There will have been the long history of gynocide. This is known by the colonized peoples of yesterday, the workers, the nations, the species off whose backs the history of men has made its gold; those who have known the ignominy of persecution derive from it an obstinate future desire for grandeur; those who are locked up know better than their jailers the taste of free air. Thanks to their history, women today know (how to do and want) what men will be able to conceive of only much later. I say woman overturns the "personal," for if, by means of laws, lies, blackmail, and marriage, her right to herself has been extorted at the same time as her name, she has been able, through the very movement of mortal alienation, to see more closely the inanity of "propriety," the reductive stinginess of the masculine-conjugal subjective economy, which she doubly resists. On the one hand she has constituted herself necessarily as that "person" capable of losing a part of herself without losing her integrity. But secretly, silently, deep down inside, she grows and multiplies, for, on the other hand, she knows far more about living and about the relation between the economy of the drives and the management of the ego than any man. Unlike man, who holds so dearly to his title and his titles, his pouches of value, his cap, crown, and everything connected with his head, woman couldn't care less about the fear of decapitation (or castration), adventuring, without the masculine temerity, into anonymity, which she can merge with without annihilating herself: because she's a giver.

I shall have a great deal to say about the whole deceptive problematic of the gift. Woman is obviously not that woman Nietzsche dreamed of who gives only in order to.<sup>9</sup>

Who could ever think of the gift as a gift-that-takes? Who else but man, precisely the one who would like to take everything?

If there is a “propriety of woman,” it is paradoxically her capacity to deappropriate unselfishly: body without end, without appendage, without principal “parts.” If she is a whole, it’s a whole composed of parts that are wholes, not simple partial objects but a moving, limitlessly changing ensemble, a cosmos tirelessly traversed by Eros, an immense astral space not organized around any one sun that’s any more of a star than the others.

This doesn’t mean that she’s an undifferentiated magma, but that she doesn’t lord it over her body or her desire. Though masculine sexuality gravitates around the penis, engendering that centralized body (in political anatomy) under the dictatorship of its parts, woman does not bring about the same regionalization which serves the couple head/genitals and which is inscribed only within boundaries. Her libido is cosmic, just as her unconscious is worldwide. Her writing can only keep going, without ever inscribing or discerning contours, daring to make these vertiginous crossings of the other(s) ephemeral and passionate sojourns in him, her, them, whom she inhabits long enough to look at from the point closest to their unconscious from the moment they awaken, to love them at the point closest to their drives: and then further, impregnated through and through with these brief, identificatory embraces, she goes and passes into infinity. She alone dares and wishes to know from within, where she, the outcast, has never ceased to hear the resonance of fore-language. She lets the other language speak – the language of 1,000 tongues which knows neither enclosure nor death. To life she refuses nothing. Her language does not contain, it carries; it does not hold back, it makes possible. When *id* is ambiguously uttered – the wonder of being several – she doesn’t defend herself against these unknown women whom she’s surprised at becoming, but derives pleasure from this gift of alterability. I am spacious, singing flesh, on which is grafted no one knows which I, more or less human, but alive because of transformation.

Write! and your self-seeking text will know itself better than flesh and blood, rising, insurrectionary dough kneading itself, with sonorous, perfumed ingredients, a lively combination of flying colors, leaves, and rivers plunging into the sea we feed. “Ah, there’s her sea,” he will say as he holds out to me a basin full of water from the little phallic mother from whom he’s inseparable. But look, our seas are what we make of them, full of fish or not, opaque or transparent, red or black, high or smooth, narrow or bankless; and we are ourselves sea, sand, coral, seaweed, beaches, tides, swimmers, children, waves.... More or less wavy sea, earth, sky – what matter would rebuff us? We know how to speak them all.

Heterogeneous, yes. For her joyous benefit she is erogenous; she is the erotogeneity of the heterogeneous: airborne swimmer, in flight, she does not cling to herself: she is dispersible, prodigious, stunning, desirous and capable of others, of the other woman that she will be, of the other woman she isn’t, of him, of you.

Woman be unafraid of any other place, of any same, or any other. My eyes, my tongue, my ears, my nose, my skin, my mouth, my body-for-(the)-other – not that I long for it in order to fill up a hole, to provide against some defect of mine, or because, as fate would have it, I’m spurred on by feminine “jealousy”; not because I’ve been dragged into the whole chain of substitutions that brings that which is substituted back to its ultimate object. That sort of thing you would expect to come straight out of “Tom Thumb,” out of the *Penisneid* whispered to us by old grandmother ogresses, servants to their father-sons. If they believe, in order to muster up some self-importance, if they really need to believe that we’re dying of desire, that we are this hole fringed with desire for their

penis – that's their immemorial business. Undeniably (we verify it at our own expense – but also to our amusement), it's their business to let us know they're getting a hard-on, so that we'll assure them (we the maternal mistresses of their little pocket signifier) that they still can, that it's still there – that men structure themselves only by being fitted with a feather. In the child it's not the penis that the woman desires, it's not that famous bit of skin around which every man gravitates. Pregnancy cannot be traced back, except within the historical limits of the ancients, to some form of fate, to those mechanical substitutions brought about by the unconscious of some eternal "jealous woman"; not to penis envies; and not to narcissism or to some sort of homosexuality linked to the ever-present mother! Begetting a child doesn't mean that the woman or the man must fall ineluctably into patterns or must recharge the circuit of reproduction. If there's a risk there's not an inevitable trap: may women be spared the pressure, under the guise of consciousness-raising, of a supplement of interdictions. Either you want a kid or you don't – *that's your business*. Let nobody threaten you; in satisfying your desire, let not the fear of becoming the accomplice to a sociality succeed the old-time fear of being "taken." And man, are you still going to bank on everyone's blindness and passivity, afraid lest the child make a father and, consequently, that in having a kid the woman land herself more than one bad deal by engendering all at once child – mother – father – family? No; it's up to you to break the old circuits. It will be up to man and woman to render obsolete the former relationship and all its consequences, to consider the launching of a brand-new subject, alive, with defamilialization. Let us demater-paternalize rather than deny woman, in an effort to avoid the co-optation of procreation, a thrilling era of the body. Let us defetishize. Let's get away from the dialectic which has it that the only good father is a dead one, or that the child is the death of his parents. The child is the other, but the other without violence, bypassing loss, struggle. We're fed up with the reuniting of bonds forever to be severed, with the litany of castration that's handed down and genealogized. We won't advance backward anymore; we're not going to repress something so simple as the desire for life. Oral drive, anal drive, vocal drive – all these drives are our strengths, and among them is the gestation drive – just like the desire to write: a desire to live self from within, a desire for the swollen belly, for language, for blood. We are not going to refuse, if it should happen to strike our fancy, the unsurpassed pleasures of pregnancy which have actually been always exaggerated or conjured away – or cursed – in the classic texts. For if there's one thing that's been repressed here's just the place to find it: in the taboo of the pregnant woman. This says a lot about the power she seems invested with at the time, because it has always been suspected, that, when pregnant, the woman not only doubles her market value, but – what's more important – takes on intrinsic value as a woman in her own eyes and, undeniably, acquires body and sex.

There are thousands of ways of living one's pregnancy; to have or not to have with that still invisible other a relationship of another intensity. And if you don't have that particular yearning, it doesn't mean that you're in any way lacking. Each body distributes in its own special way, without model or norm, the nonfinite and changing totality of its desires. Decide for yourself on your position in the arena of contradictions, where pleasure and reality embrace. Bring the other to life. Women know how to live detachment; giving birth is neither losing nor increasing. It's adding to life an other. Am I dreaming? Am I mis-recognizing? You, the defenders of "theory," the sacrosanct yes-men of Concept, enthroners of the phallus (but not of the penis):

Once more you'll say that all this smacks of "idealism," or what's worse, you'll sputter that I'm a "mystic."

And what about the libido? Haven't I read the "Signification of the Phallus"? And what about separation, what about that bit of self for which, to be born, you undergo an ablation – an ablation, so they say, to be forever commemorated by your desire?

Besides, isn't it evident that the penis gets around in my texts, that I give it a place and appeal? Of course I do. I want all. I want all of me with all of him. Why should I deprive myself of a part of us? I want all of us. Woman of course has a desire for a "loving desire" and not a jealous one. But not because she is gelded; not because she's deprived and needs to be filled out, like some wounded person who wants to console herself or seek vengeance: I don't want a penis to decorate my body with. But I do desire the other for the other, whole and entire, male or female; because living means wanting everything that is, everything that lives, and wanting it alive. Castration? Let others toy with it. What's a desire originating from a lack? A pretty meager desire.

The woman who still allows herself to be threatened by the big dick, who's still impressed by the commotion of the phallic stance, who still leads a loyal master to the beat of the drum: that's the woman of yesterday. They still exist, easy and numerous victims of the oldest of farces; either they're cast in the original silent version in which, as titanesses lying under the mountains they make with their quivering, they never see erected that theoretic monument to the golden phallus looming, in the old manner, over their bodies. Or, coming today out of their *infans* period and into the second, "enlightened" version of their virtuous debasement, they see themselves suddenly assaulted by the builders of the analytic empire and, as soon as they've begun to formulate the new desire, naked, nameless, so happy at making an appearance, they're taken in their bath by the new old men, and then, whoops! Luring them with flashy signifiers, the demon of interpretation – oblique, decked out in modernity – sells them the same old handcuffs, baubles, and chains. Which castration do you prefer? Whose degrading do you like better, the father's or the mother's? Oh, what pwetty eyes, you pwetty little girl. Here, buy my glasses and you'll see the Truth-Me-Myself tell you everything you should know. Put them on your nose and take a fetishist's look (you are me, the other analyst – that's what I'm telling you) at your body and the body of the other. You see? No? Wait, you'll have everything explained to you, and you'll know at last which sort of neurosis you're related to. Hold still, we're going to do your portrait, so that you can begin looking like it right away.

Yes, the naives to the first and second degree are still legion. If the New Women, arriving now, dare to create outside the theoretical, they're called in by the cops of the signifier, fingerprinted, remonstrated, and brought into the line of order that they are supposed to know; assigned by force of trickery to a precise place in the chain that's always formed for the benefit of a privileged signifier. We are pieced back to the string which leads back, if not to the Name-of-the-Father, then, for a new twist, to the place of the phallic-mother.

Beware, my friend, of the signifier that would take you back to the authority of a signified! Beware of diagnoses that would reduce your generative powers. "Common" nouns are also proper nouns that disparage your singularity by classifying it into species. Break out of the circles; don't remain within the psychoanalytic closure. Take a look around, then cut through!

And if we are legion, it's because the war of liberation has only made as yet a tiny breakthrough. But women are thronging to it. I've seen them, those who will be neither dupe nor domestic, those who will not fear the risk of being a woman; will not fear any risk, any desire, any space still unexplored in themselves, among themselves and others

or anywhere else. They do not fetishize, they do not deny, they do not hate. They observe, they approach, they try to see the other woman, the child, the lover – not to strengthen their own narcissism or verify the solidity or weakness of the master, but to make love better, to invent.

*Other love.* – In the beginning are our differences. The new love dares for the other, wants the other, makes dizzying, precipitous flights between knowledge and invention. The woman arriving over and over again does not stand still; she's everywhere, she exchanges, she is the desire-that-gives. (Not enclosed in the paradox of the gift that takes nor under the illusion of unitary fusion. We're past that.) She comes in, comes-in-between herself me and you, between herself me and you, between the other me where one is always infinitely more than one and more than me, without the fear of ever reaching a limit; she thrills in our becoming. And we'll keep on becoming! She cuts through defensive loves, motherages, and devourations: beyond selfish narcissism, in the moving, open, transitional space, she runs her risks. Beyond the struggle-to-the-death that's been removed to the bed, beyond the love-battle that claims to represent exchange, she scorns at an Eros dynamic that would be fed by hatred. Hatred: a heritage, again, a remainder, a duping subservience to the phallus. To love, to watch-think-seek the other in the other, to despecularize, to unhoard. Does this seem difficult? It's not impossible, and this is what nourishes life – a love that has no commerce with the apprehensive desire that provides against the lack and stultifies the strange; a love that rejoices in the exchange that multiplies. Wherever history still unfolds as the history of death, she does not tread. Opposition, hierarchizing exchange, the struggle for mastery which can end only in at least one death (one master – one slave, or two nonmasters ≠ two dead) – all that comes from a period in time governed by phallocentric values. The fact that this period extends into the present doesn't prevent woman from starting the history of life somewhere else. Elsewhere, she gives. She doesn't "know" what she's giving, she doesn't measure it; she gives, though, neither a counterfeit impression nor something she hasn't got. She gives more, with no assurance that she'll get back even some unexpected profit from what she puts out. She gives that there may be life, thought, transformation. This is an "economy" that can no longer be put in economic terms. Wherever she loves, all the old concepts of management are left behind. At the end of a more or less conscious computation, she finds not her sum but her differences. I am for you what you want me to be at the moment you look at me in a way you've never seen me before: at every instant. When I write, it's everything that we don't know we can be that is written out of me, without exclusions, without stipulation, and everything we will be calls us to the unflagging, intoxicating, unappeasable search for love. In one another we will never be lacking.

*University of Paris VIII – Vincennes*

## Notes

- 1 Men still have everything to say about their sexuality, and everything to write. For what they have said so far, for the most part, stems from the opposition activity/passivity, from the power relation between a fantasized obligatory virility meant to invade, to colonize, and the consequential phantasm of woman as a "dark continent" to penetrate and to "pacify." (We know what "pacify" means in terms of scotomizing the other and misrecognizing the self.) Conquering her, they've made haste to depart from her borders, to get out of sight, out of body. The way man has of getting out of himself and into her whom he takes not for the other but for his own, deprives him, he knows, of his own bodily territory. One can understand how man, confusing himself with his penis and rushing

in for the attack, might feel resentment and fear of being “taken” by the woman, of being lost in her, absorbed, or alone.

- 2 I am speaking here only of the place “reserved” for women by the Western world.
- 3 Which works, then, might be called feminine? I’ll just point out some examples: one would have to give them full readings to bring out what is pervasively feminine in their significance. Which I shall do elsewhere. In France (have you noted our infinite poverty in this field? – the Anglo-Saxon countries have shown resources of distinctly greater consequence), leading through what’s come out of the twentieth century – and it’s not much – the only inscriptions of femininity that I have seen were by Colette, Marguerite Duras, … and Jean Genêt.
- 4 “Dé-pense,” a neologism formed on the verb *penser*, hence “unthinks,” but also “spends” (from *dépenser*) (translator’s note).
- 5 Standard English term for the Hegelian *Aufhebung*, the French *la relève*
- 6 Jean Genêt, *Pompes funèbres* (Paris, 1948), p. 185.
- 7 Also, “to steal.” Both meanings of the verb *voler* are played on, as the text itself explains in the following paragraph (translator’s note).
- 8 *Illes* is a fusion of the masculine pronoun *ils*, which refers back to birds and robbers, with the feminine pronoun *elles*, which refers to women (translator’s note).
- 9 Reread Derrida’s text, “Le Style de la femme,” in *Nietzsche aujourd’hui* (Paris: Union Générale d’Editions, Coll. 10/18), where the philosopher can be seen operating an *Aufhebung* of all philosophy in its systematic reducing of woman to the place of seduction: she appears as the one who is taken for; the bait in person, all veils unfurled, the one who doesn’t give but who gives only in order to (take).

# CHAPTER 5

## Imitation and Gender Insubordination

*Judith Butler*

Judith Butler's 1982 book, *Gender Trouble*, helped initiate the new field of Gender Studies. In it, she argued that gender identity is fabricated through identification with cultural ideals of masculinity and femininity that are repetitively performed into being. Freud had noticed that identity is formed through the internalization of images of parents. Butler transposes this model to the way culture provides images of gender identity to its members. By repeating those images in the daily performances of life, we seem to approximate an identity that is stable and complete, but because such identity arises through imitation and repetition, there are always gaps of uncertainty and incompleteness that render gender inherently unstable as a category.

Here is something like a confession which is meant merely to thematize the impossibility of confession: As a young person, I suffered for a long time, and I suspect many people have, from being told, explicitly or implicitly, that what I "am" is a copy, an imitation, a derivative example, a shadow of the real. Compulsory heterosexuality sets itself up as the original, the true, the authentic; the norm that determines the real implies that "being" lesbian is always a kind of miming, a vain effort to participate in the phantasmatic plenitude of naturalized heterosexuality which will always and only fail.<sup>1</sup> And yet, I remember quite distinctly when I first read in Esther Newton's *Mother Camp: "Female" Impersonators in America*<sup>2</sup> that drag is not an imitation or a copy of some prior and true gender; according to Newton, drag enacts the very structure of impersonation by which any *gender* is assumed. Drag is not the putting on of a gender that belongs properly to some other group, i.e. an act of expropriation or appropriation that assumes that gender is the rightful property of sex, that "masculine" belongs to "male" and "feminine" belongs to "female." There is no "proper" gender, a gender proper to one sex rather than another, which is in some sense that sex's cultural property. Where that notion of the "proper" operates, it is always and only improperly installed as the effect of a compulsory system. Drag constitutes the mundane way in which genders are appropriated, theatricalized, worn, and done; it implies that all gendering is a kind of impersonation

*Original publication details:* Judith Butler, "Imitation and Gender Insubordination" from *Inside/Out*, ed. Diana Fuss, pp. 13–31. Routledge, 1991. Reproduced with permission from Taylor & Francis.

and approximation. If this is true, it seems, there is no original or primary gender that drag imitates, but *gender is a kind of imitation for which there is no original*; in fact, it is a kind of imitation that produces the very notion of the original as an *effect* and consequence of the imitation itself. In other words, the naturalistic effects of heterosexualized genders are produced through imitative strategies; what they imitate is a phantasmatic ideal of heterosexual identity, one that is produced by the imitation as its effect. In this sense, the “reality” of heterosexual identities is performatively constituted through an imitation that sets itself up as the origin and the ground of all imitations. In other words, heterosexuality is always in the process of imitating and approximating its own phantasmatic idealization of itself – *and failing*. Precisely because it is bound to fail, and yet endeavors to succeed, the project of heterosexual identity is propelled into an endless repetition of itself. Indeed, in its efforts to naturalize itself as the originally heterosexuality must be understood as a compulsive and compulsory repetition that can only produce the *effect* of its own originality; in other words, compulsory heterosexual identities, those ontologically consolidated phantasms of “man” and “woman,” are theatrically produced effects that posture as grounds, origins, the normative measure of the real.<sup>3</sup>

Reconsider then the homophobic charge that queens and butches and femmes are imitations of the heterosexual real. Here “imitation” carries the meaning of “derivative” or “secondary,” a copy of an origin which is itself the ground of all copies, but which is itself a copy of nothing. Logically, this notion of an “origin” is suspect, for how can something operate as an origin if there are no secondary consequences which retrospectively confirm the originality of that origin? The origin requires its derivations in order to affirm itself as an origin, for origins only make sense to the extent that they are differentiated from that which they produce as derivatives. Hence, if it were not for the notion of the homosexual as copy, there would be no construct of heterosexuality as origin. Heterosexuality here presupposes homosexuality. And if the homosexual as copy *precedes* the heterosexual as origin, then it seems only fair to concede that the copy comes before the origin, and that homosexuality is thus the origin, and heterosexuality the copy.

But simple inversions are not really possible. For it is only *as a copy* that homosexuality can be argued to *precede* heterosexuality as the origin. In other words, the entire framework of copy and origin proves radically unstable as each position inverts into the other and confounds the possibility of any stable way to locate the temporal or logical priority of either term.

But let us then consider this problematic inversion from a psychic/political perspective. If the structure of gender imitation is such that the imitated is to some degree produced – or, rather, reproduced – by imitation (see again Derrida’s inversion and displacement of mimesis in “The Double Session”), then to claim that gay and lesbian identities are implicated in heterosexual norms or in hegemonic culture generally is not to *derive* gayness from straightness. On the contrary, *imitation* does not copy that which is prior, but produces and *inverts* the very terms of priority and derivativeness. Hence, if gay identities are implicated in heterosexuality, that is not the same as claiming that they are determined or derived from heterosexuality, and it is not the same as claiming that that heterosexuality is the only cultural network in which they are implicated. These are, quite literally, *inverted* imitations, ones which invert the order of imitated and imitation, and which, in the process, expose the fundamental dependency of “the origin” on that which it claims to produce as its secondary effect.

What follows if we concede from the start that gay identities as derivative inversions are in part defined in terms of the very heterosexual identities from which they are differentiated? If heterosexuality is an impossible imitation of itself, an imitation that performatively constitutes itself as the original, then the imitative parody of “heterosexuality” – when and where it exists in gay cultures – is always and only an imitation of an imitation, a copy of a copy, for which there is no original. Put in yet a different way, the parodic or imitative effect of gay identities works neither to copy nor to emulate heterosexuality, but rather, to expose heterosexuality as an incessant and *panicked* imitation of its own naturalized idealization. That heterosexuality is always in the act of elaborating itself is evidence that it is perpetually at risk, that is, that it “knows” its own possibility of becoming undone: hence, its compulsion to repeat which is at once a foreclosure of that which threatens its coherence. That it can never eradicate that risk it attests to its profound dependency upon the homosexuality that it seeks fully to eradicate and never can or that it seeks to make second, but which is always already there as a prior possibility.<sup>4</sup> Although this failure of naturalized heterosexuality might constitute a source of pathos for heterosexuality itself – what its theorists often refer to as its constitutive malaise – it can become an occasion for a subversive and proliferating parody of gender norms in which the very claim to originality and to the real is shown to be the effect of a certain kind of naturalized gender mime.

It is important to recognize the ways in which heterosexual norms reappear within gay identities, to affirm that gay and lesbian identities are not only structured in part by dominant heterosexual frames, but that they are *not* for that reason *determined* by them. They are running commentaries on those naturalized positions as well, parodic replays and resignifications of precisely those heterosexual structures that would consign gay life to discursive domains of unreality and unthinkable. But to be constituted or structured in part by the very heterosexual norms by which gay people are oppressed is not, I repeat, to be claimed or determined by those structures. And it is not necessary to think of such heterosexual constructs as the pernicious intrusion of “the straight mind” one that must be rooted out in its entirety. In a way, the presence of heterosexual constructs and positionalities in whatever form in gay and lesbian identities presupposes that there is a gay and lesbian repetition of straightness, a recapitulation of straightness – which is itself a repetition and recapitulation of its own ideality – within its own terms, a site in which all sorts of resignifying and parodic repetitions become possible. The parodic replication and resignification of heterosexual constructs within non-heterosexual frames brings into relief the utterly constructed status of the so-called original, but it shows that heterosexuality only constitutes itself as the original through a convincing act of repetition. The more that “act” is expropriated, the more the heterosexual claim to originality is exposed as illusory.

Although I have concentrated in the above on the reality-effects of gender practices, performances, repetitions, and mimes, I do not mean to suggest that drag is a “role” that can be taken on or taken off at will. There is no volitional subject behind the mime who decides, as it were, which gender it will be today. On the contrary, the very possibility of becoming a viable subject requires that a certain gender mime be already underway. The “being” of the subject is no more self-identical than the “being” of any gender; in fact, coherent gender, achieved through an apparent repetition of the same, produces as its *effect* the illusion of a prior and volitional subject. In this sense, gender is not a performance that a prior subject elects to do, but gender is *performative* in the sense that it constitutes as an effect the very subject it appears to express. It is a *compulsory*

performance in the sense that acting out of line with heterosexual norms brings with it ostracism, punishment, and violence, not to mention the transgressive pleasures produced by those very prohibitions.

To claim that there is no performer prior to the performed, that the performance is performative, that the performance constitutes the appearance of a “subject” as its effect is difficult to accept. This difficulty is the result of a predisposition to think of sexuality and gender as “expressing” in some indirect or direct way a psychic reality that precedes it. The denial of the *priority* of the subject, however, is not the denial of the subject; in fact, the refusal to conflate the subject with the psyche marks the psychic as that which exceeds the domain of the conscious subject. This psychic excess is precisely what is being systematically denied by the notion of a volitional “subject” who elects at will which gender and/or sexuality to be at any given time and place. It is this excess which erupts within the intervals of those repeated gestures and acts that construct the apparent uniformity of heterosexual positionalities, indeed which compels the repetition itself, and which guarantees its perpetual failure. In this sense, it is this excess which, within the heterosexual economy, implicitly includes homosexuality, that perpetual threat of a disruption which is quelled through a reenforced repetition of the same. And yet, if repetition is the way in which power works to construct the illusion of a seamless heterosexual identity, if heterosexuality is compelled to *repeat itself* in order to establish the illusion of its own uniformity and identity, then this is an identity permanently at risk, for what if it fails to repeat, or if the very exercise of repetition is redeployed for a very different performative purpose? If there is, as it were, always a compulsion to repeat repetition never fully accomplishes identity. That there is a need for a repetition at all is a sign that identity is not self-identical. It requires to be instituted again and again, which is to say that it runs the risk of becoming de-instituted at every interval.

So what is this psychic excess, and what will constitute a subversive or de-instituting repetition? First, it is necessary to consider that sexuality always exceeds any given performance, presentation, or narrative which is why it is not possible to derive or read off a sexuality from any given gender presentation. And sexuality may be said to exceed any definitive narrativization. Sexuality is never fully “expressed” in a performance or practice; there will be passive and butchy femmes, femmy and aggressive butches, and both of those, and more, will turn out to describe more or less anatomically stable “males” and “females.” There are no direct expressive or causal lines between sex, gender, gender presentation, sexual practice, fantasy and sexuality. None of those terms captures or determines the rest. Part of what constitutes sexuality is precisely that which does not appear and that which, to some degree, can never appear. This is perhaps the most fundamental reason why sexuality is to some degree always closeted, especially to the one who would express it through acts of self-disclosure. That which is excluded for a given gender presentation to “succeed” may be precisely what is played out sexually, that is, an “inverted” relation, as it were, between gender and gender presentation, and gender presentation and sexuality. On the other hand, both gender presentation and sexual practices may corollate such that it appears that the former “expresses” the latter, and yet both are jointly constituted by the very sexual possibilities that they exclude.

This logic of inversion gets played out interestingly in versions of lesbian butch and femme gender stylization. For a butch can present herself as capable, forceful, and all-providing, and a stone butch may well seek to constitute her lover as the exclusive site of erotic attention and pleasure. And yet, this “providing” butch who seems *at first* to replicate a certain husband-like role, can find herself caught in a logic of inversion

whereby that “providingness” turns to a self-sacrifice, which implicates her in the most ancient trap of feminine self-abnegation. She may well find herself in a situation of radical need, which is precisely what she sought to locate, find, and fulfill in her femme lover. In effect, the butch inverts into the femme or remains caught up in the specter of that inversion, or takes pleasure in it. On the other hand, the femme who, as Amber Hollibaugh has argued, “orchestrates” sexual exchange,<sup>5</sup> may well eroticize a certain dependency only to learn that the very power to orchestrate that dependency exposes her own incontrovertible power, at which point she inverts into a butch or becomes caught up in the specter of that inversion, or perhaps delights in it.

### Psychic Mimesis

What stylizes or forms an erotic style and/or a gender presentation – and that which makes such categories inherently unstable – is a set of *psychic identifications* that are not simple to describe. Some psychoanalytic theories tend to construe identification and desire as two mutually exclusive relations to love objects that have been lost through prohibition and/or separation. Any intense emotional attachment thus divides into either wanting to have someone or wanting to be that someone, but never both at once. It is important to consider that identification and desire can coexist, and that their formulation in terms of mutually exclusive oppositions serves a heterosexual matrix. But I would like to focus attention on yet a different construal of that scenario, namely, that “wanting to be” and “wanting to have” can operate to differentiate mutually exclusive positionalities internal to lesbian erotic exchange. Consider that identifications are always made in response to loss of some kind, and that they involve a certain *mimetic practice* that seeks to incorporate the lost love within the very “identity” of the one who remains. This was Freud’s thesis in “Mourning and Melancholia” in 1917 and continues to inform contemporary psychoanalytic discussions of identification.<sup>6</sup>

For psychoanalytic theorists Mikkel Borch-Jacobsen and Ruth Leys, however, identification and, in particular, identificatory mimetism, *precedes* “identity” and constitutes identity as that which is fundamentally “other to itself.” The notion of this Other *in* the self, as it were, implies that the self/Other distinction is *not* primarily external (a powerful critique of ego psychology follows from this); the self is from the start radically implicated in the “Other.” This theory of primary mimetism differs from Freud’s account of melancholic incorporation. In Freud’s view, which I continue to find useful, incorporation – a kind of psychic miming – is a response to, and refusal of, *loss*. Gender as the site of such psychic mimesis is thus constituted by the variously gendered Others who have been loved and lost, where the loss is suspended through a melancholic and imaginary incorporation (and preservation) of those Others into the psyche. Over and against this account of psychic mimesis by way of incorporation and melancholy, the theory of primary mimetism argues an even stronger position in favor of the non-self identity of the psychic subject. Mimetism is not motivated by a drama of loss and wishful recovery, but appears to precede and constitute desire (and motivation) itself, in this sense; mimetism would be prior to the possibility of loss and the disappointments of love.

Whether loss or mimetism is primary (perhaps an undecidable problem), the psychic subject is nevertheless constituted internally by differentially gendered Others and is, therefore, never, as a gender, self-identical.

In my view, the self only becomes a self on the condition that it has suffered a separation (grammar fails us here, for the “it” only becomes differentiated through that separation), a loss which is suspended and provisionally resolved through a melancholic incorporation of some “Other.” That “Other” installed in the self thus establishes the permanent incapacity of that itself to achieve self-identity; it is as it were always already disrupted by that Other; the disruption of the Other at the heart of the self is the very condition of that self’s possibility.<sup>7</sup>

Such a consideration of psychic identification would vitiate the possibility of any stable set of typologies that explain or describe something like gay or lesbian identities. And any efforts to supply one – as evidenced in Kaja Silverman’s recent inquiries into male homosexuality – suffer from simplification, and conform, with alarming ease, to the regulatory requirements of diagnostic epistemic regimes. If incorporation in Freud’s sense in 1914 is an effort to *preserve* a lost and loved object and to refuse or postpone the recognition of loss and, hence, of grief, then to become *like* one’s mother or father or sibling or other early “lovers” may be an act of love and/or a hateful effort to replace or displace. How would we “typologize” the ambivalence at the heart of mimetic incorporations such as these?<sup>8</sup>

How does this consideration of psychic identification return us to the question, what constitutes a subversive repetition? How are troublesome identifications apparent in cultural practices? Well, consider the way in which heterosexuality naturalizes itself through setting up certain illusions of continuity between sex, gender, and desire. When Aretha Franklin sings, “you make me feel like a natural woman,” she seems at first to suggest that some natural potential of her biological sex is actualized by her participation in the cultural position of “woman” as object of heterosexual recognition. Something in her “sex” is thus expressed by her “gender” which is then fully known and consecrated within the heterosexual scene. There is no breakage, no discontinuity between “sex” as biological facticity and essence, or between gender and sexuality. Although Aretha appears to be all too glad to have her naturalness confirmed, she also seems fully and paradoxically mindful that that confirmation is never guaranteed, that the effect of naturalness is only achieved as a consequence of that moment of heterosexual recognition. After all, Aretha sings, you make me feel like a natural woman, suggesting that this is a kind of metaphorical substitution, an act of imposture, a kind of sublime and momentary participation in an ontological illusion produced by the mundane operation of heterosexual drag.

But what if Aretha were singing to me? Or what if she were singing to a drag queen whose performance somehow confirmed her own?

How do we take account of these kinds of identifications? It’s not that there is some kind of *sex* that exists in hazy biological form that is somehow *expressed* in the gait, the posture, the gesture; and that some sexuality then expresses both that apparent gender or that more or less magical sex. If gender is drag, and if it is an imitation that regularly produces the ideal it attempts to approximate, then gender is a performance that *produces* the illusion of an inner sex or essence or psychic gender core; it *produces* on the skin, through the gesture, the move, the gait (that array of corporeal theatrics understood as gender presentation), the illusion of an inner depth. In effect, one way that genders gets naturalized is through being constructed as an inner psychic or physical *necessity*. And yet, it is always a surface sign, a signification on and with the public body that produces this illusion of an inner depth, necessity, or essence that is somehow magically, causally expressed.

To dispute the psyche as *inner depth*, however, is not to refuse the psyche altogether. On the contrary, the psyche calls to be rethought precisely as a compulsive repetition, as that which conditions and disables the repetitive performance of identity. If every performance repeats itself to institute the effect of identity, then every repetition requires an interval between the acts, as it were, in which risk and excess threaten to disrupt the identity being constituted. The unconscious is this excess that enables and contests every performance, and which never fully appears within the performance itself. The psyche is not “in” the body, but in the very signifying process through which that body comes to appear it is the lapse in repetition as well as its compulsion, precisely what the performance seeks to deny and that which compels it from the start.

To locate the psyche within this signifying chain as the instability of all iterability is not the same as claiming that it is [an] inner core that is awaiting its full and liberatory expression. On the contrary, the psyche is the permanent failure of expression a failure that has its values, for it impels repetition and so reinstates the possibility of disruption. What then does it mean to pursue disruptive repetition within compulsory heterosexuality?

Although compulsory heterosexuality often presumes that there is first a sex that is expressed through a gender and then through a sexuality, it may now be necessary fully to invert and displace that operation of thought. If a regime of sexuality mandates a compulsory performance of sex then it may be only through that performance that the binary system of gender and the binary system of sex come to have intelligibility at all. It may be that the very categories of sex of sexual identity of gender are produced or maintained in the *effects* of this compulsory performance, effects which are disingenuously renamed as causes, origins, disingenuously lined up within a causal or expressive sequence that the heterosexual norm produces to legitimate itself as the origin of all sex. How then to expose the causal lines as retrospectively and performatively produced fabrications, and to engage gender itself as an inevitable fabrication, to fabricate gender in terms which reveal every claim to the origin, the inner, the true, and the real as nothing other than the effects of *drag*, whose subversive possibilities ought to be played and replayed to make the “sex” of gender into a site of insistent political play? Perhaps this will be a matter of working sexuality *against* identity even against gender, and of letting that which cannot fully appear in any performance persist in its disruptive promise.

## Notes

- 1 Although miming suggests that there is a prior model which is being copied it can have the effect of exposing that prior model as purely phantasmatic. In Jacques Derrida’s “The Double Session” in *Dissemination*, trans. Barbara Johnson (Chicago: University of Chicago Press, 1981) he considers the textual effect of the mime in Mallarmé’s “Mimique.” There Derrida argues that the mime does not imitate or copy some prior phenomenon, idea, or figure but constitutes – some might say *performatively* – the phantasm of the original in and through the mime:

He represents nothing, imitates nothing, does not have to conform to any prior referent with the aim of achieving adequation or verisimilitude. One can here foresee an objection: since the mime imitates nothing, reproduces nothing, opens up in its origin the very thing he is tracing out, presenting, or producing, he must be the very movement of truth. Not, of course, truth in the form of adequation between the representation and the present of the thing itself or between the imitator and the imitated but truth as the present unveiling of the present ... But this is not the case ... we are faced then with mimicry imitating nothing: faced so to

speak with a double that couples no simple, a double that nothing anticipates, nothing at least that is not itself already double. There is no simple reference ... This speculum reflects no reality: it produces mere “reality-effects” ... In this speculum with no reality in this mirror of a mirror a difference or dyad does exist since there are mimes and phantoms. But it is a difference without reference or rather reference without a referent, without any first or last unit, a ghost that is the phantom of no flesh ... (p. 206)

- 3 In a sense one might offer a redescription of the above in Lacanian terms. The sexual “positions” of heterosexually differentiated “man” and “woman” are part of the *Symbolic*, that is an ideal embodiment of the Law of sexual difference which constitutes the object of imaginary pursuits but which is always thwarted by the “real.” These symbolic positions for Lacan are by definition impossible to occupy even as they are impossible to resist as the structuring telos of desire. I accept the former point and reject the latter one. The imputation of universal necessity to such positions simply encodes compulsory heterosexuality at the level of the *Symbolic* and the “failure” to achieve it is implicitly lamented as a source of heterosexual pathos.
- 4 Of course, it is Eve Kosofsky Sedgwick’s *Epistemology of the Closet* (Berkeley: University of California Press, 1990) which traces the subtleties of this kind of panic in Western heterosexual epistemes.
- 5 Amber Hollibaugh and Cherrie Moraga, “What We’re Rollin Around in Bed With: Sexual Silences in Feminism,” in Ann Snitow, Christine Stansell, and Sharon Thompson, eds, *Powers of Desire: The Politics of Sexuality* (New York: Monthly Review Press, 1983), pp. 394–405.
- 6 Mikkel Borch-Jacobsen, *The Freudian Subject* (Stanford: Stanford University Press, 1988); for citations of Ruth Leys’s work, see the following two endnotes.
- 7 For a very fine analysis of primary mimetism with direct implications for gender formation, see Ruth Leys, “The Real Miss Beauchamp: The History and Sexual Politics of the Multiple Personality Concept,” in Judith Butler and Joan W. Scott, eds, *Feminists Theorize the Political* (New York and London: Routledge, 1992). For Leys, a primary mimetism or suggestibility requires that the “self” from the start is constituted by its incorporations; the effort to differentiate oneself from that by which one is constituted is, of course, impossible, but it does entail a certain “incorporative violence,” to use her term. The violence of identification is in this way in the service of an effort at differentiation, to take the place of the Other who is, as it were, insulted at the foundation of the self. That this replacement, which seeks to be a displacement, fails, and must repeat itself endlessly, becomes the trajectory of one’s psychic career.
- 8 Here again, I think it is the work of Ruth Leys which will clarify some of the complex questions of gender constitution that emerge from a close psychoanalytic consideration of imitation and identification. Her forthcoming book manuscript will doubtless galvanize this field: *The Subject of Imitation*.

# CHAPTER 6

## Global Identities: Theorizing Transnational Studies of Sexuality

*Inderpal Grewal and Caren Kaplan*

Inderpal Grewal teaches gender and sexuality studies at Yale University. Caren Kaplan is Professor of American Studies at the University of California, Davis. Kaplan is the author of *Questions of Travel* (1996). Grewal's books include *Transnational America* (2005) and *Theorizing NGOs* (2014). Together they have written *An Introduction to Women's Studies* (2005) and *Scattered Hegemonies* (1994).

In modernity, identities inevitably become global. Indeed, few things remain local in the aftermath of the rise of capitalism. Just as goods and people come to circulate in new ways, so too identities emerge and come into specific relations of circulation and expansion. In this globalized framework of encounter and exchange, sexual identities are similar to other kinds of identities in that they are imbued with power relations. These power relations are connected to inequalities that result from earlier forms of globalization, but they have also generated new asymmetries. Our task is to examine both the specificities and the continuities within the globalization of sexual identities at the present juncture.

For the most part, throughout the twentieth century, what we might call politically “progressive” studies of sexuality emerged as a result of identity politics and social movements. Increasingly, with the rise of ethnic and postcolonial studies and the growing emphasis on diaspora in American studies, the scholarship on sexuality is globalized.<sup>1</sup> Yet thinking simply about global identities does not begin to get at the complex terrain of sexual politics that is at once national, regional, local, even “cross-cultural” and hybrid. In many works on globalization, the “global” is seen either as a homogenizing influence or as a neocolonial movement of ideas and capital from West to non-West.<sup>2</sup> Debates on the nature of global identities have suggested the inadequacy of understanding globalization simply through political economy or through theories of “Western” cultural imperialism and have pushed us to probe further the

*Original publication details:* Inderpal Grewal and Caren Kaplan, “Global Identities: Theorizing Transnational Studies of Sexuality.” *GLQ: A Journal of Lesbian and Gay Studies* 7.4 (2001), pp. 663–679. Duke University Press, 2001. Reproduced with permission from Duke University Press.

relationship between globalization and culture.<sup>3</sup> Yet how do we understand these emerging identities, given the divergent theories regarding the relationship between globalization and cultural formations? Can these identities be called “global identities,” or is some other term more useful?

In light of the problems that some scholars have pointed out with the rhetoric of diversity and globality with respect to sexual identity, such that these discourses produce a “monumentalist gay identity” and elide “radical sexual difference,” the term *transnational* seems to us more helpful in getting to the specifics of sexualities in postmodernity.<sup>4</sup> As we have argued elsewhere, the term *transnational* can address the asymmetries of the globalization process.<sup>5</sup> Yet it has become so ubiquitous in cultural, literary, and critical studies that much of its political valence seems to have become evacuated. Is this a function of globalization in its cultural aspects, of the ways in which it has become a truism that everyone and everything are always already displaced and hence “transnational”? Or is it a function of the modernist search for novelty and innovation leading to the adoption of a seemingly new term for a global world? Perhaps these two tendencies are intertwined, and this term works at this point because it has become “real” or “appropriate” in some way that it would do us good to examine. By thinking about the many ways in which the term is being rearticulated, we can understand the rhetorical imperative that underlies such uses. Since terms and critical practices are neither authentic nor pure, we do not wish to argue that one use is more correct than another. Rather, we need to examine the circulation of this term and its regulation through institutional sites, such as academic publishing, conference panels and papers, and academic personnel matters. By doing so, we can begin to understand how the study of sexuality remains bound by disciplinary constraints. A more interdisciplinary and transnational approach that addresses inequalities as well as new formations can begin more adequately to explore the nature of sexual identities in the current phase of globalization.

We can identify several primary ways in which the term *transnational* does a particular kind of work in the U.S. academy in general. First, it circulates widely as a more useful term to describe migration at the present time. This is the application that we find most often at work in anthropology, for example, in the work that theorizes migration as a transnational process.<sup>6</sup> In emphasizing labor migration, this approach leaves out other factors in the globalization of labor. We can also identify an application in the notion of “transnational flows,” a concept that sometimes ignores inequities as well as those aspects of modernity that seem fixed or immobile.<sup>7</sup> Some Marxist commentators prefer the term *flexible* over the term *flow*, since it ties globalization to flexible accumulation in current capitalism.<sup>8</sup>

A second use of *transnational* is to signal the demise or irrelevance of the nation-state in the current phase of globalization.<sup>9</sup> A related “borderless world” argument suggests that cultures are more and more important or relevant than nations and that identities are linked to cultures more than to nations or to the institutions of the nation-state.<sup>10</sup> In this approach, the concept of transnational does not have to concern itself with the post-colonial state; that is, it erases political economy as well as new forms of governmentality. As Victoria Bernal has put it so powerfully, “Embracing globalization and transnationalism as forces that render the nation inconsequential may appeal to anthropologists and humanities scholars in part because it allows them to conveniently ignore the ambivalent and troubling postcolonial state in favor of more sympathetic social forms.”<sup>11</sup> Thus, by eliminating the postcolonial nation-state, flows of people and shifts in culture appear to be almost inevitable and strangely ahistorical.

A third use of *transnational* that has become visible recently is as a synonym for *diasporic*. In this increasingly common usage, which follows on the current use of *transnational* as a term that describes cross-border migration, any reference to materials or evidence or texts from a region outside the United States is coded as “diasporic.”<sup>12</sup> And everyone in the United States is believed to be diasporic in some way. Often diasporics come to be figured as always in resistance to the nation-state in which they are located.<sup>13</sup> In this formulation, diasporic groups can be best understood through the politics of cultural identity or cultural citizenship. Thus subcultures of immigration and migration are always already diasporas. Here we are not arguing that people are better understood simply through the politics of the local. Rather, we are pointing to the mystification and romanticization of displacement that often accompany this formulation.<sup>14</sup>

A fourth use of *transnational* is to designate a form of neocolonialism. In this approach, *transnational* is a deeply problematic term, because it appears to be completely imbricated in the movements of transnational capital.<sup>15</sup> That is, the argument goes, globalization involves rapid movements of finance capital and thus facilitates a global economy in which transnational corporations have trampled on and destroyed local formations. In our view, this approach may inadvertently mystify what existed before the advent of late capitalism, whereas we would argue that earlier phases of globalization produced their own inequalities. Certainly, transnational capital is creating new forms of inequality and continuing older asymmetries. Consequently, a long historical viewpoint, indeed multiple views for many sites, is necessary.

A fifth use of *transnational* signals what has been called the NGOization of social movements.<sup>16</sup> In the wake of several decades of U.N. conferences on women, the emergence of global feminism as a policy and an activist arena, and the rise of human rights initiatives that enact new forms of governmentality, the term *transnational* has been adopted to stand for all of the above. Thus we find more and more references to “transnationalism from below” or to transnational women’s movements (with *transnational* supplanting *global*).<sup>17</sup> Such a shift in usage is interesting and significant, since it signals an alternative to the problematic of the “global” and the “international” as it was articulated primarily by Western or Euro-American second-wave feminists as well as by multinational corporations, for which “becoming global” marks an expansion into new markets. Our response to this specific development is that we need to trace the histories of such movements through the modern period to understand how they have been tied to colonial processes and to imperialism. Thus such usage relied on a universal subject of feminism, while *transnational* could signal cultural and national difference. However, it is important to remain alert to these national and international histories, which are embedded in every so-called transnational social movement, regardless of the intention of committed individuals and organizations.

If we have pointed out some of the ways in which *transnational* is used so ubiquitously at the present moment, it is not to suggest that we should abandon the term on the grounds that it has been overused to the point of meaning nothing in particular. Since ignoring transnational formations has left studies of sexualities without the tools to address questions of globalization, race, political economy, immigration, migration, and geopolitics, it is important to bring questions of transnationalism into conversation with the feminist study of sexuality. The history of the way in which sexuality has been studied and described needs to be better understood. Many scholars working on sexuality have begun to identify how separate spheres of study have arisen as a result of the disciplinary divides in the U.S. academy. In this context, critical practices are at a bit of an

impasse, relying heavily on conventional disciplinary approaches that are unable to address some key issues and problems.

What are these separate spheres? The first divide is the separation of sexuality from the study of race, class, nation, religion, and so on. If Western, Judeo-Christian culture has viewed sexuality as the other within each individual, the study of sexuality in the U.S. academy has been limited by the inability of the human sciences to address this feared aspect of human life. In general, in the social sciences sexuality has been discussed at length only as an attribute of “primitive” cultures – exerting a strong fascination and producing an enormous literature that continues to this day. As anthropologists begin to study their “own” cultures, we have begun to see some shifts in this dynamic. But the legacies of the rise of the human sciences remain. And the Western body stands as the normative body in scholarly discourse and in public policy.

We have to turn to the rise of biomedicine and the emergence of eugenics, gynecology, endocrinology, genetics, and psychology to understand fully the social and political stakes in viewing sexuality as distinct from race, class, nation, and other factors in modernity. Gender and sexual difference have become understood as attributes of bodies unmarked in any other way, despite copious evidence that all of these modern identities are interconnected. The binary gender model is so pervasive and universalized that it has become naturalized. In most queer studies in the United States, destabilization of gender binarism seems to remain in the zone of gender permutation or diversity rather than including considerations of histories of political economies and forms of governmentality.<sup>18</sup> For instance, if we can argue that historical analysis shows us that concepts of gender difference in medieval China were quite different from those in medieval Islamic cultures, we will begin to understand that the legacies of these traditions with attendant identities and practices produce new kinds of subjects in the present moment. Here we have to pause to note that we are not arguing that cultural specificity leads to complete difference. Rather, we want to add to this model of cultural difference a consideration of power, history, and analyses of contact and change.

In the study of sexuality in a transnational frame, we need a mapping of different medical traditions, conceptions of the body, scientific discourses, and, last but not least, political economies of the family. Such a mapping requires us to rethink the reliance on the family as a primary locus of difference and inequality. The family has been primarily treated as an entity that emerges in the context of a public-private split and as a result of divisions of labor. Internationalizing the public-private split and patriarchal divisions of labor has not changed the content of the scholarship much. Many of these approaches to the family produce representations of a heteronormative unit, a universal patriarchy, and, very often, a victimized and unified subject of feminism. If class comes to the fore in these analyses, sexuality remains in the realm of the exploitation and control of women via reproduction or trafficking. This emphasis on the family as a universal category of analysis also enables an allied mode of universalizing, that is, psychoanalytic criticism.

Psychoanalysis is a powerful mode of interpretation that has struggled with its universalizing tendencies.<sup>19</sup> That is, many psychoanalytic critiques admit to cultural limitations in the model but find it impossible to depart from it. If sexual desire is always already understood as produced in and through the family, then it would be difficult to detach it from a psychoanalytic approach. The family is an important figure in modernity, but it is not the only site of subject production. We want to argue that the study of sexuality in a transnational frame must be detached from psychoanalysis as a primary method in order to resist the universalization of the Western body as sexual difference. Psychoanalysis is

a powerful interpretive tool, but it has become a form of biomedicine and cannot be utilized in ignorance of its own power structures.

Recently, new versions of psychoanalysis have sought to lift the cultural blinders from earlier work. These new works focus on the nation or the community as the family to provide new examples from diverse places. Although in recent years there has emerged an interest in expanding and rearticulating the notion of family and kinship, for the most part psychoanalytic cultural criticism may be of limited usefulness. Its Eurocentric biases can often be marshaled to reproduce nationalist formations.<sup>20</sup> Even Lacanian psychoanalysis cannot shake off its reliance on the modern European family as a central structuring metaphor. As we have said, this type of family may not make sense to people in other cultures and nation-states, nor can desire be understood solely in Western psychoanalytic terms. At the very least, the psychoanalytic framework may have to be different where relations between family and state are not the same as in the wealthier welfare states or where psychoanalysis is not medicalized or professionalized, as it is in Europe and North America.

The second instance of separated spheres that we wish to examine concerns the demarcation in the United States of international area studies from American studies. As Tani E. Barlow has argued, international area studies was implicated in the production of Cold War cultural and political knowledges about other cultures and nations.<sup>21</sup> American studies comes from a 1930s Marxist, popular-front effort to critique and oppose capitalism. During the conservative backlash of the Cold War, it was co-opted and became articulated as American exceptionalism. At that point, the whiteness of “American” studies became distinguishable from what was later called “ethnic studies.” The emergence of ethnic studies has to be understood as a response to this conservative retrenching of an otherwise limited but more radical initial vision. So both international area studies and American studies as we know them today are Cold War productions generated to manage and negotiate the tensions that arose after the Second World War and during decolonization worldwide, that is, in distinction to the emergence of other nationalisms.

One consequence of these divisions has been that comparative work in international area studies and American studies remains bound by the nation-state. Although an analytic position of the comparison studies mode has given us some useful insights, it naturalizes and reproduces the nationalist basis of modern scholarship.<sup>22</sup> By questioning the distinctness of areas presupposed by the comparative framework and by respecting the specificities of historical and cultural conjectures, we might enable new insights into the workings of gender and patriarchy across various borders rather than simply within the parameters of the state or the nation. The changing nature of migrations, global flows of media, and capital demands a different notion of transdisciplinary scholarship.

How does the institutional divide between international area studies and American studies affect contemporary studies of sexuality? The academic study of sexuality that can be linked to the emergence of gay and lesbian politics of identity and new queer formations has focused on U.S. and European examples, with the primary emphasis on white, middle-class life.<sup>23</sup> Thus the disciplinary divides that emerge out of other political arenas are played out on campus and off, that is, in academic as well as in “community-based” or activist locations. As a result, much of the experience-based literature rearticulates the divide between a sexuality-based lesbian or gay or queer culture or identity and one that is based on race or class or ethnicity.<sup>24</sup> In recent years, both “articulation”

theory and “intersectionality” approaches have attempted to resolve this problem by arguing for complex or hybrid subjects.<sup>25</sup> That is, the nationalist basis of these academic disciplinary formations has participated in producing sexual subjects as nationalist subjects or as cultural-nationalist subjects. A related issue that we are not going to dwell on here but that we have discussed elsewhere is the nature of the cosmopolitan subject as a mystified national subject in the guise of a “world” or global citizen.<sup>26</sup>

A third divide that we would like to bring up can be characterized as the tradition-modernity split. Following postcolonial studies, much has been said about this primary binary of Western culture. What is noteworthy, however, is the reemergence of this split in the international study of sexuality. As we noted above, nationalist biases and geopolitics contribute to this binary formulation, in which the United States and Europe are figured as modern and thus as the sites of progressive social movements, while other parts of the world are presumed to be traditional, especially in regard to sexuality. If any countries or nations depart from this model, it is because they are interpellated by “primitivism.” In general, the United States and Europe come to be seen as unified sites of “freedom” and “democratic choice” over and against locations characterized by oppression.

In our work on female sexual surgeries and the global and cultural feminist discourse of “female genital mutilation” (FGM), we have argued that the tradition-modernity binary is foundational and even modern in that sexual subjects are produced as traditional in order to create feminist modern subjects.<sup>27</sup> Thus the global feminist is one who has free choice over her body and a complete and intact rather than a fragmented or surgically altered body, while the traditional female subject of patriarchy is forcibly altered, fragmented, alienated from her innate sexuality, and deprived of choices or agency. As we have discussed in relation to the film text by Alice Walker and Pratibha Parmar, *Warrior Marks*, freedom of choice in this nexus of modernity is marked by “coming out” as a lesbian. This is a complicated example, but suffice it to say at this juncture that a feminist and lesbian cosmopolitanism emerges over and against rural, African and Islamic “barbarism” in the name of saving “traditional women” from their own families. Although we see plenty of events and instances in the United States, for example, in which violence is enacted against gays and lesbians, against transgendered people, and against women, the displacement of the victims of sexualized violence to the Third World needs more discussion.

Another example of the tradition-modernity divide at work in the study of sexuality can be found in the literature on migration and refugee asylum. In such work, the process of migration to the United States, Europe, and other metropolitan locations is figured as the movement from repression to freedom.<sup>28</sup> That is, “backward,” often rural subjects flee their homes and/or patriarchal families or violent, abusive situations to come to the modern metropolis, where they can express their true nature as sexual identity in a state of freedom. This narrative is a hallowed one in domestic “coming-out” discourses as well as in a burgeoning international human rights arena. Refugee asylum in the United States, for instance, produces gay and lesbian subjects through a political and legal articulation of such narratives. Some recent research suggests that it is virtually impossible to stay in the country without deploying such a narrative, thereby questioning its “natural” origins.<sup>29</sup> Further inquiry into this international context of immigration and asylum would need to focus on the ways in which the state becomes involved in producing sexual identities in an era of globalization. This is why we are arguing that a cultural or psychoanalytic understanding of so-called global lesbian and

gay movements is inadequate. Nation-states, economic formations, consumer cultures, and forms of governmentality all work together to produce and uphold subjectivities and communities.

It is these kinds of examples and considerations that lead us to believe that we cannot think of sexual subjects as purely oppositional or resistant to dominant institutions that produce heteronormativity. In other words, as many have pointed out, queer subjects are not always already avant-garde for all time and in all places. For example, lesbian sexuality and practices in many sites have to struggle against patriarchal formations, while gay male sexualities may not. Our point is that, again, universalized models of resistance with idealized tropes or politics of identity obscure rather than elucidate the terrain of subjectivity in postmodernity.

A fourth link in this chain of examples of separate spheres is the global-local divide. In the context of globalization and some kinds of transnational studies, the local is seen as working against or in resistance to the global. That is, local and global constitute two separate spheres that never contaminate each other. The global-local divide is a tempting device for many cultural critics, but, like all the other binaries we are discussing, this one obscures important aspects of post-modernity, not the least of which is that the local is often constituted through the global, and vice versa.<sup>30</sup> It is also a model that hails critics because of its liberatory and resistance qualities. In this formulation, the local serves as the space of oppositional consciousness and generates practices of resistance, and the global serves as an oppressive network of dominant power structures. In various critical engagements with this global-local binary, lesbian, gay, and queer theorists have argued that the site of the local destabilizes the homogenizing tendencies of global gay formations.<sup>31</sup> There is another formulation that advocates the globalizing of Euro-American identity politics of sexuality along the lines that we have discussed above, that is, to advance human rights and freedom of choice.

We think that there is another way to look at the tension between these heavily mediated practices that appear to signal “local” or “global.” We would advocate a mode of study that adopts a more complicated model of transnational relations in which power structures, asymmetries, and inequalities become the conditions of possibility of new subjects. For example, we could look at the way social and political movements are cosmopolitan and class-based, generating new sites of power rather than simply forms of resistance.<sup>32</sup> We could also investigate the empowering practices of consumption and engagements with media and new technologies that create new subjects that trouble the model of rights and citizenship. Above all, there should be much more attention to the power relations of travel – contacts and transactions of all kinds – that are part of the knowledge production through which subjects are constituted. The social aspects of sexuality are always embedded in the material histories of these encounters and must be addressed in nuanced ways.

In many ways we are addressing the problem of writing history, a problem foregrounded by many theorists and critics working in gay and lesbian and queer studies.<sup>33</sup> That is, subjects are produced by the writing of history itself and thus may always be marked by a belated recognition or identification that is always already in the terms of the present. While we can see this problem at work in the representation of the past, we are not always as aware of the limits of representation in the present. This problem of the present is especially egregious when we look at other cultures near or far. That is, identity politics have structured our view so profoundly that we literally cannot see the link between representation and subject formation in the ways that we are calling for

vis-à-vis a transnational framework. Actually, what we are really grappling with here is not just representation; it is also the emergence of new forms of governmentality with an entire repertoire of strategies, regulatory practices, and instrumentalities linking the state to bodies. Thus representation is always linked to production, consumption, and regulation.<sup>34</sup>

Most of the identities we can recognize have emerged during the era of modernity encompassing the rise of capitalism and the nation-state in the context of imperialism. Our point is that sexual subjects are produced not just by the politics of identity or social movements but by the links between various institutions that accompany these social movements. Furthermore, we need to probe these connections and circuits to see how identities are upheld or made possible by institutions linked to the state. We find it problematic that in much work on sexual identities the state seldom has a hand in enabling these identities.<sup>35</sup> Most discussions of the state focus on queer or gay resistance to state-sanctioned heterosexism. While most states seem to oppose all forms of sexuality that are not related to reproduction or marriage, there have been cases where states (or institutions within states) have not been so uniformly in opposition. Although there is increasing discussion of the ways in which communities might be affected by institutions such as schools or the military, other state-linked or related institutions, such as universities and census boards, or institutions of the market, such as advertising, financial flows, and banks, are not often discussed in work on sexualities or sexual identities. Instead, communities seem to be simply produced by culture or by a culturalist notion of history, and by *culture* we mean in both the Arnoldian and the anthropological sense. This idea of culture signals a means of distinguishing between and ranking groups or seeing cultural formations as aesthetic categories.

What, then, is a transnational practice of the study of sexuality? There is a great deal of very exciting and useful work coming out of both interdisciplinary and disciplinary sites. Journals such as *GLQ* and *positions* have taken the lead in publishing new approaches, and there have been a plethora of conferences, workshops, and panels where these intersections have been increasingly evident.<sup>36</sup> Other institutional sites – such as centers for the study of sexuality or for gay, lesbian, and transgender studies; women's studies; gender studies; ethnic studies; and other interdisciplinary initiatives – are encouraging new scholarship and fostering various dialogues. Sexuality studies, like feminist and gender studies, is an increasingly important area of work in all kinds of disciplinary formations as well.

In our work on the film text of *Warrior Marks*, we began the project of creating a transnational framework for the study of sexual surgeries. We started by examining the ways in which colonial and postcolonial discourses of modernity and tradition have structured feminist and lesbian-feminist cultural production and identity politics as well as policy and activism in the Clinton era. Other parts of this long-term project include examinations of refugee asylum and other human rights practices and legal-juridical discourses that produce sexed subjects and identities. Another valence concerns the deployment of FGM discourse in social activism around infant sex assignment practices. Here the complicated issues involve the emergence of an intersex movement in the United States and the complexities of resisting recent biomedical practices by relying on notions of a natural body, conventions of sexual and gender difference, and colonial notions of tradition, barbarism, and mutilation. There is more that we can say about this project, but for now we would argue that the study of biomedicine must incorporate the kind of transnational frame that we are calling for in this essay.

Another area that engages not only our work but the work of many other scholars is travel and tourism.<sup>37</sup> As feminists in colonial and postcolonial discourse studies have argued, the emergence of travel in the modern period has been constitutive of many forms of orientalism and other ethnocentrisms.<sup>38</sup> Power differentials are always implicated in the activity of travel. Imperialism enabled forms of travel and exploration that produced circuits and flows of power and desire through which new forms of otherness and exoticism arose. From the “sotadic” zone in Richard Burton’s travel narratives to Roland Barthes’s “empire of signs” (not to forget Isabelle Eberhardt’s peregrinations in male attire in North Africa), sexuality has been a primary subject of travel writing.<sup>39</sup> While over the last fifteen years both feminist and postcolonial critics have written extensively about travel in the era of imperialism, the field has been plagued by many of the critical limits that we have delineated here. In gay and lesbian and queer studies, the discussion of travel follows the parameters that we have critiqued thus far, for instance, the positioning of gay and lesbian travelers as transcending colonial power relations or functioning as agents of resistance.

Tourism is linked both to the colonial history of travel and to new forms of globalization in late capitalism. From global trafficking of women to sex tourism, the topic of tourism provides a window onto specific connections among nationalism, political economy, and cultural formations. The debate about global trafficking and sex tourism in certain locales, such as Thailand, Sri Lanka, and the Caribbean, for example, tends to portray sex workers as downtrodden victims of their patriarchies and “underdeveloped” economies. The figure of the “Third World prostitute,” male or female, adult or child, is structured by the fantasy of rescue.<sup>40</sup> As Spivak’s formulation argues, it is the old colonial project of saving the brown woman from her own kind – in these instances, we can expand this formulation to various subjects of capitalism and patriarchy, although there are important differences among these linked subjects.<sup>41</sup> There has been a lot of new work on these circuits of labor and desire, but much more needs to be done, especially in terms of media and visual culture.

We are also interested in new kinds of studies of migration and immigration that trouble the narratives of movement from oppression to freedom that we have already mentioned. Migration within nations as well as across different kinds of national boundaries has been studied in different disciplines; however, we need to pay attention to the different kinds of boundaries that are crossed or that cannot be crossed, and by whom. For instance, the family-based categories for immigration into the United States are profoundly antigay and -lesbian, but they also assume models of the family based on a hierarchy of nations and cultures. Other nation-states have enacted laws requiring HIV testing for entry as well as other invasive and homophobic practices. Here nationalism, gender, sexuality, and geopolitics must be considered, along with the political economy that underlies the regulation of immigration at the current moment.

One of the best examples of the issues we are raising here is the production of HIV/AIDS discourses over the last two decades. In this field we can discern a massive shift from the separate spheres to which we have been referring to the new forms of global and transnational policy discussions that have been created in response to this emergency. We see also the interconnections among state policies, nationalist agendas, pharmaceutical corporate practices, biomedical institutions, and the varied sexual subjects, cultures, and practices that become visible and targeted in new ways. The discourse of the modern nation-state’s heteronormative family and of sexuality as the purview of males has been disrupted by the circulation of discourses of viruses,

consumer actions, treatment strategies, theories of origins, and new sexual subjects. This example enables us to see the limits of the separate spheres approach as well as the interconnections that transnational subjects engender.

In conclusion, we would like to return to the five points with which we began our discussion of the circulation of the term *transnational*. We pointed out the limits of current uses of the term and linked these uses to articulations of knowledge formations. These limits include the production of various kinds of separate spheres or binaries, which prevent an approach to the study of sexuality that would usefully enable us to examine some of the areas of study that we have mentioned. Although other such topics can be considered, we have raised a few here as a contribution to a discussion that can build a bridge between the fields of global and transnational studies and those of sexuality, gender, women's, ethnic, and cultural studies in the U.S. academy. Such interdisciplinary work will enable us to understand global identities at the present time and to examine complicities as well as resistances in order to create the possibility of critique and change.

## Notes

The text published here was delivered as an inaugural lecture at the Center for the Study of Gender and Sexuality at New York University on 12 February 2001. We would like to thank Carolyn Dinshaw for her encouragement and support of this project. We would also like to thank the audiences at the NYU Center for the Study of Gender and Sexuality, the University of Maastricht workshop "Gender, Ethnicity, and Globalization," and the Center for the Study of Sexual Cultures at the University of California, Berkeley, for terrific comments and feedback.

- 18 Although *The Lesbian and Gay Studies Reader*, ed. Henry Abelove, Michèle Aina Barale, and David M. Halperin (New York: Routledge, 1993), broke new ground in important ways, many of the essays in it focus on this approach to gender diversity. Since then, other publications have attempted to address this problem. See Gerald Hunt, ed., *Laboring for Rights: Unions and Sexual Diversity across Nations* (Philadelphia: Temple University Press, 1999); Amy Gluckman and Betsy Reed, eds., *Homo Economics: Capitalism, Community, and Lesbian and Gay Life* (New York: Routledge, 1997); Erica Rand, *Barbie's Queer Accessories* (Durham: Duke University Press, 1995); Donald Morton, ed., *The Material Queer: A LesBiGay Cultural Studies Reader* (Boulder, Colo.: Westview, 1996); and Roger N. Lancaster and Micaela di Leonardo, eds., *The Gender/Sexuality Reader: Culture, History, Political Economy* (New York: Routledge, 1997).
- 19 For a trenchant critique of such work see Gayatri Chakravorty Spivak, "French Feminism in an International Frame," in *In Other Worlds: Essays in Cultural Politics* (New York: Routledge, 1988), 134–53.
- 20 For instance, in the context of South Asian studies see the work of Ashis Nandy, *The Intimate Enemy: Loss and Recovery of Self under Colonialism* (Delhi: Oxford University Press, 1983).
- 21 Tani E. Barlow, "Colonialism's Career in Postwar China Studies," *positions* 1, no. 1 (1993): 224–67.
- 22 See Inderpal Grewal, *Home and Harem: Nation, Gender, Empire, and the Cultures of Travel* (Durham: Duke University Press, 1996); and Inderpal Grewal, Akhil Gupta, and Aihwa Ong, eds., introduction to "Asian Transnationalities," special issue of *positions* 7 (1999): 653–66.
- 23 Many writers have pointed out that analyses of race are often absent from works by gay and lesbian scholars. See Audre Lorde, *Sister/Outsider* (Trumansburg, N.Y.: Crossing, 1984); bell hooks, *Yearning: Race, Gender, and Cultural Politics* (Boston: South End, 1990); and Cherrie Moraga and Gloria Anzaldúa, *This Bridge Called My Back: Writings by Radical Women of Color* (Watertown, Mass.: Persephone, 1981). An example of work that does not address the relation between sexuality and race or ethnicity is Corey K. Creekmur and Alexander Doty, eds., *Out in Culture: Gay, Lesbian, and Queer Essays on Popular Culture* (Durham: Duke University Press, 1995). In the very influential *Lesbian and Gay Studies Reader*, most of the essays focus on Europe and North America, although some address the relationship among sexuality, sexual identities, and race. Lancaster and di Leonardo's anthology *The Gender/Sexuality Reader* provides a more cross-cultural perspective.

# CHAPTER 7

## Women Workers and Capitalist Scripts

*Chandra Talpade Mohanty*

Chandra Talpade Mohanty teaches English at Cornell University. Her books include *Feminism Without Borders* (2003) and *Third World Women and the Politics of Feminism* (1991).

*We dream that when we work hard, we'll be able to clothe our children decently, and still have a little time and money left for ourselves. And we dream that when we do as good as other people, we get treated the same, and that nobody puts us down because we are not like them.... Then we ask ourselves, "How could we make these things come true?" And so far we've come up with only two possible answers: win the lottery, or organize. What can I say, except I have never been lucky with numbers. So tell this in your book: tell them it may take time that people think they don't have, but they have to organize! ... Because the only way to get a little measure of power over your own life is to do it collectively, with the support of other people who share your needs.*

Irma, a Filipina worker in the Silicon Valley, California<sup>1</sup>

Irma's dreams of a decent life for her children and herself, her desire for equal treatment and dignity on the basis of the quality and merit of her work, her conviction that collective struggle is the means to "get a little measure of power over your own life," succinctly capture the struggles of poor women workers in the global capitalist arena. In this essay, I want to focus on the exploitation of poor Third-World women, on their agency as workers, on the common interests of women workers based on an understanding of shared location and needs, and on the strategies/practices of organizing that are anchored in and lead to the transformation of the daily lives of women workers.

This has been an especially difficult essay to write – perhaps because the almost-total saturation of the processes of capitalist domination makes it hard to envision forms of feminist resistance which would make a real difference in the daily lives of poor women workers. However, as I began to sort through the actions, reflections, and analyses by and about women workers (or wage laborers) in the capitalist economy,

*Original publication details:* Chandra Talpade Mohanty, "Women Workers and Capitalist Scripts" from *Feminist Approaches to Theory and Methodology*, ed. Sharlene Hesse-Biber, Christina Martin, and Robin Lydenberg, pp. 364–387. Oxford University Press, 1999. Reproduced with permission from Oxford University Press.

I discovered the dignity of women workers' struggles in the face of overwhelming odds. From these struggles we can learn a great deal about processes of exploitation and domination as well as about autonomy and liberation.

A recent study tour to Tijuana, Mexico, organized by Mary Tong of the San Diego-based Support Committee for Maquiladora Workers, confirmed my belief in the radical possibilities of cross-border organizing, especially in the wake of NAFTA. Exchanging ideas, experiences, and strategies with Veronica Vasquez, a twenty-one-year-old Maquila worker fighting for her job, for better working conditions, and against sexual harassment, was as much of an inspiration as any in writing this essay. Veronica Vasquez, along with ninety-nine former employees of the Tijuana factory Exportadora Mano de Obra, S.A. de C.V., has filed an unprecedented lawsuit in Los Angeles, California, against the U.S. owner of Exportadora, National O-Ring of Downey, demanding that it be forced to follow Mexican labor laws and provide workers with three months' back pay after shutting down company operations in Tijuana in November 1994. The courage, determination, and analytical clarity of these young Mexican women workers in launching the first case to test the legality of NAFTA suggest that in spite of the global saturation of processes of capitalist domination, 1995 was a moment of great possibility for building cross-border feminist solidarity.<sup>2</sup>

Over the years, I have been preoccupied with the limits as well as the possibilities of constructing feminist solidarities across national, racial, sexual, and class divides. Women's lives as workers, consumers, and citizens have changed radically with the triumphal rise of capitalism in the global arena. The common interests of capital (e.g., profit, accumulation, exploitation, etc.) are somewhat clear at this point. But how do we talk about poor Third-World women workers' interests, their agency, and their (in)visibility in so-called democratic processes? What are the possibilities for democratic citizenship for Third-World women workers in the contemporary capitalist economy? These are some of the questions driving this essay. I hope to clarify and analyze the location of Third-World women workers and their collective struggles in an attempt to generate ways to think about mobilization, organizing, and conscientization transnationally.

This essay extends the arguments I have made elsewhere regarding the location of Third-World women as workers in a global economy.<sup>3</sup> I write now, as I did then, from my own discontinuous locations: as a South Asian anticapitalist feminist in the U.S. committed to working on a truly liberatory feminist practice which theorizes and enacts the potential for a cross-cultural, international politics of solidarity; as a Third-World feminist teacher and activist for whom the psychic economy of "home" and of "work" has always been the space of contradiction and struggle; and as a woman whose middle-class struggles for self-definition and autonomy outside the definitions of daughter, wife, and mother mark an intellectual and political genealogy that led me to this particular analysis of Third-World women's work.

Here, I want to examine the analytical category of "women's work," and to look at the historically specific *naturalization* of gender and race hierarchies through this category. An international division of labor is central to the establishment, consolidation, and maintenance of the current world order: global assembly lines are as much about the production of people as they are about "providing jobs" or making profit. Thus, naturalized assumptions about *work* and *the worker* are crucial to understanding the sexual politics of global capitalism. I believe that the relation of local to global processes of colonization and exploitation, and the specification of a process of cultural and ideological

homogenization across national borders, in part through the creation of the consumer as “the” citizen under advanced capitalism, must be crucial aspects of any comparative feminist project. This definition of the citizen-consumer depends to a large degree on the definition and disciplining of producers/workers on whose backs the citizen-consumer gains legitimacy. It is the worker/producer side of this equation that I will address. Who are the workers that make the citizen-consumer possible? What role do sexual politics play in the ideological creation of this worker? How does global capitalism, in search of ever-increasing profits, utilize gender and racialized ideologies in crafting forms of women’s work? And, does the social location of particular women as workers suggest the basis for common interests and potential solidarities across national borders?

As global capitalism develops and wage labor becomes the hegemonic form of organizing production and reproduction, class relations within and across national borders have become more complex and less transparent.<sup>4</sup> Thus, issues of spatial economy – the manner by which capital utilizes particular spaces for differential production and the accumulation of capital and, in the process, transforms these spaces (and peoples) – gain fundamental importance for feminist analysis.<sup>5</sup> In the aftermath of feminist struggles around the right to work and the demand for equal pay, the boundaries between home/family and work are no longer seen as inviolable (of course these boundaries were always fluid for poor and working-class women). Women are (and have always been) in the workforce, and we are here to stay. In this essay, I offer an analysis of certain historical and ideological transformations of gender, capital, and work across the borders of nation-states,<sup>6</sup> and, in the process, develop a way of thinking about the common interests of Third-World women workers, and in particular about questions of agency and the transformation of consciousness.

Drawing specifically on case studies of the incorporation of Third-World women into a global division of labor at different geographical ends of the new world order, I argue for a historically delineated category of “women’s work” as an example of a productive and necessary basis for feminist cross-cultural analysis.<sup>7</sup> The idea I am interested in invoking here is not “the work that women do” or even the occupations that they/we happen to be concentrated in, but rather the ideological construction of jobs and tasks in terms of notions of appropriate femininity, domesticity, (hetero)sexuality, and racial and cultural stereotypes. I am interested in mapping these operations of capitalism across different divides, in tracing the naturalization of capitalist processes, ideologies, and values through the way women’s work is *constitutively* defined – in this case, in terms of gender and racial parameters. One of the questions I explore pertains to the way gender identity (defined in domestic, heterosexual, familial terms) structures the nature of the work women are allowed to perform or precludes women from being “workers” altogether.

While I base the details of my analysis in geographically anchored case studies, I am suggesting a comparative methodology which moves beyond the case-study approach and illuminates global processes which inflect and draw upon indigenous hierarchies, ideologies, and forms of exploitation to consolidate new modes of colonization (what we refer to in the introductory chapter as “recolonization”). The local and the global are indeed connected through parallel, contradictory, and sometimes converging relations of rule which position women in different and similar locations as workers.<sup>8</sup> I agree with feminists who argue that class struggle, narrowly defined, can no longer be the only basis for solidarity among women workers. The fact of being women with particular racial, ethnic, cultural, sexual, and geographical histories has everything to do with our definitions and

identities as workers. A number of feminists have analyzed the division between production and reproduction, and the construction of ideologies of womanhood in terms of public/private spheres. Here, I want to highlight a) the persistence of patriarchal definitions of womanhood in the arena of wage labor; b) the versatility and specificity of capitalist exploitative processes providing the basis for thinking about potential common interests and solidarity between Third-World women workers; and c) the challenges for collective organizing in a context where traditional union methods (based on the idea of the class interests of the male worker) are inadequate as strategies for empowerment.

If, as I suggest, the logic of a world order characterized by a transnational economy involves the active construction and dissemination of an image of the “Third World/racialized, or marginalized woman worker” that draws on indigenous histories of gender and race inequalities, and if this worker’s identity is coded in patriarchal terms which define her in relation to men and the heterosexual, conjugal family unit, then the model of class conflict between capitalists and workers needs to be recrafted in terms of the interests (and perhaps identities) of Third-World women workers. Patriarchal ideologies, which sometimes pit women against men within and outside the home, infuse the material realities of the lives of Third-World women workers, making it imperative to reconceptualize the way we think about working-class interests and strategies for organizing. Thus, while this is not an argument for just recognizing the “common experiences” of Third-World women workers, it is an argument for recognizing (concrete, not abstract) “common interests” and the potential bases of cross-national solidarity – a common context of struggle. In addition, while I choose to focus on the “Third World” woman worker, my argument holds for white women workers who are also racialized in similar ways. The argument then is about a *process* of gender and race domination, rather than about the *content* of “Third World.” Making Third-World women workers visible in this gender, race, class formation involves engaging a capitalist script of subordination and exploitation. But it also leads to thinking about the possibilities of emancipatory action on the basis of the reconceptualization of Third-World women as agents rather than victims.

But why even use “Third World,” a somewhat problematic term which many now consider outdated? And why make an argument which privileges the social location, experiences, and identities of Third-World women workers, as opposed to any other group of workers, male or female? Certainly, there are problems with the term “Third World.” It is inadequate in comprehensively characterizing the economic, political, racial, and cultural differences *within* the borders of Third-World nations. But in comparison with other similar formulations like “North/South” and “advanced/underdeveloped nations,” “Third World” retains a certain heuristic value and explanatory specificity in relation to the inheritance of colonialism and contemporary neocolonial economic and geopolitical processes that the other formulations lack.<sup>9</sup>

In response to the second question, I would argue that at this time in the development and operation of a “new” world order, Third-World women workers (defined in this context as both women from the geographical Third World and immigrant and indigenous women of color in the U.S. and Western Europe) occupy a specific social location in the international division of labor which *illuminates* and *explains* crucial features of the capitalist processes of exploitation and domination. These are features of the social world that are usually obfuscated or mystified in discourses about the “progress” and “development” (e.g., the creation of jobs for poor, Third-World women as the marker of economic and social advancement) that is assumed to “naturally” accompany the triumphal

rise of global capitalism. I do not claim to explain *all* the relevant features of the social world or to offer a *comprehensive* analysis of capitalist processes of recolonization. However, I am suggesting that Third-World women workers have a potential identity in common, an identity as *workers* in a particular division of labor at this historical moment. And I believe that exploring and analyzing this potential commonality across geographical and cultural divides provides both a way of reading and understanding the world and an explanation of the consolidation of inequities of gender, race, class, and (hetero) sexuality, which are necessary to envision and enact transnational feminist solidarity.<sup>10</sup>

The argument that multinationals position and exploit women workers in certain ways does not originate with me. I want to suggest, however, that in interconnecting and comparing some of these case studies, a larger theoretical argument can be made about the category of women's work, specifically about the Third-World woman as worker, at this particular historical moment. I think this intersection of gender and work, where the very definition of work draws upon and reconstructs notions of masculinity, femininity, and sexuality, offers a basis of cross-cultural comparison and analysis which is grounded in the concrete realities of women's lives. I am not suggesting that this basis for comparison exhausts the *totality* of women's experience cross-culturally. In other words, because similar ideological constructions of "women's work" make cross-cultural analysis possible, this does not automatically mean women's lives are the *same*, but rather that they are *comparable*. I argue for a notion of political solidarity and common interests, defined as a community or collectivity among women workers across class, race, and national boundaries which is based on shared material interests and identity and common ways of reading the world. This idea of political solidarity in the context of the incorporation of Third-World women into a global economy offers a basis for cross-cultural comparison and analysis which is grounded in history and social location rather than in an ahistorical notion of culture or experience. I am making a choice here to focus on and analyze the *continuities* in the experiences, histories, and strategies of survival of these particular workers. But this does not mean that differences and discontinuities in experience do not exist or that they are insignificant. The focus on continuities is a *strategic* one – it makes possible a way of reading the operation of capital from a location (that of Third-World women workers) which, while forming the bedrock of a certain kind of global exploitation of labor, remains somewhat invisible and undertheorized.

## **Gender and Work: Historical and Ideological Transformations**

"Work makes life sweet," says Lola Weixel, a working-class Jewish woman in Connie Field's film "The Life and Times of Rosie the Riveter." Weixel is reflecting on her experience of working in a welding factory during World War II, at a time when large numbers of U.S. women were incorporated into the labor force to replace men who were fighting the war. In one of the most moving moments in the film, she draws attention to what it meant to her and to other women to work side by side, to learn skills and craft products, and to be paid for the work they did, only to be told at the end of the war that they were no longer needed and should go back to being girlfriends, housewives, and mothers. While the U.S. state propaganda machine was especially explicit on matters of work for men and women, and the corresponding expectations of masculinity/femininity and domesticity in the late 1940s and 1950s, this is no longer the case in the 1990s. Shifting definitions of public and private, and of workers, consumers and citizens

no longer define wage-work in visibly masculine terms. However, the dynamics of job competition, loss, and profit-making in the 1990s are still part of the dynamic process that spelled the decline of the mill towns of New England in the early 1900s and that now pits “American” against “immigrant” and “Third-World” workers along the U.S./Mexico border or in the Silicon Valley in California. Similarly, there are continuities between the women-led New York garment-workers strike of 1909, the Bread and Roses (Lawrence textile) strike of 1912, Lola Weixel’s role in union organizing during WWII, and the frequent strikes in the 1980s and 1990s of Korean textile and electronic workers, most of whom are young, single women.<sup>11</sup> While the global division of labor in 1995 looks quite different from what it was in the 1950s, ideologies of women’s work, the meaning and value of work for women, and women workers’ struggles against exploitation remain central issues for feminists around the world. After all, women’s labor has always been central to the development, consolidation, and reproduction of capitalism in the U.S.A. and elsewhere.

In the United States, histories of slavery, indentured servitude, contract labor, self-employment, and wage-work are also simultaneously histories of gender, race, and (hetero)sexuality, nested within the context of the development of capitalism. Thus, women of different races, ethnicities, and social classes had profoundly different, though interconnected, experiences of work in the economic development from nineteenth-century economic and social practices (slave agriculture in the South, emergent industrial capitalism in the Northeast, the hacienda system in the Southwest, independent family farms in the rural Midwest, Native American hunting/gathering and agriculture) to wage-labor and self-employment (including family businesses) in the late-twentieth century. In 1995, almost a century after the Lowell girls lost their jobs when textile mills moved South to attract non-unionized labor, feminists are faced with a number of profound analytical and organizational challenges in different regions of the world. The material, cultural, and political effects of the processes of domination and exploitation which sustain what is called the New World Order (NWO)<sup>12</sup> are devastating for the vast majority of people in the world – and most especially for impoverished and Third-World women. Maria Mies argues that the increasing division of the world into consumers and producers has a profound effect on Third-World women workers, who are drawn into the international division of labor as workers in agriculture; in large-scale manufacturing industries like textiles, electronics, garments, and toys; in small-scale manufacturing of consumer goods like handicrafts and food processing (the informal sector); and as workers in the sex and tourist industries.<sup>13</sup>

The values, power, and meanings attached to being either a consumer or a producer/worker vary enormously depending on where and who we happen to be in an unequal global system. In the 1990s, it is, after all, multinational corporations that are the hallmark of global capitalism. In an analysis of the effects of these corporations on the new world order, Richard Barnet and John Cavanagh characterize the global commercial arena in terms of four intersecting webs: the Global Cultural Bazaar (which creates and disseminates images and dreams through films, television, radio, music, and other media), the Global Shopping Mall (a planetary supermarket which sells things to eat, drink, wear, and enjoy through advertising, distribution, and marketing networks), the Global Workplace (a network of factories and workplaces where goods are produced, information processed, and services rendered), and, finally, the Global Financial Network (the international traffic in currency transactions, global securities, etc.).<sup>14</sup> In each of these webs, racialized ideologies of masculinity, femininity, and sexuality play

a role in constructing the legitimate consumer, worker, and manager. Meanwhile, the psychic and social disenfranchisement and impoverishment of women continues. Women's bodies and labor are used to consolidate global dreams, desires, and ideologies of success and the good life in unprecedented ways.

Feminists have responded directly to the challenges of globalization and capitalist modes of recolonization by addressing the sexual politics and effects on women of a) religious fundamentalist movements within and across the boundaries of the nation-state; b) structural adjustment policies (SAPs); c) militarism, demilitarization, and violence against women; d) environmental degradation and land/sovereignty struggles of indigenous and native peoples; and e) population control, health, and reproductive policies and practices.<sup>15</sup> In each of these cases, feminists have analyzed the effects on women as workers, sexual partners, mothers and caretakers, consumers, and transmitters and transformers of culture and tradition. Analysis of the ideologies of masculinity and femininity, of motherhood and (hetero)sexuality and the understanding and mapping of agency, access, and choice are central to this analysis and organizing. Thus, while my characterization of capitalist processes of domination and recolonization may appear somewhat overwhelming, I want to draw attention to the numerous forms of resistance and struggle that have also always been constitutive of the script of colonialism/capitalism. Capitalist patriarchies and racialized, class/caste-specific hierarchies are a key part of the long history of domination and exploitation of women, but struggles against these practices and vibrant, creative, collective forms of mobilization and organizing have also always been a part of our histories. In fact, like Jacqui Alexander and a number of other authors in this collection, I attempt to articulate an emancipatory discourse and knowledge, one that furthers the cause of feminist liberatory practice. After all, part of what needs to change within racialized capitalist patriarchies is the very concept of work/labor, as well as the naturalization of heterosexual masculinity in the definition of "the worker."

Teresa Amott and Julie Matthaei, in analyzing the U.S. labor market, argue that the intersection of gender, class, and racial-ethnic hierarchies of power has had two major effects:

First, disempowered groups have been concentrated in jobs with lower pay, less job security, and more difficult working conditions. Second, workplaces have been places of extreme segregation, in which workers have worked in jobs only with members of their same racial-ethnic, gender, and class group, even though the particular racial-ethnic group and gender assigned to a job may have varied across firms and regions.<sup>16</sup>

While Amott and Matthaei draw attention to the sex-and-race typing of jobs, they do not *theorize* the relationship between this job typing and the social identity of the workers concentrated in these low-paying, segregated, often unsafe sectors of the labor market. While the economic history they chart is crucial to any understanding of the race-and-gender basis of U.S. capitalist processes, their analysis begs the question of whether there is a connection (other than the common history of domination of people of color) between *how* these jobs are defined and *who* is sought after for the jobs.

By examining two instances of the incorporation of women into the global economy (women lacemakers in Narsapur, India, and women in the electronics industry in the Silicon Valley) I want to delineate the interconnections between gender, race, and ethnicity, and the ideologies of work which locate women in particular exploitative contexts.

The contradictory positioning of women along class, race, and ethnic lines in these two cases suggests that, in spite of the obvious geographical and sociocultural differences between the two contexts, the organization of the global economy by contemporary capital positions these workers in very similar ways, effectively reproducing and transforming locally specific hierarchies. There are also some significant continuities between homework and factory work in these contexts, in terms of both the inherent ideologies of work as well as the experiences and social identities of women as workers. This tendency can also be seen in the case studies of black women workers (of Afro-Caribbean, Asian, and African origin) in Britain, especially women engaged in homework, factory work, and family businesses.

### Housewives and Homework: The Lacemakers of Narsapur

Maria Mies's 1982 study of the lacemakers of Narsapur, India, is a graphic illustration of how women bear the impact of development processes in countries where poor peasant and tribal societies are being "integrated" into an international division of labor under the dictates of capital accumulation. Mies's study illustrates how capitalist production relations are built upon the backs of women workers defined as *housewives*. Ideologies of gender and work and their historical transformation provide the necessary ground for the exploitation of the lacemakers. But the definition of women as housewives also suggests the heterosexualization of women's work – women are always defined in relation to men and conjugal marriage. Mies's account of the development of the lace industry and the corresponding relations of production illustrates fundamental transformations of gender, caste, and ethnic relations. The original caste distinctions between the feudal warrior castes (the landowners) and the Narsapur (poor Christians) and Serepalam (poor Kapus/Hindu agriculturalists) women are totally transformed through the development of the lace industry, and a new caste hierarchy is effected.

At the time of Mies's study, there were sixty lace manufacturers, with some 200,000 women in Narsapur and Serepalam constituting the work force. Lacemaking women worked six to eight hours a day, and ranged in age from six to eighty. Mies argues that the expansion of the lace industry between 1970 and 1978 and its integration into the world market led to class/caste differentiation within particular communities, with a masculinization of all nonproduction jobs (trade) and a total feminization of the production process. Thus, men sold women's products and lived on profits from women's labor. The polarization between men and women's work, where men actually defined themselves as exporters and businessmen who invested in women's labor, bolstered the social and ideological definition of women as housewives and their work as "leisure time activity." In other words, work, in this context, was grounded in sexual identity, in concrete definitions of femininity, masculinity, and heterosexuality.

Two particular indigenous hierarchies, those of caste and gender, interacted to produce normative definitions of "women's work." Where, at the onset of the lace industry, Kapu men and women were agricultural laborers and it was the lower-caste Harijan women who were lacemakers, with the development of capitalist relations of production and the possibility of caste/class mobility, it was the Harijan women who were agricultural laborers while the Kapu women undertook the "leisure time" activity of lacemaking. The caste-based ideology of seclusion and purdah was essential to the extraction of surplus value. Since purdah and the seclusion of women is a sign of higher

caste status, the domestication of Kapu laborer women – where their (lacemaking) activity was tied to the concept of the “women sitting in the house” was entirely within the logic of capital accumulation and profit. Now, Kapu women, not just the women of feudal, landowning castes, are in purdah as housewives producing for the world market.

Ideologies of seclusion and the domestication of women are clearly sexual, drawing as they do on masculine and feminine notions of protectionism and property. They are also heterosexual ideologies, based on the normative definition of women as wives, sisters, and mothers – always in relation to conjugal marriage and the “family.” Thus, the caste transformation and separation of women along lines of domestication and nondomestication (Kapu housewives vs. Harijan laborers) effectively links the work that women do with their sexual and caste/class identities. Domestication works, in this case, because of the persistence and legitimacy of the ideology of the housewife, which defines women in terms of their place within the home, conjugal marriage, and heterosexuality. The opposition between definitions of the “laborer” and of the “housewife” anchors the invisibility (and caste-related status) of work; in effect, it defines women as *non-workers*. By definition, housewives cannot be workers or laborers; housewives make male breadwinners and consumers possible. Clearly, ideologies of “women’s place and work” have real material force in this instance, where spatial parameters construct and maintain gendered and caste-specific hierarchies. Thus, Mies’s study illustrates the concrete effects of the social definition of women as housewives. Not only are the lacemakers invisible in census figures (after all, their work is leisure), but their definition as housewives makes possible the definition of men as “breadwinners.” Here, class and gender proletarianization through the development of capitalist relations of production, and the integration of women into the world market is possible because of the history and transformation of indigenous caste and sexual ideologies.

Reading the operation of capitalist processes from the position of the housewife/worker who produces for the world market makes the specifically gendered and caste/class opposition between laborer and the non-worker (housewife) visible. Moreover, it makes it possible to acknowledge and account for the hidden costs of women’s labor. And finally, it illuminates the fundamentally *masculine* definition of laborer/worker in a context where, as Mies says, men live off women who are the producers. Analyzing and transforming this masculine definition of labor, which is the mainstay of capitalist patriarchal cultures, is one of the most significant challenges we face. The effect of this definition of labor is not only that it makes women’s labor and its costs invisible, but that it undercuts women’s agency by defining them as victims of a process of pauperization or of “tradition” or “patriarchy,” rather than as agents capable of making their own choices.

In fact, the contradictions raised by these choices are evident in the lace-makers’ responses to characterizations of their own work as “leisure activity.” While the fact that they did “work” was clear to them and while they had a sense of the history of their own pauperization (with a rise in prices for goods but no corresponding rise in wages), they were unable to explain how they came to be in the situation they found themselves. Thus, while some of the contradictions between their work and their roles as housewives and mothers were evident to them, they did not have access to an analysis of these contradictions which could lead to a) seeing the complete picture in terms of their exploitation; b) strategizing and organizing to transform their material situations; or c) recognizing their common interests as women workers across caste/class lines. As a matter of fact, the Serepelam women defined their lacemaking in terms of “housework”

rather than wage-work, and women who had managed to establish themselves as petty commodity producers saw what they did as entrepreneurial: they saw themselves as selling *products* rather than *labor*. Thus, in both cases, women internalized the ideologies that defined them as nonworkers. The isolation of the work context (work done in the house rather than in a public setting) as well as the internalization of caste and patriarchal ideologies thus militated against organizing as *workers*, or as *women*. However, Mies suggests that there were cracks in this ideology: the women expressed some envy toward agricultural laborers, whom the lacemakers saw as enjoying working together in the fields. What seems necessary in such a context, in terms of feminist mobilization, is a recognition of the fact that the identity of the housewife needs to be transformed into the identity of a “woman worker or working woman.” Recognition of common interests as housewives is very different from recognition of common interests as women and as workers.

### **Immigrant Wives, Mothers, and Factory Work: Electronics Workers in the Silicon Valley**

My discussion of the U.S. end of the global assembly line is based on studies by Naomi Katz and David Kemnitzer (1983) and Karen Hossfeld (1990) of electronics workers in the so-called Silicon Valley in California. An analysis of production strategies and processes indicates a significant ideological redefinition of normative ideas of factory work in terms of the Third-World, immigrant women who constitute the primary workforce. While the lacemakers of Narsapur were located as *housewives* and their work defined as *leisure time activity* in a very complex international world market, Third-World women in the electronics industry in the Silicon Valley are located as *mothers*, *wives*, and *supplementary* workers. Unlike the search for the “single” woman assembly worker in Third-World countries, it is in part the ideology of the “married woman” which defines job parameters in the Valley, according to Katz and Kemnitzer’s data.

Hossfeld also documents how existing ideologies of femininity cement the exploitation of the immigrant women workers in the Valley, and how the women often use this patriarchal logic against management. Assumptions of “single” and “married” women as the ideal workforce at the two geographical ends of the electronics global assembly line (which includes South Korea, Hong Kong, China, Taiwan, Thailand, Malaysia, Japan, India, Pakistan, the Philippines, and the United States, Scotland, and Italy)<sup>17</sup> are anchored in normative understandings of femininity, womanhood, and sexual identity. The labels are predicated on sexual difference and the institution of heterosexual marriage and carry connotations of a “manageable” (docile?) labor force.<sup>18</sup>

Katz and Kemnitzer’s data indicates a definition and transformation of women’s work which relies on gender, race, and ethnic hierarchies already historically anchored in the U.S. Further, their data illustrates that the construction of “job labels” pertaining to Third-World women’s work is closely allied with their sexual and racial identities. While Hossfeld’s more recent study reinforces some of Katz and Kemnitzer’s conclusions, she focuses more specifically on how “contradictory ideologies about sex, race, class, and nationality are used as forms of both labor control and labor resistance in the capitalist workplace today.”<sup>19</sup> Her contribution lies in charting the operation of gendered ideologies in the structuring of the industry and in analyzing what she calls “refeminization strategies” in the workplace.

Although the primary workforce in the Valley consists of Third-World and newly immigrant women, substantial numbers of Third-World and immigrant men are also employed by the electronics industry. In the early 1980s, 70,000 women held 80 to 90 percent of the operative or laborer jobs on the shop floor. Of these, 45 to 50 percent were Third-World, especially Asian, immigrants. White men held either technician or supervisory jobs. Hossfeld's study was conducted between 1983 and 1986, at which time she estimates that up to 80 percent of the operative jobs were held by people of color, with women constituting up to 90 percent of the assembly workers. Katz and Kemnitzer maintain that the industry actively seeks sources of cheap labor by deskilling production and by using race, gender, and ethnic stereotypes to "attract" groups of workers who are "more suited" to perform tedious, unrewarding, poorly paid work. When interviewed, management personnel described the jobs as a) unskilled (as easy as a recipe); b) requiring tolerance for tedious work (Asian women are therefore more suited); and c) supplementary activity for women whose main tasks were mothering and housework.

It may be instructive to unpack these job labels in relation to the immigrant and Third-World (married) women who perform these jobs. The job labels recorded by Katz and Kemnitzer need to be analyzed as definitions of *women's work*, specifically as definitions of *Third-World/immigrant women's work*. First, the notion of "unskilled" as easy (like following a recipe) and the idea of tolerance for tedious work both have racial and gendered dimensions. Both draw upon stereotypes which infantilize Third-World women and initiate a nativist discourse of "tedium" and "tolerance" as characteristics of non-Western, primarily agricultural, premodern (Asian) cultures. Secondly, defining jobs as supplementary activity for *mothers* and *housewives* adds a further dimension: sexual identity and appropriate notions of heterosexual femininity as marital domesticity. These are not part-time jobs, but they are defined as supplementary. Thus, in this particular context, (Third-World) women's work needs are defined as temporary.

While Hossfeld's analysis of management logic follows similar lines, she offers a much more nuanced understanding of how the gender and racial stereotypes prevalent in the larger culture infuse worker consciousness and resistance. For instance, she draws attention to the ways in which factory jobs are seen by the workers as "unfeminine" or not "ladylike." Management exploits and reinforces these ideologies by encouraging women to view femininity as contradictory to factory work, by defining their jobs as secondary and temporary, and by asking women to choose between defining themselves as women or as workers. Womanhood and femininity are thus defined along a domestic, familial model, with work seen as supplemental to this primary identity. Significantly, although 80 percent of the immigrant women in Hossfeld's study were the largest annual income producers in their families, they still considered men to be the breadwinners.

Thus, as with the exploitation of Indian lacemakers as "housewives," Third-World/immigrant women in the Silicon Valley are located as "mothers and homemakers" and only secondarily as workers. In both cases, men are seen as the real breadwinners. While (women's) work is usually defined as something that takes place in the "public" or production sphere, these ideologies clearly draw on stereotypes of women as home-bound. In addition, the *invisibility* of work in the Indian context can be compared to the *temporary/secondary* nature of work in the Valley. Like the Mies study, the data compiled by Hossfeld and Katz and Kemnitzer indicate the presence of local ideologies and hierarchies of gender and race as the basis for the exploitation of the electronics workers. The question that arises is: How do women understand their own positions and construct meanings in an exploitative job situation?

Interviews with electronics workers indicate that, contrary to the views of management, women do not see their jobs as temporary but as part of a life-time strategy of upward mobility. Conscious of their racial, class, and gender status, they combat their devaluation as workers by increasing their income: by job-hopping, overtime, and moonlighting as pieceworkers. Note that, in effect, the "homework" that Silicon Valley workers do is performed under conditions very similar to the lacemaking of Narsapur women. Both kinds of work are done in the home, in isolation, with the worker paying her own overhead costs (like electricity and cleaning), with no legally mandated protections (such as a minimum wage, paid leave, health benefits, etc.). However, clearly the meanings attached to the work differ in both contexts, as does the way we understand them.

For Katz and Kemnitzer the commitment of electronics workers to class mobility is an important assertion of self. Thus, unlike in Narsapur, in the Silicon Valley, homework has an entrepreneurial aspect for the women themselves. In fact, in Narsapur, women's work turns the men into entrepreneurs! In the Valley, women take advantage of the contradictions of the situations they face as *individual workers*. While in Narsapur, it is purdah and caste/class mobility which provides the necessary self-definition required to anchor women's work in the home as leisure activity, in the Silicon Valley, it is a specifically *American* notion of individual ambition and entrepreneurship which provides the necessary ideological anchor for Third-World women.

Katz and Kemnitzer maintain that this underground economy produces an *ideological* redefinition of jobs, allowing them to be defined as *other than* the basis of support of the historically stable, "comfortable," white, metropolitan working class. In other words, there is a clear connection between low wages and the definition of the job as supplementary, and the fact that the lifestyles of people of color are defined as different and cheaper. Thus, according to Katz and Kemnitzer, *women and people of color* continue to be "defined out" of the old industrial system and become targets and/or instruments of the ideological shift away from class towards national/ethnic/gender lines.<sup>20</sup> In this context, ideology and popular culture emphasize the *individual maximization* of options for personal success. Individual success is thus severed from union activity, political struggle, and collective relations. Similarly, Hossfeld suggests that it is the racist and sexist management logic of the needs of "immigrants" that allows the kind of exploitative labor processes that she documents.<sup>21</sup> However, in spite of Katz and Kemnitzer's complex analysis of the relationship of modes of production, social relations of production, culture, and ideology in the context of the Silicon Valley workers, they do not specify why it is *Third-World women* who constitute the primary labor force. Similarly, while Hossfeld provides a nuanced analysis of the gendering of the workplace and the use of racial and gendered logic to consolidate capitalist accumulation, she also sometimes separates "women" and "minority workers" (Hossfeld, p. 176), and does not specify why it is women of color who constitute the major labor force on the assembly lines in the Valley. In distinguishing between women and people of color, Katz and Kemnitzer tend to reproduce the old conceptual divisions of gender and race, where women are defined primarily in terms of their gender and people of color in terms of race. What is excluded is an *interactive* notion of gender and race, whereby women's gendered identity is grounded in race and people of color's racial identities are gendered.

I would argue that the data compiled by Katz and Kemnitzer and Hossfeld does, in fact, explain why Third-World women are targeted for jobs in electronics factories. The explanation lies in the redefinition of work as temporary, supplementary, and unskilled, in the construction of women as mothers and homemakers, and in the positioning of

femininity as contradictory to factory work. In addition, the explanation also lies in the specific definition of Third-World, immigrant women as docile, tolerant, and satisfied with substandard wages. It is the ideological redefinition of women's work that provides the necessary understanding of this phenomenon. Hossfeld describes some strategies of resistance in which the workers utilize against management the very gendered and racialized logic that management uses against them. However, while these tactics may provide some temporary relief on the job, they build on racial and gender stereotypes which, in the long run, can be and are used against Third-World women.

### **Daughters, Wives, and Mothers: Migrant Women Workers in Britain**

Family businesses have been able to access minority women's labor power through mediations of kinship and an appeal to ideologies which emphasize the role of women in the home as wives and mothers and as keepers of family honor.<sup>22</sup>

In a collection of essays exploring the working lives of black and minority women inside and outside the home, Sallie Westwood and Parminder Bhachu focus on the benefits afforded the British capitalist state by the racial and gendered aspects of migrant women's labor. They point to the fact that what has been called the "ethnic economy" (the way migrants draw on resources to survive in situations where the combined effects of a hostile, racist environment and economic decline serve to oppress them) is also fundamentally a gendered economy. Statistics indicate that Afro-Caribbean and non-Muslim Asian women have a higher full-time labor participation rate than white women in the U.K. Thus, while the perception that black women (defined, in this case, as women of Afro-Caribbean, Asian, and African origin) are mostly concentrated in part-time jobs is untrue, the *forms* and *patterns* of their work lives within the context of homework and family firms, businesses where the entire family is involved in earning a living, either inside or outside the home bears examination. Work by British feminist scholars (Phizacklea 1983, Westwood 1984, 1988, Josephides 1988, and others) suggests that familial ideologies of domesticity and heterosexual marriage cement the economic and social exploitation of black women's labor within family firms. Repressive patriarchal ideologies, which fix the woman's role in the family are grounded in inherited systems of inequality and oppression in Black women's cultures of origin. And these very ideologies are reproduced and consolidated in order to provide the glue for profit-making in the context of the racialized British capitalist state.

For instance, Annie Phizacklea's work on Bangladeshi homeworkers in the clothing industry in the English West Midlands illuminates the extent to which family and community ties, maintained by women, are crucial in allowing this domestic subcontracting in the clothing industry to undercut the competition in terms of wages and long work-days and its cost to women workers. In addition, Sallie Westwood's work on Gujarati women factory workers in the East Midlands hosiery industry suggests that the power and creativity of the shop-floor culture – which draws on cultural norms of femininity, masculinity and domesticity, while simultaneously generating resistance and solidarity among the Indian and white women workers – is, in fact, anchored in Gujarati cultural inheritances. Discussing the contradictions in the lives of Gujarati women within the home and the perception that male family members have of their work as an extension

of their family roles (not as a path to financial independence), Westwood elaborates on the continuities between the ideologies of domesticity within the household, which are the result of (often repressive) indigenous cultural values and practices, and the culture of the shopfloor. Celebrating each other as daughters, wives, and mothers is one form of generating solidarity on the shopfloor – but it is also a powerful refeminization strategy, in Hossfeld's terms.

Finally, family businesses, which depend on the cultural and ideological resources and loyalties within the family to transform ethnic “minority” women into workers committed to common familial goals, are also anchored in women’s roles as daughters, wives, mothers, and keepers of family honor (Josephides 1988, Bhachu 1998). Women’s work in family business is unpaid and produces dependencies that are similar to those of homeworkers whose labor, although paid, is invisible. Both are predicated on ideologies of domesticity and womanhood which infuse the spheres of production and reproduction. In discussing Cypriot women in family firms, Sasha Josephides cites the use of familial ideologies of “honor” and the construction of a “safe” environment outside the public sphere as the bases for a definition of femininity and womanhood (the perfect corollary to a paternal, protective definition of masculinity) that allows Cypriot women to see themselves as workers for their family, rather than as workers for themselves. All conflict around the question of work is thus accommodated within the context of the family. This is an important instance of the privatization of work, and of the redefinition of the identity of women workers in family firms as doing work that is a “natural extension” of their familial duties (not unlike the lacemakers). It is their identity as mothers, wives, and family members that stands in for their identity as workers. Parminder Bhachu’s work with Punjabi Sikhs also illustrates this fact. Citing the growth of small-scale entrepreneurship among South Asians as a relatively new trend in the British economy, Bhachu states that women workers in family businesses often end up losing autonomy and reenter more traditional forms of patriarchal dominance where men control all or most of the economic resources within the family: “By giving up work, these women not only lose an independent source of income, and a large network of often female colleagues, but they also find themselves sucked back into the kinship system which emphasizes patrilaterality.”<sup>23</sup> Women thus lose a “direct relationship with the productive process,” thus raising the issue of the invisibility (even to themselves) of their identity as workers.

This analysis of migrant women’s work in Britain illustrates the parallel trajectory of their exploitation as workers within a different metropolitan context than the U.S. To summarize, all these case studies indicate ways in which ideologies of domesticity, femininity, and race form the basis of the construction of the notion of “women’s work” for Third-World women in the contemporary economy. In the case of the lacemakers, this is done through the definition of homework as leisure time activity and of the workers themselves as housewives. As discussed earlier, indigenous hierarchies of gender and caste/class make this definition possible. In the case of the electronics workers, women’s work is defined as unskilled, tedious, and supplementary activity for mothers and homemakers. It is a specifically American ideology of individual success, as well as local histories of race and ethnicity that constitute this definition. We can thus contrast the *invisibility* of the lacemakers as workers to the *temporary* nature of the work of Third-World women in the Silicon Valley. In the case of migrant women workers in family firms in Britain, work becomes an extension of familial roles and loyalties, and draws upon cultural and ethnic/racial ideologies of womanhood,

domesticity, and entrepreneurship to consolidate patriarchal dependencies. In all these cases, ideas of *flexibility*, *temporality*, *invisibility*, and *domesticity* in the naturalization of categories of work are crucial in the construction of Third-World women as an appropriate and cheap labor force. All of the above ideas rest on stereotypes about gender, race, and poverty, which, in turn, characterize Third-World women as workers in the contemporary global arena.

Eileen Boris and Cynthia Daniels claim that “homework belongs to the decentralization of production that seems to be a central strategy of some sectors and firms for coping with the international restructuring of production, consumption, and capital accumulation.”<sup>24</sup> Homework assumes a significant role in the contemporary capitalist global economy. The discussion of homework performed by Third-World women in the three geographical spaces discussed above – India, U.S.A., and Britain – suggests something specific about capitalist strategies of recolonization at this historical juncture. Homework emerged at the same time as factory work in the early nineteenth century in the U.S., and, as a system, it has always reinforced the conjoining of capitalism and patriarchy. Analyzing the homeworker as a wage laborer (rather than an entrepreneur who controls both her labor and the market for it) dependent on the employer for work which is carried out usually in the “home” or domestic premises, makes it possible to understand the *systematic* invisibility of this form of work. What allows this work to be so fundamentally exploitative as to be invisible as a form of work are ideologies of domesticity, dependency, and (hetero)sexuality, which designate women – in this case, Third-World women – as primarily housewives/mothers and men as economic supporters/breadwinners. Homework capitalizes on the equation of home, family, and patriarchal and racial/cultural ideologies of femininity/masculinity with work. This is work done at home, in the midst of doing housework, childcare, and other tasks related to “homemaking,” often work that never ceases. Characterizations of “housewives,” “mothers,” and “homemakers” make it impossible to see home-workers as workers earning regular wages and entitled to the rights of workers. Thus, not just their *production*, but homeworkers’ *exploitation* as workers, can, in fact, also remain invisible, contained within domestic, patriarchal relations in the family. This is a form of work that often falls outside accounts of wage labor, as well as accounts of household dynamics.<sup>25</sup>

Family firms in Britain represent a similar ideological pattern, within a different class dynamic. Black women imagine themselves as entrepreneurs (rather than as wage laborers) working for the prosperity of their families in a racist society. However, the work they do is still seen as an extension of their familial roles and often creates economic and social dependencies. This does not mean that women in family firms never attain a sense of autonomy, but that, as a system, the operation of family business exploits Third-World women’s labor by drawing on and reinforcing indigenous hierarchies in the search for upward mobility in the (racist) British capitalist economy. What makes this form of work in the contemporary global capitalist arena so profoundly exploitative is that its invisibility (both to the market, and sometimes to the workers themselves) is premised on deeply ingrained sexist and racist relationships within and outside heterosexual kinship systems. This is also the reason why changing the gendered relationships that anchor homework, and organizing homeworkers becomes such a challenge for feminists.

The analysis of factory work and family business in Britain and of homework in all three geographical locations raises the question of whether homework and factory work would be defined in these particular ways if the workers were single women. In this case,

the construct of the *worker* is dependant on gender ideologies. In fact, the idea of work or labor as necessary for the psychic, material, and spiritual survival and development of women workers is absent. Instead, it is the identity of women as housewives, wives, and mothers (identities also defined outside the parameters of work) that is assumed to provide the basis for women's survival and growth. These Third-World women are defined out of the labor/capital process as if work in their case isn't necessary for economic, social, psychic autonomy, independence, and self-determination – a nonalienated relation to work is a conceptual and practical impossibility in this situation.

### Common Interests/Different Needs: Collective Struggles of Poor Women Workers

Thus far, this essay has charted the ideological commonalities of the exploitation of (mostly) poor Third-World women workers by global capitalist economic processes in different geographical locations. The analysis of the continuities between factory work and homework in objectifying and domesticating Third-World women workers such that their very identity as *workers* is secondary to familial roles and identities, and predicated on patriarchal and racial/ethnic hierarchies anchored in local/indigenous and transnational processes of exploitation exposes the profound challenges posed in organizing women workers on the basis of common interests. Clearly, these women are not merely victims of colonizing, exploitative processes – the analysis of the case studies indicates different levels of consciousness of their own exploitation, different modes of resistance, and different understandings of the contradictions they face, and of their own agency as workers. While the essay thus far lays the groundwork for conceptualizing the common interests of women workers based on an understanding of shared location and needs, the analysis foregrounds processes of *repression* rather than forms of *opposition*. How have poor Third-World women organized as workers? How do we conceptualize the question of "common interests" based in a "common context of struggle," such that women are agents who make choices and decisions that lead to the transformation of consciousness and of their daily lives as workers?

As discussed earlier, with the current domination in the global arena of the arbitrary interests of the market and of transnational capital, older signposts and definitions of capital/labor or of "the worker" or even of "class struggle" are no longer totally accurate or viable conceptual or organizational categories. It is, in fact, the predicament of poor working women and their experiences of survival and resistance in the creation of new organizational forms to earn a living and improve their daily lives that offers new possibilities for struggle and action.<sup>26</sup> In this instance, then, the experiences of Third-World women workers are relevant for understanding and transforming the work experiences and daily lives of poor women everywhere. The rest of this essay explores these questions by suggesting a working definition of the question of the common interests of Third-World women workers in the contemporary global capitalist economy, drawing on the work of feminist political theorist Anna G. Jonasdottir.

Jonasdottir explores the concept of women's interests in participatory democratic political theory. She emphasizes both the formal and the content aspects of a theory of social and political interests that refers to "different layers of social existence: agency and the needs/desires that give strength and meaning to agency."<sup>27</sup> Adjudicating between political analysts who theorize common interests in formal terms (i.e., the claim to

actively “be among,” to choose to participate in defining the terms of one’s own existence, or acquiring the conditions for choice), and those who reject the concept of interests in favor of the concept of (subjective) individualized, and group-based “needs and desires,” (the consequences of choice), Jonasdottir formulates a concept of the common interests of women that emphasizes the former, but is a combination of both perspectives. She argues that the formal aspect of interest (an active “being among”) is crucial: “Understood historically, and seen as emerging from people’s lived experiences, interests about basic processes of social life are divided systematically between groups of people in so far as their living conditions are systematically different. Thus, historically and socially defined, interests can be characterized as ‘objective.’”<sup>28</sup> In other words, there are systematic material and historical bases for claiming Third-World women workers have common interests. However, Jonasdottir suggests that the second aspect of theorizing interest, the satisfaction of needs and desires (she distinguishes between agency and the result of agency) remains a open question. Thus, the *content* of needs and desires from the point of view of interest remains open for subjective interpretation. According to Jonasdottir, feminists can acknowledge and fight on the basis of the (objective) common interests of women in terms of active representation and choices to participate in a democratic polity, while at the same time not reducing women’s common interests (based on subjective needs and desires) to this formal “being among” aspect of the question of interest. This theorization allows us to acknowledge common interests and potential agency on the basis of systematic aspects of social location and experience, while keeping open what I see as the deeper, more fundamental question of understanding and organizing around the needs, desires, and choices (the question of critical, transformative consciousness) in order to transform the material and ideological conditions of daily life. The latter has a pedagogical and transformative dimension which the former does not.

How does this theorization relate to conceptualizations of the common interests of Third-World women workers? Jonasdottir’s distinction between agency and the result of agency is a very useful one in this instance. The challenges for feminists in this arena are a) understanding Third-World women workers as having objective interests in common as workers (they are thus agents and make choices as workers); and b) recognizing the contradictions and dislocations in women’s own consciousness of themselves as workers, and thus of their needs and desires – which sometimes militate *against* organizing on the basis of their common interests (the results of agency). Thus, work has to be done here in analyzing the links between the social location and the historical and current experiences of domination of Third-World women workers on the one hand, and in theorizing and enacting the common *social identity* of Third-World women workers on the other. Reviewing the forms of collective struggle of poor, Third-World women workers in relation to the above theorization of common interests provides a map of where we are in this project.

In the case of women workers in the free-trade zones in a number of countries, trade unions have been the most visible forum for expressing the needs and demands of poor women. The sexism of trade unions, however, has led women to recognize the need for alternative, more democratic organizational structures, and to form women’s unions (as in Korea, China, Italy, and Malaysia)<sup>29</sup> or to turn to community groups, church committees, or feminist organizations. In the U.S., Third-World immigrant women in electronics factories have often been hostile to unions which they recognize as clearly modeled in the image of the white, male, working-class American worker. Thus, church

involvement in immigrant women workers' struggles has been an important form of collective struggle in the U.S.<sup>30</sup>

Women workers have developed innovative strategies of struggle in women's unions. For instance, in 1989, the Korean Women Workers Association staged an occupation of the factory in Masan. They moved into the factory and lived there, cooked meals, guarded the machines and premises, and effectively stopped production.<sup>31</sup> In this form of occupation of the work premises, the processes of daily life become constitutive of resistance (also evident in the welfare rights struggles in the U.S.A.) and opposition is anchored in the systematic realities of the lives of poor women. It expresses not only their common interests as workers, but acknowledges their social circumstance as *women* for whom the artificial separation of work and home has little meaning. This "occupation" is a strategy of collective resistance that draws attention to poor women worker's *building community* as a form of survival.

Kumudhini Rosa makes a similar argument in her analysis of the "habits of resistance" of women workers in Free Trade Zones (FTZ) in Sri Lanka, Malaysia, and the Philippines.<sup>32</sup> The fact that women live and work together in these FTZs is crucial in analyzing the ways in which they build community life, share resources and dreams, provide mutual support and aid on the assembly line and in the street, and develop individual and collective habits of resistance. Rosa claims that these forms of resistance and mutual aid are anchored in a "culture of subversion" in which women living in patriarchal, authoritarian households where they are required to be obedient and disciplined, acquire practice in "concealed forms of rebelling" (86). Thus, women workers engage in "spontaneous" strikes in Sri Lanka, "wildcat" strikes in Malaysia, and "sympathy" strikes in the Philippines. They also support each other by systematically lowering the production target, or helping slow workers to meet the production targets on assembly lines. Rosa's analysis illustrates recognition of the common interests of women workers at a formal "being among" level. While women are conscious of the contradictions of their daily lives as women and as workers, and enact their resistance, they have not organized actively to identify their collective needs and to transform the conditions of their daily lives.

While the earlier section on the ideological construction of work in terms of gender and racial/ethnic hierarchies discussed homework as one of the most acute forms of exploitation of poor Third-World women, it is also the area in which some of the most creative and transformative collective organizing has occurred. The two most visibly successful organizational efforts in this arena are the Working Women's Forum (WWF) and SEWA (Self Employed Women's Association) in India, both registered as independent trade unions, and focusing on incorporating homeworkers, as well as petty traders, hawkers, and laborers in the informal economy into their membership.<sup>33</sup>

There has also been a long history of organizing homeworkers in Britain. Discussing the experience of the West Yorkshire Homeworking Group in the late 1980s, Jane Tate states that "a homework campaign has to work at a number of levels, in which the personal interconnects with the political, the family situation with work, lobbying Parliament with small local meetings.... In practical terms, the homeworking campaigns have adopted a way of organising that reflects the practice of many women's groups, as well as being influenced by the theory and practice of community work. It aims to bring out the strength of women, more often in small groups with a less formal structure and organisation than in a body such as a union."<sup>34</sup> Issues of race, ethnicity, and class are central in this effort since most of the homeworkers are of Asian or

Third-World origin. Tate identifies a number of simultaneous strategies used by the West Yorkshire Group to organize homeworkers: pinpointing and making visible the “real” employer (or the real enemy), rather than directing organizational efforts only against local subsidiaries; consumer education and pressure, which links the buying of goods to homeworker struggles; fighting for a code of work practice for suppliers by forming alliances between trade unions, women’s, and consumer groups; linking campaigns to the development of alternative trade organizations (for instance, SEWA); fighting for visibility in international bodies like the ILO; and, finally, developing transnational links between local grass-roots homeworker organizations – thus, sharing resources, strategies, and working toward empowerment. The common interests of homeworkers are acknowledged in terms of their daily lives as workers and as women – there is no artificial separation of the “worker” and the “homemaker” or the “housewife” in this context. While the West Yorkshire Homeworking Group has achieved some measure of success in organizing homeworkers, and there is a commitment to literacy, consciousness-raising, and empowerment of workers, this is still a feminist group that organizes women workers (rather than the impetus for organization emerging from the workers themselves – women workers organizing). It is in this regard that SEWA and WWF emerge as important models for poor women workers organizations.

Swasti Mitter discusses the success of SEWA and WWF in terms of: a) their representing the potential for organizing powerful women workers’ organizations (the membership of WWF is 85,000 and that of SEWA is 46,000 workers) when effective strategies are used; and b) making these “hidden” workers visible as *workers* to national and international policy makers. Both WWF and SEWA address the demands of poor women workers, and both include a development plan for women which includes leadership training, child care, women’s banks, and producer’s cooperatives which offer alternative trading opportunities. Renana Jhabvala, SEWA’s secretary, explains that, while SEWA was born in 1972 in the Indian labor movement and drew inspiration from the women’s movement, it always saw itself as a part of the cooperative movement, as well. Thus, struggling for poor women workers’ rights always went hand-in-hand with strategies to develop alternative economic systems. Jhabvala states, “SEWA accepts the co-operative principles and sees itself as part of the co-operative movement attempting to extend these principles to the poorest women.... SEWA sees the need to bring poor women into workers’ co-operatives. The co-operative structure has to be revitalised if they are to become truly workers’ organisations, and thereby mobilise the strength of the co-operative movement in the task of organising and strengthening poor women.”<sup>35</sup> This emphasis on the extension of cooperative (or democratic) principles to poor women, the focus on political and legal literacy, education for critical and collective consciousness, and developing strategies for collective (and sometimes militant) struggle *and* for economic, social, and psychic development makes SEWA’s project a deeply feminist, democratic, and transformative one. Self-employed women are some of the most disenfranchised in Indian society – they are vulnerable economically, in caste terms, physically, sexually, and in terms of their health, and, of course, they are socially and politically invisible. Thus, they are also one of the most difficult constituencies to organize. The simultaneous focus on collective struggle for equal rights and justice (struggle against) coupled with economic development on the basis of cooperative, democratic principles of sharing, education, self-reliance, and autonomy (struggle for) is what is responsible for SEWA’s success at organizing poor, home-based, women workers. Jhabvala summarizes this when she says, “The combination of trade union

and co-operative power makes it possible not only to defend members but to present an ideological alternative. Poor women's co-operatives are a new phenomenon. SEWA has a vision of the co-operative as a form of society which will bring about more equal relationships and lead to a new type of society."<sup>36</sup>

SEWA appears to come closest to articulating the common interests and needs of Third-World women workers in the terms that Jonasdottir elaborates. SEWA organizes on the basis of the objective interests of poor women workers – both the trade union and cooperative development aspect of the organizational strategies illustrate this. The status of poor women workers as workers and as citizens entitled to rights and justice is primary. But SEWA also approaches the deeper level of the articulation of needs and desires based on recognition of subjective, collective interests. As discussed earlier, it is this level of the recognition and articulation of common interest that is the challenge for women workers globally. While the common interests of women workers as *workers* have been variously articulated in the forms of struggles and organization reviewed above, the transition to identifying common needs and desires (the *content* aspect of interest) of Third-World women workers, which leads potentially to the construction of the *identity* of Third-World women workers, is what remains a challenge – a challenge that perhaps SEWA comes closest to identifying and addressing.

I have argued that the particular location of Third-World women workers at this moment in the development of global capitalism provides a vantage point from which to a) make particular practices of domination and recolonization visible and transparent, thus illuminating the minute and global processes of capitalist recolonization of women workers, and b) understand the commonalities of experiences, histories, and identity as the basis for solidarity and in organizing Third-World women workers transnationally. My claim, here, is that the definition of the social identity of women as workers is not only class-based, but, in fact, in this case, must be grounded in understandings of race, gender, and caste histories and experiences of work. In effect, I suggest that homework is one of the most significant, and repressive forms of "women's work" in contemporary global capitalism. In pointing to the ideology of the "Third-World woman worker" created in the context of a global division of labor, I am articulating differences located in specific histories of inequality, i.e., histories of gender and caste/class in the Narsapur context, and histories of gender, race, and liberal individualism in the Silicon Valley and in Britain.

However, my argument does not suggest that these are *discrete* and *separate* histories. In focusing on women's work as a particular form of Third-World women's exploitation in the contemporary economy, I also want to foreground a particular history that third- and first-world women seem to have in common: the logic and operation of capital in the contemporary global arena. I maintain that the interests of contemporary transnational capital and the strategies employed enable it to draw upon indigenous social hierarchies and to construct, reproduce, and maintain ideologies of masculinity/femininity, technological superiority, appropriate development, skilled/unskilled labor, etc. Here I have argued this in terms of the category of "women's work," which I have shown to be grounded in an ideology of the Third-World women worker. Thus, analysis of the location of Third-World women in the new international division of labor must draw upon the histories of colonialism and race, class and capitalism, gender and patriarchy, and sexual and familial figurations. The analysis of the ideological definition and redefinition of women's work thus indicates a political basis for common struggles and it is this particular forging of the political unity of Third-World women workers that I would like

to endorse. This is in opposition to ahistorical notions of the common experience, exploitation, or strength of Third-World women or between third- and first-world women, which serve to naturalize normative Western feminist categories of self and other. If Third-World women are to be seen as the *subjects of theory and of struggle*, we must pay attention to the specificities of their/our common and different histories.

In summary, this essay highlights the following analytic and political issues pertaining to Third-World women workers in the global arena: 1) it writes a particular group of women workers into history and into the operation of contemporary capitalist hegemony; 2) it charts the links and potential for solidarity between women workers across the borders of nation-states, based on demystifying the ideology of the masculinized worker; 3) it exposes a domesticated definition of Third-World women's work to be in actuality a strategy of global capitalist recolonization; 4) it suggests that women have common interests as workers, not just in transforming their work lives and environments, but in redefining home spaces so that homework is recognized as work to earn a living rather than as leisure of supplemental activity; 5) it foregrounds the need for feminist liberatory knowledge as the basis of feminist organizing and collective struggles for economic and political justice; 6) it provides a working definition of the common interests of Third-World women workers based on theorizing the common social identity of Third-World women as women/workers; and finally, 7) it reviews the habits of resistance, forms of collective struggle, and strategies of organizing of poor, Third-World women workers. Irma is right when she says that "the only way to get a little measure of power over your own life is to do it collectively, with the support of other people who share your needs." The question of defining common interests and needs such that the identity of Third-World women workers forms a potentially revolutionary basis for struggles against capitalist recolonization, and for feminist self-determination and autonomy, is a complex one. However, as maquiladora worker Veronica Vasquez and the women in SEWA demonstrate, women are already waging such struggles. The end of the twentieth century may be characterized by the exacerbation of the sexual politics of global capitalist domination and exploitation, but it is also suggestive of the dawning of a renewed politics of hope and solidarity.

## Notes

Even after a number of new beginnings and revisions, this essay remains work in progress. I have come to the conclusion that this is indicative of both my own level of thinking about these issues as well as the current material and ideological conditions which position Third-World women wage-laborers in contradictory ways. I would like to thank Jacqui Alexander for careful, systematic, and patient feedback on this essay. The essay would not have been possible without Satya Mohanty's pertinent and incisive critique, and his unstinting emotional and intellectual support. My students at Hamilton College and colleagues at various institutions where I have presented sections of this argument are responsible for whatever clarity and lucidity the essay offers – thanks for keeping me on my toes. It is my involvement with the staff and board members of Grassroots Leadership of North Carolina that has sharpened my thinking about the struggles of poor and working people, and about the politics of solidarity and hope it engenders. Finally, it was Lisa Lowe, and then Mary Tong of the Support Committee for Maquiladora Workers, who brought the cross-border organizing of Veronica Vasquez and other workers to my attention. I thank all these organizers for teaching me and for the grassroots organizing work they continue to do in the face of great odds.

- 2 See "Tijuanaans Sue in L.A. after Their Maquiladora Is Closed," by Sandra Dibble, in *The San Diego Union-Tribune*, Friday, December 16, 1994. The Support Committee for Maquiladora Workers promotes cross-border organizing against corporate impunity. This is a San Diego-based volunteer effort of unionists, community activists, and others to assist workers in building autonomous organizations and facilitating ties between Mexican and U.S. workers. The Committee, which is coordinated by Mary Tong, also sees its task as educating U.S. citizens about the realities of life, work, and efforts for change among maquiladora workers. For more information write the Support Committee at 3909 Centre St., #210, San Diego, CA 92103.
- 3 See my essay, "Cartographies of Struggle: Third World Women and the Politics of Feminism," in Mohanty, Russo, and Torres, eds. *Third World Women and The Politics of Feminism*, (Bloomington: Indiana University Press, 1991), especially p. 39, where I identified five provisional historical, political, and discursive junctures for understanding Third-World feminist politics: "decolonization and national liberation movements in the third world, the consolidation of white, liberal capitalist patriarchies in Euro-America, the operation of multinational capital within a global economy, ... anthropology as an example of a discourse of dominance and self-reflexivity, ... (and) storytelling or autobiography (the practice of writing) as a discourse of oppositional consciousness and agency." This essay represents a continuation of one part of this project: the operation of multinational capital and the location of poor Third-World women workers.
- 4 See the excellent analysis in Teresa L. Amott and Julie A. Matthaei, *Race, Gender and Work: A Multicultural Economic History of Women in the United States* (Boston: South End Press, 1991), esp. pp. 22–23.
- 5 See Bagguley, Mark-Lawson, Shapiro, Urry, Walby, and Warde, *Restructuring: Place, Class and Gender* (London: Sage Publications, 1990).
- 6 Joan Smith has argued, in a similar vein, for the usefulness of a world-systems-theory approach (seeing the various economic and social hierarchies and national divisions around the globe as part of a singular systematic division of labor, with multiple parts, rather than as plural and autonomous national systems) which incorporates the notion of the "household" as integral to understanding the profoundly gendered character of this systemic division of labor. While her analysis is useful in historicizing and analyzing the idea of the household as the constellation of relationships that makes the transfer of wealth possible across age, gender, class, and national lines, the ideologies of masculinity, femininity, and heterosexuality that are internal to the concept of the household are left curiously intact in her analysis – as are differences in understandings of the household in different cultures. In addition, the impact of domesticating ideologies in the sphere of production, in constructions of "women's work" are also not addressed in Smith's analysis. While I find this version of the world-systems approach useful, my own analysis attempts a different series of connections and theorizations. See Joan Smith, "The Creation of the World We Know: The World-Economy and the Re-creation of Gendered Identities," in V. Moghadam, ed., *Identity Politics and Women: Cultural Reassertions in International Perspective* (Boulder: Westview Press, 1994), pp. 27–41.
- 7 The case studies I analyze are: Maria Mies, *The Lacemakers of Narsapur, Indian Housewives Produce for the World Market* (London: Zed Press, 1982); Naomi Katz and David Kemnitzer, "Fast Forward: the Internationalization of the Silicon Valley," in June Nash and M. P. Fernandez-Kelly, *Women, Men, and the International Division of Labor* (Albany: SUNY Press, 1983), pp 273–331; Katz and Kemnitzer, "Women and Work in the Silicon Valley," in Karen Brodkin Sacks, *My Troubles Are Going to Have Trouble with Me: Everyday Trials and Triumphs of Women Workers* (New Brunswick, NJ: Rutgers University Press, 1984), pp 193–208; and Karen J. Hossfeld, "'Their Logic Against Them:' Contradictions in Sex, Race, and Class in the Silicon Valley," in Kathryn Ward, ed., *Women Workers and Global Restructuring* (Ithaca: Cornell University Press, 1990), pp. 149–178. I also draw on case studies of Black women workers in the British context in Sallie Westwood and Parminder Bhachu, eds., *Enterprising Women* (New York: Routledge, 1988).
- 8 See my discussion of "relations of rule" in "Cartographies." There has been an immense amount of excellent feminist scholarship on women and work and women and multinationals in the last

- decade. In fact, it is this scholarship which makes my argument possible. Without the analytic and political insights and analyses of scholars like Aihwa Ong, Maria Patricia Fernandez-Kelly, Lourdes Beneria and Martha Roldan, Maria Mies, Swasti Mitter, and Sallie Westwood, among others, my attempt to understand and stitch together the lives and struggles of women workers in different geographical spaces would be sharply limited. This essay builds on arguments offered by some of these scholars, while attempting to move beyond particular cases to an integrated analysis which is not the same as the world-systems model. See especially Nash and Fernandez-Kelly, *Women, Men and the International Division of Labor; Ward, ed., Women Workers and Global Restructuring; Review of Radical Political Economics*, vol. 23, no. 3–4, (Fall/Winter 1991) special issue on “Women in the International Economy”; Harriet Bradley, *Men’s Work, Women’s Work* (Minneapolis: University of Minnesota Press, 1989); Lynne Brydon and Sylvia Chant, *Women in the Third World, Gender Issues in Rural and Urban Areas* (New Brunswick, NJ: Rutgers University Press, 1989).
- 9 See Ella Shohat and Robert Stam, *Unthinking Eurocentrism: Multiculturalism and the Media* (London and New York: Routledge, 1994), esp. pp. 25–27. In a discussion of the analytic and political problems involved in using terms like “Third World,” Shohat and Stam draw attention to the adoption of “third world” at the 1955 Bandung Conference of “non-aligned” African and Asian nations, an adoption which was premised on the solidarity of these nations around the anticolonial struggles in Vietnam and Algeria. This is the genealogy of the term that I choose to invoke here.
  - 10 My understanding and appreciation of the links between location, experience, and social identity in political and intellectual matters grows out of numerous discussions with Satya Mohanty. See especially his essay, “Colonial Legacies, Multicultural Futures: Relativism, Objectivity, and the Challenge of Otherness,” in *PMLA*, January 1995, pp. 108–117. See also Paula Moya’s essay in this collection for further discussion of these issues.

  - 12 Jeremy Brecher, “The Hierarch’s New World Order – and Ours,” in Jeremy S. Brecher et al., eds., *Global Visions, Beyond the New World Order* (Boston: South End Press, 1993), pp. 3–12.
  - 13 See Maria Mies, *Patriarchy and Accumulation on a World Scale: Women in the International Division of Labor* (London: Zed Press, 1986), pp. 114–15.
  - 14 Richard J. Barnet and John Cavanagh, *Global Dreams: Imperial Corporations and the New World Order* (New York: Simon and Shuster, 1994), esp. pp. 25–41.
  - 15 For examples of cross-national feminist organizing around these issues, see the following texts: Gita Sahgal and Nira Yuval Davis, eds., *Refusing Holy Orders, Women and Fundamentalism in Britain* (London: Virago, 1992); Valentine M. Moghadam, *Identity Politics and Women, Cultural Reassertions and Feminisms in International Perspective* (Boulder: Westview Press, 1994); *Claiming Our Place, Working the Human Rights System to Women’s Advantage* (Washington D.C.: Institute for Women, Law and Development, 1993); Sheila Rowbotham and Swasti Mitter, eds., *Dignity and Daily Bread: New Forms of Economic Organizing among Poor Women in the Third World and the First* (New York: Routledge, 1994); and Julie Peters and Andrea Wolper, eds., *Women’s Rights, Human Rights: International Feminist Perspectives* (New York: Routledge, 1995).
  - 16 Amott and Matthaei, eds., *Race, Gender and Work*, pp. 316–17.
  - 17 Women Working Worldwide, *Common Interests*, ibid.
  - 18 Aihwa Ong’s discussion of the various modes of surveillance of young Malaysian factory women as a way of discursively producing and constructing notions of feminine sexuality is also applicable in this context, where “single” and “married” assume powerful connotations of sexual control. See Aihwa Ong, *Spirits of Resistance and Capitalist Discipline: Factory Women in Malaysia* (Albany: SUNY Press, 1987).
  - 19 Hossfeld, “Their Logic Against Them,” p. 149. Hossfeld states that she spoke to workers from at least thirty Third-World nations (including Mexico, Vietnam, the Philippines, Korea, China, Cambodia, Laos, Thailand, Malaysia, Indonesia, India, Pakistan, Iran, Ethiopia, Haiti, Cuba, El Salvador, Nicaragua, Guatemala, Venezuela, as well as southern Europe, especially Portugal and Greece). It may be instructive to pause and reflect on the implications of this level of racial

and national diversity on the shop floor in the Silicon Valley. While all these workers are defined as “immigrants,” a number of them as recent immigrants, the racial, ethnic, and gender logic of capitalist strategies of recolonization in this situation locate all the workers in similar relationships to the management, as well as to the U.S. state.

- 20 Assembly lines in the Silicon Valley are often divided along race, ethnic, and gender lines, with workers competing against each other for greater productivity. Individual worker choices, however imaginative or ambitious, do not transform the system. Often they merely undercut the historically won benefits of the metropolitan working class. Thus, while moonlighting, overtime, and job-hopping are indications of individual modes of resistance, and of an overall strategy of class mobility, it is these very aspects of worker’s choices which supports an underground domestic economy which evades or circumvents legal, institutionalized, or contractual arrangements that add to the indirect wages of workers.

# CHAPTER 8

## “I Would Rather Be a Cyborg Than a Goddess”: Becoming Intersectional in Assemblage Theory

*Jasbir Puar*

Jasbir Puar teaches Women’s and Gender Studies at Rutgers University. Her books include *Terrorist Assemblages* (2007) and *Interspecies* (2011).

“Grids happen” writes Brian Massumi, at a moment in *Parables for the Virtual* where one is tempted to be swept away by the endless affirmative becomings of movement, flux, and potential, as opposed to being pinned down by the retroactive positioning of identity (2002, 8). For the most part, Massumi has been less interested in how grids happen than in asking how they can un-happen, or not happen. What the tension between the two purportedly opposing forces signals, at this junction of scholarly criticism, might be thought of as a dialogue between theories that deploy the subject as a primary analytic frame, and those that highlight the forces that make subject formation tenuous, if not impossible or even undesirable. I have seen this tension manifest acutely in my own work on intersectionality and assemblage theory. On the one hand I have been a staunch advocate of what is now commonly known as an intersectional approach: analyses that foreground the mutually co-constitutive forces of race, class, sex, gender, and nation. Numerous feminist thinkers consider intersectionality the dominant paradigm through which feminist theory has analyzed difference; Leslie McCall argues that intersectionality might be considered “the most important theoretical contribution that women’s studies, in conjunction with other fields, has made so far” (McCall 2005, 1771). Intersectional analysis is now a prevalent approach in queer theory.<sup>1</sup> At the same time, encountering a poststructuralist fatigue with the

*Original publication details:* Jaspir Puar, “I Would Rather Be a Cyborg than a Goddess: Becoming Intersectional in Assemblage Theory.” *philoSOPHIA*, 2.1. State University of New York Press, 2012. Reproduced with permission from State University of New York and J. Paur.

now-predictable yet still necessary demands for subject recognition, I also argued in my book, *Terrorist Assemblages: Homonationalism in Queer Times*, that intersectionality as an intellectual rubric and a tool for political intervention must be supplemented – if not complicated and reconceptualized – by a notion of assemblage. Following Massumi on the “retrospective ordering” of identities such as “gender, race, and sexual orientation” which “back-form their reality,” in *Terrorist Assemblages* I write, “[I]ntersectional identities and assemblages must remain as interlocutors in tension … intersectional identities are the byproducts of attempts to still and quell the perpetual motion of assemblages, to capture and reduce them, to harness their threatening mobility” (Puar 2007, 213). Subject positioning on a grid is never self-coinciding; positioning does not precede movement but rather it is induced by it; epistemological correctives cannot apprehend ontological becomings; the complexity of process is continually mistaken for a resultant product.<sup>2</sup>

Since the publication of *Terrorist Assemblages*, in response to anxieties about my apparent prescription to leave intersectionality behind (as if one could), I have often been asked to elaborate on the political usages of assemblages and assemblage theory. A prominent concept in the work of Gilles Deleuze and Felix Guattari, assemblage seems to inspire doubt about its political “applicability,” while intersectionality seems to hold fast as a successful tool for political and scholarly transformation. Part of the assumption at work in these queries is that representation, and its recognized subjects, is the dominant, primary, or most efficacious platform of political intervention, while a Deleuzian nonrepresentational, non-subject-oriented politics is deemed impossible. Perhaps these queries also reveal concerns about how they might be somehow incompatible or even oppositional, despite the fact that intersectionality and assemblage are not analogous in terms of content, utility, or deployment. As analytics, they may not be reconcilable. Yet they need not be oppositional but rather, I argue, frictional.

In what follows, I offer some preliminary thoughts on the limits and possibilities of intersectionality and assemblage and what might be gained by thinking them through and with each other. What are the strengths of each in the realms of theory, political organizing, legal structures, and method? Through highlighting the convivial crossings of these two differentiated but not oppositional genealogies, I offer some thoughts on epistemological correctives in feminist knowledge production – which has been driven, sometimes single-mindedly, by the mandate of intersectional analysis – to see what kinds of futures are possible for feminist theorizing. I reread the formative concept that fueled the metaphoric invocation of intersectionality, specifically Kimberlé Crenshaw’s use of the traffic intersection, to show where intersectionality, as that which retroactively forms the grid and positions on it, and assemblage, as that which is prior to, beyond, or past the grid, not so much intersect (though I am tempted to make the pun) but rather resonate with each other. That is to say, what follows aspires to an affirmative, convivial conversation between what have generally been construed as oppositional sets of literatures: that of women of color intersectional feminist theory, and feminist theory that has been invested in postrepresentational, posthuman, or postsocial conceptualizations of the body. My aim here, then, is not to evaluate the limits and potentials of intersectionality for the sake of refining intersectionality itself, nor to weigh in on debates about whether intersectionality is “outmoded and outdated” (Taylor et al. 2011, 3), but to put intersectionality in tandem with assemblage to see how they might be thought together.

## Intersectionality and Its Discontents

It has been more than twenty years since Kimberlé Crenshaw wrote her groundbreaking piece titled, “Demarginalizing the Intersection of Race and Sex: A Black Feminist Critique of Antidiscrimination Doctrine, Feminist Theory, and Antiracist Politics” (1989), which, along with her 1991 piece “Mapping the Margins: Intersectionality, Identity Politics, and Violence against Women of Color,” went on to become seminal texts for the theorization of intersectionality. The twentieth anniversary was marked by a number of special journal issues, edited books, and conferences commemorating Crenshaw’s contribution and discussing the impact of intersectional feminist theorizing, perhaps generating a resurgence of interest in the topic, as anniversaries are wont to do. As activist and theoretical discourse about “difference” developed over several decades by black feminists in the United States such as Audre Lorde, bell hooks, Angela Davis, and The Combahee River Collective, the term *intersectionality* was introduced by and became solidified as a feminist heuristic through Crenshaw’s analysis of U.S. antidiscrimination legal doctrine. Crenshaw mapped out three forms of intersectional analysis she deemed crucial: structural (addressing the intersection of racism and patriarchy in relation to battering and rape of women); political (addressing the intersection of antiracist organizing and feminist organizing); and representational (addressing the intersection of racial stereotypes and gender stereotypes, particularly in the case of 2 Live Crew). Her intervention into mutually exclusive identity paradigms is one of rethinking identity politics from within, in particular, from within systemic legal exclusions.<sup>3</sup>

While Crenshaw specifically targeted the elisions of both critical race paradigms and gender normative paradigms, intersectionality emerged from the struggles of second wave feminism as a crucial black feminist intervention challenging the hegemonic rubrics of race, class, and gender within predominantly white feminist frames. Pedagogically, since the emergence and consolidation of intersectionality from the 1980s on, it has been deployed more forcefully as a feminist intervention to disrupt whiteness and less so as a critical race intervention to disrupt masculinist frames. Thus, precisely in the act of performing this intervention, what is also produced is an ironic reification of sexual difference as a/the foundational one that needs to be disrupted. Sexual and gender difference is understood as the constant from which there are variants, just as women of color are constructed in dominant feminist generational narratives as the newest arrivals among the subjects of feminism. This pedagogical deployment has had the effect of re-securing the centrality of the subject positioning of white women.

How is this possible? The theory of intersectionality argues that all identities are lived and experienced as intersectional – in such a way that identity categories themselves are cut through and unstable – and that all subjects are intersectional whether or not they recognize themselves as such. In the succinct words of Arun Saldanha, using Venn diagrams to illustrate his point, “The theory of intersectionality holds that there is no actual body that is a member of only one set” (Saldanha 2010, 289). But what the method of intersectionality is most predominantly used to qualify is the *specific difference* of “women of color,” a category that has now become, I would argue, simultaneously emptied of specific meaning in its ubiquitous application and yet overdetermined in its deployment. In this usage, intersectionality always produces an Other, and that Other is always a Woman of Color (now often referred to as WOC, to underscore the overdetermined emptiness of its gratuitousness), who must invariably be shown to be resistant, subversive, or articulating a grievance.<sup>4</sup> More pointedly, it is the difference of African American women

that dominates this genealogy of the term *women of color*. Indeed, Crenshaw is clear that she centralizes “black women’s experience” and posits “black women as the starting point” of her analysis (Crenshaw 1991, 1243). Thus, the insistent consolidation of intersectionality as a dominant heuristic may well be driven by anxieties about maintaining the “integrity” of a discrete black feminist genealogy, one that might actually obfuscate how intersectionality is thought of and functions differently in different strands of black feminist and women of color feminist thought. For example, while Crenshaw’s work is about disrupting and reconciling what are perceived to be irreconcilable binary options of gender and race, Audre Lorde’s seminal piece “Age, Race, Class, and Sex: Women Redefining Difference” from 1984 reads as a dynamic, affectively resonant postulation of inchoate and sometimes contradictory intersectional subjectivities.<sup>5</sup>

This ironic othering of WOC through an approach that meant to alleviate such othering is exacerbated by the fact that intersectionality has become cathected to the field of women’s studies as the paradigmatic frame through which women’s lives are understood and theorized, a problem reified by both WOC feminists and white feminists.<sup>6</sup> McCall notes that “feminists are perhaps alone in the academy in the extent to which they have embraced intersectionality … as itself a central category of analysis” (McCall 2005, 1771). This claim to intersectionality as the dominant feminist method can be produced with such insistence that an interest in exploring other frames, for example assemblage, is rendered problematic and even produces WOC feminists invested in multiple genealogies as “race-traitors.”<sup>7</sup> This accusation of course reinforces the implicit understanding that intersectionality is a tool to diagnose specifically *racial difference*. Despite decades of feminist theorizing on the question of difference, difference continues to be “difference from,” that is, the difference from “white woman.” Distinct from a frame that privileges “difference within,” “difference from” produces difference as a contradiction rather than as a recognizing it as a perpetual and continuous process of splitting. This is also then an ironic reification of racial difference. Malini Johar Schueller, for example, argues that most scholarship on WOC is produced by WOC, while many white feminists, although hailing intersectionality as a self-evident, primary methodological rubric, continue to produce scholarship that presumes gender difference as foundational. Writes Schueller: “While women of color theorize about a particular group of women, many white feminists continue to theorize about gender/sexuality/women in general.” And later: “Indeed, it has become almost a given that works in gender and sexuality studies acknowledge multiple axes of oppression or invoke the mantra of race, class, gender and sexuality” (Schueller 2005, 64).<sup>8</sup> Much like the language of diversity, the language of intersectionality, its very invocation, it seems, largely substitutes for intersectional analysis itself. What I have elsewhere called “diversity management” can more rigorously be described as a “tendency to displace the concept of intersectionality from any political practice and socio-economic context by translating it into a merely theoretical abstraction of slipping signifiers of identity” (Erel et al. 2011, 66).

Political practice and socioeconomic context are shifting metrics that require a historicization of the “event” of intersectionality, its emergence, and the thought that it moved and generated. Further questions about practice and context arise when intersectionality is situated within the changing historical and economic landscape of neoliberal capitalism and identity. What does an intersectional critique look like – or more to the point, what does it do – in an age of neoliberal pluralism, absorption, and accommodation of all kinds of differences? If it is the case that intersectionality has been “mainstreamed” in the last two decades – a way to manage difference that colludes with

dominant forms of liberal multiculturalism – is the qualitative force of the interpellation of “difference itself” altered or uncertain? Should intersectionality have to account for anything beyond the context of the legal doctrine from which it was developed? Let me qualify that my concern is not about the formative, generative, and necessary intervention of Crenshaw’s work, but about both the changed geopolitics of reception (one that purports to include rather than exclude difference) as well as a tendency toward reification in the deployment of intersectional method. Has intersectionality become, as Schueller implies, an alibi for the re-centering of white liberal feminists? What is a poststructuralist theory of intersectionality that might address liberal multicultural and “postracial” discourses of inclusion that destabilize the WOC as a mere enabling prosthetic to white feminists?

Such questions about time, history, and the shifts from exclusion to inclusion also bring to the fore the dynamics of the spatialization of intersectional analyses. If, as Avtar Brah and Ann Phoenix have argued, “old debates about the category woman have assumed new critical urgency” (Brah and Phoenix 2004, 76) in the context of recent historical events, such as September 11th and the occupation of Afghanistan and Iraq, transnational and postcolonial scholars point out that the categories privileged by intersectional analysis do not necessarily traverse national and regional boundaries nor genealogical exigencies, presuming and producing static epistemological renderings of categories themselves across historical and geopolitical locations. Indeed, many of the cherished categories of the intersectional mantra – originally starting with race, class, gender, now including sexuality, nation, religion, age, and disability – are the products of modernist colonial agendas and regimes of epistemic violence, operative through a Western/Euro-American epistemological formation through which the notion of discrete identity has emerged. Joseph Massad quite astutely points out, in his refinement of Foucauldian framings of sexuality, that the colonial project deployed “sexuality” as a concept that was largely internalized within intellectual and juridical realms but was not distilled as a widespread hegemonic project. While one might worry, then, about the development and adaptation of the terms *gay* or *lesbian* or the globalization of the term *queer*, Massad highlights the graver problem of the generalization and assumed transparency of the term *sexuality* itself – a taken for granted category of the modernist imperial project, not only an imposed epistemological frame, but also ontologically presumptuous – or in fact, an epistemological capture of an ontologically irreducible becoming (Massad 2009).

These problems of epistemic violence are reproduced in feminist and gay and lesbian human rights discourses, as intersectionality is now widely understood as a policy-friendly paradigm. In her piece detailing the incorporation of the language and the conceptual frame of intersectionality into UN and NGO forums, Nira Yuval-Davis points out: “The analysis and methodology of intersectionality, especially in UN-related bodies is just emerging and often suffers from analytic confusions that have already been tackled by feminist scholars who have been working on these issues for longer” (Yuval-Davis 2006, 206). Yuval-Davis also notes that the relatively recent spread of intersectionality in Europe has largely been attributed to its amenability to policy discussions, an attribution she argues elides the work on migrant feminisms in Europe and particularly the scholarly interventions of black British feminists in the 1970s. To further complicate the travels of intersectional theorizing, in the United States intersectionality came from a very specific set of social movements, whereas in Europe, where the term is currently being widely taken up, the interest in intersectionality does not emerge from social

movements (and in fact, as Yuval-Davis points out, with the exception perhaps of Britain, the efforts of migrant women to challenge dominant feminist frames went largely ignored). Rather, this newfound interest in intersectionality signals a belated recognition of the need to theorize racial difference; it also functions as a method for European women's studies to "catch up institutionally" with U.S. women's studies. The category "nation" therefore appears to be the least theorized and acknowledged of intersectional categories, transmitted through a form of globalizing transparency. The United States is reproduced as the dominant site of feminist inquiry through the use of intersectionality as a heuristic to teach difference. Thus, the Euro-American bias of women's studies and history of feminism is ironically reiterated via intersectionality, eliding the main intervention of transnational and postcolonial feminist scholars since the 1990s, which has been, in part, about destabilizing the nation-centered production of the category WOC (Kaplan and Grewal 1994).

The issues I have sketched out reflect issues about knowledge production and suggest that intersectionality is a viable corrective to epistemological violence, should these limitations regarding subject positioning be addressed. But a different critique suggests that intersectionality functions as a problematic reinvestment in the humanist subject, in particular, the "subject X." Rey Chow has produced the most damning critique of what she calls "poststructuralist significatory incarceration," seriously questioning whether the marginalized subject is still a viable site from which to produce politics, much less whether the subject is a necessary precursor for politics (Chow 2006, 53). "Difference" produces new subjects of inquiry that then infinitely multiply exclusion in order to promote inclusion. Difference now precedes and defines identity. Part of Chow's concern is that poststructuralist efforts to attend to the specificity of Others has become a universalizing project that is always beholden to the self-referentiality of the "center," ironically given that intersectionality functions as a call for and a form of antiessentialism (Brah and Phoenix 2004, 76). The poststructuralist fatigue Chow describes is contingent on the following temporal sequencing: Subject X may be different in content, but shows up, time and again, as the same in form. (Examples might be found in the relatively recent entrance of both "trans" identity and "disability" into the intersectional fray.)

## Cyborgs and Other Companionate Assemblages

The literature on intersectionality has been bolstered by the focus on representational politics; scholars concerned with the impact and development of representational politics rarely come into dialogue with those convinced of the nonrepresentational referent of "matter itself." There has yet to be a serious interrogation of how these theories on matter and mattering might animate conceptualizations of intersectionality. I am speaking broadly of the work of Donna Haraway, Elizabeth Grosz, Elizabeth Wilson, Karan Barad, Patricia Clough, Dianne Currier, Claire Colebrook, Vicky Kirby, Miriam Fraser, and Luciana Parisi, to name a few. While this group is an artificial construction of my own making and reflects many divergent interests and different theoretical orientations, a few noteworthy commonalities run across them. Divested from subject formation (but for different reasons than Chow), these feminist scholars in science and technology studies, some inflected by posthumanism, others by Deleuzian thought, have generally argued that the liminality of bodily matter cannot be captured by intersectional subject positioning. They proffer instead the notion that bodies are unstable entities that cannot

be seamlessly disaggregated into identity formations. Elizabeth Grosz, for example, foregrounding its spatial and temporal essentializations, calls intersectionality “a gridlock model that fails to account for the mutual constitution and indeterminacy of embodied configurations of gender, sexuality, race, class, and nation” (Grosz 1994). They can be loosely described as feminist materialists or feminists invested in de-centering linguistic signification and social constructionism that still takes a division between matter and discourse as the starting point for deconstructive critique.<sup>9</sup>

Haraway has arguably been the most influential of this group. In a leading text from this literature she famously stated, as the very last line in her groundbreaking 1985 essay “A Manifesto for Cyborgs” that she would rather be a cyborg than a goddess, favoring the postmodern technologized figure of techno-human over the reclamation of a racialized, matriarchal past, thus implicitly invoking this binary between intersectionality and assemblage (Haraway 1985). Several theorists have critiqued Haraway’s use of the trope of “woman of color” to denote a cyborg par excellence, including Chela Sandoval and Schueller (who has argued that women of color function as a prosthetic to the cyborg myth, which, as I point out earlier, is not unlike how WOC function in relation to intersectionality) (Sandoval 2000; Schueller 2005). Even though Haraway’s cyborgs are meant to undermine binaries – of humans and animals, of humans and machines, and of the organic and inorganic – a cyborg actually inhabits the intersection of body and technology. Dianne Currier writes: “In the construction of a cyborg, technologies are added to impact upon, and at some point intersect with a discrete, non-technological ‘body.’ … Thus, insofar as the hybrid cyborg is forged in the intermeshing of technology with a body, in a process of addition, it leaves largely intact those two categories – (human) body and technology – that preceded the conjunction.” Currier argues that despite intending otherwise, the theorization of cyborgs winds up unwittingly “reinscribing the cyborg into the binary logic of identity which Haraway hopes to circumvent” (Currier 2003, 323). Haraway does not actually approach a human/animal/machine nexus, though more recent theorizations of the nature/culture divide, by Luciana Parisi for example, demarcate the biophysical, the biocultural, and the biodigital (Parisi 2004, 12). Still, the question of how the body is materialized, rather than what the body signifies, is the dominant one in this literature.

“Assemblage” is actually an awkward translation of the French term *agencement*. The original term in Deleuze and Guattari’s work is not the French word *assemblage*, but *agencement*, a term that means design, layout, organization, arrangement, and relations – the focus being not on content but on relations, relations of patterns (Phillips 2006, 108). In *agencement*, as John Phillips explains, specific *connections with other concepts* is precisely what gives them their meaning. Concepts do not prescribe relations, nor do they exist prior to them; rather, relations of force, connection, resonance, and patterning give rise to concepts. As Phillips writes, the priority is neither to “the state of affairs [what one might call essence] nor the statement [enunciation or expression of that essence] but rather of their connection, which implies the production of a sense that exceeds them and of which, transformed, they now form parts” (*ibid.*, 108). The French and English definitions of assemblage, however, both refer to a collection of things, a combination of items and the fact of assembling. The problematic that haunts this traversal from French theoretical production to U.S. academic usage is about the generative effects of this “mistranslation.” Phillips argues that the enunciation of *agencement* as assemblage might be “justified as a further event of *agencement* (assemblage) were it not for the tendency of discourses of knowledge to operate as statements *about* states of affairs” (*ibid.*, 109).

One productive way of approaching this continental impasse would be to ask not necessarily what assemblages are, but rather, what assemblages do. What does assemblage as a conceptual frame do, and what does their theoretical deployment as such do? What is a practice of *agencement*? For current purposes, assemblages are interesting because they de-privilege the human body as a discrete organic thing. As Haraway notes, the body does not end at the skin. We leave traces of our DNA everywhere we go, we live with other bodies within us, microbes and bacteria, we are enmeshed in forces, affects, energies, we are composites of information. Assemblages do not privilege bodies as human, nor as residing within a human animal/nonhuman animal binary. Along with a de-exceptionalizing of human bodies, multiple forms of matter can be bodies – bodies of water, cities, institutions, and so on. Matter is an actor. Following Karen Barad on her theory of performative metaphysics, matter is not a “thing” but a doing. In particular, Barad challenges dominant notions of performativity that operate through an implicit distinction between signification and that which is signified, stating that matter does not materialize through signification alone. Writes Barad:

A performative understanding of discursive practices challenges the representationalist belief in the power of words to represent preexisting things. Performativity, properly construed, is not an invitation to turn everything (including material bodies) into words; on the contrary, performativity is precisely a contestation of the excessive power granted to language to determine what is real. Hence, in ironic contrast to the monism that takes language to be the stuff of reality, performativity is actually a contestation of the unexamined habits of mind that grant language and other forms of representation more power in determining our ontologies than they deserve (Barad 2003, 802).<sup>10</sup>

Barad's is a posthumanist framing that questions the boundaries between human and nonhuman, matter and discourse, and interrogates the practices through which these boundaries are constituted, stabilized, and destabilized. Signification is only one element of many that give a substance both meaning and capacity. In his book *A New Philosophy of Society: Assemblage Theory and Social Complexity*, Manuel DeLanda undertakes the radical move to “make language last” (DeLanda 2006, 16). In this post-poststructuralist framing, essentialism, which is usually posited as the opposite of social constructionism, is now placed squarely within the realms of signification and language, what DeLanda and others have called “linguistic essentialism.” Karen Barad writes: “Language has been granted too much power. The linguistic turn, the semiotic turn, the interpretative turn, the cultural turn; it seems that at every turn lately every ‘thing’ is turned into language or some other form of cultural representation.... There is an important sense in which the only thing that does not seem to matter anymore is matter” (Barad 2003, 801). Categories – race, gender, sexuality – are considered events, actions, and encounters between bodies, rather than simply entities and attributes of subjects. Situated along a “vertical and horizontal axis,” assemblages come into existence within processes of deterritorialization and reterritorialization. In *A Thousand Plateaus*, Deleuze and Guattari problematize a model that produces a constant in order to establish its variations. Instead, they argue, assemblages foreground no constants but rather “variation to variation” and hence the event-ness of identity (Deleuze and Guattari 1987). DeLanda thus argues that race and gender are situated as attributes only within a study of “the pattern of recurring links, as well as the properties of those links” (DeLanda 2006, 56). Using the notion of assemblage (note the

translation of *agencement* as “arrangement” here), Guattari elaborates the limits of “molar” categories such as class:

Take the notion of class, or the class struggle. It implies that there are perfectly delimited sociological objects: bourgeoisie, proletariat, aristocracy.... But these entities become hazy in the many interzones, the intersections of the petite bourgeoisie, the aristocratic bourgeoisie, the aristocracy of the proletariat, the lumpenproletariat, the nonguaranteed elite.... The result: an indeterminacy that prevents the social field from being mapped out in a clear and distinct way, and which undermines militant practice. Now the notion of arrangement can be useful here, because it shows that social entities are not made up of bipolar oppositions. Complex arrangements place parameters like race, sex, age, nationality, etc., into relief. Interactive crossings imply other kinds of logic than that of two-by-two class oppositions. Importing this notion of arrangement to the social field isn’t just a gratuitous theoretical subtlety. But it might help to configure the situation, to come up with cartographies capable of identifying and eluding certain simplistic conceptions concerning class struggle. (Guattari 2009, 26)

### **Re-reading Intersectionality as Assemblage**

One of Crenshaw’s foundational examples – that of the traffic intersection – does indeed describe intersectionality as an event. Crenshaw writes, “Consider an analogy to traffic in an intersection, coming and going in all four directions. Discrimination, like traffic through an intersection, may flow in one direction, and it may flow in another. If an accident happens in an intersection, it can be caused by cars traveling from any number of directions and, sometimes, from all of them.” And later: “But it is not always easy to reconstruct an accident: Sometimes the skid marks and the injuries simply indicate that they occurred simultaneously, frustrating efforts to determine which driver caused the harm. In these cases the tendency seems to be that no driver is held responsible, no treatment is administered, and the involved parties simply get back in their cars and zoom away” (Crenshaw 1989, 149).

As Crenshaw indicates in this description, identification is a process; identity is an encounter, an event, an accident, in fact. Identities are multicausal, multidirectional, liminal; traces aren’t always self-evident. The problem of how the two preexisting roads come into being notwithstanding, there is emphasis on motion rather than gridlock, on how the halting of motion produces the demand to locate. The accident itself indicates the entry of the standardizing needs of the juridical; is there a crime taking place? How does one determine who is at fault? As a metaphor, then, intersectionality is a more porous paradigm than the standardization of method inherent to a discipline has allowed it to be; the institutionalization of women’s studies in the United States has led to demands for a subject/s (subject X, in fact) and a method.

However animated the scene of the accident at the traffic intersection might read, it still remains, I would argue, primarily trapped within the logic of identity. I want to turn now to a moment in Brian Massumi’s *Parables for the Virtual* where he reads an incident of domestic violence through what he calls the “home event-space” (Massumi 2002, 81). For him, the event is not defined as a discrete act or series of actions or activities, but rather the “folding of dimensions of time into each other” (*ibid.*, 15). This folding of dimensions of time is a result of the “conversion of surface distance into intensity

[which] is also the conversion of the materiality of the body into an event" (*ibid.*, 14). Interested in the claim regarding a purported increase in domestic violence during Super Bowl Sunday, Massumi writes:

The home entry of the game, at its crest of intensity, upsets the fragile equilibrium of the household. The patterns of relations between household bodies is reproblematised. The game event momentarily interrupts the pattern of extrinsic relations generally obtaining between domestic types, as typed by gender. A struggle ensues: a gender struggle over clashing codes of sociality, rights to access to portions of the home and its contents, and rituals of servitude. The sociohistorical home place converts into an event space. The television suddenly stands out from the background of the furnishings, imposing itself as a catalytic part-subject, arraying domestic bodies around itself according to the differential potentials generally attaching to their gender type. For a moment, everything is up in the air – and around the TV set, and between the living room and the kitchen. In proximity to the TV, words and gestures take on unaccustomed intensity. Anything could happen. The male body, sensing the potential, transduces the heterogeneity of the elements of the situation into a reflex readiness to violence. The "game" is rigged by the male's already-constituted propensity to strike. The typical pattern of relations is re-imposed in the unity of movement of hand against face. The strike expresses the empirical reality of situation: recontainment by the male-dominated power formation of the domestic. The event short-circuits. The event is recapture. The home event-space is back to the place it was: a container of asymmetric relations between terms already constituted according to gender. Folding back onto domestication. Coded belonging, no becoming. (*ibid.*, 80–81)

So what transpires in this assemblage of the event-space? There is an intensification of the body's relation to itself (one definition of affect), produced not only by the significance of the game, Super Bowl Sunday, but by the bodily force and energy given over to this significance. The difference between signification and significance (sense, value, force) is accentuated. There is a focus on the patterns of relations – not the entities themselves, but the patterns within which they are arranged with each other. The placements within the space itself have not necessarily altered, but the intensified relations have given new capacities to the entities ("The television suddenly stands out"). Not Assemblage, but *Agencement*. "Household" bodies are not organic bodies alone: the television is an actor, a matter with force, conveying (not deterministically, but suggestively) who moves where and how and when. The television is an affective conductor: "In proximity to the TV, words and gestures take on an unaccustomed intensity." There is a sense of potentiality, a becoming. "Anything could happen." It is a moment of deterritorialization, a line of flight, something not available for immediate capture – "everything is up in the air," and quite literally, the air is charged with possibility. Intersectional identity comes into play, as the (white) male is always already ideologically coded as more prone to violence. Finally, the strike happens: the hand against face. The line of flight is reterritorialized, forward into the social script, a closing off of one becoming, routed into another assemblage.

Massumi writes: "The point of bringing up this issue is not to enter the debate on whether there is an empirically provable causal link between professional sports and violence against women. The outpouring of verbal aggression provoked by the mere suggestion that there was a link is enough to establish the theoretical point in question here: that what the mass media transmit is not fundamentally image-content but event-potential" (Massumi 2002, 269n5). Thus, this reading of Massumi's is not a textual

analysis of the possibility that watching violent television produces violence, or violent subjects. It is not a theory of spectatorship identification, but of affective intensification: the meeting of technology (good old television, no need to always privilege the Internet), bodies, matter, molecular movements, and energetic transfers. Massumi has been criticized for aestheticizing violence, but I would argue that what he conveys so well is the interplay between signification and significance, movement and capture, matter and meaning, affect and identity. Unlike Crenshaw's accident at the traffic intersection, the focus here is not on whether there is a crime taking place, nor determining who is at fault, but rather asking, what are the affective conditions necessary for the event-space to unfold? In the most basic of feminist terms, we can read Massumi's interest in unravelling the script as offering a different way of thinking about the questions, what causes domestic violence and how can we prevent it?

There's obviously much more to say about such an example; certainly one can note (once again) that Massumi also presumes sex/gender differentiation as the primary one that locates bodies on the grid. But in rereading Massumi's example, one sees, as Saldanha argues, using the Deleuzian concepts of "molar" and "molecular" differences, that intersectionality as a concept "is only meant for the molar 'level' ... molecular forces continually upset the topological localizability of a body" (Saldanha 2010, 290). In closing, and as an effort to signpost the lines of flight this essay cannot fully follow given space restrictions, my own concerns about intersectional frameworks go far beyond rethinking its contextual specificity (this is not only about epistemological incongruence or correctives, but more importantly, ontological irreducibility). As I have argued in *Terrorist Assemblages*: "No matter how intersectional our models of subjectivity, no matter how attuned to locational politics of space, place, and scale, these formulations – these fine tunings of intersectionality, as it were, that continue to be demanded – may still limit us if they presume the automatic primacy and singularity of the disciplinary subject and its identitarian interpellation" (Puar 2007, 206). My interest in interrogating the predominance of subjecthood itself is driven precisely by the limitations of poststructuralist critique that Rey Chow foregrounds, the concerns about the nature/culture divide and questions of language and matter that the technoscience and materialist feminists have outlined, and the attention to power and affect that assemblage theorists centralize.

I want to make one final connection between intersectionality, assemblage, and the debates on disciplinary societies and societies of control, derived from the work of Michel Foucault and Deleuze's extension of it. While discipline works at the level of identity, control works at the level of intensity; identity is a process involving an intensification of habituation, thus discipline and control are mutually entwined, though not necessarily compatible, with each other. In the 2007 English translation of Michel Foucault's 1977–78 lectures titled *Security, Territory, and Population*, Foucault distinguishes between disciplinary mechanisms and security apparatuses, what Deleuze would later come to call "control societies." On the disciplinary organization of multiplicity, Foucault writes: "Discipline is a mode of individualization of multiplicities rather than something that constructs an edifice of multiple elements on the basis of individuals who are worked on as, first of all, individuals" (Foucault 2007, 12). Many relations between discipline (exclusion and inclusion) and control (modulation, tweaking) have been proffered: one, as various overlapping yet progressive stages of market capitalism and governmentality; two, as coexisting models and exercises of power; three, control as an effect of disciplinary

apparatuses – control as the epitome of a disciplinary society par excellence (in that disciplinary forms of power exceed their sites to reproduce everywhere); and finally, as Foucault suggests above, disciplinary frames as a form of control and as a response to the proliferation of control.

It seems to me, and I pose these as speculative points that I continue to think through, that intersectional critique has both intervened in the legal and capitalist structures that demand the fixity of the rights-bearing subject and has also simultaneously reproduced the disciplinary demands of that subject formation. As Norma Alarcon presciently asked, in 1984, in her response to the publication of *This Bridge Called My Back*, are we going to make a subject of the whole world? (Alarcon 1990, 361). If, as Brah and Phoenix argue, “a key feature of feminist analysis of intersectionality is … decentering … the normative subject of feminism” (Brah and Phoenix 2004, 78), then how do feminist thinkers address the problem that the construct of the subject is itself already normative? At this productive impasse, then, is this conundrum: the heuristic of intersectionality has produced a tremendous amount of work on WOC while concomitantly excusing white feminists from this work, re-centering gender and sexual difference as foundational and primary – indeed, this amplification of knowledge has in some senses been at the cost of WOC. Yet “we” (this “we” always under duress and contestation) might be reaching a poststructuralist fatigue around the notion of the subject itself. The limits of the epistemological corrective are encountered.

Therefore, to dismiss assemblages in favor of retaining intersectional identitarian frameworks is to dismiss how societies of control tweak and modulate bodies as matter, not predominantly through signification or identity interpellation but rather through affective capacities and tendencies. It is also to miss that assemblages encompass not only ongoing attempts to destabilize identities and grids, but also the forces that continue to mandate and enforce them. That is to say, grid making is a recognized process of *agencement*. But to render intersectionality as an archaic relic of identity politics bypasses entirely the possibility that for some bodies – we can call them statistical outliers, or those consigned to premature death, or those once formerly considered useless bodies or bodies of excess – discipline and punish may well still be a primary apparatus of power. There are different conceptual problems posed by each; intersectionality attempts to comprehend political institutions and their attendant forms of social normativity and disciplinary administration, while assemblages, in an effort to reintroduce politics into the political, asks what is prior to and beyond what gets established. So one of the big payoffs for thinking through the intertwined relations of intersectionality and assemblages is that it can help us produce more roadmaps of precisely these not quite fully understood relations between discipline and control.

To return to the title of this piece, and the juxtaposition that Haraway (unfortunately, but presciently) renders, would I really rather be a cyborg than a goddess? The former hails the future in a teleological technological determinism – culture – that seems not only overdetermined, but also exceptionalizes our current technologies. The latter – nature – is embedded in the racialized matriarchal mythos of feminist reclamation narratives. Certainly it sounds sexier, these days, to lay claim to being a cyborg than a goddess. But why disaggregate the two when there surely must be cyborgian goddesses in our midst? Now that is a becoming-intersectional assemblage that I could really appreciate.

## Notes

- 1 For a comprehensive overview of these debates in queer theory, see Taylor et al., 2011.
- 2 For the full reading of Massumi on movement and my interpretation of it regarding debates on intersectionality, see Puar 2007, 211–26.
- 3 Disrupting hegemonic frames of race and gender seems to be the initial impetus for many intersectional analyses, while other oppressions follow; for example, the Combahee River Collective writes: “A combined anti-racist and anti-sexist position drew us together initially, and as we developed politically we addressed ourselves to heterosexism and economic oppression under capitalism” (Combahee River Collective, The Combahee River Collective Statement, 1979).
- 4 My point here is simple: intersectionality rarely refers to work on white subjects, with the important exception of white working-class women. And more generally it rarely refers to work addressing privileged subjects, for example, white upper-class men. While the study of these subjects may well indeed involve an intersectional analysis or approach, the claim to the term itself is sutured to a referent that leads to racial essentialization.
- 5 As Lorde writes, “As a forty-nine-year-old Black lesbian feminist socialist mother of two, including one boy, and a member of an interracial couple ...” (1984, 120).
- 6 This is despite the fact that there are wide geopolitical differences in the interest in intersectionality. As someone who works with graduate students at Rutgers, I encounter a variety of uneven responses to the importance of intersectionality, determined in part by variations among women’s and gender studies programs and geographical regions – from students who are well schooled in the lexicon of intersectionality and presume a taken-for-grantedness of its necessity, to those who have never encountered it in their undergraduate schooling.
- 7 This is an observation based on responses to my work as well as anecdotal evidence from several WOC with whom I have discussed these issues.
- 8 Schueller’s overall project examines the use of racial analogy as way of restabilizing white women as the proper subject of feminism, what she terms “incorporation by analogy.”
- 9 There have been many varied strands of materialist feminism and not all of these thinkers would describe themselves as such. For a good overview of what has been recently hailed as “the new materialisms,” see the Introduction to Coole and Frost 2010.
- 10 While I find Barad very useful in thinking about how performativity has come to signal a predominantly linguistic process, the danger of her notion of “ontological realism” is that the effort to destabilize linguist essentialism may well privilege an essentialized truth produced through matter, a sort of ontological essentialism or materialist essentialism that uses a linguistic frame – performativity – to shore up the durational temporalities of matter. A similar conundrum appears in the work of Jane Bennet’s *Vibrant Matter: A Political Ecology of Things*. Her otherwise instructive theorization of the vitality of matter is undercut, in my opinion, by the use of “agency” as something that can be accorded to certain forms of matter. Agency as it has historically been deployed refers to the capacities of the liberal humanist subject, an anthropocentric conceptualization of movement.

# CHAPTER 9

## Epistemology of the Closet

*Eve Kosofsky Sedgwick*

Eve Sedgwick's *Epistemology of the Closet* (1990) is part of the body of scholarship and theory that grew especially in the 1980s and 1990s around the issue of gay and lesbian representation in literature. Sedgwick's work is important for the way it conceives of that issue in terms of the question of knowledge and secrecy. Important in her work as well is the argument that sexuality and gender do not match up in any easily identifiable manner. As many gay theorists noted regarding the US Supreme Court's rulings against homosexuals, the very "unnatural" sexual practices that supposedly distinguish gays from straights are practiced by many heterosexual couples.

Historically, the framing of *Epistemology of the Closet* begins with a puzzle. It is a rather amazing fact that, of the very many dimensions along which the genital activity of one person can be differentiated from that of another (dimensions that include preference for certain acts, certain zones or sensations, certain physical types, a certain frequency, certain symbolic investments, certain relations of age or power, a certain species, a certain number of participants, etc. etc. etc.), precisely one, the gender of object choice, emerged from the turn of the century, and has remained, as the dimension denoted by the now ubiquitous category of "sexual orientation." This is not a development that would have been foreseen from the viewpoint of the fin de siècle itself, where a rich stew of male algolagnia, child-love, and autoeroticism, to mention no more of its components, seemed to have as indicative a relation as did homosexuality to the whole, obsessively entertained problematic of sexual "perversion" or, more broadly, "decadence." Foucault, for instance, mentions the hysterical woman and the masturbating child, along with "entomologized" sexological categories such as zoophiles, zooerasts, auto-monosexualists, and gynecomasts, as typifying the new sexual taxonomies, the "*specification of individuals*" that facilitated the modern freighting of sexual definition with epistemological and power relations.<sup>1</sup> True as his notation is, it suggests without beginning to answer the further question: why the category of "the masturbator," to choose only one example,

*Original publication details:* Eve Kosofsky Sedgwick, "Epistemology of the Closet" from *Epistemology of the Closet*, pp. 8–13, 27–35. University of California Press, 1990.  
Reproduced with permission from University of California Press.

should by now have entirely lost its diacritical potential for specifying a particular kind of person, an identity, at the same time as it continues to be true – becomes increasingly true – that, for a crucial strain of Western discourse, in Foucault's words “the homosexual was now a species.”<sup>2</sup> So, as a result, is the heterosexual, and between *these* species the human species has come more and more to be divided. *Epistemology of the Closet* does not have an explanation to offer for this sudden, radical condensation of sexual categories; instead of speculating on its causes, the book explores its unpredictably varied and acute implications and consequences.

At the same time that this process of sexual specification or species-formation was going on, the book will argue, less stable and identity-bound understandings of sexual choice also persisted and developed, often among the same people or interwoven in the same systems of thought. Again, the book will not suggest (nor do I believe there currently exists) any standpoint of thought from which the rival claims of these minoritizing and universalizing understandings of sexual definition could be decisively arbitrated as to their “truth.” Instead, the performative effects of the self-contradictory discursive field of force created by their overlap will be my subject. And, of course, it makes every difference that these impactions of homo/heterosexual definition took place in a setting, not of spacious emotional or analytic impartiality, but rather of urgent homophobic pressure to devalue one of the two nominally symmetrical forms of choice.

As several of the formulations above would suggest, one main strand of argument in this book is deconstructive, in a fairly specific sense. The analytic move it makes is to demonstrate that categories presented in a culture as symmetrical binary oppositions – heterosexual/homosexual, in this case – actually subsist in a more unsettled and dynamic tacit relation according to which, first, term B is not symmetrical with but subordinated to term A; but, second, the ontologically valorized term A actually depends for its meaning on the simultaneous subsumption and exclusion of term B; hence, third, the question of priority between the supposed central and the supposed marginal category of each dyad is irresolvably unstable, an instability caused by the fact that term B is constituted as at once internal and external to term A. Harold Beaver, for instance, in an influential 1981 essay sketched the outlines of such a deconstructive strategy:

The aim must be to reverse the rhetorical opposition of what is “transparent” or “natural” and what is “derivative” or “contrived” by demonstrating that the qualities predicated of “homosexuality” (as a dependent term) are in fact a condition of “heterosexuality”; that “heterosexuality,” far from possessing a privileged status, must itself be treated as a dependent term.<sup>3</sup>

To understand these conceptual relations as irresolvably unstable is not, however, to understand them as inefficacious or innocuous. It is at least premature when Roland Barthes prophesies that “once the paradigm is blurred, utopia begins: meaning and sex become the objects of free play, at the heart of which the (polysemant) forms and the (sensual) practices, liberated from the binary prison, will achieve a state of infinite expansion.”<sup>4</sup> To the contrary, a deconstructive understanding of these binarisms makes it possible to identify them as sites that are *peculiarly* densely charged with lasting potentials for powerful manipulation – through precisely the mechanisms of self-contradictory definition or, more succinctly, the double bind. Nor is a deconstructive analysis of such definitional knots, however necessary, at all sufficient to disable them. Quite the opposite: I would suggest that an understanding of their irresolvable instability has been

continually available, and has continually lent discursive authority, to antigay as well as to gay cultural forces of this century. Beaver makes an optimistic prediction that “by disqualifying the autonomy of what was deemed spontaneously immanent, the whole sexual system is fundamentally decentred and exposed.”<sup>5</sup> But there is reason to believe that the oppressive sexual system of the past hundred years was if anything born and bred (if I may rely on the pith of a fable whose value doesn’t, I must hope, stand or fall with its history of racist uses) in the briar patch of the most notorious and repeated decenterings and exposures.

These deconstructive contestations can occur, moreover, only in the context of an entire cultural network of normative definitions, definitions themselves equally unstable but responding to different sets of contiguities and often at a different rate. The master terms of a particular historical moment will be those that are so situated as to entangle most inextricably and at the same time most differentially the filaments of other important definitional nexuses. In arguing that homo/heterosexual definition has been a presiding master term of the past century, one that has the same, primary importance for all modern Western identity and social organization (and not merely for homosexual identity and culture) as do the more traditionally visible cruxes of gender, class, and race, I’ll argue that the now chronic modern crisis of homo/heterosexual definition has affected our culture through its ineffaceable marking particularly of the categories secrecy/disclosure, knowledge/ignorance, private/public, masculine/feminine, majority/minority, innocence/initiation, natural/artificial, new/old, discipline/terrorism, canonic/noncanonic, wholeness/decadence, urbane/provincial, domestic/foreign, health/illness, same/different, active/passive, in/out, cognition/paranoia, art/kitsch, utopia/apocalypse, sincerity/sentimentality, and voluntariness/addiction.<sup>6</sup> And rather than embrace an idealist faith in the necessarily, immanently self-corrosive efficacy of the contradictions inherent to these definitional binarisms, I will suggest instead that contests for discursive power can be specified as competitions for the material or rhetorical leverage required to set the terms of, and to profit in some way from, the operations of such an incoherence of definition.

Perhaps I should say something about the project of hypothesizing that certain binarisms that structure meaning in a culture may be “ineffaceably marked” by association with this one particular problematic – ineffaceably even when invisibly. Hypothesizing is easier than proving, but indeed I cannot imagine the protocol by which such hypotheses might be *tested*; they must be deepened and broadened – not the work of one book – and used, rather than proved or disproved by a few examples. The collecting of instances of each binarism that would appear to “common sense” to be unmarked by issues of homo/heterosexual definition, though an inexhaustibly stimulating heuristic, is not, I believe, a good test of such a hypothesis. After all, the particular kinds of skill that might be required to produce the most telling interpretations have hardly been a valued part of the “common sense” of this epistemologically cloven culture. If a painstaking process of accumulative reading and historical de- and recontextualization does not render these homologies resonant and productive, that is the only test they can directly fail, the only one they need to pass.

The structure of the present book has been markedly affected by this intuition – by a sense that the cultural interrogations it aims to make imperative will be trivialized or evacuated, at this early stage, to the degree that their procedures seem to partake of the *a priori*. I’ve wanted the book to be inviting (as well as imperative) but resolutely non-algorithmic. A point of the book is *not to know* how far its insights and projects are

generalizable, not to be able to say in advance where the semantic specificity of these issues gives over to (or: itself structures?) the syntax of a “broader” or more abstractable critical project. In particular, the book aims to resist in every way it can the deadening pretended knowingness by which the chisel of modern homo/heterosexual definitional crisis tends, in public discourse, to be hammered most fatally home....

*Axiom 2 The study of sexuality is not coextensive with the study of gender; correspondingly, antihomophobic inquiry is not coextensive with feminist inquiry. But we can't know in advance how they will be different.*

Sex, gender, sexuality: three terms whose usage relations and analytical relations are almost irremediably slippery. The charting of a space between something called “sex” and something called “gender” has been one of the most influential and successful undertakings of feminist thought. For the purposes of that undertaking, “sex” has had the meaning of a certain group of irreducible, biological differentiations between members of the species *Homo sapiens* who have XX and those who have XY chromosomes. These include (or are ordinarily thought to include) more or less marked dimorphisms of genital formation, hair growth (in populations that have body hair), fat distribution, hormonal function, and reproductive capacity. “Sex” in this sense – what I’ll demarcate as “chromosomal sex” – is seen as the relatively minimal raw material on which is then based the social construction of *gender*. Gender, then, is the far more elaborated, more fully and rigidly dichotomized social production and reproduction of male and female identities and behaviors – of male and female *persons* – in a cultural system for which “male/female” functions as a primary and perhaps model binarism affecting the structure and meaning of many, many other binarisms whose apparent connection to chromosomal sex will often be exiguous or nonexistent. Compared to chromosomal sex, which is seen (by these definitions) as tending to be immutable, immanent in the individual, and biologically based, the meaning of gender is seen as culturally mutable and variable, highly relational (in the sense that each of the binarized genders is defined primarily by its relation to the other), and inextricable from a history of power differentials between genders. This feminist charting of what Gayle Rubin refers to as a “sex/gender system,”<sup>7</sup> the system by which chromosomal sex is turned into, and processed as, cultural gender, has tended to minimize the attribution of people’s various behaviors and identities to chromosomal sex and to maximize their attribution to socialized gender constructs. The purpose of that strategy has been to gain analytic and critical leverage on the female-disadvantaging social arrangements that prevail at a given time in a given society, by throwing into question their legitimative ideological grounding in biologically based narratives of the “natural.”

“Sex” is, however, a term that extends indefinitely beyond chromosomal sex. That its history of usage often overlaps with what might, now, more properly be called “gender” is only one problem. (“I can only love someone of my own sex.” Shouldn’t “sex” be “gender” in such a sentence? “M. saw that the person who approached was of the opposite sex.” Genders – insofar as there are two and they are defined in contradistinction to one another – may be said to be opposite; but in what sense is XX the opposite of XY?) Beyond chromosomes, however, the association of “sex,” precisely through the physical body, with reproduction and with genital activity and sensation keeps offering new challenges to the conceptual clarity or even possibility of sex/gender differentiation. There is a powerful argument to be made that a primary (or *the* primary) issue in gender

differentiation and gender struggle is the question of who is to have control of women's (biologically) distinctive reproductive capability. Indeed, the intimacy of the association between several of the most signal forms of gender oppression and "the facts" of women's bodies and women's reproductive activity has led some radical feminists to question, more or less explicitly, the usefulness of insisting on a sex/gender distinction. For these reasons, even usages involving the "sex/gender system" within feminist theory are able to use "sex/gender" only to delineate a problematical *space* rather than a crisp distinction. My own loose usage in this book will be to denominate that problematized space of the sex/gender system, the whole package of physical and cultural distinctions between women and men, more simply under the rubric "gender." I do this in order to reduce the likelihood of confusion between "sex" in the sense of "the space of differences between male and female" (what I'll be grouping under "gender") and "sex" in the sense of sexuality.

For meanwhile the whole realm of what modern culture refers to as "sexuality" and *also* calls "sex" – the array of acts, expectations, narratives, pleasures, identity-formations, and knowledges, in both women and men, that tends to cluster most densely around certain genital sensations but is not adequately defined by them – that realm is virtually impossible to situate on a map delimited by the feminist-defined sex/gender distinction. To the degree that it has a center or starting point in certain physical sites, acts, and rhythms associated (however contingently) with procreation or the potential for it, "sexuality" in this sense may seem to be of a piece with "chromosomal sex": biologically necessary to species survival, tending toward the individually immanent, the socially immutable, the given. But to the extent that, as Freud argued and Foucault assumed, the distinctively sexual nature of human sexuality has to do precisely with its excess over or potential difference from the bare choreographies of procreation, "sexuality" might be the very opposite of what we originally referred to as (chromosomal-based) sex: it could occupy, instead, even more than "gender" the polar position of the relational, the social/symbolic, the constructed, the variable, the representational (see Figure 1). To note that, according to these different findings, *something* legitimately called sex or sexuality is all over the experiential and conceptual map is to record a problem less resolvable than a necessary choice of analytic paradigms or a determinate slippage of semantic meaning; it is rather, I would say, true to quite a range of contemporary worldviews and intuitions to find that sex/sexuality *does* tend to represent the full spectrum of positions between the most intimate and the most social, the most predetermined and the most aleatory, the most physically rooted and the most symbolically infused, the most innate and the most learned, the most autonomous and the most relational traits of being.

If all this is true of the definitional nexus between sex and sexuality, how much less simple, even, must be that between sexuality and gender. It will be an assumption of this study that there is always at least the potential for an analytic distance between gender and sexuality, even if particular manifestations or features of particular sexualities are among the things that plunge women and men most ineluctably into the discursive, institutional, and bodily enmeshments of gender definition, gender relation, and gender inequality. This, too, has been posed by Gayle Rubin:

I want to challenge the assumption that feminism is or should be the privileged site of a theory of sexuality. Feminism is the theory of gender oppression. ... Gender affects the operation of the sexual system, and the sexual system has had gender-specific manifestations. But although sex and gender are related, they are not the same thing.<sup>8</sup>

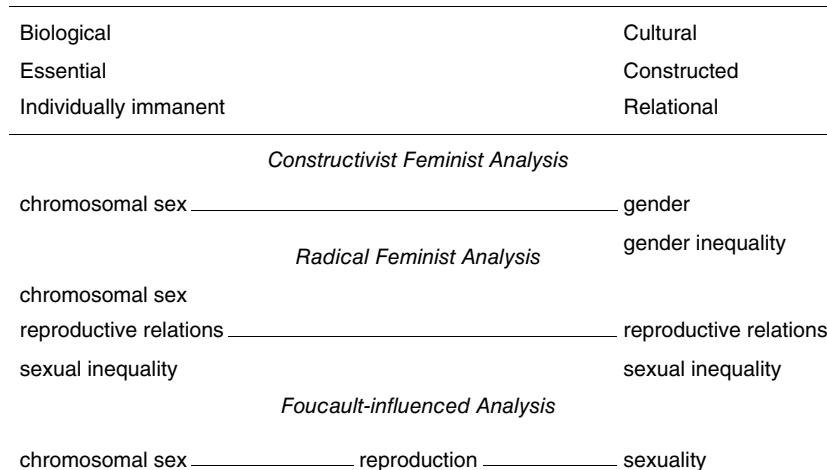

Figure 1 Some Mappings of Sex, Gender, and Sexuality.

This book will hypothesize, with Rubin, that the question of gender and the question of sexuality, inextricable from one another though they are in that each can be expressed only in the terms of the other, are nonetheless not the same question, that in twentieth-century Western culture gender and sexuality represent two analytic axes that may productively be imagined as being as distinct from one another as, say, gender and class, or class and race. Distinct, that is to say, no more than minimally, but nonetheless usefully.

Under this hypothesis, then, just as one has learned to assume that every issue of racial meaning must be embodied through the specificity of a particular class position – and every issue of class, for instance, through the specificity of a particular gender position – so every issue of gender would necessarily be embodied through the specificity of a particular sexuality, and vice versa; but nonetheless there could be use in keeping the analytic axes distinct.

An objection to this analogy might be that gender is *definitionally* built into determinations of sexuality, in a way that neither of them is definitionally intertwined with, for instance, determinations of class or race. It is certainly true that without a concept of gender there could be, quite simply, no concept of homo- or heterosexuality. But many other dimensions of sexual choice (auto- or alloerotic, within or between generations, species, etc.) have no such distinctive, explicit definitional connection with gender; indeed, some dimensions of sexuality might be tied, not to gender, but *instead* to differences or similarities of race or class. The definitional narrowing-down in this century of sexuality as a whole to a binarized calculus of *homo-* or *heterosexuality* is a weighty fact but an entirely historical one. To use that fait accompli as a reason for analytically conflating sexuality per se with gender would obscure the degree to which the fact itself requires explanation. It would also, I think, risk obscuring yet again the extreme intimacy with which all these available analytic axes do after all mutually constitute one another: to assume the distinctiveness of the *intimacy* between sexuality and gender might well risk assuming too much about the definitional *separability* of either of them from determinations of, say, class or race.

It may be, as well, that a damaging bias toward heterosocial or heterosexist assumptions inheres unavoidably in the very concept of gender. This bias would be built into any gender-based analytic perspective to the extent that gender definition and gender identity are necessarily relational between genders – to the extent, that is, that in any gender system, female identity or definition is constructed by analogy, supplementarity, or contrast to male, or vice versa. Although many gender-based forms of analysis do involve accounts, sometimes fairly rich ones, of intragender behaviors and relations, the ultimate definitional appeal in any gender-based analysis must necessarily be to the diacritical frontier between different genders. This gives heterosocial and heterosexual relations a conceptual privilege of incalculable consequence. Undeniably, residues, markers, tracks, signs referring to that diacritical frontier between genders are everywhere, as well, internal to and determinative of the experience of each gender and its intragender relations; gender-based analysis can never be dispensed with in even the most purely intragender context. Nevertheless it seems predictable that the analytic bite of a purely gender-based account will grow less incisive and direct as the distance of its subject from a social interface between different genders increases. It is unrealistic to expect a close, textured analysis of same-sex relations through an optic calibrated in the first place to the coarser stigmata of gender difference.<sup>9</sup> The development of an alternative analytic axis – call it sexuality – might well be, therefore, a particularly urgent project for gay/lesbian and antihomophobic inquiry.

It would be a natural corollary to Axiom 2 to hypothesize, then, that gay/lesbian and antihomophobic inquiry still has a lot to learn from asking questions that feminist inquiry has learned to ask – but only so long as we don't demand to receive the same answers in both interlocutions. In a comparison of feminist and gay theory as they currently stand, the newness and consequent relative underdevelopment of gay theory are seen most clearly in two manifestations. First, we are by now very used to asking as feminists what we aren't yet used to asking as antihomophobic readers: how a variety of forms of oppression intertwine systemically with each other; and especially how the person who is disabled through one set of oppressions may *by the same positioning* be enabled through others. For instance, the understated demeanor of educated women in our society tends to mark both their deference to educated men and their expectation of deference from women and men of lower class. Again, a woman's use of a married name makes graphic at the same time her subordination as a woman and her privilege as a presumptive heterosexual. Or, again, the distinctive vulnerability to rape of women of all races has become in this country a powerful tool for the racist enforcement by which white people, including women, are privileged at the expense of Black people of both genders. That one is *either* oppressed *or* an oppressor, or that if one happens to be both, the two are not likely to have much to do with each other, still seems to be a common assumption, however, in at any rate male gay writing and activism,<sup>10</sup> as it hasn't for a long time been in careful feminist work.

Indeed, it was the long, painful realization, *not* that all oppressions are congruent, but that they are *differently* structured and so must intersect in complex embodiments that was the first great heuristic breakthrough of socialist-feminist thought and of the thought of women of color.<sup>11</sup> This realization has as its corollary that the comparison of different axes of oppression is a crucial task, not for any purpose of ranking oppressions, but to the contrary because each oppression is likely to be in a uniquely indicative relation to certain distinctive nodes of cultural organization. The *special* centrality of homophobic oppression in the twentieth century, I will be

arguing, has resulted from its inextricability from the question of knowledge and the processes of knowing in modern Western culture at large.

The second and perhaps even greater heuristic leap of feminism has been the recognition that categories of gender and, hence, oppressions of gender can have a structuring force for nodes of thought, for axes of cultural discrimination, whose thematic subject isn't explicitly gendered at all. Through a series of developments structured by the deconstructive understandings and procedures sketched above, we have now learned as feminist readers that dichotomies in a given text of culture as opposed to nature, public as opposed to private, mind as opposed to body, activity as opposed to passivity, etc. etc., are, under particular pressures of culture and history, likely places to look for implicit allegories of the relations of men to women; more, that to fail to analyze such nominally ungendered constructs in gender terms can itself be a gravely tendentious move in the gender politics of reading. This has given us ways to ask the question of gender about texts even where the culturally "marked" gender (female) is not present as either author or thematic.

The dichotomy heterosexual/homosexual, as it has emerged through the last century of Western discourse, would seem to lend itself peculiarly neatly to a set of analytic moves learned from this deconstructive moment in feminist theory. In fact, the dichotomy heterosexual/homosexual fits the deconstructive template much more neatly than male/female itself does, and hence, importantly differently. The most dramatic difference between gender and sexual orientation – that virtually all people are publicly and unalterably assigned to one or the other gender, and from birth – seems if anything to mean that it is, rather, sexual orientation, with its far greater potential for rearrangement, ambiguity, and representational doubleness, that would offer the apter deconstructive object. An essentialism of sexual object-choice is far less easy to maintain, far more visibly incoherent, more visibly stressed and challenged at every point in the culture than any essentialism of gender. This is not an argument for any epistemological or ontological privileging of an axis of sexuality over an axis of gender; but it is a powerful argument for their potential distinctness one from the other.

Even given the imperative of constructing an account of sexuality irreducible to gender, however, it should already be clear that there are certain distortions necessarily built into the relation of gay/lesbian and antihomophobic theory to a larger project of conceiving a theory of sexuality as a whole. The two can after all scarcely be coextensive. And this is true not because "gay/lesbian and antihomophobic theory" would fail to cover heterosexual as well as same-sex object-choice (any more than "feminist theory" would fail to cover men as well as women), but rather because, as we have noted, sexuality extends along so many dimensions that aren't well described in terms of the gender of object-choice at all. Some of these dimensions are habitually condensed under the rubrics of object-choice, so that certain discriminations of (for instance) *act* or of (for another instance) *erotic localization* come into play, however implicitly and however incoherently, when categories of object-choice are mobilized. One used, for instance, to hear a lot about a high developmental stage called "heterosexual genitality," as though cross-gender object-choice automatically erased desires attaching to mouth, anus, breasts, feet, etc.; a certain anal-erotic salience of male homosexuality is if anything increasingly strong under the glare of heterosexist AIDS-phobia; and several different historical influences have led to the de-genitalization and bodily diffusion of many popular, and indeed many lesbian, understandings of lesbian sexuality. Other dimensions of sexuality, however, distinguish object-choice quite differently (e.g., human/animal,

adult/child, singular/plural, autoerotic/alloerotic) or are not even about object choice (e.g., orgasmic/nonorgasmic, noncommercial/commercial, using bodies only/using manufactured objects, in private/in public, spontaneous/scripted).<sup>12</sup> Some of these other dimensions of sexuality have had high diacritical importance in different historical contexts (e.g., human/animal, autoerotic/alloerotic). Others, like adult/child object choice, visibly do have such importance today, but without being very fully subsumed under the hetero/homosexual binarism. Still others, including a host of them I haven't mentioned or couldn't think of, subsist in this culture as nondiacritical differences, differences that seem to make little difference beyond themselves – except that the hyperintensive structuring of sexuality in our culture sets several of them, for instance, at the exact border between legal and illegal. What I mean at any rate to emphasize is that the implicit condensation of "sexual theory" into "gay/lesbian and antihomophobic theory," which corresponds roughly to our by now unquestioned reading of the phrase "sexual orientation" to mean "gender of object-choice," is at the very least damagingly skewed by the specificity of its historical placement.

- 6 My casting of all these definitional nodes in the form of binarisms, I should make explicit, has to do not with a mystical faith in the number two but, rather, with the felt need to schematize in some consistent way the treatment of social vectors so exceedingly various. The kind of falsification necessarily performed on each by this reduction cannot, unfortunately, itself be consistent. But the scope of the kind of hypothesis I want to pose does seem to require a drastic reductiveness, at least in its initial formulations.

# CHAPTER 10

## Queers, Read This

*Queer Nation*

The modern gay and lesbian movement began with the Stonewall revolt in New York in 1969. Gays and lesbians and transgender people rejected police harassment, which had been common up to that moment. Seldom have single events changed history so vividly or effectively. However, by the late 1980s, the gay and lesbian movement that grew in the 1970s and 1980s was considered by many younger gay and lesbian activists to be too moderate and too assimilationist. The goal, they felt, was not to be "accepted" by straight heterosexual society. They rejected straight culture with its assumption that heterosexuality was the norm but that "deviants" were welcome. "Be nice to deviants" was not enough of a rallying cry for the younger generation. So they embraced their difference and became queer, adopting a pejorative term that had been used for decades to stigmatize as "other" anyone who departed from the dominant heterosexual paradigm. Rather than seek acceptance by a straight culture that was assumed to be normal, queers began to dismantle the assumptions that sustained that culture, rejecting the idea that gender had to be an identity or that there was anything that might be a norm in regard to either sex or gender. Queers celebrate the free-floating transitivity of gender forms and practices, and their work over the past several decades has been instrumental in adding transgender, bi, and queer to the diversity flag: LGBTQ. The pamphlet that follows was distributed at the 1990 Pride March in New York City.

### A Leaflet Distributed at Pride March in NY Published Anonymously by Queers June, 1990

How can I tell you. How can I convince you, brother, sister that your life is in danger: That everyday you wake up alive, relatively happy, and a functioning human being, you are committing a rebellious act. You as an alive and functioning queer are a revolutionary.

There is nothing on this planet that validates, protects or encourages your existence. It is a miracle you are standing here reading these words. You should by all rights be

*Original publication details:* Queer Nation, "Queers Read This." Queer Nation, 1990.

dead. Don't be fooled, straight people own the world and the only reason you have been spared is you're smart, lucky or a fighter.

Straight people have a privilege that allows them to do whatever they please and fuck without fear. But not only do they live a life free of fear; they flaunt their freedom in my face. Their images are on my TV, in the magazine I bought, in the restaurant I want to eat in, and on the street where I live. I want there to be a moratorium on straight marriage, on babies, on public displays of affection among the opposite sex and media images that promote heterosexuality. Until I can enjoy the same freedom of movement and sexuality, as straights, their privilege must stop and it must be given over to me and my queer sisters and brothers. Straight people will not do this voluntarily and so they must be forced into it. Straights must be frightened into it. Terrorized into it. Fear is the most powerful motivation. No one will give us what we deserve. Rights are not given they are taken, by force if necessary. It is easier to fight when you know who your enemy is. Straight people are your enemy. They are your enemy when they don't acknowledge your invisibility and continue to live in and contribute to a culture that kills you. Every day one of us is taken by the enemy. Whether it's an AIDS death due to homophobic government inaction or a lesbian bashing in an all-night diner (in a supposedly lesbian neighborhood).

### **An Army of Lovers cannot Lose**

Being queer is not about a right to privacy; it is about the freedom to be public, to just be who we are. It means everyday fighting oppression; homophobia, racism, misogyny, the bigotry of religious hypocrites and our own self-hatred. (We have been carefully taught to hate ourselves.) And now of course it means fighting a virus as well, and all those homo-haters who are using AIDS to wipe us off the face of the earth. Being queer means leading a different sort of life. It's not about the mainstream, profit-margins, patriotism, patriarchy or being assimilated. It's not about executive directors, privilege and elitism. It's about being on the margins, defining ourselves; it's about gender-fuck and secrets, what's beneath the belt and deep inside the heart; it's about the night. Being queer is "grass roots" because we know that everyone of us, every body, every cunt, every heart and ass and dick is a world of pleasure waiting to be explored. Everyone of us is a world of infinite possibility. We are an army because we have to be. We are an army because we are so powerful. (We have so much to fight for; we are the most precious of endangered species.) And we are an army of lovers because it is we who know what love is. Desire and lust, too. We invented them. We come out of the closet, face the rejection of society, face firing squads, just to love each other! Every time we fuck, we win. We must fight for ourselves (no one else is going to do it) and if in that process we bring greater freedom to the world at large then great. (We've given so much to that world: democracy, all the arts, the concepts of love, philosophy and the soul, to name just a few gifts from our ancient Greek Dykes, Fags.) Let's make every space a Lesbian and Gay space. Every street a part of our sexual geography. A city of yearning and then total satisfaction. A city and a country where we can be safe and free and more. We must look at our lives and see what's best in them, see what is queer and what is straight and let that straight chaff fall away! Remember there is so, so little time. And I want to be a lover of each and every one of you. Next year, we march naked.

## **Anger**

“The strong sisters told the brothers that there were two important things to remember about the coming revolutions, the first is that we will get our asses kicked. The second, is that we will win.”

I’m angry. I’m angry for being condemned to death by strangers saying, “You deserve to die” and “AIDS is the cure.” Fury erupts when a Republican woman wearing thousands of dollars of garments and jewelry minces by the police lines shaking her head, chuckling and wagging her finger at us like we are recalcitrant children making absurd demands and throwing temper tantrum when they aren’t met. Angry while Joseph agonizes over \$8,000 a over for AZT which might keep him alive a little longer and which makes him sicker than the disease he is diagnosed with. Angry as I listen to a man tell me that after changing his will five times he’s running out of people to leave things to. All of his best friends are dead. Angry when stand in a sea of quilt panels, or go to a candlelight march or attend yet another memorial service. I will not march silently with a fucking candle and I want to take that goddamned quilt and wrap myself in it and furiously rend it and my hair and curse every god religion ever created. I refuse to accept a creation that cuts people down in the third decade of their life.

It is cruel and vile and meaningless and everything I have in me rails against the absurdity and I raise my face to the clouds and a ragged laugh that sounds more demonic than joyous erupts from my throat and tears stream down my face and if this disease doesn’t kill me, I may just die of frustration. My feet pound the streets and Peter’s hands are chained to a pharmaceutical company’s reception desk while the receptionist looks on in horror and Eric’s body lies rotting in a Brooklyn cemetery and I’ll never hear his flute resounding off the walls of the meeting house again. And I see the old people in Tompkins Square Park huddled in their long wool coats in June to keep out the cold they perceive is there and to cling to whatever little life has left to offer them. I’m reminded of the people who strip and stand before a mirror each night before they go to bed and search their bodies for any mark that might not have been there yesterday. A mark that this scourge has visited them.

And I’m angry when the newspapers call us “victims” and sound alarms that “it” might soon spread to the “general population.” And I want to scream “Who the fuck am I?” And I want to scream at New York Hospital with its yellow plastic bags marked “isolation linen”, “ropa infecciosa” and its orderlies in latex gloves and surgical masks skirting the bed as if its occupant will suddenly leap out and douse them with blood and semen giving them too the plague.

And I’m angry at straight people who sit smugly wrapped in their self-protective coat of monogamy and heterosexuality confident that this disease has nothing to do with them because “it” only happens to “them.” And the teenage boys who upon spotting my Silence = Death button begin chanting “Faggot’s gonna die” and I wonder, who taught them this? Enveloped in fury and fear, I remain silent while my button mocks me every step of the way. And the anger I fell when a television program on the quilt gives profiles of the dead and the list begins with a baby, a teenage girl who got a blood transfusion, an elderly baptist minister and his wife and when they finally show a gay man, he’s described as someone who knowingly infected teenage male prostitutes with the virus. What else can you expect from a faggot?

I’m angry.

## Queer Artists

Since time began, the world has been inspired by the work of queer artists. In exchange, there has been suffering, there has been pain, there has been violence. Throughout history, society has struck a bargain with its queer citizens: they may pursue creative careers, if they do it discreetly. Through the arts queers are productive, lucrative, entertaining and even uplifting. These are the clear-cut and useful by-products of what is otherwise considered antisocial behavior. In cultured circles, queers may quietly coexist with an otherwise disapproving power elite.

At the forefront of the most recent campaign to bash queer artists is Jesse Helms, arbiter of all that is decent, moral, christian and amerikan. For Helms, queer art is quite simply a threat to the world. In his imaginings, heterosexual culture is too fragile to bear up to the admission of human or sexual diversity. Quite simply, the structure of power in the Judeo-Christian world has made procreation its cornerstone. Families having children assures consumers for the nation's products and a work force to produce them, as well as a built-in family system to care for its ill, reducing the expense of public healthcare systems.

ALL NON-PROCREATIVE BEHAVIOR IS CONSIDERED A THREAT, from homosexuality to birth control to abortion as an option. It is not enough, according to the religious right, to consistently advertise procreation and heterosexuality ... it is also necessary to destroy any alternatives. It is not art Helms is after.... IT IS OUR LIVES! Art is the last safe place for lesbians and gay men to thrive. Helms knows this, and has developed a program to purge queers from the one arena they have been permitted to contribute to our shared culture.

Helms is advocating a world free from diversity or dissent. It is easy to imagine why that might feel more comfortable to those in charge of such a world. It is also easy to envision an amerikan landscape flattened by such power. Helms should just ask for what he is hinting at: State sponsored art, art of totalitarianism, art that speaks only in christian terms, art which supports the goals of those in power, art that matches the sofas in the Oval Office. Ask for what you want, Jesse, so that men and women of conscience can mobilize against it, as we do against the human rights violations of other countries, and fight to free our own country's dissidents.

## If you're Queer,

Queers are under siege.

Queers are being attacked on all fronts and I'm afraid it's ok with us.

In 1969, there were 50 "Queer Bashings" in the month of May alone. Violent attacks, 3,720 men, women and children died of AIDS in the same month, caused by a more violent attack – government inaction, rooted in society's growing homophobia. This is institutionalized violence, perhaps more dangerous to the existence of queers because the attackers are faceless. We allow these attacks by our own continued lack of action against them. AIDS has affected the straight world and now they're blaming us for AIDS and using it as a way to justify their violence against us. They don't want us anymore. They will beat us, rape us and kill us before they will continue to live with us. What will it take for this not to be ok? Feel some rage. If rage doesn't empower you, try fear. If that doesn't work, try panic.

**Shout It!**

Be proud. Do whatever you need to do to tear yourself away from your customary state of acceptance. Be free. Shout.

In 1969, Queers fought back. In 1990, Queers say ok. Next year, will we be here?

**I Hate ...**

I hate Jesse Helms. I hate Jesse Helms so much I'd rejoice if he dropped down dead. If someone killed him I'd consider it his own fault.

I hate Ronald Reagan, too, because he mass-murdered my people for eight years. But to be honest, I hate him even more for eulogizing Ryan White without first admitting his guilt, without begging forgiveness for Ryan's death and for the deaths of tens of thousands of other PWA's – most of them queer. I hate him for making a mockery of our grief.

I hate the fucking Pope, and I hate John fucking Cardinal fucking O'Connor, and I hate the whole fucking Catholic Church. The same goes for the Military, and especially for Amerika's Law Enforcement Officials – the cops – state sanctioned sadists who brutalize street transvestites, prostitutes and queer prisoners. I also hate the medical and mental health establishments, particularly the psychiatrist who conviced me not to have sex with men for three years until we (meaning he) could make me bisexual rather than queer. I also hate the education profession, for its share in driving thousands of queer teens to suicide every year. I hate the "respectable" art world; and the entertainment industry, and the mainstream media, especially The New York Times. In fact, I hate every sector of the straight establishment in this country – the worst of whom actively want all queers dead, the best of whom never stick their necks out to keep us alive.

I hate straight people who think they have anything intelligent to say about "outing." I hate straight people who think stories about themselves are "universal" but stories about us are only about homosexuality. I hate straight recording artists who make their careers off of queer people, then attack us, then act hurt when we get angry and then deny having wronged us rather than apologize for it. I hate straight people who say, "I don't see why you feel the need to wear those buttons and t-shirts. I don't go around telling the whole world I'm straight."

I hate that in twelve years of public education I was never taught about queer people. I hate that I grew up thinking I was the only queer in the world, and I hate even more that most queer kids still grow up the same way. I hate that I was tormented by other kids for being a faggot, but more that I was taught to feel ashamed for being the object of their cruelty, taught to feel it was my fault. I hate that the Supreme Court of this country says it's okay to criminalize me because of how I make love. I hate that so many straight people are so concerned about my goddamned sex life. I hate that so many twisted straight people become parents, while I have to fight like hell to be allowed to be a father. I hate straights.

**Where Are You Sisters?**

I wear my pink triangle everywhere. I do not lower my voice in public when talking about lesbian love or sex. I always tell people I'm a lesbian. I don't wait to be asked about my "boyfriend." I don't say it's "no one's business."

I don't do this for straight people. Most of them don't know what the pink triangle even means. Most of them couldn't care less that my girlfriend and I are totally in love or having a fight on the street. Most of them don't notice us no matter what we do. I do what I do to reach other lesbians. I do what I do because I don't want lesbians to assume I'm a straight girl. I am out all the time, everywhere, because I WANT TO REACH YOU. Maybe you'll notice me, maybe we'll start talking, maybe we'll exchange numbers, maybe we'll become friends. Maybe we won't say a word but our eyes will meet and I will imagine you naked, sweating, openmouthed, your back arched as I am fucking you. And we'll be happy to know we aren't the only ones in the world. We'll be happy because we found each other, without saying a word, maybe just for a moment. But no.

You won't wear a pink triangle on that linen lapel. You won't meet my eyes if I flirt with you on the street. You avoid me on the job because I'm "too" out. You chastise me in bars because I'm "too political." You ignore me in public because I bring "too much" attention to "my" lesbianism. But then you want me to be your lover, you want me to be your friend, you want me to love you, support, you, fight for "OUR" right to exist.

### **Where Are You?**

You talk, talk, talk about invisibility and then retreat to your homes to nest with your lovers or carouse in a bar with pals and stumble home in a cab or sit silently and politely by while your family, your boss, your neighbors, your public servants distort and disfigure us, deride us and punish us. Then home again and you feel like screaming. Then you pad your anger with a relationship or a career or a party with other dykes like you and still you wonder why we can't find each other, why you feel lonely, angry, alienated.

### **Get Up, Wake Up Sisters!!**

Your life is in your hands.

When I risk it all to be out, I risk it for both of us. When I risk it all and it works (which it often does if you would try it), I benefit and so do you. When it doesn't work, I suffer and you do not.

But girl you can't wait for other dykes to make the world safe for you. STOP waiting for a better more lesbian future! The revolution could be here if we started it.

Where are you sisters? I'm trying to find you, I'm trying to find you. How come I only see you on Gay Pride Day?

We're OUT, Where the fuck are YOU?

### **When Anyone Assaults You for being Queer, It is Queer Bashing. Right?**

A crowd of 50 people exit a gay bar as it closes. Across the street, some straight boys are shouting "Faggots" and throwing beer bottles at the gathering, which outnumbers them by 10 to 1. Three queers make a move to respond, getting no support from the group. Why did a group this size allow themselves to be sitting ducks?

Tompkins Square Park, Labor Day. At an annual outdoor concert/drag show, a group of gay men were harassed by teens carrying sticks. In the midst of thousands of gay men and lesbians, these straight boys beat two gay men to the ground, then stood around triumphantly laughing amongst themselves. The emcee was alerted and warned the crowd from the stage, “You girls be careful. When you dress up it drives the boys crazy,” as if it were a practical joke inspired by what the victims were wearing rather than a pointed attack on anyone and everyone at that event.

What would it have taken for that crowd to stand up to its attackers?

After James Zappalorti, an openly gay man, was murdered in cold blood on Staten Island this winter, a single demonstration was held in protest. Only one hundred people came. When Yuseuf Hawkins, a black youth, was shot to death for being on “white turf” in Bensonhurst, African Americans marched through that neighborhood in large numbers again and again. A black person was killed BECAUSE HE WAS BLACK, and people of color throughout the city recognized it and acted on it. The bullet that hit Hawkins was meant for a black man, ANY black man. Do most gays and lesbians think that the knife that punctured Zappalorti’s heart was meant only for him?

The straight world has us so convinced that we are helpless and deserving victims of the violence against us, that queers are immobilized when faced with a threat. BE OUTRAGED! These attacks must not be tolerated. DO SOMETHING. Recognize that any act of aggression against any member of our community is an attack on every member of the community. The more we allow homophobes to inflict violence, terror and fear on our lives, the more frequently and ferociously we will be the object of their hatred. You’re immeasurably valuable, because unless you start believing that, it can easily be taken from you. If you know how to gently and efficiently immobilize your attacker, then by all means, do it. If you lack those skills, then think about gouging out his fucking eyes, slamming his nose back into his brain, slashing his throat with a broken bottle – do whatever you can, whatever you have to, to save your life!

reeuQ\_yhW

Queer!

Ah, do we really have to use that word? It’s trouble. Every gay person has his or her own take on it. For some it means strange and eccentric and kind of mysterious. That’s okay, we like that. But some gay girls and boys don’t. They think they’re more normal than strange. And for others “queer” conjures up those awful memories of adolescent suffering. Queer. It’s forcibly bittersweet and quaint at best – weakening and painful at worst. Couldn’t we just use “gay” instead? It’s a much brighter word and isn’t it synonymous with “happy?” When will you militants grow up and get over the novelty of being different?

## Why Queer

Well, yes, “gay” is great. It has its place. But when a lot of lesbians and gay men wake up in the morning we feel angry and disgusted, not gay. So we’ve chosen to call ourselves queer. Using “queer” is a way of reminding us how we are perceived by the rest of the world. It’s a way of telling ourselves we don’t have to be witty and charming people who keep our lives discreet and marginalized in the straight world. We use queer as gay men loving lesbians and lesbians loving being queer.

Queer, unlike GAY, doesn't mean MALE.

And when spoken to other gays and lesbians it's a way of suggesting we close ranks, and forget (temporarily) our individual differences because we face a more insidious common enemy. Yeah, QUEER can be a rough word but it is also a sly and ironic weapon we can steal from the homophobe's hands and use against him.

## No Sex Police

For anyone to say that coming out is not part of the revolution is missing the point. Positive sexual images and what they manifest saves lives because they affirm those lives and make it possible for people to attempt to live as self-loving instead of self-loathing. As the famous "Black is beautiful" slogan changed many lives, so does "Read my lips" affirm queerness in the face of hatred and invisibility as displayed in a recent governmental study of suicides that states at least one third of all teen suicides are Queer kids. This is further exemplified by the rise in HIV transmission among those under 21.

We are most hated as queers for our sexualness, that is, our physical contact with the same sex. Our sexuality and sexual expression are what makes us most susceptible to physical violence. Our difference, our otherness, our uniqueness can either paralyze us or politicize us. Hopefully, the majority of us will not let it kill us.

## Queer Space

Why in the world do we let heteros into queer clubs? Who gives a fuck if they like us because we "really know how to party?" WE HAVE TO IN ORDER TO BLOW OFF THE STEAM THEY MAKE US FEEL ALL THE TIME! They make out wherever they please, and take up too much room on the dance floor doing ostentatious couples dances. They wear their heterosexuality like a "Keep Out" sign, or like a deed of ownership.

Why the fuck do we tolerate them when they invade our space like it's their right? Why do we let them shove heterosexuality – a weapon their world wields against us – right in our faces in the few public spots where we can be sexy with each other and not fear attack?

It's time to stop letting the straight people make all the rules. Let's start by posting this sign outside every queer club and bar:

## Rules of Conduct for Straight People

1. Keep your display of affection (kissing, handholding, embracing) to a minimum. Your sexuality is unwanted and offensive to many here.
2. If you must slow dance, be as inconspicuous as possible.
3. Do not gawk or stare at lesbians or gay men, especially bull dykes or drag queens. We are not your entertainment.
4. If you cannot comfortably deal with someone of the same sex making a pass at you, get out.
5. Do not flaunt your heterosexuality. Be Discreet. Risk being mistaken for a lezzie or a homo.
6. If you feel these rules are unfair, go fight homophobia in straight clubs, or:
7. Go Fuck Yourself.

## I Hate Straights

I have friends. Some of them are straight.

Year after year, I see my straight friends. I want to see them, to see how they are doing, to add newness to our long and complicated histories, to experience some continuity. Year after year I continue to realize that the facts of my life are irrelevant to them and that I am only half listened to, that I am an appendage to the doings of a greater world, a world of power and privilege, of the laws of installation, a world of exclusion. “That’s not true,” argue my straight friends. There is the one certainty in the politics of power: those left out of it beg for inclusion, while the insiders claim that they already are. Men do it to women, whites do it to blacks, and everyone does it to queers. The main dividing line, both conscious and unconscious, is procreation … and that magic word – Family. Frequently, the ones we are born into disown us when they find out who we really are, and to make matters worse, we are prevented from having our own. We are punished, insulted, cut off, and treated like seditionaries in terms of child rearing, both damned if we try and damned if we abstain. It’s as if the propagation of the species is such a fragile directive that without enforcing it as if it were an agenda, humankind would melt back into the primeval ooze.

I hate having to convince straight people that lesbians and gays live in a war zone, that we’re surrounded by bomb blasts only we seem to hear, that our bodies and souls are heaped high, dead from fright or bashed or raped, dying of grief or disease, stripped of our personhood.

I hate straight people who can’t listen to queer anger without saying “hey, all straight people aren’t like that. I’m straight too, you know,” as if their egos don’t get enough stroking or protection in this arrogant, heterosexist world. Why must we take care of them, in the midst of our just anger brought on by their fucked up society?! Why add the reassurance of “Of course, I don’t mean you. You don’t act that way.” Let them figure out for themselves whether they deserve to be included in our anger.

But of course that would mean listening to our anger, which they almost never do. They deflect it, by saying “I’m not like that” or “Now look who’s generalizing” or “You’ll catch more flies with honey … ” or “If you focus on the negative you just give out more power” or “you’re not the only one in the world who’s suffering.” They say “Don’t yell at me, I’m on your side” or “I think you’re overreacting” or “BOY, YOU’RE BITTER.”

They’ve taught us that good queers don’t get mad. They’ve taught us so well that we not only hide our anger from them, we hide it from each other. WE EVEN HIDE IT FROM OURSELVES. We hide it with substance abuse and suicide and overachieving in the hope of proving our worth. They bash us and stab us and shoot us and bomb us in ever increasing numbers and still we freak out when angry queers carry banners or signs that say BASH BACK. For the last decade they let us die in droves and still we thank President Bush for planting a fucking tree, applaud him for likening PWAs to car accident victims who refuse to wear seatbelts. LET YOURSELF BE ANGRY. Let yourself be angry that the price of our visibility is the constant threat of violence, anti-queer violence to which practically every segment of this society contributes. Let yourself feel angry that THERE IS NO PLACE IN THIS COUNTRY WHERE WE ARE SAFE, no place where we are not targeted for hatred and attack, the self-hatred, the suicide – of the closet. The next time some straight person comes down on you for being angry, tell them that until things change, you don’t need any more evidence that the world turns at

your expense. You don't need to see only hetero couple grocery shopping on your TV ... You don't want any more baby pictures shoved in your face until you can have or keep your own. No more weddings, showers, anniversaries, please, unless they are our own brothers and sisters celebrating. And tell them not to dismiss you by saying "You have rights," "You have privileges," "You're overreacting," or "You have a victim's mentality." Tell them "GO AWAY FROM ME, until YOU can change." Go away and try on a world without the brave, strong queers that are its backbone, that are its guts and brains and souls. Go tell them go away until they have spent a month walking hand in hand in public with someone of the same sex. After they survive that, then you'll hear what they have to say about queer anger.

Otherwise, tell them to shut up and listen.

# CHAPTER 11

## Sex in Public

*Lauren Berlant and Michael Warner*

Lauren Berlant teaches English at the University of Chicago and is co-editor of *Critical Inquiry*. Her books include *The Anatomy of National Fantasy* (1991) and *The Queen of America Goes to Washington* (1997). Michael Warner teaches English at Yale University. His books include *Fear of a Queer Planet* (1993) and *The Letters of the Republic* (1990).

### 1. There Is Nothing More Public Than Privacy

A paper titled “Sex in Public” teases with the obscurity of its object and the twisted aim of its narrative. In this paper we will be talking not about the sex people already have clarity about, nor identities and acts, nor a wildness in need of derepression; but rather about sex as it is mediated by publics.<sup>1</sup> Some of these publics have an obvious relation to sex: pornographic cinema, phone sex, “adult” markets for print, lap dancing. Others are organized around sex, but not necessarily sex *acts* in the usual sense: queer zones and other worlds estranged from heterosexual culture, but also more tacit scenes of sexuality like official national culture, which depends on a notion of privacy to cloak its sexualization of national membership.

The aim of this paper is to describe what we want to promote as the radical aspirations of queer culture building: not just a safe zone for queer sex but the changed possibilities of identity, intelligibility, publics, culture, and sex that appear when the heterosexual couple is no longer the referent or the privileged example of sexual culture. Queer social practices like sex and theory try to unsettle the garbled but powerful norms supporting that privilege – including the project of normalization that has made heterosexuality hegemonic – as well as those material practices that, though not explicitly sexual, are implicated in the hierarchies of property and propriety that we will describe as heteronormative.<sup>2</sup> We open with two scenes of sex in public.

*Original publication details:* Lauren Berlant and Michael Warner, “Sex in Public.” *Critical Inquiry* 24.2, Intimacy (Winter 1998), pp. 547–566. University of Chicago Press, 1998. Reproduced with permission from University of Chicago Press and L. Berlant.

### Scene 1

In 1993 *Time* magazine published a special issue about immigration called “The New Face of America.”<sup>3</sup> The cover girl of this issue was morphed via computer from head shots representing a range of U.S. immigrant groups: an amalgam of “Middle Eastern,” “Italian,” “African,” “Vietnamese,” “Anglo-Saxon,” “Chinese,” and “Hispanic” faces. The new face of America is supposed to represent what the modal citizen will look like when, in the year 2004, it is projected, there is no longer a white statistical majority in the United States. Naked, smiling, and just off-white, *Time*’s divine Frankenstein aims to organize hegemonic optimism about citizenship and the national future. *Time*’s theory is that by the twenty-first century interracial reproductive sex will have taken place in the United States on such a mass scale that racial difference itself will be finally replaced by a kind of family feeling based on blood relations. In the twenty-first century, *Time* imagines, hundreds of millions of hybrid faces will erase American racism altogether: the nation will become a happy racial monoculture made up of “one (mixed) blood.”<sup>4</sup>

The publication of this special issue caused a brief flurry of interest but had no important effects; its very banality calls us to understand the technologies that produce its ordinariness. The fantasy banalized by the image is one that reverberates in the law and in the most intimate crevices of everyday life. Its explicit aim is to help its public process the threat to “normal” or “core” national culture that is currently phrased as “the problem of immigration.”<sup>5</sup> But this crisis image of immigrants is also a *racial mirage* generated by a white-dominated society, supplying a specific phobia to organize its public so that a more substantial discussion of exploitation in the United States can be avoided and then remaindered to the part of collective memory sanctified not by nostalgia but by mass aversion. Let’s call this the amnesia archive. The motto above the door is Memory Is the Amnesia You Like.

But more than exploitation and racism are forgotten in this whirl of projection and suppression. Central to the transfiguration of the immigrant into a nostalgic image to shore up core national culture and allay white fears of minoritization is something that cannot speak its name, though its signature is everywhere: national heterosexuality. National heterosexuality is the mechanism by which a core national culture can be imagined as a sanitized space of sentimental feeling and immaculate behavior, a space of pure citizenship. A familial model of society displaces the recognition of structural racism and other systemic inequalities. This is not entirely new: the family form has functioned as a mediator and metaphor of national existence in the United States since the eighteenth century.<sup>6</sup> We are arguing that its contemporary deployment increasingly supports the governmentality of the welfare state by separating the aspirations of national belonging from the critical culture of the public sphere and from political citizenship.<sup>7</sup> Immigration crises have also previously produced feminine icons that function as prostheses for the state – most famously, the Statue of Liberty, which symbolized seamless immigrant assimilation to the metaculture of the United States. In *Time*’s face it is not symbolic femininity but practical heterosexuality that guarantees the monocultural nation.

The nostalgic family values covenant of contemporary American politics stipulates a privatization of citizenship and sex in a number of ways. In law and political ideology, for example, the fetus and the child have been spectacularly elevated to the place of sanctified nationality. The state now sponsors stings and legislation to purify the internet on behalf of children. New welfare and tax “reforms” passed under the cooperation between the

Contract with America and Clintonian familialism seek to increase the legal and economic privileges of married couples and parents. Vouchers and privatization rezone education as the domain of parents rather than citizens. Meanwhile, senators such as Ted Kennedy and Jesse Helms support amendments that refuse federal funds to organizations that “promote, disseminate, or produce materials that are obscene or that depict or describe, in a patently offensive way, sexual or excretory activities or organs, including but not limited to obscene depictions of sadomasochism, homo-eroticism, the sexual exploitation of children, or individuals engaged in sexual intercourse.”<sup>8</sup> These developments, though distinct, are linked in the way they organize a hegemonic national public around sex. But because this sex public officially claims to act only in order to protect the zone of heterosexual privacy, the institutions of economic privilege and social reproduction informing its practices and organizing its ideal world are protected by the spectacular demonization of any represented sex.

## Scene 2

In October 1995, the New York City Council passed a new zoning law by a forty-one to nine vote. The Zoning Text Amendment covers adult book and video stores, eating and drinking establishments, theaters, and other businesses. It allows these businesses only in certain areas zoned as nonresidential, most of which turn out to be on the waterfront. Within the new reserved districts, adult businesses are disallowed within five hundred feet of another adult establishment or within five hundred feet of a house of worship, school, or day-care center. They are limited to one per lot and in size to ten thousand square feet. Signs are limited in size, placement, and illumination. All other adult businesses are required to close within a year. Of the estimated 177 adult businesses in the city, all but 28 may have to close under this law. Enforcement of the bill is entrusted to building inspectors.

A court challenge against the bill was brought by a coalition that also fought it in the political process, formed by anticensorship groups such as the New York Civil Liberties Union (NYCLU), Feminists for Free Expression, People for the American Way, and the National Coalition Against Censorship as well as gay and lesbian organizations such as the Lambda Legal Defense Fund, the Empire State Pride Agenda, and the AIDS Prevention Action League. (An appeal was still pending as of July 1997.) These latter groups joined the anticensorship groups for a simple reason: the impact of rezoning on businesses catering to queers, especially to gay men, will be devastating. All five of the adult businesses on Christopher Street will be shut down, along with the principal venues where men meet men for sex. None of these businesses have been targets of local complaints. Gay men have come to take for granted the availability of explicit sexual materials, theaters, and clubs. That is how they have learned to find each other; to map a commonly accessible world; to construct the architecture of queer space in a homophobic environment; and, for the last fifteen years, to cultivate a collective ethos of safer sex. All of that is about to change. Now, gay men who want sexual materials or who want to meet other men for sex will have two choices: they can cathect the privatized virtual public of phone sex and the internet; or they can travel to small, inaccessible, little-trafficked, badly lit areas, remote from public transportation and from any residences, mostly on the waterfront, where heterosexual porn users will also be relocated and where the risk of violence will consequently be higher.<sup>9</sup> In either case, the result will be a sense

of isolation and diminished expectations for queer life, as well as an attenuated capacity for political community. The nascent lesbian sexual culture, including the Clit Club and the only video rental club catering to lesbians, will also disappear. The impact of the sexual purification of New York will fall unequally on those who already have fewest publicly accessible resources.

## 2. Normativity and Sexual Culture

Heterosexuality is not a thing. We speak of heterosexual culture rather than heterosexuality because that culture never has more than a provisional unity.<sup>10</sup> It is neither a single Symbolic nor a single ideology nor a unified set of shared beliefs.<sup>11</sup> The conflicts between these strands are seldom more than dimly perceived in practice, where the givenness of male-female sexual relations is part of the ordinary rightness of the world, its fragility masked in shows of solemn rectitude. Such conflicts have also gone unrecognized in theory, partly because of the metacultural work of the very category of heterosexuality, which consolidates as *a sexuality* widely differing practices, norms, and institutions; and partly because the sciences of social knowledge are themselves so deeply anchored in the process of normalization to which Foucault attributes so much of modern sexuality.<sup>12</sup> Thus when we say that the contemporary United States is saturated by the project of constructing national heterosexuality, we do not mean that national heterosexuality is anything like a simple monoculture. Hegemonies are nothing if not elastic alliances, involving dispersed and contradictory strategies for self-maintenance and reproduction.

Heterosexual culture achieves much of its metacultural intelligibility through the ideologies and institutions of intimacy. We want to argue here that although the intimate relations of private personhood appear to be the realm of sexuality itself, allowing “sex in public” to appear like matter out of place, intimacy is itself publicly mediated, in several senses. First, its conventional spaces presuppose a structural differentiation of “personal life” from work, politics, and the public sphere.<sup>13</sup> Second, the normativity of heterosexual culture links intimacy only to the institutions of personal life, making them the privileged institutions of social reproduction, the accumulation and transfer of capital, and self-development. Third, by making sex seem irrelevant or merely personal, heteronormative conventions of intimacy block the building of nonnormative or explicit public sexual cultures. Finally, those conventions conjure a mirage: a home base of prepolitical humanity from which citizens are thought to come into political discourse and to which they are expected to return in the (always imaginary) future after political conflict. Intimate life is the endlessly cited *elsewhere* of political public discourse, a promised haven that distracts citizens from the unequal conditions of their political and economic lives, consoles them for the damaged humanity of mass society, and shames them for any divergence between their lives and the intimate sphere that is alleged to be simple personhood.

Ideologies and institutions of intimacy are increasingly offered as a vision of the good life for the destabilized and struggling citizenry of the United States, the only (fantasy) zone in which a future might be thought and willed, the only (imaginary) place where good citizens might be produced away from the confusing and unsettling distractions and contradictions of capitalism and politics. Indeed, one of the unforeseen paradoxes of national-capitalist privatization has been that citizens have been led through heterosexual culture to identify both themselves and *their politics* with privacy.

In the official public, this involves making sex private; reintensifying blood as a psychic base for identification; replacing state mandates for social justice with a privatized ethics of responsibility, charity, atonement, and “values”; and enforcing boundaries between moral persons and economic ones.<sup>14</sup>

A complex cluster of sexual practices gets confused, in heterosexual culture, with the love plot of intimacy and familialism that signifies belonging to society in a deep and normal way. Community is imagined through scenes of intimacy, coupling, and kinship; a historical relation to futurity is restricted to generational narrative and reproduction.<sup>15</sup> A whole field of social relations becomes intelligible as heterosexuality, and this privatized sexual culture bestows on its sexual practices a tacit sense of rightness and normalcy. This sense of rightness – embedded in things and not just in sex – is what we call heteronormativity. Heteronormativity is more than ideology, or prejudice, or phobia against gays and lesbians; it is produced in almost every aspect of the forms and arrangements of social life: nationality, the state, and the law; commerce; medicine; and education; as well as in the conventions and affects of narrativity, romance, and other protected spaces of culture. It is hard to see these fields as heteronormative because the sexual culture straight people inhabit is so diffuse, a mix of languages they are just developing with premodern notions of sexuality so ancient that their material conditions feel hardwired into personhood.

But intimacy has not always had the meaning it has for contemporary heteronormative culture. Along with Foucault and other historians, the classicist David Halperin, for example, has shown that in ancient Athens sex was a transitive act rather than a fundamental dimension of personhood or an expression of intimacy. The verb for having sex appears on a late antique list of things that are not done in regard to or through others: “namely, speaking, singing, dancing, fist-fighting, competing, hanging oneself, dying, being crucified, diving, finding a treasure, having sex, vomiting, moving one’s bowels, sleeping, laughing, crying, talking to the gods, and the like.”<sup>16</sup> Halperin points out that the inclusion of fucking on this list shows that sex is not here “knit up in a web of mutuality.”<sup>17</sup> In contrast, modern heterosexuality is supposed to refer to relations of intimacy and identification with other persons, and sex acts are supposed to be the most intimate communication of them all.<sup>18</sup> The sex act shielded by the zone of privacy is the affectual nimbus that heterosexual culture protects and from which it abstracts its model of ethics, but this utopia of social belonging is also supported and extended by acts less commonly recognized as part of sexual culture: paying taxes, being disgusted, philandering, bequeathing, celebrating a holiday, investing for the future, teaching, disposing of a corpse, carrying wallet photos, buying economy size, being nepotistic, running for president, divorcing, or owning anything “His” and “Hers.”

The elaboration of this list is a project for further study. Meanwhile, to make it and to laugh at it is not immediately to label any practice as oppressive, uncool, or definitive. We are describing a constellation of practices that everywhere disperses heterosexual privilege as a tacit but central organizing index of social membership. Exposing it inevitably produces what we have elsewhere called a “wrenching sense of recontextualization,” as its subjects, even its gay and lesbian subjects, begin to piece together how it is that social and economic discourses, institutions, and practices that don’t feel especially sexual or familial collaborate to produce as a social norm and ideal an extremely narrow context for living.<sup>19</sup> Heterosexual culture cannot recognize, validate, sustain, incorporate, or remember much of what people know and experience about the cruelty of normal culture even to the people who identify with it.

But that cruelty does not go unregistered. Intimacy, for example, has a whole public environment of therapeutic genres dedicated to witnessing the constant failure of heterosexual ideologies and institutions. Every day, in many countries now, people testify to their failure to sustain or be sustained by institutions of privacy on talk shows, in scandal journalism, even in the ordinary course of mainstream journalism addressed to middlebrow culture. We can learn a lot from these stories of love plots that have gone astray: about the ways quotidian violence is linked to complex pressures from money, racism, histories of sexual violence, cross-generational tensions. We can learn a lot from listening to the increasing demands on love to deliver the good life it promises. And we can learn from the extremely punitive responses that tend to emerge when people seem not to suffer enough for their transgressions and failures.

Maybe we would learn too much. Recently, the proliferation of evidence for heterosexuality's failings has produced a backlash against talk-show therapy. It has even brought William Bennett to the podium; but rather than confessing his transgressions or making a complaint about someone else's, we find him calling for boycotts and for the suppression of heterosexual therapy culture altogether. Recognition of heterosexuality's daily failures agitates him as much as queerness. "We've forgotten that civilization depends on keeping some of this stuff under wraps," he said. "This is a tropism toward the toilet."<sup>20</sup>

But does civilization need to cover its ass? Or does heterosexual culture actually secure itself through banalizing intimacy? Does belief that normal life is actually possible require amnesia and the ludicrous stereotyping of a bottom-feeding culture apparently inadequate to intimacy? On these shows no one ever blames the ideology and institutions of heterosexuality. Every day, even the talk-show hosts are newly astonished to find that people who are committed to hetero intimacy are nevertheless unhappy. After all is said and done, the prospects and promises of heterosexual culture still represent the optimism for optimism, a hope to which people apparently have already pledged their consent – at least in public.

Recently, Biddy Martin has written that some queer social theorists have produced a reductive and pseudoradical antinormativity by actively repudiating the institutions of heterosexuality that have come to oversaturate the social imaginary. She shows that the kinds of arguments that crop up in the writings of people like Andrew Sullivan are not just right-wing fantasies. "In some queer work," she writes, "the very fact of attachment has been cast as only punitive and constraining because already socially constructed.... Radical anti-normativity throws out a lot of babies with a lot of bathwater.... An enormous fear of ordinariness or normalcy results in superficial accounts of the complex imbrication of sexuality with other aspects of social and psychic life, and in far too little attention to the dilemmas of the average people that we also are."<sup>21</sup>

We think our friend Biddy might be referring to us, although in this segment she cites no one in particular. We would like to clarify the argument. To be against heteronormativity is not to be against norms. To be against the processes of normalization is not to be afraid of ordinariness. Nor is it to advocate the "existence without limit" she sees as produced by bad Foucauldians ("EH," p. 123). Nor is it to decide that sentimental identifications with family and children are waste or garbage, or make people into waste or garbage. Nor is it to say that any sex called "lovemaking" isn't lovemaking; whatever the ideological or historical burdens of sexuality have been, they have not excluded, and indeed may have entailed, the ability of sex to count as intimacy and care. What we have been arguing here is that the space of sexual culture has become obnoxiously cramped from doing the work of maintaining a normal metaculture. When Biddy Martin calls us

to recognize ourselves as “average people,” to relax from an artificially stimulated “fear of normalcy,” the image of average personhood appears to be simply descriptive (“EH,” p. 123). But its averageness is also normative, in exactly the sense that Foucault meant by “normalization”: not the imposition of an alien will, but a distribution around a statistically imagined norm. This deceptive appeal of the average remains heteronormative, measuring deviance from the mass. It can also be consoling, an expression of a utopian desire for unconflicted personhood. But this desire cannot be satisfied in the current conditions of privacy. People feel that the price they must pay for social membership and a relation to the future is identification with the heterosexual life narrative; that they are individually responsible for the rages, instabilities, ambivalences, and failures they experience in their intimate lives, while the fractures of the contemporary United States shame and sabotage them everywhere. Heterosexuality involves so many practices that are not sex that a world in which this hegemonic cluster would not be dominant is, at this point, unimaginable. We are trying to bring that world into being.

### 3. Queer Counterpublics

By queer culture we mean a world-making project, where “world,” like “public,” differs from community or group because it necessarily includes more people than can be identified, more spaces than can be mapped beyond a few reference points, modes of feeling that can be learned rather than experienced as a birthright. The queer world is a space of entrances, exits, unsystematized lines of acquaintance, projected horizons, typifying examples, alternate routes, blockages, incommensurate geographies.<sup>22</sup> World making, as much in the mode of dirty talk as of print-mediated representation, is dispersed through incommensurate registers, by definition *unrealizable* as community or identity. Every cultural form, be it a novel or an after-hours club or an academic lecture, indexes a virtual social world, in ways that range from a repertoire of styles and speech genres to referential metaculture. A novel like Andrew Holleran’s *Dancer from the Dance* relies much more heavily on referential metaculture than does an after-hours club that survives on word of mouth and may be a major scene because it is only barely coherent as a scene. Yet for all their differences, both allow for the concretization of a queer counterpublic. We are trying to promote this world-making project, and a first step in doing so is to recognize that queer culture constitutes itself in many ways other than through the official publics of opinion culture and the state, or through the privatized forms normally associated with sexuality. Queer and other insurgents have long striven, often dangerously or scandalously, to cultivate what good folks used to call criminal intimacies. We have developed relations and narratives that are only recognized as intimate in queer culture: girlfriends, gal pals, fuckbuddies, tricks. Queer culture has learned not only how to sexualize these and other relations, but also to use them as a context for witnessing intense and personal affect while elaborating a public world of belonging and transformation. Making a queer world has required the development of kinds of intimacy that bear no necessary relation to domestic space, to kinship, to the couple form, to property, or to the nation. These intimacies *do* bear a necessary relation to a counterpublic – an indefinitely accessible world conscious of its subordinate relation. They are typical both of the inventiveness of queer world making and of the queer world’s fragility.

Nonstandard intimacies would seem less criminal and less fleeting if, as used to be the case, normal intimacies included everything from consorts to courtiers, friends, amours,

associates, and coconspirators.<sup>23</sup> Along with the sex it legitimates, intimacy has been privatized; the discourse contexts that narrate true personhood have been segregated from those that represent citizens, workers, or professionals.

This transformation in the cultural forms of intimacy is related both to the history of the modern public sphere and to the modern discourse of sexuality as a fundamental human capacity. In *The Structural Transformation of the Public Sphere*, Habermas shows that the institutions and forms of domestic intimacy made private people private, members of the public sphere of private society rather than the market or the state. Intimacy grounded abstract, disembodied citizens in a sense of universal humanity. In *The History of Sexuality*, Foucault describes the personalization of sex from the other direction: the confessional and expert discourses of civil society continually posit an inner personal essence, equating this true personhood with sex and surrounding that sex with dramas of secrecy and disclosure. There is an instructive convergence here in two thinkers who otherwise seem to be describing different planets.<sup>24</sup> Habermas overlooks the administrative and normalizing dimensions of privatized sex in sciences of social knowledge because he is interested in the norm of a critical relation between state and civil society. Foucault overlooks the critical culture that might enable transformation of sex and other private relations; he wants to show that modern epistemologies of sexual personhood, far from bringing sexual publics into being, are techniques of isolation; they identify persons as normal or perverse, for the purpose of medicalizing or otherwise administering them as individuals. Yet both Habermas and Foucault point to the way a hegemonic public has founded itself by a privatization of sex and the sexualization of private personhood. Both identify the conditions in which sexuality seems like a property of subjectivity rather than a publicly or counterpublicly accessible culture.

Like most ideologies, that of normal intimacy may never have been an accurate description of how people actually live. It was from the beginning mediated not only by a structural separation of economic and domestic space but also by opinion culture, correspondence, novels, and romances; Rousseau's *Confessions* is typical both of the ideology and of its reliance on mediation by print and by new, hybrid forms of life narrative. Habermas notes that "subjectivity, as the innermost core of the private, was always oriented to an audience,"<sup>25</sup> adding that the structure of this intimacy includes a fundamentally contradictory relation to the economy:

To the autonomy of property owners in the market corresponded a self-presentation of human beings in the family. The latter's intimacy, apparently set free from the constraint of society, was the seal on the truth of a private autonomy exercised in competition. Thus it was a private autonomy denying its economic origins ... that provided the bourgeois family with its consciousness of itself.<sup>26</sup>

This structural relation is no less normative for being imperfect in practice. Its force is to prevent the recognition, memory, elaboration, or institutionalization of all the non-standard intimacies that people have in everyday life. Affective life slops over onto work and political life; people have key self-constitutive relations with strangers and acquaintances; and they have eroticism, if not sex, outside of the couple form. These border intimacies give people tremendous pleasure. But when that pleasure is called sexuality, the spillage of eroticism into everyday social life seems transgressive in a way that provokes normal aversion, a hygienic recoil even as contemporary consumer and media cultures increasingly trope toiletward, splattering the matter of intimate life at the highest levels of national culture.

In gay male culture, the principal scenes of criminal intimacy have been tearooms, streets, sex clubs, and parks – a tropism toward the public toilet.<sup>27</sup> Promiscuity is so heavily stigmatized as nonintimate that it is often called anonymous, whether names are used or not. One of the most commonly forgotten lessons of AIDS is that this promiscuous intimacy turned out to be a lifesaving public resource. Unbidden by experts, gay people invented safer sex; and, as Douglas Crimp wrote in 1987

we were able to invent safe sex because we have always known that sex is not, in an epidemic or not, limited to penetrative sex. Our promiscuity taught us many things, not only about the pleasures of sex, but about the great multiplicity of those pleasures. It is that psychic preparation, that experimentation, that conscious work on our own sexualities that has allowed many of us to change our sexual behaviors – something that brutal “behavioral therapies” tried unsuccessfully for over a century to force us to do – very quickly and very dramatically.... All those who contend that gay male promiscuity is merely sexual *compulsion* resulting from fear of intimacy are now faced with very strong evidence against their prejudices.... Gay male promiscuity should be seen instead as a positive model of how sexual pleasures might be pursued by and granted to everyone if those pleasures were not confined within the narrow limits of institutionalized sexuality.<sup>28</sup>

AIDS is a special case, and this model of sexual culture has been typically male. But sexual practice is only one kind of counterintimacy. More important is the critical practical knowledge that allows such relations to count as intimate, to be not empty release or transgression but a common language of self-cultivation, shared knowledge, and the exchange of inwardness.

Queer culture has found it necessary to develop this knowledge in mobile sites of drag, youth culture, music, dance, parades, flaunting, and cruising – sites whose mobility makes them possible but also renders them hard to recognize as world making because they are so fragile and ephemeral. They are paradigmatically trivialized as “lifestyle.” But to understand them only as self-expression or as a demand for recognition would be to misrecognize the fundamentally unequal material conditions whereby the institutions of social reproduction are coupled to the forms of hetero culture.<sup>29</sup> Contexts of queer world making depend on parasitic and fugitive elaboration through gossip, dance clubs, softball leagues, and the phone-sex ads that increasingly are the commercial support for print-mediated left culture in general.<sup>30</sup> Queer is difficult to entextualize as culture.

This is particularly true of intimate culture. Heteronormative forms of intimacy are supported, as we have argued, not only by overt referential discourse such as love plots and sentimentality but materially, in marriage and family law, in the architecture of the domestic, in the zoning of work and politics. Queer culture, by contrast, has almost no institutional matrix for its counterintimacies. In the absence of marriage and the rituals that organize life around matrimony, improvisation is always necessary for the speech act of pledging, or the narrative practice of dating, or for such apparently noneconomic economies as joint checking. The heteronormativity in such practices may seem weak and indirect. After all, same-sex couples have sometimes been able to invent versions of such practices. But they have done so only by betrothing themselves to the couple form and its language of personal significance, leaving untransformed the material and ideological conditions that divide intimacy from history, politics, and publics. The queer project we imagine is not just to destigmatize those average intimacies, not just to give access to the sentimentality of the couple for persons of the same sex, and definitely not to certify as properly private the personal lives of gays and lesbians.<sup>31</sup> Rather, it is to

support forms of affective, erotic, and personal living that are public in the sense of accessible, available to memory, and sustained through collective activity.

Because the heteronormative culture of intimacy leaves queer culture especially dependent on ephemeral elaborations in urban space and print culture, queer publics are also peculiarly vulnerable to initiatives such as Mayor Rudolph Giuliani's new zoning law. The law aims to restrict any counterpublic sexual culture by regulating its economic conditions; its effects will reach far beyond the adult businesses it explicitly controls. The gay bars on Christopher Street draw customers from people who come there because of its sex trade. The street is cruisier because of the sex shops. The boutiques that sell freedom rings and "Don't Panic" T-shirts do more business for the same reasons. Not all of the thousands who migrate or make pilgrimages to Christopher Street use the porn shops, but all benefit from the fact that some do. After a certain point, a quantitative change is a qualitative change. A critical mass develops. The street becomes queer. It develops a dense, publicly accessible sexual culture. It therefore becomes a base for nonporn businesses, like the Oscar Wilde Bookshop. And it becomes a political base from which to pressure politicians with a gay voting bloc.

No group is more dependent on this kind of pattern in urban space than queers. If we could not concentrate a publicly accessible culture somewhere, we would always be outnumbered and overwhelmed. And because what brings us together is sexual culture, there are very few places in the world that have assembled much of a queer population without a base in sex commerce, and even those that do exist, such as the lesbian culture in Northampton, Massachusetts, are stronger because of their ties to places like the West Village, Dupont Circle, West Hollywood, and the Castro. Respectable gays like to think that they owe nothing to the sexual subculture they think of as sleazy. But their success, their way of living, their political rights, and their very identities would never have been possible but for the existence of the public sexual culture they now despise. Extinguish it, and almost all *out* gay or queer culture will wither on the vine. No one knows this connection better than the right. Conservatives would not so flagrantly contradict their stated belief in a market free from government interference if they did not see this kind of hyper-regulation as an important victory.

The point here is not that queer politics needs more free-market ideology, but that heteronormative forms, so central to the accumulation and reproduction of capital, also depend on heavy interventions in the regulation of capital. One of the most disturbing fantasies in the zoning scheme, for example, is the idea that an urban locale is a community of shared interest based on residence and property. The ideology of the neighborhood is politically unchallengeable in the current debate, which is dominated by a fantasy that sexual subjects only reside, that the space relevant to sexual politics is the neighborhood. But a district like Christopher Street is not just a neighborhood affair. The local character of the neighborhood depends on the daily presence of thousands of nonresidents. Those who actually live in the West Village should not forget their debt to these mostly queer pilgrims. And we should not make the mistake of confusing the class of citizens with the class of property owners. Many of those who hang out on Christopher Street—typically young, queer, and African American—couldn't possibly afford to live there. Urban space is always a host space. The right to the city extends to those who use the city.<sup>32</sup> It is not limited to property owners. It is not because of a fluke in the politics of zoning that urban space is so deeply misrecognized; normal sexuality requires such misrecognition, including their economic and legal enforcement, in order to sustain its illusion of humanity.

#### 4. Tweaking and Thwacking

Queer social theory is committed to sexuality as an inescapable category of analysis, agitation, and refunctioning. Like class relations, which in this moment are mainly visible in the polarized embodiments of identity forms, heteronormativity is a fundamental motor of social organization in the United States, a founding condition of unequal and exploitative relations throughout even straight society. Any social theory that miscomprehends this participates in their reproduction.

The project of thinking about sex in public does not only engage sex when it is disavowed or suppressed. Even if sex practice is not the object domain of queer studies, sex is everywhere present. But where is the tweaking, thwacking, thumping, sliming, and rubbing you might have expected – or dreaded – in a paper on sex? We close with two scenes that might have happened on the same day in our wanderings around the city. One afternoon, we were riding with a young straight couple we know, in their station wagon. gingerly, after much circumlocution, they brought the conversation around to vibrators. These are people whose reproductivity governs their lives, their aspirations, and their relations to money and entailment, mediating their relations to everyone and everything else. But the woman in this couple had recently read an article in a women's magazine about sex toys and other forms of nonreproductive eroticism. She and her husband did some mail-order shopping and have become increasingly involved in what from most points of view would count as queer sex practices; their bodies have become disorganized and exciting to them. They said to us: you're the only people we can talk to about this; to all of our straight friends this would make us perverts. In order not to feel like perverts, they had to make *us* into a kind of sex public.

Later, the question of aversion and perversion came up again. This time we were in a bar that on most nights is a garden-variety leather bar, but that, on Wednesday nights, hosts a sex performance event called "Pork." Shows typically include spanking, flagellation, shaving, branding, laceration, bondage, humiliation, wrestling – you know, the usual: amateur, everyday practitioners strutting for everyone else's gratification, not unlike an academic conference. This night, word was circulating that the performance was to be erotic vomiting. This sounded like an appetite spoiler, and the thought of leaving early occurred to us but was overcome by a simple curiosity: what would the foreplay be like? Let's stay until it gets messy. Then we can leave.

A boy, twentyish, very skateboard, comes on the low stage at one end of the bar, wearing lycra shorts and a dog collar. He sits loosely in a restraining chair. His partner comes out and tilts the bottom's head up to the ceiling, stretching out his throat. Behind them is an array of foods. The top begins pouring milk down the boy's throat, then food, then more milk. It spills over, down his chest and onto the floor. A dynamic is established between them in which they carefully keep at the threshold of gagging. The bottom struggles to keep taking in more than he really can. The top is careful to give him just enough to stretch his capacities. From time to time a baby bottle is offered as a respite, but soon the rhythm intensifies. The boy's stomach is beginning to rise and pulse, almost convulsively.

It is at this point that we realize we cannot leave, cannot even look away. No one can. The crowd is transfixed by the scene of intimacy and display, control and abandon, ferocity and abjection. People are moaning softly with admiration, then whistling, stomping, screaming encouragements. They have pressed forward in a compact and intimate group. Finally, as the top inserts two, then three fingers in the bottom's throat, insistently offering his own

stomach for the repeated climaxes, we realize that we have never seen such a display of trust and violation. We are breathless. But, good academics that we are, we also have some questions to ask. Word has gone around that the boy is straight. We want to know: What does that mean in this context? How did you discover that this is what you want to do? How did you find a male top to do it with? How did you come to do it in a leather bar? Where else do you do this? How do you feel about your new partners, this audience?

We did not get to ask these questions, but we have others that we can pose now, about these scenes where sex appears more sublime than narration itself, neither redemptive nor transgressive, moral nor immoral, hetero nor homo, nor sutured to any axis of social legitimization. We have been arguing that sex opens a wedge to the transformation of those social norms that require only its static intelligibility or its deadness as a source of meaning.<sup>33</sup> In these cases, though, paths through publicity led to the production of nonheteronormative bodily contexts. They intended nonheteronormative worlds because they refused to pretend that privacy was their ground; because they were forms of sociability that unlinked money and family from the scene of the good life; because they made sex the consequence of public mediations and collective self-activity in a way that made for unpredicted pleasures; because, in turn, they attempted to make a context of support for their practices; because their pleasures were not purchased by a redemptive pastoralism of sex, nor by mandatory amnesia about failure, shame, and aversion.<sup>34</sup>

We are used to thinking about sexuality as a form of intimacy and subjectivity, and we have just demonstrated how limited that representation is. But the heteronormativity of U.S. culture is not something that can be easily rezoned or disavowed by individual acts of will, by a subversiveness imagined only as personal rather than as the basis of public-formation, nor even by the lyric moments that interrupt the hostile cultural narrative that we have been staging here. Remembering the utopian wish behind normal intimate life, we also want to remember that we aren't married to it.

## Notes

- 1 On public sex in the standard sense, see Pat Califia, *Public Sex: The Culture of Radical Sex* (Pittsburgh, 1994). On acts and identities, see Janet E. Halley, "The Status/Conduct Distinction in the 1993 Revisions to Military Antigay Policy: A Legal Archaeology," *GLQ* 3 (1996): 159–252. The classic political argument for sexual derepression as a condition of freedom is put forth in Herbert Marcuse, *Eros and Civilization: A Philosophical Inquiry into Freud* (Boston, 1966). In contemporary prosex thought inspired by volume 1 of Michel Foucault's *The History of Sexuality*, the denunciation of "erotic injustice and sexual oppression" is situated less in the freedom of individuals than in analyses of the normative and coercive relations between specific "populations" and the institutions created to manage them (Gayle Rubin, "Thinking Sex: Notes for a Radical Theory of the Politics of Sexuality," in *Pleasure and Danger: Exploring Female Sexuality*, ed. Carole S. Vance [Boston, 1984], p. 275). See also Michel Foucault, *The History of Sexuality: An Introduction*, vol. 1 of *The History of Sexuality*, trans. Robert Hurley (New York, 1978).
- 2 By heteronormativity we mean the institutions, structures of understanding, and practical orientations that make heterosexuality seem not only coherent – that is, organized as a sexuality – but also privileged. Its coherence is always provisional, and its privilege can take several (sometimes contradictory) forms: unmarked, as the basic idiom of the personal and the social; or marked as a natural state; or projected as an ideal or moral accomplishment. It consists less of norms that could be summarized as a body of doctrine than of a sense of rightness produced in contradictory manifestations – often unconscious, immanent to practice or to institutions. Contexts that have

little visible relation to sex practice, such as life narrative and generational identity, can be heteronormative in this sense, while in other contexts forms of sex between men and women might *not* be heteronormative. Heteronormativity is thus a concept distinct from heterosexuality. One of the most conspicuous differences is that it has no parallel, unlike heterosexuality, which organizes homosexuality as its opposite. Because homosexuality can never have the invisible, tacit, society-founding rightness that heterosexuality has, it would not be possible to speak of “homonormativity” in the same sense. See Michael Warner, “Fear of a Queer Planet,” *Social Text*, no. 29 (1991): 3–17.

- 3 See *Time*, special issue, “The New Face of America,” Fall 1993. This analysis reworks materials in Lauren Berlant, *The Queen of America Goes to Washington City: Essays on Sex and Citizenship* (Durham, N.C., 1997), pp. 200–208.
- 4 For a treatment of the centrality of “blood” to U.S. nationalist discourse, see Bonnie Honig, *No Place Like Home: Democracy and the Politics of Foreignness* (forthcoming).
- 5 See, for example, William J. Bennett, *The De-Valuing of America: The Fight for Our Culture and Our Children* (New York, 1992); Peter Brimelow, *Alien Nation: Common Sense about America’s Immigration Disaster* (New York, 1995); and William A. Henry III, *In Defense of Elitism* (New York, 1994).
- 6 On the family form in national rhetoric, see Jay Fliegelman, *Prodigals and Pilgrims: The American Revolution against Patriarchal Authority, 1750–1800* (Cambridge, 1982), and Shirley Samuels, *Romances of the Republic: Women, the Family, and Violence in the Literature of the Early American Nation* (New York, 1996). On fantasies of genetic assimilation, see Robert S. Tilton, *Pocahontas: The Evolution of an American Narrative* (Cambridge, 1994), pp. 9–33, and Elise Lemire, “Making Miscegenation” (Ph.D. diss., Rutgers University, 1996).
- 7 The concept of welfare state governmentality has a growing literature. For a concise statement, see Jürgen Habermas, “The New Obscurity: The Crisis of the Welfare State and the Exhaustion of Utopian Energies,” *The New Conservatism: Cultural Criticism and the Historians’ Debate*, trans. Shierry Weber Nicholson (Cambridge, Mass., 1989), pp. 48–70. Michael Warner has discussed the relation between this analysis and queer culture in his “Something Queer about the Nation-State,” in *After Political Correctness: The Humanities and Society in the 1990s*, ed. Christopher Newfield and Ronald Strickland (Boulder, Colo., 1995), pp. 361–71.

- 9 Political geography in this way produces systematic effects of violence. Queers are forced to find each other in untrafficked areas because of the combined pressures of propriety, stigma, the closet, and state regulation such as laws against public lewdness. The same areas are known to gay-bashers and other criminals. And they are disregarded by police. The effect is to make both violence and police neglect seem like natural hazards, voluntarily courted by queers. As the 1997 documentary film *Licensed to Kill* illustrates, antigay violence has been difficult to combat by legal means: victims are reluctant to come forward in any public and prosecutorial framework, while bashers can appeal to the geographic circumstances to implicate the victims themselves. The legal system has helped to produce the violence it is called upon to remedy.
- 10 See Eve Kosofsky Sedgwick, *Epistemology of the Closet* (Berkeley, 1992).
- 11 Gay and lesbian theory, especially in the humanities, frequently emphasizes psychoanalytic or psychoanalytic-style models of subject-formation, the differences among which are significant and yet all of which tend to elide the difference between the categories male/female and the process and project of heteronormativity. Three propositional paradigms are relevant here: those that propose that human identity itself is fundamentally organized by gender identifications that are hardwired into infants; those that equate the clarities of gender identity with the domination of a relatively coherent and vertically stable “straight” ideology; and those that focus on a phallocentric Symbolic order that produces gendered subjects who live out the destiny of their positioning in it. The psychoanalytic and philosophical insights and limits of these models (which, we feel, underdescribe the practices, institutions, and incongruities of heteronormativity) require further engagement. For the time being, these works stand in as the most challenging relevant archive: Judith Butler, *Bodies that Matter: On the Discursive Limits of “Sex”* (New York, 1993); Luce Irigaray, *Speculum of the Other Woman*, trans. Gillian C. Gill (Ithaca, N.Y., 1985) and *This Sex*

- Which Is Not One*, trans. Catherine Porter and Carolyn Burke (Ithaca, N.Y., 1985); Teresa de Lauretis, *The Practice of Love: Lesbian Sexuality and Perverse Desire* (Bloomington, Ind., 1994); Kaja Silverman, *Male Subjectivity at the Margins* (New York, 1992); and Monique Wittig, *The Straight Mind and Other Essays* (Boston, 1992). Psychoanalytic work on sexuality does not always latch onto acts and inclinations to natural or constructed “identity”: see, for example, Leo Bersani, *Homos* (Cambridge, Mass., 1995) and “Is the Rectum a Grave?” in *AIDS: Cultural Analysis/Cultural Activism*, ed. Douglas Crimp (Cambridge, Mass., 1988).
- 12 The notion of metaculture we borrow from Greg Urban. See Greg Urban, *A Discourse-Centered Approach to Culture: Native South American Myths and Rituals* (Austin, Tex., 1991) and *Noumenal Community: Myth and Reality in an Amerindian Brazilian Society* (Austin, Tex., 1996). On normalization, see Foucault, *Discipline and Punish: The Birth of the Prison*, trans. Alan Sheridan (New York, 1979), pp. 184–85 and *The History of Sexuality*, p. 144. Foucault derives his argument here from the revised version of Georges Canguilhem, *The Normal and the Pathological*, trans. Carolyn R. Fawcett and Robert S. Cohen (New York, 1991).
- 13 Here we are influenced by Eli Zaretsky, *Capitalism, the Family, and Personal Life* (New York, 1986), and Stephanie Coontz, *The Social Origins of Private Life: A History of American Families, 1600–1900* (London, 1988), though heteronormativity is a problem not often made visible in Coontz’s work.
- 14 On privatization and intimacy politics, see Berlant, *The Queen of America Goes to Washington City*, pp. 1–24 and “Feminism and the Institutions of Intimacy,” in *The Politics of Research*, ed. E. Ann Kaplan and George Levine (New Brunswick, N.J., 1997), pp. 143–61; Honig, *No Place Like Home*; and Rosalind Pollack Petchesky, “The Body as Property: A Feminist Re-vision,” in *Conceiving the New World Order: The Global Politics of Reproduction*, ed. Faye D. Ginsburg and Rayna Rapp (Berkeley, 1995), pp. 387–406. On privatization and national-capitalism, see David Harvey, *The Condition of Postmodernity: An Enquiry into the Origins of Cultural Change* (Oxford, 1989), and Mike Davis, *City of Quartz: Excavating the Future in Los Angeles* (New York, 1992).
- 15 This language for community is a problem for gay historiography. In otherwise fine and important studies such as Esther Newton’s *Cherry Grove, Fire Island: Sixty Years in America’s First Gay and Lesbian Town* (Boston, 1993), or Elizabeth Lapovsky Kennedy and Madeline D. Davis’s *Boots of Leather, Slippers of Gold: The History of a Lesbian Community* (New York, 1993), or even George Chauncey’s *Gay New York: Gender, Urban Culture, and the Makings of the Gay Male World, 1890–1940* (New York, 1994), community is imagined as whole-person, face-to-face relations – local, experiential, proximate, and saturating. But queer worlds seldom manifest themselves in such forms. Cherry Grove – a seasonal resort depending heavily on weekend visits by New Yorkers – may be typical less of a “gay and lesbian town” than of the way queer sites are specialized spaces in which transits can project alternative worlds. John D’Emilio’s *Sexual Politics, Sexual Communities: The Making of a Homosexual Minority in the United States, 1940–1970* is an especially interesting example of the imaginative power of the idealization of local community for queers: the book charts the separate tracks of political organizing and local scenes such as bar life, showing that when the “movement” and the “subculture” began to converge in San Francisco, the result was a new formation with a new utopian appeal: “A ‘community,’” D’Emilio writes, “was in fact forming around a shared sexual orientation” (John D’Emilio, *Sexual Politics, Sexual Communities: The Making of a Homosexual Minority in the United States, 1940–1970* [Chicago, 1983], p. 195). D’Emilio (wisely) keeps scare quotes around “community” in the very sentence declaring it to exist in fact.
- 16 Artemidorus, *Oneirocritica* 1.2, quoted in David M. Halperin, “Sex before Sexuality: Pederasty, Politics, and Power in Classical Athens,” in *Hidden from History: Reclaiming the Gay and Lesbian Past*, ed. Martin Bauml Duberman, Martha Vicinus, and Chauncey (New York, 1989), p. 49.
- 17 Halperin, “Sex before Sexuality,” p. 49.
- 18 Studies of intimacy that do not assume this “web of mutuality,” either as the self-evident nature of intimacy or as a human value, are rare. Roland Barthes’s *A Lover’s Discourse: Fragments*, trans. Richard Howard (New York, 1978), and Niklas Luhmann’s *Love as Passion*, trans. Jeremy Gaines and Doris L. Jones (Cambridge, Mass., 1986) both try, in very different ways, to describe analytically the production of intimacy. More typical is Anthony Giddens’s attempt to theorize intimacy

- as “pure relationship” in *The Transformation of Intimacy: Sexuality, Love, and Eroticism in Modern Societies* (Cambridge, 1992). There, ironically, it is “the gays who are the pioneers” in separating the “pure relationship” of love from extraneous institutions and contexts such as marriage and reproduction.
- 19 Berlant and Warner, “What Does Queer Theory Teach Us about X?” *PMLA* 110 (May 1995): 345.
  - 20 Bennett, quoted in Maureen Dowd, “Talk Is Cheap,” *New York Times*, 26 Oct. 1995, p. A25.
  - 21 Biddy Martin, “Extraordinary Homosexuals and the Fear of Being Ordinary,” *Differences* 6 (Summer–Fall 1994): 123; hereafter abbreviated “EH.”
  - 22 In some traditions of social theory, the process of world making as we describe it here is seen as common to all social actors. See, for example, Alfred Schutz’s emphasis on the practices of typification and projects of action involved in ordinary knowledge of the social in *The Phenomenology of the Social World*, trans. George Walsh and Frederick Lehnert (Evanston, Ill., 1967). Yet in most contexts the social world is understood, not as constructed by reference to types or projects, but as instantiated whole in a form capable of reproducing itself. The family, the state, a neighborhood, the human species, or institutions such as school and church – such images of social being share an appearance of plenitude seldom approached in contexts of queer world making. However much the latter might resemble the process of world construction in ordinary contexts, queer worlds do not have the power to represent a taken-for-granted social existence.
  - 23 See, for example, Alan Bray, “Homosexuality and the Signs of Male Friendship in Elizabethan England,” *History Workshop* 29 (Spring 1990): 1–19; Laurie J. Shannon, “Emilia’s Argument: Friendship and ‘Human Title’ in *The Two Noble Kinsmen*,” *ELH* 64 (Fall 1997); and *Passions of the Renaissance*, trans. Arthur Goldhammer, ed. Roger Chartier, vol. 3 of *A History of Private Life*, ed. Philippe Ariès and Georges Duby (Cambridge, Mass., 1989).
  - 24 On the relation between Foucault and Habermas, we take inspiration from Tom McCarthy, *Ideals and Illusions* (Cambridge, Mass., 1991), pp. 43–75.
  - 25 Habermas, *The Structural Transformation of the Public Sphere: An Inquiry into a Category of Bourgeois Society*, trans. Thomas Burger and Frederick Lawrence (Cambridge, Mass., 1991), p. 49.
  - 26 Ibid., p. 46.
  - 27 On the centrality of semipublic spaces like tearooms, bathrooms, and bathhouses to gay male life, see Chauncey, *Gay New York*, and Lee Edelman, “Tearooms and Sympathy, or, Epistemology of the Water Closet,” in *Nationalisms and Sexualities*, ed. Andrew Parker et al. (New York, 1992), pp. 263–84. The spaces of both gay and lesbian semipublic sexual practices are investigated in *Mapping Desire: Geographies of Sexualities*, ed. David Bell and Gill Valentine (New York, 1995).
  - 28 Douglas Crimp, “How to Have Promiscuity in an Epidemic,” *October*, no. 43 (Winter 1987): 253.
  - 29 The notion of a demand for recognition has been recently advanced by a number of thinkers as a way of understanding multicultural politics. See, for example, Axel Honneth, *The Struggle for Recognition: The Moral Grammar of Social Conflicts*, trans. Joel Anderson (Cambridge, 1995), or *Multiculturalism: Examining the Politics of Recognition*, ed. Amy Gutmann (Princeton, N.J., 1994). We are suggesting that although queer politics does contest the terrain of recognition, it cannot be conceived as a politics of recognition *as opposed to* an issue of distributive justice; this is the distinction proposed in Nancy Fraser’s “From Redistribution to Recognition? Dilemmas of Justice in a ‘Postsocialist’ Age,” *New Left Review*, no. 212 (July–Aug. 1995): 68–93; repr. in her *Justice Interruptus: Critical Reflections on the ‘Postsocialist’ Condition* (New York, 1997).
  - 30 See Sedgwick, *Epistemology of the Closet*, and Yvonne Zipter, *Diamonds Are a Dyke’s Best Friend: Reflections, Reminiscences, and Reports from the Field on the Lesbian National Pastime* (Ithaca, N.Y., 1988).
  - 31 Such a politics is increasingly recommended within the gay movement. See, for example, Andrew Sullivan, *Same-Sex Marriage, Pro and Con* (New York, 1997); Michelangelo Signorile, *Life Outside: The Signorile Report on Gay Men, Sex, Drugs, Muscles, and the Passages of Life* (New York, 1997); Gabriel Rotello, *Sexual Ecology: AIDS and the Destiny of Gay Men* (New York, 1997); William N. Eskridge, Jr., *The Case for Same-Sex Marriage: From Sexual Liberty to Civilized Commitment* (New York, 1996); *Same-Sex Marriage: The Moral and Legal Debate*, ed. Robert M. Baird and Stuart E. Rosenbaum (Amherst, N.Y., 1996); and Mark Strasser, *Legally Wed: Same-Sex Marriage and the Constitution* (Ithaca, N.Y., 1997).

- 32 The phrase “the right to the city” is Henri Lefebvre’s, from his *Le Droit à la ville* (Paris, 1968); trans. Eleonore Kofman and Elizabeth Lebas, under the title “The Right to the City,” *Writings on Cities* (Oxford, 1996), pp. 147–59. See also Manuel Castells, *The City and the Grassroots* (Berkeley, 1983).
- 33 On deadness as an affect and aspiration of normative social membership, see Berlant, “Live Sex Acts (Parental Advisory: Explicit Material),” *The Queen of America Goes to Washington City*, pp. 59–60, 79–81.
- 34 The classic argument against the redemptive sex pastoralism of normative sexual ideology is made in Bersani, “Is the Rectum a Grave?”; on redemptive visions more generally, see his *The Culture of Redemption* (Cambridge, Mass., 1990).

# CHAPTER 12

## Naturally Queer

*Myra Hird*

Sociologist Myra Hird's essay introduces us to the "new materialism," a movement across the social sciences that treats the boundaries between the human and the biological as fluid. As Hird notes, we humans are populated by bacteria with which we interact in ways that do not respect the boundaries that are usually expected to exist between entities. Moreover, our heterosexual reproductive paradigm is minoritarian when considered in the context of the numerous pan-sexual forms of reproduction with which we live in close proximity. Nature is not a static thing in relation to which cultural fluidity is measured; rather biology itself is fluid in ways that provoke a questioning of our static habits of thought and action in regard to gender identity and reproduction.

Transgressing boundaries is a hallmark of queer theory and research. The analysis of boundary transgressions is usually framed as the purview of culture, with living and non-living matter figured as the stubborn, inert, 'outside' to transgressive potential. This short paper aims to suggest nonlinear biology as a potent lens with which to explore particular boundary transgressions associated with queer theory including the autonomy of the self, embodiment and sexual difference.

### Queering Sexual Difference

Non-linear biology provides a wealth of evidence to confound static notions of sexual difference.<sup>1</sup> Human bodies, like those of other living organisms, are only 'sexed' from a particularly narrow perspective. The *vast* majority of cells in human bodies are intersex (and this category itself is only possible by maintaining a division between 'female' and 'male' chromosomes), with only egg and sperm cells counting as sexually dimorphic. *Most* of the reproduction that we undertake in our lifetimes has nothing to do with 'sex'. The cells in our bodies engage in constant, energetic reproduction in the form of *recombination* (cutting and patching of DNA strands), *merging* (fertilization of cells), *meiosis* (cell division by halving chromosome number, for instance in making sperm and eggs),

*Original publication details:* Myra Hird, "Naturally Queer." *Feminist Theory* 5, pp. 85–89. Sage, 2004. Reproduced with permission from Sage and M. Hird.

and *mitosis* (cell division with maintenance of cell number). Nor does reproduction take place between discrete ‘selves’, as many cultural analyses would have it. Indeed, only by taking our skin as a definitive impenetrable boundary are we able to see our bodies as discrete selves.<sup>2</sup> Our human bodies are more accurately ‘built from a mass of interacting selves … the self is not only corporeal but corporate’ (Sagan, 1992: 370). Our cells also provide asylum for a variety of bacteria, viruses and countless genetic fragments. And none of this reproduction requires any bodily contact with another human being. Moreover, there is no linear relationship between sexual dimorphism and sexual reproduction. Male sea horses, pipe fish and hares get pregnant. Many species are male and female simultaneously, or sequentially. Many types of fish change sex back and forth depending on environmental conditions (see Rothblatt, 1995).

Indeed, what I would call our bodily state of sexual *indifference* is founded upon an entire evolutionary legacy. During most of our evolutionary heritage, our ancestors reproduced without sex. Currently, most of the organisms in four out of the five kingdoms do not require sex for reproduction. Imagine *The Joy of Sex* for plants, fungi, and bacteria. *Schizophyllum*, for instance, has more than 28,000 sexes. And sex among these promiscuous mushrooms is literally a ‘touch-and-go’ event, leading Laidman to conclude that for fungi there are ‘so many genders, so little time …’ (2000: 1–3). Thus, sexual ‘difference’ might be culturally significant, but this term obscures the much more prevalent sex diversity among living matter.

### Queering Technology

Whether cultural analyses trumpet technology as the future site of new ways of living, or caution the perceived headlong rush toward technological dependence in the absence of sustained ethical consideration, these analyses tend to tacitly assume technology to be the cache of human beings. But as Arthur Clarke points out, ‘we never invent anything that nature hasn’t tried out millions of years earlier’ (2000: 333). At a basic level, life itself is, and has always been, ‘technological’ in the very real sense that bacteria, protocists and animals incorporate external structural materials into their bodies (see Margulis and Sagan, 1997). And it is particularly in relation to technology that I begin my ode to bacteria. Bacteria have been around for about three billion years. Sagan is right to argue that ‘bacteria are biochemically and metabolically far more diverse than all plants and animals put together’ (1992: 377). On their curriculum vitae, bacteria can boast the ability to detect light, produce alcohol, and convert various gases and minerals (see Margulis and Sagan, 1997). The ancestors of all living things, bacteria are, indisputably, the supreme chemists in the history of this planet. They, and not hippies, were the first beings to grow on nothing but sun, water and air. But that’s not all. Bacteria also invented all major forms of metabolism, multicellularity, nanotechnology (controlling molecules in ways that continue to elude scientists), and metallurgy. They are the single most important living beings to maintain the biosphere, and they have even figured out a way to successfully resist death. As Margulis and Sagan note:

Bacteria and protocists set the stage. They, not animals, introduced DNA recombination, locomotion, reproduction leading to exponential growth, photosynthesis, boil-proof spores. They, not animals, pioneered symbiosis and the organization of individuals from multicellular collectives. They invented intracellular motility (including mitosis), complex developmental

cycles, meiosis, sexual fusion, individuality, and programmed death. The prokaryotic microbes, not animals or plants, still run all the geochemical cycles that make the planet habitable. The prototists, in their new status as individuals form coevolved bacterial communities, invented resistant cysts, skeletons and shells, gender behaviours, cell-to-cell communication, lethal toxins, and many other processes later co-opted by animals. Animals were preceded by bacteria and prototists, not by chemicals. The animal explosion has a long microbial fuse. (1995: 160)

Bacteria also seriously raise the queering bar through their abilities to cross species barriers and perform hypersex. Current controversy over the use of animal cell and organ ‘donation’ (no one, as far as I know, has ever asked the pigs for their consent) is old hat for bacteria. The equivalent to this bacterial ability in human animals would be a ‘man with red hair and freckles wak[ing] up, after a swim with his brunette boyfriend and dog, with brown hair, a tail and floppy ears’ (Margulis and Sagan, 1997: 53). Bacteria long ago cornered the market on ‘trans’, whether transduction or transfection.<sup>3</sup> Bacteria are not lumbered with quaint ideas about sexual reproduction to exchange genes, and will avidly exchange genes with just about any living organism (including our not-so-autonomous human bodies). Much of the ‘brave new world’ of reproductive technologies is human mimicry of well-worn, millions of years old bacterial practices. And, within bacterial being, the female/male, sex/gender distinction has no meaning (Margulis and Sagan, 1997). Since bacteria recognize and avidly embrace diversity, they do not discriminate on the basis of ‘sex’ or ‘gender’ differences at all.

### **Queerying Boundaries**

One of the founding aims of queer theory is to challenge normative boundaries, between what is ‘normal’ and ‘abnormal’, ‘heterosexual’ and ‘homosexual’ and so on. My ‘ode to bacteria’ might suggest that while I may have queered human notions of technology, I have re-established a boundary/binary between ‘human’ and ‘bacteria’. However, my central point here is that bacteria are us. Put another way, ‘we’ live in a symbiotic relationship with bacteria, and when we say ‘human’ we necessarily mean, at a physical level, bacteria as well (as well as a host of other matter such as viruses, thread worms and so on). Thus, in non-linear biology, the penultimate embodiment of queer may be bodies themselves. Take, for example, Donna Haraway’s (2001) *Mixotricha paradoxa*, a minute single-celled organism that lives in symbiotic relationship with five other organisms in the gut of the South Australian termite. For *Mixotricha paradoxa*, as for *Homo sapiens*, the key boundary is between the self and other, or as Haraway puts it ‘the one and the many’ (2001: 82). Recent research on chimerism and mosaicism within human and other animals further troubles the notion of material autonomy.<sup>4</sup>

Beyond the autonomy of the (human) self, non-linear biology might help us to re-think other boundaries such as the distinction between humans and primates, and living and non-living matter more generally. As Sarah Franklin notes, ‘trading organismic distinction for pan-species genetic information flow pulls the rug out from under the sex/gender system as we know it’ (1995: 69). Non-linear biology also provides a growing catalogue of homosexual, transgender, and non-reproductive heterosexual behaviour in animals that defies the traditional homosexual/heterosexual boundary. Gay parenting, lesbianism, homosexuality, sex-changing, and other behaviours in animals are prevalent in living matter. It is at least curious that queer theory does not devote more space to the abundant queer behaviour of most of the living matter on this planet.

## Conclusion

If queer critiques ‘have fallen into old and familiar patterns [then one way this] ubiquitous gravitation to culture’ might be averted is by studying the queerness of matter (Wilson, 1996: 50). We may no longer be certain that it is nature that remains static and culture that evinces limitless malleability. Non-linear biology stands to make a significant contribution to queer discussions of the constitution, boundaries and technologies of ‘sex’, ‘gender’, and ‘sexuality’.

## Notes

- 1 For a longer account of queering sexual difference, technology and boundaries, see Hird (2003).
- 2 Lewis Thomas puts it more directly: from the point of view of the mitochondria in our bodies (which occupy as much volume in themselves as the rest of us), we ‘could be taken for a very large, motile colony of respiring bacteria, operating a complex system of nuclei, microtubules, and neurons for the pleasure and sustenance of their families, and running, at the moment, a typewriter’ (1974: 72).
- 3 Humans tend to think of agency as requiring intentionality born of subjectivity, but if we use Karen Barad’s (1998) definition of ‘agency as an enactment rather than something someone has’ we get a different picture. To deny all forms of non-human matter agency reminds me of Descartes’ humanocentric claim that dogs do not suffer pain.
- 4 See for example Pearson (2002) and Strain et al. (1998).

# CHAPTER 13

## Cruising Utopia: “Introduction” and “Queerness as Horizon: Utopian Hermeneutics in the Face of Gay Pragmatism”

*José Esteban Muñoz*

José Esteban Muñoz (1967–December 4, 2013) was an American academic in the fields of performance studies, visual culture, Queer Theory, cultural studies, and critical theory. His book *Disidentifications: Queers of Color and the Performance of Politics* (1999) examines queer and racial minority issues from a performance studies perspective. His second book, *Cruising Utopia: The Then and There of Queer Futurity*, was published by NYU Press in 2009. He also co-edited *Pop Out: Queer Warhol* (1996) with Jennifer Doyle and Jonathan Flatley, and *Everynight Life: Culture and Dance in Latin/o America* (1997) with Celeste Fraser Delgado. Muñoz was Professor in, and former Chair of, the Department of Performance Studies at New York University’s Tisch School of the Arts.

### Introduction

### Feeling Utopia

*A map of the world that does not include utopia is not worth glancing at.*

— Oscar Wilde

Queerness is not yet here. Queerness is an ideality. Put another way, we are not yet queer. We may never touch queerness, but we can feel it as the warm illumination of a horizon imbued with potentiality. We have never been queer, yet queerness exists for us as an ideality that can be distilled from the past and used to imagine a future. The future is queerness’s domain. Queerness is a structuring and educated mode of desiring that

*Original publication details:* José Esteban Muñoz, from *Cruising Utopia*, pp. 1–48. New York University Press, 2009.

allows us to see and feel beyond the quagmire of the present. The here and now is a prison house. We must strive, in the face of the here and now's totalizing rendering of reality, to think and feel a *then and there*. Some will say that all we have are the pleasures of this moment, but we must never settle for that minimal transport; we must dream and enact new and better pleasures, other ways of being in the world, and ultimately new worlds. Queerness is a longing that propels us onward, beyond romances of the negative and toiling in the present. Queerness is that thing that lets us feel that this world is not enough, that indeed something is missing. Often we can glimpse the worlds proposed and promised by queerness in the realm of the aesthetic. The aesthetic, especially the queer aesthetic, frequently contains blueprints and schemata of a forward-dawning futurity. Both the ornamental and the quotidian can contain a map of the utopia that is queerness. Turning to the aesthetic in the case of queerness is nothing like an escape from the social realm, insofar as queer aesthetics map future social relations. Queerness is also a performative because it is not simply a being but a doing for and toward the future. Queerness is essentially about the rejection of a here and now and an insistence on potentiality or concrete possibility for another world.

## Queerness as Horizon

### Utopian Hermeneutics in the Face of Gay Pragmatism

*for John*

I begin this chapter on futurity and a desire that is utopian by turning to a text from the past – more specifically, to those words that emanate from the spatiotemporal coordinate Bloch referred to as the no-longer-conscious, a term that attempts to enact a more precise understanding of the work that the past does, what can be understood as the performative force of the past. A 1971 issue of the gay liberation journal *Gay Flames* included a manifesto by a group calling itself Third World Gay Revolution. The text, titled “What We Want, What We Believe,” offered a detailed list of demands that included the abolition of capital punishment, the abolishment of institutional religion, and the end of the bourgeois family. The entire list of sixteen demands culminated with a request that was especially radical and poignant when compared to the anemic political agenda that dominates contemporary LGBT politics in North America today.

16.) We want a new society – a revolutionary socialist society. We want liberation of humanity, free food, free shelter, free clothing, free transportation, free health care, free utilities, free education, free art for all. We want a society where the needs of the people come first.

We believe that all people should share the labor and products of society, according to each one's needs and abilities, regardless of race, sex, age or sexual preferences. We believe the land, technology and the means of production belong to the people, and must be shared by the people collectively for the liberation of all.<sup>1</sup>

When we consider the extremely pragmatic agenda that organizes LGBT activism in North America today, the demand “we want a new society” may seem naive by the present’s standards. Many people would dismiss these demands as impractical or merely utopian. Yet I contend that there is great value in pulling these words from the no-longer-conscious to arm a critique of the present. The use of “we” in this manifesto

can be mistakenly read as the “we” implicit in the identity politics that emerged after the Third World Gay Revolution group. Such a reading would miss the point. This “we” does not speak to a merely identitarian logic but instead to a logic of futurity. The “we” speaks to a “we” that is “not yet conscious,” the future society that is being invoked and addressed at the same moment. The “we” is not content to describe who the collective is but more nearly describes what the collective and the larger social order could be, what it should be. The particularities that are listed – “race, sex, age or sexual preferences” – are not things in and of themselves that format this “we”; indeed the statement’s “we” is “regardless” of these markers, which is not to say that it is beyond such distinctions or due to these differences but, instead, that it is *beside* them. This is to say that the field of utopian possibility is one in which multiple forms of belonging in difference adhere to a belonging in collectivity.

Such multiple forms of belonging-in-difference and expansive critiques of social asymmetries are absent in the dominant LGBT leadership community and in many aspects of queer critique. One manifesto from today’s movement that seems especially representative of the anemic, short-sighted, and retrograde politics of the present is “All Together Now (A Blueprint for the Movement),”<sup>2</sup> a text written by pro-gay-marriage lawyer Evan Wolfson that appeared on his website, [freedomtomarry.org](http://freedomtomarry.org). Wolfson’s single-minded text identifies the social recognition and financial advantages offered by traditional marriage pacts as the key to what he calls “freedom.” Freedom for Wolfson is mere inclusion in a corrupt and bankrupt social order. Wolfson cannot critique the larger ideological regime that represents marriage as something desirable, natural, and good. His assimilationist gay politics posits an “all” that is in fact a few: queers with enough access to capital to imagine a life integrated within North American capitalist culture. It goes almost without saying that the “all” invoked by the gay lawyer and his followers are normative citizen-subjects with a host of rights only afforded to some (and not all) queer people. Arguments against gay marriage have been articulated with great acumen by Lisa Duggan and Richard Kim.<sup>3</sup> But it is Wolfson’s invocation of the term *freedom* that is most unsettling.

Wolfson and his website’s rhetoric degrade the concept of freedom. Homonormative cultural and political lobbyists such as Wolfson have degraded the political and conceptual force of concepts such as freedom in the same way that the current political regime of the United States has degraded the term *liberation* in the case of recent Middle Eastern foreign policy. I invoke Wolfson here not so much as this chapter’s problem or foil but merely as a recent symptom of the erosion of the gay and lesbian political imagination. Wolfson represents many homonormative interests leading the contemporary LGBT movement toward the goal of “naturalizing” the flawed and toxic ideological formation known as marriage. The aping of traditional straight relationality, especially marriage, for gays and lesbians announces itself as a pragmatic strategy when it is in fact a deeply ideological project that is hardly practical. In this way gay marriage’s detractors are absolutely right: gay marriage is not natural – but then again, neither is marriage for any individual.

A similar but more nuanced form of what I am referring to as gay pragmatic thought can be seen in Biddy Martin’s work, especially her psychoanalytically inspired diagnosis that queer critique suffers from an androcentric bias in which queerness presents itself as the “extraordinary” while at the same time fleeing the charge of being “ordinary.” Being ordinary and being married are both antiutopian wishes, desires that automatically rein themselves in, never daring to see or imagine the not-yet-conscious. This line of

thought that I am identifying as pragmatic is taken from its vernacular register. I am not referring to the actual philosophical tradition of American pragmatism of Charles Peirce, William James, or John Dewey. But the current gay political strategy I am describing does share an interest in empiricism with that school. Gay pragmatic organizing is in direct opposition to the idealist thought that I associate as endemic to a forward-dawning queerness that calls on a no-longer-conscious in the service of imagining a futurity.

The not-quite-conscious is the realm of potentiality that must be called on, and insisted on, if we are ever to look beyond the pragmatic sphere of the here and now, the hollow nature of the present. Thus, I wish to argue that queerness is not quite here; it is, in the language of Italian philosopher Giorgio Agamben, a potentiality.<sup>4</sup> Alain Badiou refers to that which follows the event as the thing-that-is-not-yet-imagined,<sup>5</sup> and in my estimation queerness too should be understood to have a similar valence. But my turn to this notion of the not-quite-conscious is again indebted to Bloch and his massive three-volume text *The Principle of Hope*.<sup>6</sup> That treatise, both a continuation and an amplification of German idealist practices of thought, is a critical discourse – which is to say that it does not avert or turn away from the present. Rather, it critiques an autonaturalizing temporality that we might call *straight time*. Straight time tells us that there is no future but the here and now of our everyday life.<sup>7</sup> The only futurity promised is that of reproductive majoritarian heterosexuality, the spectacle of the state refurbishing its ranks through overt and subsidized acts of reproduction. In *No Future*, Lee Edelman advises queers that the future is “kid stuff.”<sup>8</sup> Although I believe that there is a lot to like about Edelman’s polemic – mostly its disdain for the culture of the child – I ultimately want to speak for a notion of queer futurity by turning to Bloch’s critical notion of utopia.

It is equally polemical to argue that we are not quite queer yet, that queerness, what we will really know as queerness, does not yet exist. I suggest that holding queerness in a sort of ontologically humble state, under a conceptual grid in which we do not claim to always already know queerness in the world, potentially staves off the ossifying effects of neoliberal ideology and the degradation of politics brought about by representations of queerness in contemporary popular culture.

A posterior glance at different moments, objects, and spaces might offer us an anticipatory illumination of queerness. We cannot trust in the manifestations of what some people would call queerness in the present, especially as embodied in the pragmatic debates that dominate contemporary gay and lesbian politics. (Here, again, I most pointedly mean U.S. queers clamoring for their right to participate in the suspect institution of marriage and, maybe worse, to serve in the military.) None of this is to say that there are not avatars of a queer futurity, both in the past and the present, especially in sites of cultural production. What I am suggesting is that we gain a greater conceptual and theoretical leverage if we see queerness as something that is not yet here. In this sense it is useful to consider Edmund Husserl, phenomenology’s founder, and his invitation to look to horizons of being.<sup>9</sup> Indeed to access queer visuality we may need to squint, to strain our vision and force it to see otherwise, beyond the limited vista of the here and now.

To critique an overarching “here and now” is not to turn one’s face away from the everyday. Roland Barthes wrote that the mark of the utopian is the quotidian.<sup>10</sup> Such an argument would stress that the utopian is an impulse that we see in everyday life. This impulse is to be glimpsed as something that is extra to the everyday transaction of heteronormative capitalism. This quotidian example of the utopian can be glimpsed in utopian bonds, affiliations, designs, and gestures that exist within the present moment. Turning to the New York School of poetry, a moment that is one of the cultural

touchstones for my research, we can consider a poem by James Schuyler that speaks of a hope and desire that is clearly utopian. The poem, like most of Schuyler's body of work, is clearly rooted in an observation of the affective realm of the present. Yet there is an excess that the poet also conveys, a type of affective excess that presents the enabling force of a forward-dawning futurity that is queerness. In the poem "A photograph," published in 1974 in the collection *Hymn to Life*, a picture that resides on the speaker's desk sparks a recollection of domestic bliss.

*A photograph*  
Shows you in a London  
room; books, a painting,  
your smile, a silky  
tie, a suit. And more.  
It looks so like you  
and I see it every day  
(here, on my desk)  
which I don't you. Last  
Friday was grand.  
We went out, we came  
back, we went wild. You  
slept. Me too. The pup  
woke you and you dressed  
and walked him. When  
you left, I was sleeping.  
When I woke there was  
just time to make the  
train to a country dinner  
and talk about ecstasy.  
Which I think comes in  
two sorts: that which you  
Know "Now I am ecstatic"  
Like my strange scream  
last Friday night. And  
another kind, that you  
know only in retrospect:  
"Why, that joy I felt  
and didn't think about  
when his feet were in  
my lap, or when I looked  
down and saw his slanty  
eyes shut, that too was  
ecstasy. Nor is there  
necessarily a downer from  
it." Do I believe in  
the perfectibility of  
man? Strangely enough,  
(I've known unhappiness enough) I  
do. I mean it.  
I really do believe  
future generations can  
live without the intervals of anxious

fear we know between our  
 bouts and strolls of  
 ecstasy. The struck ball  
 finds the pocket. You  
 smile some years back  
 in London, I have  
 known ecstasy and calm:  
 haven't you too? Let's  
 try to understand, my  
 handsome friend who  
 wears his nose awry.<sup>11</sup>

The speaker remembers the grandness of an unspectacular Friday in which he and his addressee slept in and then scrambled to catch a train to a dinner out in the country. He attempts to explain the ecstasy he felt that night, indicating that one moment of ecstasy, a moment he identifies as being marked both by self-consciousness and obliviousness, possesses a potentially transformative charge. He then considers another moment of ecstasy in retrospect, a looking back at a no-longer-conscious that provides an affective enclave in the present that staves off the sense of "bad feelings" that mark the affective disjuncture of being queer in straight time.

The moment in the poem of deeper introspection – beginning "Do I believe in / the perfectibility of / man?" – is an example of a utopian desire inspired by queer relationality. Moments of queer relational bliss, what the poet names as ecstasies, are viewed as having the ability to rewrite a larger map of everyday life. When "future generations" are invoked, the poet is signaling a queerness to come, a way of being in the world that is glimpsed through reveries in a quotidian life that challenges the dominance of an affective world, a present, full of anxiousness and fear. These future generations are, like the "we" invoked in the manifesto by the Third World Gay Revolution group, not an identitarian formulation but, instead, the invocation of a future collectivity, a queerness that registers as the illumination of a horizon of existence.

The poem speaks of multiple temporalities and the affective mode known as ecstasy, which resonates alongside the work of Martin Heidegger. In *Being and Time* Heidegger reflects on the activity of timeliness and its relation to *ekstatisch* (ecstasy), signaling for Heidegger the ecstatic unity of temporality – Past, Present, and Future.<sup>12</sup> The ecstasy the speaker feels and remembers in "A photograph" is not consigned to one moment. It steps out from the past and remarks on the unity of an expansive version of temporality; hence, future generations are invoked. To know ecstasy in the way in which the poem's speaker does is to have a sense of timeliness's motion, to understand a temporal unity that is important to what I attempt to describe as the time of queerness. Queerness's time is a stepping out of the linearity of straight time. Straight time is a self-naturalizing temporality. Straight time's "presentness" needs to be phenomenologically questioned, and this is the fundamental value of a queer utopian hermeneutics. Queerness's ecstatic and horizontal temporality is a path and a movement to a greater openness to the world.

It would be difficult to mistake Schuyler's poem for one of Frank O'Hara's upbeat reveries. O'Hara's optimism is a contagious happiness within the quotidian that I would also describe as having a utopian quality. Schuyler's poetry is not so much about optimism but instead about a hope that is distinctly utopian and distinctly queer. The poem imagines another collective belonging, an enclave in the future where readers will not be beset with feelings of nervousness and fear. These feelings are the affective results of

being outside of straight time. He writes from a depressive position, “(I’ve known un-/ happiness enough),” but reaches beyond the affective force-field of the present.

Hope for Bloch is an essential characteristic of not only the utopian but also the human condition. Thus, I talk about the human as a relatively stable category. But queerness in its utopian connotations promises a human that is not yet here, thus disrupting any ossified understanding of the human. The point is to stave off a gay and lesbian anti-utopianism that is very much tainted with a polemics of the pragmatic rights discourse that in and of itself hamstrings not only politics but also desire. Queerness as utopian formation is a formation based on an economy of desire and desiring. This desire is always directed at that thing that is not yet here, objects and moments that burn with anticipation and promise. The desire that propels Schuyler’s “A photograph” is born of the no-longer-conscious, the rich resonance of remembrance, distinct pleasures felt in the past. And thus past pleasures stave off the affective perils of the present while they enable a desire that is queer futurity’s core.

Queerness is utopian, and there is something queer about the utopian. Fredric Jameson described the utopian as the oddball or the maniac.<sup>13</sup> Indeed, to live inside straight time and ask for, desire, and imagine another time and place is to represent and perform a desire that is both utopian and queer. To participate in such an endeavor is not to imagine an isolated future for the individual but instead to participate in a hermeneutic that wishes to describe a collective futurity, a notion of futurity that functions as a historical materialist critique. In the two textual examples I have employed we see an overt utopianism that is explicit in the Third World Gay Revolution manifesto, and what I am identifying as a *utopian impulse* is perceivable in Schuyler’s poetry. One requires a utopian hermeneutic to see an already operative principle of hope that hums in the poet’s work. The other text, the manifesto, does another type of performative work; it *does utopia*.

To “read” the performative, along the lines of thought first inaugurated by J. L. Austin, is implicitly to critique the epistemological.<sup>14</sup> Performativity and utopia both call into question what is epistemologically there and signal a highly ephemeral ontological field that can be characterized as a *doing in futurity*. Thus, a manifesto is a call to a doing in and for the future. The utopian impulse to be gleaned from the poem is a call for “doing” that is a becoming: the becoming of and for “future generations.” This rejection of the here and now, the ontologically static, is indeed, by the measure of homonormative codes, a maniacal and oddball endeavor. The queer utopian project addressed here turns to the fringe of political and cultural production to offset the tyranny of the homonormative. It is drawn to tastes, ideologies, and aesthetics that can only seem odd, strange, or indeed queer next to the muted striving of the practical and normalcy-desiring homosexual.

The turn to the call of the no-longer-conscious is not a turn to normative historical analysis. Indeed it is important to complicate queer history and understand it as doing more than the flawed process of merely evidencing. Evidencing protocols often fail to enact real hermeneutical inquiry and instead opt to reinstate that which is known in advance. Thus, practices of knowledge production that are content merely to cull selectively from the past, while striking a pose of positivist undertaking or empirical knowledge retrieval, often nullify the political imagination. Jameson’s Marxian dictate “always historicize”<sup>15</sup> is not a methodological call for empirical data collection. Instead, it is a dialectical injunction, suggesting we animate our critical faculties by bringing the past to bear on the present and the future. Utopian hermeneutics offer us a refined lens to view queerness, insofar as queerness, if it is indeed not quite here, is nonetheless intensely relational with the past.

The present is not enough. It is impoverished and toxic for queers and other people who do not feel the privilege of majoritarian belonging, normative tastes, and “rational” expectations. (I address the question of rationalism shortly). Let me be clear that the idea is not simply to turn away from the present. One cannot afford such a maneuver, and if one thinks one can, one has resisted the present in favor of folly. The present must be known in relation to the alternative temporal and spatial maps provided by a perception of past and future affective worlds.

Utopian thinking gets maligned for being naively romantic. Of course, much of it has been naive. We know that any history of actualized utopian communities would be replete with failures. No one, other than perhaps Marx himself, has been more cognizant about this fact than Bloch. But it is through this Marxian tradition, not beside or against it, that the problem of the present is addressed. In the following quotation we begin to glimpse the importance of the Marxian tradition for the here and now.

Marxism, above all, was first to bring a concept of knowledge into the world that essentially refers to Becomeness, but to the tendency of what is coming up; thus for the first time it brings future into our conceptual and theoretical grasp. Such recognition of tendency is necessary to remember, and to open up the No-Longer-Conscious.<sup>16</sup>

Thus we see Bloch’s model for approaching the past. The idea is not to attempt merely to represent it with simplistic strokes. More nearly, it is important to call on the past, to animate it, understanding that the past has a performative nature, which is to say that rather than being static and fixed, the past does things. It is in this very way that the past is performative. Following a Blochian thread, it seems important to put the past into play with the present, calling into view the tautological nature of the present. The present, which is almost exclusively conceived through the parameters of straight time, is a self-naturalizing endeavor. Opening up a queer past is enabled by Marxian ideological tactics. Bloch explains that

Marxism thus rescued the rational core of utopia and made it concrete as well as the core of the still idealistic tendency of dialectics. Romanticism does not understand utopia, not even its own, but utopia that has become concrete understands Romanticism and makes inroads into it, in so far as archaic material in its archetypes and work, contain a not yet voiced, undischarged element.<sup>17</sup>

Bloch invites us to look to this no-longer-conscious, a past that is akin to what Derrida described as the trace. These ephemeral traces, flickering illuminations from other times and places, are sites that may indeed appear merely romantic, even to themselves. Nonetheless they assist those of us who wish to follow queerness’s promise, its still unrealized potential, to see something else, a component that the German aesthetician would call *cultural surplus*. I build on this idea to suggest that the surplus is both cultural and *affective*. More distinctly, I point to a queer feeling of hope in the face of hopeless heteronormative maps of the present where futurity is indeed the province of normative reproduction. This hope takes on the philosophical contours of idealism.

A queer utopian hermeneutic would thus be queer in its aim to look for queer relational formations within the social. It is also about this temporal project that I align with queerness, a work shaped by its idealist trajectory; indeed it is the work of not settling for the present, of asking and looking beyond the here and now. Such a hermeneutic would then

be *epistemologically and ontologically humble* in that it would not claim the epistemological certitude of a queerness that we simply “know” but, instead, strain to activate the no-longer-conscious and to extend a glance toward that which is forward-dawning, anticipatory illuminations of the not-yet-conscious. The purpose of such temporal maneuvers is to wrest ourselves from the present’s stultifying hold, to know our queerness as a belonging in particularity that is not dictated or organized around the spirit of political impasse that characterizes the present.

Jameson has suggested that for Bloch the present is provincial.<sup>18</sup> This spatialization of time makes sense in relation to the history of utopian thought, most famously described as an island by Thomas More. To mark the present as provincial is not to ridicule or demean the spots on queerness’s map that do not signify as metropolitan. The here and now has an opposite number, and that would be the then and there. I have argued that the *then* that disrupts the tyranny of the *now* is both past and future. Along those lines, the here that is unnamed yet always implicit in the metropolitan hub requires the challenge of a there that can be regional or global. The transregional or the global as modes of spatial organization potentially displace the hegemony of an unnamed here that is always dominated by the shadow of the nation-state and its mutable and multiple corporate interests. While *globalization* is a term that mostly defines a worldwide system of manufactured asymmetry and ravenous exploitation, it also signals the encroaching of the there on the here in ways that are worth considering.

The Third World Gay Revolution group was an organization that grew out of the larger Gay Liberation Front at roughly the same time that the Radicalesbians also spun off from the larger group in the spring/summer of 1970. Although they took the name Third World Gay Revolution, the group’s members have been described by a recent historian as people of color.<sup>19</sup> Their own usage of the term “Third World” clearly connotes their deep identification with the global phenomenon that was decolonization. It is therefore imperative to remember this moment from the no-longer-conscious that transcended a gay and lesbian activist nationalist imaginary. For Heidegger “time and space are not co-ordinate. Time is prior to space.”<sup>20</sup> If time is prior to space, then we can view both the force of the no-longer-conscious and the not-yet-here as potentially bearing on the *here* of naturalized space and time. Thus, at the center of cultural texts such as the manifesto “All Together Now (A Blueprint for the Movement)” we find an ideological document, and its claim to the pragmatic is the product of a short-sighted here that fails to include anything but an entitled and privileged world. The there of queer utopia cannot simply be that of the faltering yet still influential nation-state.

This is then to say that the distinctions between here and there, and the world that the here and now organizes, are not fixed – they are already becoming undone in relation to a forward-dawning futurity. It is important to understand that a critique of our homosexual present is not an attack on what many people routinely name as lesbian or gay but, instead, an appraisal of how queerness is still forming, or in many crucial ways formless. Queerness’s form is utopian. Ultimately, we must insist on a queer futurity because the present is so poisonous and insolvent. A resource that cannot be discounted to know the future is indeed the no-longer-conscious, that thing or place that may be extinguished but not yet discharged in its utopian potentiality.

Bloch explains the Kantian nature of his project as the “saving” of a “rationalist core.” It is worth remarking that Kant’s rationalism is not merely held up in this instance; indeed *rationalism itself is refunctioned*. No longer is rationalism the ruler used by universalism to measure time and space. In Bloch’s work rationalism is transformed via a

political urgency. Rationalism is not dismissed but is instead unyoked from a politics of the pragmatic. Herbert Marcuse discussed the “irrational element in rationality” as an important component of industrial society’s nature. Irrationality flourishes in “established institutions” – marriage is perhaps one of the very best examples of an institution that hampers rational advancement and the not-yet-imagined versions of freedom that heteronormative and homonormative culture proscribe.<sup>21</sup> In Marcuse’s analysis the advancements in rationality made by technological innovations were counteracted by gay pragmatic political strategies that tell us not to dream of other spatial/temporal coordinates but instead to dwell in a broken-down present. This homosexual pragmatism takes on the practical contours of the homonormativity so powerfully described by Lisa Duggan in her treatise on neoliberalism, *The Twilight of Equality*.<sup>22</sup> Within the hermeneutical scope of a queer utopian inquiry rationalism is reignited with an affective spark of idealist thought.

Abstract utopias are indeed dead ends, too often vectoring into the escapist disavowal of our current moment. But a turn to what Bloch calls the no-longer-conscious is an essential route for the purpose of arriving at the not-yet-here. This maneuver, a turn to the past for the purpose of critiquing the present, is propelled by a desire for futurity. Queer futurity does not underplay desire. In fact it is all about desire, desire for both larger semiabstractions such as a better world or freedom but also, more immediately, better relations within the social that include better sex and more pleasure. Some theorists of postmodernity, such as David Harvey, have narrated sex radicalism as a turning away from a politics of the collectivity toward the individualistic and the petty.<sup>23</sup> In his *A Brief History of Neoliberalism* Harvey plots what he views as the condition of neoliberalism. In his account, “The narcissistic exploration of self, sexuality and identity became the leitmotif of bourgeois urban culture.” In this account, the hard-fought struggles for sexual liberation are reduced to a “demand for lifestyle diversification.” Harvey’s critique pits the “working-class and ethnic immigrant New York” against elites who pursue “lifestyle diversification.”<sup>24</sup> The experiences of working-class or ethnic-racial queers are beyond his notice or interest. Harvey’s failing is a too-common error for some, but not all, members of a recalcitrant, unreconstructed North American left. The rejection of queer and feminist politics represented by Harvey and other reductive left thinkers is a deviation away from the Frankfurt School’s interest in the transformative force of *eros* and its implicit relationship to political desire. The failings and limits of commentators such as Harvey have certainly made queer and utopian thinkers alike wary of left thought. Thus, I suggest a turn to previous modes of Marxian philosophy, such as the work of Marcuse or Bloch. The point is not to succumb to the phobic panic that muddles left thinking or to unimaginative invocations of the rationalism cited by neoliberal gays and lesbians. The point is once again to pull from the past, the no-longer-conscious, described and represented by Bloch today, to push beyond the impasse of the present.

I swerve away from my critique of the failures of imagination in the LGBT activist enterprises to Harvey for a very specific purpose. Harvey represented a fairly more expansive and nuanced critique in his previous work on postmodernity, writing that was thoughtfully critiqued by queer theorists such as Judith Halberstam.<sup>25</sup> But Harvey’s work has become, like that of many Marxist scholars, all too ready to dismiss or sacrifice questions of sexuality and gender. Furthermore, these mostly white writers have, as in the example I cited in the preceding paragraph, been quick to posit race and class as real antagonisms within a larger socioeconomic struggle and sexuality and gender as merely “lifestyle diversification.” In many ways they are performing a function that is the

direct opposite of white neoliberal queers who studiously avoid the question of ethnic, racial, class, ability, or gender difference. This correspondence is representative of a larger political impasse that I understand as being the toll of pragmatic politics and antiutopian thought.

Concrete utopias remake rationalism, unlinking it from the provincial and pragmatic politics of the present. Taking back a rationalist core, in the way in which Bloch suggests we do in relation to romanticism, is to insist on an ordering of life that is not dictated by the spatial/temporal coordinates of straight time, a time and space matrix in which, unfortunately, far too many gays, lesbians, and other purportedly “queer” people reside.

To see queerness as horizon is to perceive it as a modality of ecstatic time in which the temporal stranglehold that I describe as straight time is interrupted or stepped out of. Ecstatic time is signaled at the moment one feels ecstasy, announced perhaps in a scream or grunt of pleasure, and more importantly during moments of contemplation when one looks back at a scene from one’s past, present, or future. Opening oneself up to such a perception of queerness as manifestation in and of ecstatic time offers queers much more than the meager offerings of pragmatic gay and lesbian politics. Seeing queerness as horizon rescues and emboldens concepts such as freedom that have been withered by the touch of neoliberal thought and gay assimilationist politics. Pragmatic gay politics present themselves as rational and ultimately more doable. Such politics and their proponents often attempt to describe themselves as not being ideological, yet they are extremely ideological and, more precisely, are representative of a decayed ideological institution known as marriage. Rationalism need not be given over to gay neoliberals who attempt to sell a cheapened and degraded version of freedom. The freedom that is offered by an LGBT position that does not bend to straight time’s gravitational pull is akin to one of Heidegger’s descriptions of freedom as unboundness. And more often than not the “rhetorical” deployment of the pragmatic leads to a *not-doing*, an anti-performativity. Doing, performing, engaging the performative as force of and for futurity is queerness’s bent and ideally the way to queerness.<sup>26</sup>

John Andrews offered me the gift of extremely generative conversations during the writing of this essay. I only partially acknowledge my gratitude by dedicating it to him.

# CHAPTER 14

## Theory in Practice

### *Queer Lear: A Gender Reading of King Lear*

*Michael Ryan*

Michael Ryan teaches in the Department of Film and Media Arts at Temple University. His books include *Marxism and Deconstruction* (1982), *Camera Politica* (1988), and *The Human Animal: How Science Explains Politics* (Academica.edu). In this essay, he explores the possibility that the initial presentation of *King Lear* on St. Stephen's Night, 1606, at the court of King James, means that the play was intended to flatter the queer king. The play's gender dynamics can be interpreted as slyly alluding to queer themes.

*King Lear* was first presented at King James's court on St. Stephen's night, 1606. King James had been monarch of England since 1603, when he arrived from Scotland upon the death of his predecessor, Queen Elizabeth I. He was a controversial figure at the time the play was staged for his entertainment. He brought with him from Scotland assumptions about the distribution of power between monarch and people that were throwbacks to an earlier feudal political culture. He lived in a plain Christian way that shocked an English court used to a refined style of speech and gentility of behavior. His court consumed twice as much as that of his predecessor, prompting a fight with Parliament, which was paying the bills. And he was openly queer. He lived apart from his wife and child and lavished gifts – including Sir Walter Raleigh's last estate – on his young male lovers. Alan Bray's *Homosexuality in Renaissance England* cites one contemporary account, the *Memoirs* of Lucy Hutchinson, which describes James's court as full of "fools and bawds, mimics and catamites" who engaged in "debaucheries." "Mimics" is a word for actors and "catamites" a contemporary term for queers. The London theater was, like James's court, a locus of the queer subculture of early seventeenth-century England. Parents were afraid to see their sons become involved with the institution for fear they might be "corrupted." Given that *King Lear* was performed by a queer acting troupe at a queer court, it is possible that the play inscribes within itself a link between these two queer subcultural sites. If so, then those moments in the play that might be interpreted as making sly queer allusions – the Fool's remark that one should

not trust “a boy’s love,” which was so controversial it was excised from the Folio edition – take on an additional significance. Indeed, we will argue the play is something of a queer Valentine’s Day card from William Shakespeare to King James I.

What might one expect of a play written and acted by a queer theater company for presentation to an audience of drunk queers? Perhaps a play with touching scenes of male love, a fair amount of ribald queer humor, plenty of crowd-pleasing bashing of heterosexuality, some mockingly campy excessive gender behavior, and expressions of skepticism regarding the easy installation of gender traits such as masculinity and femininity in biologically male or female bodies. But how do we know that Shakespeare would even have wanted to please King James rather than slyly subvert his controversial political positions that seemed to trample on traditional English “liberties”?

It can be argued that the play endorses James’s political worldview in a rather flattering way. When James assumed the throne, he brought with him arcane feudal ideas about the right of kings to rule their lands autocratically. He compared his rule to that of God over his human family, and he expected as much reverence and obedience from his people. But this feudal idea was out of step with the emerging economic and social reality in England, a land in which a new merchant class was displacing the old nobility. The merchants insisted on a role in governing the country through Parliament. They felt the king should not have absolute power. They argued with James over prerogative (who should make laws) and sustenance (who should pay to support the king’s court). Lear is initially portrayed as a representative of a feudal order whose assumptions would have been pleasing to the new king of England. Lear uses words like “recreant” and “vassal” that identify him as feudal, and he expects his daughters to play by feudal rules of fealty and duty. His tragedy is that they, like the parliamentarians, have stopped doing so. His successor – Edgar – is opposed by an illegitimate pretender with characteristics that evoke the new capitalist class. He wishes to prosper and rise, and he rejects feudal customs. That all the characters associated with the breach of feudal norms and with the values of the new capitalist class are killed suggests that the play is fairly straightforward in its political allegiance. It sides with James against the parliamentarians.

But *King Lear* also engages in more strikingly personal forms of flattery towards the new king. James was a rash and imperious ruler who was given to delivering intemperate, oath-filled lectures to Parliament when they did not meet his wishes or provide monies to support a court lifestyle that cost twice what it had under Elizabeth. The king also had difficulties with the people he ruled. His right to demand housing and food for himself and his numerous notoriously ill-mannered retainers while making his rounds of the country in pursuit of the hunt, something he preferred to sitting at court in London, provoked complaints. One day, one of his favorite hunting hounds disappeared and returned with a note around his neck begging the king to depart, since he and his followers were eating up the countryside: “[I]t will please his Majestie to go back to London … all our provision is spent already and we are not able to entertain him longer.”

The parallels with *Lear* scarcely need underscoring. It is a play about rebellion against a king that hinges on a denial of hospitality. Lear assumes that those who owe him “service” will provide food and shelter to his retinue of knights and courtiers, who are given to “pranks,” debauchery, and drink. The negative characters in the play refer to them as a “disordered rabble” that make “servants of their betters.” James was well known to dislike the duties of office, and Lear’s first act in the play is to divest himself of the “cares of state” in order to go hunting, James’s favorite diversion. The religious James valued the Christian ideal of “plain” speech that imitated Christ’s simple parables, and the play

privileges such speech in the character of Kent as well as, ultimately, in Lear himself (“I am a very foolish, fond old man / … And, to deal plainly”). James himself resembled Kent, who like James swears a great deal and shuns pomp, and like Kent, who cares little what people think of his bad manners, James was blunt rather than politic. His disgruntled behavior during his extravagant welcoming procession in 1603 was so obvious it offended his new subjects.

The shift in the play from an initial language of flattery, circumlocution, and courtly elegance to one of simple Christian plainness by the end can be seen as a figural rendering of the changes James brought about in Elizabethan court culture. In keeping with the Christian ideal of plainness, he dressed simply and saw an absence of Christian virtue in those who dressed luxuriously. He disliked the extravagant dress of the likes of Raleigh and kept his clothes until they were completely worn out, a practice which seems to be echoed in Lear’s own disregard for dress when he is on the heath. Of all the meanings of Lear’s gesture of undressing, one is the rejection of the Elizabethan court style, with its emphasis on external appearances as opposed to the inner Christian virtues James favored. James’s intemperateness as well as his penchant for oaths also seem to be echoed in Lear’s behavior and in his oath-filled speeches with their references to classical mythology, a characteristic of James’s own literary works. James loved “fooleries,” and his court was the first English court and the last European one to have a Fool and was full of jokes and pranks, much like the court of Lear, in which a Fool plays a prominent role. Fond of masques and burlesques, James staged scenes with comic or moral effects of the kind Lear arranges for his daughters’ mock trial. The daughters’ behavior seems all the more reprehensible given Lear’s generosity towards them, and indeed, James himself was caught in a similar dilemma: known for his extreme, indeed reckless, generosity, he also had trouble getting those responsible for his upkeep to cover his financial needs. Finally, James and his Scottish followers were looked upon by many in much the same way as Lear’s followers are by Goneril: they sought to govern their “better.”

The link between Lear and James becomes more evident if one compares the play with *Basilikon Doron*, James’s advice book to his son, an English-language version of which appeared shortly after he assumed power in 1603, and with his *Demonologie* (also 1603). In many respects, *Basilikon* provides both a thematic and linguistic dictionary for *King Lear*. Given the importance of the word “plain” and the value of plainness in the play, it is important that James’s book begins with a sonnet that argues that kings should “Reward the just, be stedfast, true, and plaine.” James returns to the virtue of plainness on numerous occasions (“be plaine and truthful”) and contrasts it with “the filthy vice of Flattery, the pest of all Princes.” It is as if he has Lear himself in mind when he counsels his son to “love them best, that are plainest with you, and disguise not the trueth for all their kinne.” In Act 2, Scene 2, Kent confronts Cornwall and announces: “Sir, ’tis my occupation to be plain.” He mocks ornate and elaborate speech: “Sir, in good sooth, in sincere verity, / Under the allowance of your great aspect, / Whose influence, like the wreath of radiant fire, / On flickering Phoebus’ front.” Cornwall complains of Kent’s plain speaking: “He cannot flatter, he, / An honest mind and plain, he must speak the truth!” One can hear a welcoming chuckle from the loyal James’s supporters in the court audience for the play on St. Stephen’s Night. They would no doubt have gotten the anti-Elizabethan joke.

Plainness is a necessary virtue of a good monarch, according to James, as is control over sexual appetites, something Kent and Edgar demonstrate positively, and Goneril and Regan negatively. James writes: “[H]e cannot be thought worthie to rule and

command others, that cannot rule ... his owne proper affections and unreasonable appetites." James, in terms that echo the sexual advice Edgar delivers to Lear, tells his son to "abstain from fornication" and to avoid "the filthy vice of adultery," and warns of women who use "their painted preened fashion, [to] serve for baites to filthie lecherie." As if he were counseling Goneril, who places private interest over national security ("I had rather lose the battle than that sister / Should loosen him and me"), James says the king should subject "his owne private affections and appetites to the weale and standing of his subiectes, ever thinking the common interesse his cheefest particulare." He uses the same terms Shakespeare uses to characterize Cordelia (who "was a queen over her passion") when he promotes Temperance which "shall as a Queene, command all the affections and passion." Shakespeare also seems to have James in mind when he has Lear take note of poverty and advocate charity on the part of wealthy nobles: "O, I have ta'en / Too little care of this! Take physic, pomp; / Expose thyself to feel what wretches feel, / That thou mayst shake the superflux to them / And show the heavens more just." James advises his son to "embrace the quarrel of the poore and distressed ... care for the pleasure of none, neither spare ye any paines in your own person, to see their wrongs redressed." Finally, James condemns disobedience of parents in terms ("a thing monstrous," "unnatural") that echo the play: "I had rather not be a Father, and childlesse, then be a Father of wicked children." Lear gives vent to a similar feeling when he says he "would divorce me from thy mother's tomb, / Sepulch'ring an adult'ress." Like Shakespeare, James refers to parental authority and filial loyalty as the "order of nature" and characterizes writing against parents as an "unpardonable crime."

In *Demonologie*, James describes the power of devils to "transport from one place to another a solid body" and speaks in the same passage of the possibility of falling "from an high and stay rock." One is reminded, of course, of Edgar and Gloucester at Dover, where Edgar speaks of a "fiend" standing next to Gloucester before his mock fall. The "foul fiend" is an imaginary symptom of Edgar's feigned madness, but the fiend also represents disobedience and the danger of broken contracts: "Take heed o' the foul fiend. Obey thy parents; keep thy word's justice." The first mention of the fiend coincides with Lear's banishment by his daughters. Later in the play, the associations are more ominously demonic. "See thyself, devil," Albany says to Goneril. "Proper deformity shows not in the fiend / So horrid as in woman." In *Demonologie*, James is particularly critical of women who are prone to become witches and succumb to the "greedy desire" for power or for "worldly riches ... their whole practices are either to hurt men and their goods." Shakespeare, in his depiction of Goneril and Regan, would seem to agree.

Shakespeare uses the character of Lear to ingratiate himself with the new ruler of the land in which he did business. James himself had brought a gift of cloth for the playwright upon his ascension to the throne, and Shakespeare seems to return the favor in this play by painting a flattering portrait of a tragic king whose resemblance to James would easily have been clear to those in the audience at court on St. Stephen's Night, 1606. But Shakespeare might also be said to take the king's side in a number of quarrels in which he was engaged and thereby to help further royal power at a time when it was vigorously debated in England. Perhaps the most significant of those disputes concerned the character of monarchical rule itself, whether it should be absolute or limited by law and by Parliament.

In *The True Lawe of Free Monarchies* (1598), James, still king of Scotland at the time, makes a statement that would not sit well in England, the land over which he would become king five years later. Arguing that kings rule at God's behest and therefore are deserving of absolute obedience, he writes: "the King is above the Law.... And therefore

general lawes, made publikly in Parlamente, may upon knowne respects to the King by his authoritie be mittigated, and suspended upon causes onely knowne to him.” To the English, who had fought hard to secure their liberties against monarchical power of just this kind and who believed in the sanctity of the common law tradition, that well of legal precedents that was binding on all, including the king, such statements were troubling, if not alarming. The future Chief Justice of Common Pleas, Edward Coke, was especially disturbed. In 1607 he would advise Parliament: “There is a maxim. The common law hath admeasured the King’s prerogative.” James, in Coke’s eyes and in those of many other Englishmen, was wrong.

In an encounter famous in legal history for establishing the superiority of law to political power, Coke entered into a direct argument with James concerning Fuller’s Case, which concerned the rights of dissident Puritans. James’s loyalists, who felt that judges were “delegates” of the king and therefore that the king was the ultimate judge in all matters, wanted to force the Puritans to testify under an inquisitorial oath that deprived them of their common law rights. As Chief Justice of the Common Pleas Court that fought for jurisdiction with the loyalists’ Ecclesiastical High Commission regarding the judgment of lay matters, Coke disagreed, and the issue came before James. When the loyalists claimed that the ultimate decision lay with the king, Coke replied: “The King cannot take any cause out of any of his courts and give judgment upon it himself.” James accused Coke of speaking foolishly and said he reserved the power to decide jurisdictional issues, adding that he “would ever protect the common law.” Coke responded: “The common law protecteth the King.” At this point, James accused him of treason. “The King protecteth the law, and not the law the King,” he declared. To which Coke replied “The King should not be under man, but under God and the Laws.” He nevertheless flung himself at the king’s feet and seemed to submit. But the next week he commenced once again to issue rulings at odds with the Commission.

I recount this anecdote to give a sense of what the discursive ambience was at the time *Lear* was written. The topics of monarchical power and judicial authority were publicly discussed and debated. The limits of monarchical power were at stake, and the conflict between king and Parliament would eventually lead to civil war and the overthrow of the monarchy in mid-century. James’s *True Lawe* is an argument against such rebellion. James begins by warning his audience of just how abusive monarchical rule can be. The monarch will, James warns, quoting the book of Samuel, take your sons and make them servants, take your daughters and make them “Cookes and Bakers,” take your fields and give them to his servants, “take the tenth of your seede … and give it to his Eunuches,” and “all that ye possess shall serve his private use and inordinate appetite.” He concludes “and ye shall be his servants.” If one weren’t aware that one was reading a work by a reigning monarch, one might at this point think that the author was Guy Fawkes himself trying to raise a following. It suggests that kings do abuse their power, and it quite accurately and vividly describes those abuses.

Yet by quoting scripture, James places the question of monarchical rule within the frame of the paradoxical parables of the Bible, parables whose very incomprehensibility serves to reinforce God’s ultimate authority, his transcendence of mere worldly logic. “Yet it shall not be lawful to you to cast it off,” James argues of monarchy, because absolute rule is “the ordinance of God” and “your selves have chosen him unto you, thereby renouncing for ever all privileges, by your willing consent,” especially that one which would allow people to “call backe unto your selves againe that power” given to the king. In other words, despite all the great abuses of monarchical power that have just been so

vividly depicted, you will have to put up with it. As in biblical parables in general, which argue that one has to learn to accept rough treatment at the hands of God since it is for one's own good, one must, according to James, also put up with abusive kings, because the king is a step down from God. Hence, he has the loyal people say to Samuel: "Al your speeches and hard conditions shal not skarre us, but we wil take the good and evill of it upon us, and we will be content to bear whatsoever burthen it shall please our King to lay upon us." If the king is bad, God will judge him – but no one else shall. He has the "power to judge [his people] but to be judged only by God."

The king, for James, is like a father in a family. If the people must fear the king "as their judge," they must love him "as their father." To displace the king through rebellion is to invert "the order of all law and reason," so that "the commanded may be made to command their commander, the judged to judge their Judge, and they that are governed to governe their time about their lord & governer." Obedience is the "duty his children owe to" a father, and hence also to a king. It would be "monstrous and unnatural to his sons to rise up against" either father or king. Fittingly, rebels who claim a higher allegiance to the commonwealth, "as to a Mother," are condemned. James concludes the text by denouncing what he twice, using language echoed in *Lear*, refers to as "monstrous and unnatural rebellions" against an absolute monarch. It is wrong for one party to break a contract "except that first a lawful trial and cognition be had by the ordinary judge of the breakers thereof."

What *Lear* depicts is in many ways what James describes and denounces – a "monstrous" and "unnatural" rebellion against both paternal and monarchical power. The play literalizes James's metaphors. Lear is both father and king; the rebels are his daughters. They invert the right order of government when they "command the commander" and refuse him "the duty his children owe to him." They enter into a contract – land in exchange for love and hospitality – and break it unilaterally. Regan's language of rebellion recalls the legal language of arguments in favor of parliamentary prerogative: "In my right, / By me invested, he compeers the best."

It is as if Shakespeare had James's concluding argument in mind when he has Lear summon his daughters forth for an imaginary trial, which enacts the lawful reinstatement of the appropriate judge so that "cognition" can be taken of "the breakers." If Shakespeare would seem to take James's part in his argument with Parliament, he also seems, especially in the trial scene, to take his side in his debate with the common law judges, especially Coke. "You are o' the commission; / Sit you too," Lear tells Kent. This is not the first reference in the play to the Ecclesiastical Commission that supported James's claim to absolute authority over the common law judges. Already in Act 3, Scene 2, Lear speaks favorably of "These dreadful summoners," a reference to the police or summoners who served warrants for the Ecclesiastical Commission or court. Given James's antipathy to the common law judges, it is probably of some significance that the trial scene concludes with Lear's cry "Corruption in the place! / False justicer!"

But what are we to make of Lear's vision of a judge and a thief as interchangeable and of his provocative suggestion that judges favor the wealthy over the poor? It is one of the most subversive statements in the play. Yet like the mock trial scene, it is framed by an implicit pledge of allegiance to James's absolutist position regarding the superiority of monarchical power to the common law. Coke was one judge who had become quite wealthy while in office, and justices of the peace, upholders of the common law, were great obstructers of the poor relief James advocated. The 1590s were a time of harvest failures and of famine. As a result of the enclosure of common land for the sake of more

profitable pasturing, more and more farm laborers turned to vagrancy, giving rise to laws regarding poor relief and charity. James was a promoter of charity, and the Statute of 1604 was meant to provide such relief on a more uniform basis. Its implementation was overseen by his Privy Council, but it met with a resistant negligence on the part of justices of the peace, who were in charge of tax collecting and the enforcement of statutes on the local level, even when prodded “by extraordinary directions derived from the prerogative power of his Majesty by proclamations, letters, and commission.” Perhaps this is why one of the most sympathetic characters in the play, Edgar as Tom, mentions charity twice: “Do poor Tom some charity … The country gives me proof and precedent / Of Bedlam beggars who with roaring voices / … Enforce their charity.”

Other seemingly subversive statements by Lear can be interpreted in a similar manner as pleas for James’s positions. When Lear speaks of “the great image of authority; / A dog’s obeyed in office,” he refers not to the king, whose position as a divinely ordained ruler was above “office,” but rather to the holders of political office – the parliamentarians – who circumvented the king’s wishes. And the “Robes and furred gowns” that “hide all” vices in the following lines refer to the Elizabethan courtiers, like Raleigh, who James loathed. If Shakespeare is critical of judges and of justices in a way that echoes James’s absolutist positions, the one positive reference to justices in the play also endorses James’s position regarding the superiority of divine and monarchial justice to common law human justice. Of the quick death of Cornwall after Gloucester’s blinding, Albany says: “This shows you are above, / You justicers, that these our nether crimes / So speedily can venge!” Heavenly not earthly judges are the guardians of justice in the play. The rebels are also subject to “the judgement of the heavens, that makes us tremble.” “The gods are just,” Edgar remarks, after having vanquished Edmund and set right the kingdom. He is presented as an instrument of divine justice, while also evincing a natural royalty. The force of someone endowed with royal power (“thy very gait did prophesy / A royal nobleness”) is needed because legal measures are subject to the contingencies of broken agreements and the failure of judges. “[T]he laws are mine, not thine,” Goneril claims defiantly, “Who can arraign me for ‘t?” A divine judge, James might respond, and in his place, a king or would-be king like Edgar. The play thus endorses James’s position that the right order of justice moves from God to king to judge. Human law is subject to divine law as represented in the king.

The critique of justice and of judges in the play legitimates absolute monarchical rule by warning of its abuses in order better to plead for its divinely ordained necessity. “[W]e will resign to him, / … our absolute power,” Albany says of Lear at the end. Rather than directly advocate such power, however, the play enacts a subversive vision of inversion and disorder whose ultimate purpose is to reinforce the need for that which is overturned and to further James’s argument in favor of absolute monarchial power. Initially, monarchial rule is presented negatively. Lear rules in an abusive manner. In a single scene, he banishes his favorite courtier and deprives his favorite daughter of her dowry. He is intolerant of dissent and commands absolute obedience. His behavior seems “rash,” but it is also typical of how kings should be allowed to behave, according to James, and still, like a father, command obedience. Kent’s and Cordelia’s remarkable fidelity in the face of the king’s abusive exercise of monarchial power would seem to reinforce this idea. Kings may be rash, the play argues, but we must, like Kent and Cordelia, obey them absolutely nonetheless. Even the infirmity and fury of a king, like that of a father, must, according to James, be “borne.” Even as a madman, Lear is told, somewhat illogically and paradoxically, “You are a royal one, and we obey you.”

Shakespeare in the characters of Lear and Kent clearly wanted to create a flattering portrait of the new king. Little surprise then that he also paints a flattering gender portrait of the queer monarch. The play begins on a homosocial note that very quickly veers into an at least jokingly queer suggestiveness. “I thought the King had more affected the Duke of Albany than Cornwall,” Kent remarks, drawing attention to the relation between male affection and affairs of state. The remark hints at the rashness and indecisiveness in Lear that will result in the destruction of the state; like a woman – as she is coded in Renaissance culture – he will act on the basis more of emotion than reason. The intimation that a man might behave like a woman seems to evoke a further crossing of genders when Kent says to Gloucester “I cannot conceive you.” He means he doesn’t understand his male companion, but Gloucester picks up on the sexual meaning: “Sir, this young fellow’s mother could; whereupon she grew round-wombed.” The possible reference to sodomy, which likely provoked a burst of laughter in the queer court audience, is as quickly erased as it is evoked, and it is deflected into a heteronormative framework. That maneuver befits a culture dominated by the discourse and rituals of compulsory heterosexuality, which are enacted in the ensuing dowry scene, a culture that in its religion and its law was hostile to such homosexual acts as sodomy. As a result, homosexuality only appears in the play in glimpses whose fleetingness, like a pun, suggests repression as much as expression. One might even say that by evoking it in this opening dialogue, which is played out of view of the more public events that follow, Shakespeare is noting the behind the scenes or closeted quality of life in the queer subculture to which he, like James (they both lived apart from their wives in well-known queer sites), probably belonged.

The play depicts a crisis in heteronormativity, an institution centered on an ideal of male masculinity which finds an enabling and confirming other in female femininity. That social institution is depicted as dangerous to heterosexual men because women can refuse to confirm masculinity, assume masculine qualities themselves, and effeminate men. The play offers a cure for the failings of the heteronormative model in retraction into an all-male world from the troubled heterosexual sphere. In the mad scenes on the heath, a mock theater is created that offers therapy in the form of love between men, a love laced with queer allusiveness.

The play portrays heterosexuality as a weakness that has harmful effects on men. It makes men prone to incest and to the domination of women’s lives for the sake of male vanity. “Better thou / Hadst not been born than not t’have pleased me better,” Lear says to Cordelia in a line that is not meant to evoke sympathy from the audience. The incestuous character of his demands on his daughters is made evident when Cordelia points out that his desire for expressions of affection trespasses upon the rights of a husband. Later, he accuses his daughters of opposing “the bolt / Against my coming in.” Heterosexuality is dangerous for men because it is founded on an instability: while it would seem to assure a man’s identity as a masculine male, it leaves the man dependent on feminine women for certification. Rather than be an identity, heterosexuality consists of a relation or an exchange, whereby male masculinity is confirmed by its other, the feminine – submissive and passive – woman. It is what it is not. Cordelia’s “Nothing” in response to Lear’s demands for tokens of affection exemplifies this dilemma. At the limit where the heterosexual male and the heterosexual female meet, there is always a margin of error where something needed can be lacking, where a required repetition that confirms by recognizing fails to occur. As the Fool reminds Lear several times, without heterosexual confirmation, Lear himself is nothing – “an O without a figure.” Which is to say, given the slang meaning of nothing (vagina), he resembles a passive woman.

If women are the soft spot of the heteronormative regime, its point of proof as well as of vulnerability, it is because the exchange relationship that characterizes that system is reversible. Men can be feminized by masculine women. In a world shaped by the dictates of heteronormativity, the feminization of men by women results in a depletion of personal power and social authority. If one cannot “command service” both as domestic and as sexual labor, one should not rule. In a world organized around aggressive relations between contending sites of male power – a fact emphasized in the play in references to possible strife between such players as Albany and Cornwall – the need to survive as masculine men dictates the subordination of weak characteristics such as tearful emotionality and the privileging of strong ones such as a capacity for martial combat. That these characteristics should be assumed in heteronormative culture to be distributed along biological gender lines is not surprising. What is innovative about the play is that it suggests that those characteristics may not be distributed along the lines of sexual object choice. Kent and Edgar, the strong masculine men who save the kingdom, apparently love men not women.

In the play, a dangerous and destructive feminization of men occurs when women assume traditionally masculine powers. This places the masculinity of men like Lear, who are dependent on confirmation by feminine women of their masculine identity under the heteronormative regime, in jeopardy. Their feminization is figured in the play as madness – a loss of the reason that distinguishes masculinity from emotional and bodily femininity. Within the Renaissance bodily code, Lear’s loss of temper and rash actions based on momentary emotions are coded as female. Fittingly, in relinquishing his power to his daughters and thereby masculinizing them, he says that he will follow a “monthly course,” a reference to menstruation. By entering the realm of uncontrolled bodily and emotional processes, he abandons the realm of principle, reason, and law – the realm assigned men in the play and in patriarchal culture generally. He breaks his quasi-legal agreement with Burgundy to provide land as dowry for Cordelia, and he subverts the principles of fairness and justice by depriving her of everything for nothing. The price he pays for behaving like a woman is to become a woman.

When his Fool speaks of him as “nothing,” he adds a sexual spin to Lear’s loss of power: “Thou hast pared thy wit o’ both sides and left nothing i’ the middle. Here comes one o’ the parings.” The use of “Nothing” for the thing in the middle (of Lear’s legs) suggests that Lear will be obliged to adopt a “feminine” sexual posture of passivity to penetration, and indeed, Goneril, who assumes masculine phallic proportions as a result of the territory and power Lear attributes to her, makes him bend to her will in a manner that Albany characterizes in symbolically sexual terms when he says to Goneril: “How far your eyes may pierce I cannot tell.” The Fool’s preparation of the encounter between father and daughter is more explicitly sexual: “[T]hou mad’st thy daughters thy mothers … thou gav’st them the rod and putt’st down thine own breeches.” The image of punishment suggests the submissive sexual position and the feminization of the heterosexual man deprived of masculine power. He can now be had from behind by his phallic daughter’s “rod.” Earlier, the Fool had compared the division of Lear’s kingdom to the breaking of an egg into two ends or crowns: “Why, after I have cut the egg i’ th’ middle and eat up the meat, the two crowns of the egg. When thou clovest thy crown i’ th’ middle and gav’st away both parts, thou bor’st thine ass on thy back o’er the dirt.” “Ass” refers to servant (“Thy asses are gone about [getting your horses],” the Fool tells Lear at one point), and because servants were used sexually by their masters in Renaissance England (as suggested by the trial of the Earl of Castlehaven), the image,

in addition to social inversion, also suggests the adoption of a submissive sexual posture in regard to someone more powerful, someone who would be quite literally on Lear's back. Something similar is implied by Lear's statement "Persuade me rather to be slave and sumpter / To this detested groom." A sumpter is a pack animal, but the term also carries the connotation of putting something (or someone) on one's back. That someone, of course, is Goneril, who now possesses the quality of firmness ("marble-hearted fiend") Lear lacks. When he wishes sterility upon her, he more or less completes her sex-change operation, and when she taunts her husband with "milky gentleness," she assumes masculine power in her own household. It is at this point in the play that the Fool's sexual taunts most concern castration and the loss of sexual power on Lear's part: "She ... / Shall not be a maid long, unless things be cut shorter." "I am ashamed," Lear says, "That thou hast power to shake my manhood thus." And he is described as suffering an "eyeless rage."

One consequence of the instability of heterosexuality in the play is a parallel structuring of relationships between men and women on one side and men and men on the other. The dangerously feminizing dependence inscribed in heterosexuality provokes a rejection of women, the agents of feminization, and a separation of the heroic male characters from the danger heterosexual women represent. As a result, the emotional needs and dependencies that leave a heterosexual male vulnerable to feminization within a heteronormative culture that proscribes "woman's tears" on a man's face and that mandates a more aggressive, emotionally sanitized martial posture towards the world in order to achieve heteronormative masculinity are transferred into the realm of explicitly homo-social and implicitly heterosexual male relations where feminine emotion in men is acceptable and masculinity is not endangered by dependence on unreliable and untrustworthy women. Lear, by virtue of a passage through healing male love, moves from pathological heterosexuality ("I have sworn. I am firm") to an acceptance of his own "infirmity." If emotional vulnerability is disallowed to men under the regime of heteronormative heterosexuality, it is permitted and even expected in love relations between men of the kind Edgar and Lear and Kent experience.

Edgar and Kent, the two characters most capable of masculine strength, are also those most associated with a healing queer autarchy in regard to women. Kent says he is "not so young ... to love a woman for singing, nor so old to dote on her for anything." Edgar repeatedly warns against heterosexual attachments. He articulates the play's critique of heterosexuality when as Tom, in speaking of having "served the lust of my mistress' heart," he equates heterosexuality with demonic possession by the "foul fiend." His and Kent's dislike of women offers the failed king a safe exit from heteronormativity by providing a queer model of masculinity that serves as a redemptive alternative to heterosexuality. Kent stands up to bullying by Goneril and Regan, while Edgar's decisive capacity for martial violence against Edmund distinguishes his masculinity from that of the effeminated old king, who in one crucial moment is incapable of saying what violence he will wreak on his daughters: "I will have such revenges on you both / That all the world shall – I will do such things – / What they are yet I know not." In Edgar and Kent, Shakespeare offers figures of queer masculinity that counteract the harmful effects of women on heterosexual men in the play.

If the phallic woman feminizes Lear, deprives him of power, and transforms him into a sexual servant, Lear discovers in Kent someone who subordinates himself to Lear in both a political and a sexual manner. "What wouldst thou?" Lear asks him. "Service," Kent replies. "Service" has throughout the play the dual meaning of obedient labor

(“The dear father … commands … service”) and sexual labor (“one that wouldst be a bawd in way of good service,” “To thee a woman’s services are due”). In queer love relations, the feminized heterosexual male can be repositioned in a dominant masculine posture if he receives “service” from another male. While such plays on words like “service” seem less obvious to us now, in court on St. Stephen’s Night, 1606, they would have been quite clear to the queers in the audience, including King James himself. Indeed, such a pun provides a perfect metaphor for the closet in which those queers lived – an obvious meaning and a hidden meaning, one straight, one queer, that would have perfectly summed up their experience of the world.

Edgar is the character who is most representative of a queer masculinity that heals Lear and the state (much as James imagined himself healing an England harmed by his female predecessor, the Goneril-like man-woman Elizabeth I). Like Kent, Edgar is markedly non-heterosexual; he doesn’t even talk about women, at least while sane, and while insane, all he talks about is why one should avoid them. Lear learns from him not to trust women in the way that he has up to that point. Edgar also offers the king the possibility of being placed in a subordinate feminine sexual position without suffering humiliation. Edgar undergoes with Lear an experience of liquefaction that is a metaphor for queer intercourse. He and Lear are naked in the rain together, and when Lear sheds his clothes and joins Edgar in nakedness (save for Edgar’s blanket), the visual display evokes a queer public sex encounter, as does Edgar’s vocabulary of possession, which at the time was associated with sodomy. “Sodomites” or queers were often linked to witches, were-people, and evil spells, and Edgar’s mad speeches are full of such allusions: “Flibbertigibbet … squinnies the eye and makes the harelip … aroint thee, witch.” Lear immediately develops an affectionate attachment to the “learned Theban” and will not let him go. His characterization of Edgar as an “Athenian” slyly situates their encounter within the homoerotic Greek tradition of master and pupil, and indeed, Lear adopts a student’s posture towards the younger man, a posture in keeping with the prevailing image of homosexuality at the time as a relationship between an older man and a younger one or “Ganymede.” That James’s lovers all were quite young would have made the allusion all the more visible and appealing to the court audience.

Water is also a metaphor for the dissolving of masculine heterosexual identity by women and for the overwhelming of reason by eyeless emotion. That a figure like water with two quite opposed meanings might exist at the heart of the play is to be expected, since identity forms itself out of undifferentiated matter, and the play depicts a loss of identity and a return to matter (humankind’s bare forked animal condition). To lose the “additions” that make one a king is to fall back into that state of undifferentiated nothing in which social identity dissolves and masculinity and femininity merge. It is a fitting condition for Lear, who has lost his masculine heterosexual identity and been feminized by masculine women. But water also suggests the progressive instability and fluidity of gender, as does the metaphor of theatricality and role-playing. Edgar’s acting suggests his malleability and the possibility of a change in identity. In a similar way, all Lear has to do is take off his clothes, allow himself to be soaked, and he is transformed from mad emasculated hetero to gayly happy homo. From dissolution a new identity can be formed, and Lear’s new identity is, like Edgar’s, a queer one. He can now be as feminine as he wants with his beloved “Athenian.” No one will stigmatize or punish him. He is with people who love him, and they are all men. The free-floating, contingent, and theatrical quality of gender becomes a resource for redemption.

Nevertheless, in the end, Lear is repositioned in relation to a woman, Cordelia. Does the play evoke queerness only to abandon it? Does it succumb to closeting in the end in ultimate deference to heterosexual norms?

That Cordelia is a part played by a boy actor and that her character forms a continuum with a healing homosocial male companion – the Fool – suggests how cannily Shakespeare inserts a queer subtext into this play, one that would have allowed the court audience to see a literal story of queer love while nevertheless respecting the rules of heteronormativity by endorsing the theatrical convention and the mimetic illusion that a boy is a woman. With Kent and Edgar, the Fool is a figure suggestive of homosexuality who was likely played by a boy. Called a “pretty knave” upon entering, he is a male correlate of Cordelia, who is referred to later as Lear’s “fool”: “And my poor fool is hanged.” It is possible, since the Fool and Cordelia do not appear in the same scenes and since the disappearance of the Fool from the play is the play’s one structural flaw, that the same boy actor played both roles. Both are romanticized figures of affection untainted by expediency, another quality that suggests continuity between them. The Fool remains loyal to Lear when it is foolish to do so, even in his own cynical terms. And Cordelia accepts loss for the king’s gain, even after he has imposed great losses on her. Their generosity recalls James’s own reckless generosity towards those he loved. The two characters represent a gift economy at odds with the harsh exchange economy of the parliamentarians who were hounding James over the high cost of his court, an exchange economy present in the opening act of the play, when Lear demands a return for his investment in his daughters. In one sense, Lear’s tragedy is that he becomes too like the parliamentarians, and he is saved by the very James-like gift-giving generosity of the Fool and of Cordelia.

The continuity between the Fool and Cordelia suggests some of the complexity of queer experience at the time as well as its closeted character, while also embodying the difficult representational strategies Shakespeare was obliged to adopt in telling his queer story. A play about the benefits of homosexuality in a queer-repressive heteronormative culture must necessarily try to have it both ways – displaying yet hiding – while having it neither way in the pure form. Its queer argument is necessarily oblique and double-voiced, a mix of metaphor and literal image. Cordelia in death metaphorically fulfills Lear’s sexual desires (that they die in each other’s arms should at least evoke the possibility of the Renaissance coding of death as sex). But literally, of course, on St. Stephen’s Night, she would have been a boy dressed as a woman in the arms of an older man, a visual signal the queer king and his young queer lover would have had to be blind not to notice.

Despite its closeted quality, the play’s ending is noteworthy for its emotionality. In contrast to their earlier fear of taint by women’s tears, the men seem to cry in abundance. Their hearts burst asunder, and their love for each other is manifest. Lear’s “I am firm” no longer seems to have a place. The pathological masculinity he initially represents is now replaced by a new gender identity that includes femininity. If women have been like men in the play, men now become like women, and no one seems to mind. Culturally certified traits shuttle back and forth. The play is at its most gender-radical when it seems to suggest that those traits have no biological home in physical gender. Lear’s transformation from hyper-hetero male at the outset to infirm, emotionally vulnerable femme queer by the end is a way of insisting that gender has no bio-ontology. Masculinity is not the exclusive province of men, nor is femininity exclusive to women.

*King Lear* concludes on a note of aristocratic queer romanticism (“Speak what we feel, not what we ought to say”) that privileges dissonant subjectivity over social convention, the pride of the closet over the mandates of compulsory heterosexuality. It does so, I would argue, because Shakespeare himself no doubt experienced the play’s equivocal subject position, which is inwardly queer and outwardly straight. As we know James to have been queer yet married, we know Edgar to love men, yet he must, like James, stand up in a public forum at the end of the play and pretend to submit to the customs and assumptions of heteronormativity. That no sign of that mandate is evident (no woman is present in the final scene) suggests just how grudgingly it is accepted. But it is there nonetheless, inscribed in the anti-sodomy laws and in the religious culture that could not tolerate queer coupling. Only in such enclaves as the theater and the court was a queer subculture possible because only under assumed roles or with the permission of the king could men act out their love for one other. The hovel – hidden and out of view – to which the Edgar and Lear retreat is the appropriate spatial metaphor for that closeted condition, just as madness provides the hidden language of queers in the play, a way for queer love to speak itself without censorship or judgment. That James’s queer court was known for staging plays like *Lear* says something about the necessary theatricality of queerness at the time, that it had to be enacted under the guise of madness, role-playing, and boy-to-woman drag. The real tragedy of *Lear* is that of the queer who must live out the forms of heteronormativity, acting all the time, while yet experiencing feelings that must remain silent.

That straight-passing was so mandatory in so closeted a culture allows us to understand the double-voiced character of the play. Ostensibly a tragedy about a king who is mistreated by women, it is also a coded message to King James on St. Stephen’s Night, 1606, expressing sympathy for the drubbing James was taking from the English Parliament regarding sustenance and expressing – what shall we call it? – queer love for the beset monarch in troubled times. Lear’s crown at the end prominently contains darnel weed, which evokes the Darnel of the house of Tudor, James’s family, as well as the name of James’s queer father, Lord Darnel. Darnel blossoms are red and white. It is as if Shakespeare, in the final image of the sadly mad yet beloved king, were sending the beset king and fellow queer a Valentine or a Get Well card in the form of a play that to the audience at court on St. Stephen’s Night would have seemed riotously funny, emotionally evocative, and slyly queer. Cheer up, James. Things could be worse. Mwah! Love you, Will.

# CHAPTER 15

## Theory in Practice

### *Elizabeth Bishop's "Queer Birds": Vassar, Con Spirito, and the Romance of Female Community*

*Betheny Hicok*

Bethany Hicok is the author of *Elizabeth Bishop's Brazil* (2016) and *Degrees of Freedom: American Women Poets and the Women's College, 1905–1955* (2008). A professor of English at Westminster College, she teaches courses in modern poetry, modernism, critical theory, gender studies, and interdisciplinary studies focusing on genetics and literature, utopias, and Ancient Greek ideas of justice.

"We demand nothing but fresh conception." Thus began the manifesto of *Con Spirito*, the rebel literary magazine Elizabeth Bishop and some of her fellow students started at Vassar in February 1933. "Frankly we are more interested in experimental than in traditional writing," they continued on the front page of their first issue. "Anything – politics, science, art, music, philosophy – anything that is spontaneous, that is lively" (Editorial 1). Bishop's co-conspirators were an impressive group of women, including Mary McCarthy, Eleanor and Eunice Clark, Frani Blough, Margaret Miller, and probably Muriel Rukeyser.<sup>1</sup> According to McCarthy, Bishop had come up with the name *Con Spirito* for the magazine, "a pun joining the musical notation meaning 'with zest' to the announcement of a conspiracy" (226). The original intent of *Con Spirito* was to provide an alternative to the college's established literary magazine, *The Vassar Review*. Or, as Bishop had put it somewhat more strongly in a letter to Donald Stanford, *Con Spirito*'s aim was "to startle the college and kill the traditional magazine" (*One Art* 13). Betsy Erkkila has mentioned *Con Spirito* in passing as a "striking" example of a successful collaboration among women who are positioned in competition with other women in a "struggle" for literary territory (*Wicked Sisters* 100). Paying attention to struggles such

*Original publication details:* Bethany Hicok, "Elizabeth Bishop's 'Queer Birds': Vassar, Con Spirito, and the Romance of Female Community." *Contemporary Literature* 40.2, pp. 286–310. University of Wisconsin Press, 1999. Reproduced with permission from the University of Wisconsin Press.

as these, Erkkila argues, provides a richer reading of literary history, one that can account for the differences among women (4). The editorial in the first issue of *Con Spirito*, however, also aligns these women in collaboration against a male-dominated literary tradition and particularly challenges the stereotypes of college-educated women put forward by the literary press.

*Con Spirito* was also a conspiracy, a clandestine and anonymous meeting of literary minds, in an attempt to create a space of freedom for the imagination within the boundaries of the women's college community and the larger literary world. Although it was short-lived (the magazine folded in November 1933 after only three issues), *Con Spirito* provided an important forum for the developing talents of its writers. Two of Bishop's *Con Spirito* pieces, "Then Came the Poor" and "Hymn to the Virgin," became her first professional publications when they appeared without significant changes in *The Magazine* in 1934. McCarthy took issues of *Con Spirito* to impress Malcolm Cowley at *The New Republic* when she was looking for review assignments (McCarthy 262). T. S. Eliot praised the magazine when he came to the Vassar campus in May 1933 (Fountain and Brazeau 51). Of the seven co-conspirators, four went on to establish successful literary careers: Bishop, McCarthy, Eleanor Clark, and Rukeyser. But beyond its importance as a professional vehicle, *Con Spirito* provided a space of possibility for Bishop, who had not yet come to terms with her lesbian sexuality or her literary ambition. In a limited sense, I will argue, *Con Spirito* allowed Bishop to "come out" as both a writer and, perhaps much more provisionally, a lesbian. Moreover, the *Con Spirito* writers seemed to share a fantasy of a productive female community, an idea of community that I will argue in the last part of my essay remained a powerful structuring fantasy in Bishop's work. Hence the idea of literary community that I pursue through my reading of Bishop's experience at Vassar allows me to suggest new ways to see the enclosure fantasies that have long been noted by critics as an important feature of Bishop's work. These enclosure fantasies – among them the boarding house, the prison, and the island – serve as spaces of "possibility" in Bishop's work that provide a challenge to the fixed ideas of both gender and literary identity that she found constrained the artist in the 1930s.

Before moving to the inner spaces defined by Bishop's early writing in *Con Spirito* and beyond, I would like to examine the larger territory defined by the *Con Spirito* writers in their bid for literary power at the college. This bid, as I have suggested, involved a dual challenge to the boundaries of literary and sexual convention both inside and outside the Vassar community. In the first issue of *Con Spirito*, for example, the writers responded to an editorial that had appeared in the January 1933 issue of *The American Spectator*, a literary magazine that had recently been founded by Theodore Dreiser, Eugene O'Neill, James Branch Cabell, Ernest Boyd, and George Jean Nathan. *The Spectator* had criticized Smith and Vassar "girls" for wanting to be "carbon copies of men," called their professors "desiccated old maids," and lamented the loss of "femininity" in the educated woman. Here *The Spectator* adopted the position put forward by theories of sexology that defined the independent college woman and all-female communities of the 1920s and 1930s as deviant (Smith-Rosenberg 265).

Although many college women graduated, married, and had children, the pervasive discourse labeled independent women "unnatural," because it was thought that their education would interfere with their becoming wives and mothers, roles assumed to be "natural" to their sex. In this sense, as Carroll Smith-Rosenberg has argued, their choices "violated normal gender categories" (265). *The Spectator* editorial had suggested that a woman's intellectual productivity would interfere with her reproductivity (hence

the characterization of Vassar's female professors as "desiccated old maids"). Theories of sexology also attached masculine physical characteristics to independent women. The Viennese neurologist Richard von Krafft-Ebing, for example, had invented a new category in the nineteenth century for women who took on men's roles, the Mannish Lesbian (Smith-Rosenberg 272). The Mannish Lesbian symbolized social disorder and perversion not so much because of her sexual orientation but because of her rejection of traditional feminine roles and her desire for "male privileges and power" (Smith-Rosenberg 271). With this sexual classification, Krafft-Ebing connected women's independence "to cross-dressing, sexual perversion, and borderline hermaphroditism" (272). Krafft-Ebing's theories continued to have an enormous impact on early twentieth-century ideas about college women. George Jean Nathan's familiarity with such theories of sexology seems evident in his *Spectator* article "The Theatre," where he complained that lesbians, or as he put it, women "who are of the sexual disposition of the Aeolian-Greek island colonizers," were ruining the theater with their "masculine hardness and chill undertone." He concluded, "you cannot cast Sappho as Cinderella, or as Juliet" (2).<sup>2</sup> Finally, women's college communities were portrayed in terms of metaphors of disease and contagion and became in the words of one educator "'the great breeding ground' of lesbianism" (Faderman 49).<sup>3</sup> These attitudes toward women's colleges and independent women in general permeated a great deal of writing in the twenties and thirties.

*Con Spirito* writers responded to and challenged this discourse of biological determinism. At the beginning of their first editorial, the *Con Spirito* editors argued that, while they might seem "by the very launching of this publication to have become the prototype of desiccated womanhood," they felt confident that their "intellectual venture" would not interfere with their ability to have children (Editorial 1), just as they presumed that "the literary dalliance" of *The Spectator* writers had not "interfered with their lawful begetting of infants" (1). At the end of their editorial, the *Con Spirito* editors further challenged the myth that aligned womanhood with motherhood by claiming the magazine as their child, a child they would need to keep nourished with "forward-looking" writing or it would die; they thus demonstrated that they could produce children through the male channels of productivity and thereby distance themselves from reproduction. As they appropriated the productive power of men, the *Con Spirito* editors stepped confidently over the boundary that *The Spectator* had established between feminine and masculine spheres. In other words, they made "gender trouble" in the ways that Judith Butler suggests by calling into question "those naturalized and reified notions of gender that support masculine hegemony and heterosexist power" (33–34).

The *Con Spirito* editors further challenged these fixed categories by appropriating certain aspects of masculine style, thereby calling attention to the performative aspects of masculinity. McCarthy describes, for example, how the idea for *Con Spirito* got started in the "smoking room" of Cushing Hall at Vassar. Some of the *Con Spirito* editors liked to think they were a tough bunch. Bishop, McCarthy, and others sat around puffing and debating, "several sort of droll characters," and made up bawdy rhymes, which were "mostly borrowed from men's colleges" (Fountain and Brazeau 43). While *Con Spirito*'s response to *The Spectator* and adoption of masculine style challenged fixed ideas about gender categories, the battle between *Con Spirito* and *The Vassar Review* tended to reinforce the discourse of male writers engaged in what Nina Baym has called "melodramas of beset manhood" (63–80).<sup>4</sup> According to Baym, masculine writers perceived themselves as beset by "flagrantly bad best-sellers written by women" that threatened their "integrity and livelihood" (70) and responded to this perceived threat by creating a fiction

about the woman author. In this melodrama, the woman author is excluded from the canon and becomes the creator not of art but of “conventional works” (77). The *Con Spirito* writers used similar language in their criticism of *The Vassar Review*. The *Review* was “tame,” according to McCarthy (257). Bishop called it “dull and old-fashioned” (“Interview” 293), and she makes the connections between gender and quality even clearer in her letter to Donald Stanford, with which she enclosed copies of *Con Spirito* with this note: “There are some very poor things in them – but for college writing, particularly women’s college writing, I think they’re pretty good” (*One Art* 13). Here Bishop repeats the logic of the melodrama. While proud of the writing in *Con Spirito*, Bishop aligns poor writing with women in particular rather than college literary magazines in general. *Con Spirito* writers seemed to want to put distance between themselves and what they saw as the more “feminine” *Vassar Review*, especially since this official college magazine had rejected their avant-garde work (Jessup 17).

The editors’ various accounts of *Con Spirito*’s formation suggest that they imagined themselves to be part of a subversive underground. Eunice Clark calls *Con Spirito* the “counter-establishment blast” and describes their efforts as “a tiny part of a worldwide literary revolution stretching, in variegated forms, from Walt Whitman to *Finnegans Wake*” (Jessup 17). Bishop’s title for the magazine, which contains “an almost Joycean palimpsest of meaning” for Clark, emphasizes both collective action and secrecy, the pleasure associated with music, something done “with spirit,” and the danger associated with subversion and any close alliance among women (Jessup 17). To add to the conspiratorial atmosphere, the magazine was published anonymously. Even the *Con Spirito* editors didn’t know who wrote what, except by guessing: “manuscripts for submission were put, unsigned, on a wooden chair, to be read and argued over,” McCarthy recalls (258). In addition, the makeup of the editorial board was a secret to the campus. The co-conspirators advertised the magazine “by posters we nailed up on trees in the dark of night” (258). They claimed they had “darkened [themselves] in anonymity” in order to avoid the *Review*’s “aristocratic” policies, not, as they put it, because they wanted to “wallow with impunity in ‘communism and copulations’” (Editorial 1). But here, of course, the editors themselves brought together in their denial radical politics and illicit sexuality.

All this emphasis on secrecy plays on the danger associated with women’s colleges. Educators worried that “the invert” could lure other women into a life of perversion, because the woman-centered, secretive community of the women’s college provided a perfect haven for such activity (Smith-Rosenberg 280). The language of sexology and popular psychology had linked such an alliance with sexuality, danger, and perversion. These Vassar “girls” had rejected their reproductive roles, according to the logic of *The Spectator*, in order to be productive, and in so doing had cast off their femininity to adopt masculine style; they were therefore professional as well as sexual outcasts. McCarthy describes the college’s reaction to *Con Spirito* in terms that maintain this alliance between literary “outsiderhood” and sexual “outsiderhood.” When *Con Spirito* first came out in February 1933, it caused a tremendous stir on campus, not so much because of the writing in the magazine, according to McCarthy, although *Con Spirito*’s focus on the experimental made it different in every way from the *Review*, but because it was “unsigned”: “That was the outrage, the shameful crime, treated as such even by some of the faculty, who breathed the word ‘anonymous’ as though it were married to the word ‘letter,’ denoting something so scurrilous that it dared not sign its name” (258). McCarthy’s allusion to Hawthorne suggests that she identifies with a group that has been cast out. While the

tone registers outrage, it also indicates a romance of sorts, one that seemed to be shared by others in the group.

Read in the context of McCarthy's comment, Bishop's poem "A Word with You," published in the second issue of *Con Spirito*, becomes less the "panicky" fear of being identified with "outsiderhood" that Adrienne Rich sees in the poem than a controlled, satirical account of a women's college and the speaker's identification with a "select group" of outsiders:<sup>5</sup>

Look out! there's that damned ape again  
sit silently until he goes,  
or else forgets the things he knows  
(whatever they are) about us, then  
we can begin to talk again.

(2)<sup>6</sup>

The poem goes on to list a whole zoo full of animals that appear to be watching over and squawking about the couple who are trying to talk. The poem continues:

You see

how hard it is, you understand  
this nervous strain in which we live –  
Why just one luscious adjective  
infuriates the whole damned band  
and they're squabbling for it....

In this remarkably sophisticated poem, Bishop seems to connect the suspicion and scrutiny with which relationships were monitored in women's colleges in the 1930s with the production of words. The production of "one luscious adjective" creates a furor among the animals, much as *Con Spirito* had when it first appeared. Bishop's poem also suggests the contradictory positions of the women's college in the thirties. While providing a place for women to come together and form a sense of community, encouraging an atmosphere of free expression, women's colleges also harshly policed and censored that same expression. As Barbara Solomon has noted, a woman could be expelled from college not only "for staying out all night with a man" but also "for having too 'intense' a relationship with another woman" (162).<sup>7</sup> The poem's ending reflects the kind of paranoia that such policies might produce:

Quick! there's the cockatoo! he heard!  
(He can't bear any form of wit.)  
– Please watch out that you don't get bit;  
there's not a thing escapes that bird.  
Be silent, – now the ape has overheard.

But Bishop's tone, and the zoolike atmosphere, suggests that she turned panic and paranoia into a double-edged wit that sliced through the dullness that she felt surrounded her.

While it could be argued that "A Word with You" re-creates the limitations of the women's college in the 1930s, as well as *Con Spirito*'s resistance to them, Bishop's story "Seven-Days Monologue," also published in the second issue of *Con Spirito*, appears to provide a spatial metaphor for the working out of these conflicts. The setting for this

story, related in a series of seven diary entries, is the female community of the boarding house. The conflict in the story centers around the landlady, who is a source of both fascination and obsession for the narrator; for much of the story, for instance, the narrator is trying to remember or find out the landlady's name: "She is large, looming seriously now into my life, but unlabelled" (3). She is also a dangerous maternal presence who possesses the house. In "September 2nd" the narrator notes:

Now I am suspicious of the landlady. Every time I see her I see "the house" floating over her head, like St. Paul with his church. I think she feels it there all the time: high and narrow and dark, its long stairways, black turns and lighted halls, fire-escapes and shut, white doors. We are all closed behind them, over her head, spidery legs and arms, little buttony heads. (4)

If those shut white doors lining dark, narrow passages remind one of a series of closets, the image of the landlady dressed in lavender provided earlier in the monologue seems a fairly obvious clue that Bishop's story has something to do with lesbian sexuality. As Lillian Faderman has pointed out, the color lavender was commonly used by lesbians as a code word for community in the 1930s (106). The narrator, identified as a "female lodger" about midway through the story, is fascinated by the landlady, who is described as the matriarch of this community: "There she sits on the sofa, like an ancient unculled pearl in a battered shell. She is constantly bedewed with perspiration and invariably wears a lavender dress" (4). Bishop twice uses the color "lavendar" as a description in her story, each time in a section charged with eroticism. While this code word may not have been obvious to a straight person in 1933, it might have been to another lesbian. I am fully aware that Bishop was quite reticent about her sexuality, because of the consequences such a confession could have for her career and her life, but to those who understood and sympathized with her position, she seems to have been quite open. And "Seven-Days Monologue," even at this early date, seems a limited kind of "coming out" to me.

In "September 4th," the narrator describes how the landlady comes into her bedroom and sits down on the bed:

Early this morning she came into the room like a thunder-cloud with a silver lining, her smiling face above all the rest of the *lavendarishness* and vastness, and a long white slit down the side where her dress had burst open.... I mustn't forget those feet: how her shoes have shaped themselves around them, how they bulged out and over and made themselves at home. There was something very compatible about her face and feet; you can look from one to the other without the slightest feeling of discrepancy. (4; emphasis added)

In this rather witty passage, the narrator mixes the grotesque with eroticism. The sexologists called the lesbian (and the educated woman) grotesque because she crossed acceptable gender boundaries. The idea that the women's college could be a "breeding ground" for lesbian sexuality indicates the concern over permeable boundaries, the idea that the women's college was a body that could be invaded by disease and thereby destroyed. The only hope against such a possible contagion was to police the borders and expel those who threatened them. In such a context this large and uncontrollable landlady may represent the "excess" of same-sex desire – that is, what falls outside the boundaries of what can be narrated and thereby labeled within a story.<sup>8</sup>

The introduction of a heterosexual subplot immediately following this passage reinforces such a reading, since the description is so unappetizing as to suggest rejection. In this section, the narrator, whose gender up to this point has not been clear, is identified as a "female lodger." She is visited by a man:

It was hot as hell; we quarrelled slowly, back and forth, until I wanted to push him off the fire-escape and leave him to the mercies of the alley-cats. The air was rigid; people's voices outside held to the same accent, on and on. The smell of their suppers was deathly, as if it would stick in their throats and choke them. I never thought the church steeple clock would have dared to strike the hour – or if it did it would proclaim it like a death sentence and seal us all in leaden immobility.

While their quarrel mimics sexual intercourse, it could hardly be described as pleasurable. Heterosexuality is associated here with rigidness, death, argument, stale food, lack of motion, "leaden immobility." Heterosexuality is the death knell in this story and requires quite literally a shower to cleanse it: "Finally, thank God, it rained, a wonderful rain, almost like mercury, fluid and metallic" (4). While female sexuality is associated with the grotesque and the fluidity of boundaries in the figure of the landlady, it carries both pleasure and danger, eroticism and power.<sup>9</sup> It is the landlady and the desire to know (about) her that drives both the narrator's desire and the reader's in this story.

In its adoption of the boarding house as an experimental space to test the boundaries and limits of both literary and sexual possibility, Bishop's story might be thought of in terms of the kinds of enclosure fantasies that have been noted in Bishop criticism.<sup>10</sup> Langdon Hammer has recently called Bishop's dream house in "The End of March" the most important of these enclosures and has pointed out not only its provisional nature but its potential as a site of possibility. Hammer, using the object-relations theory of D. W. Winnicott, has argued that the dream house, like Bishop's correspondence, creates a kind of "potential space" or "third area," which allows her to establish an "intimate relation" between poet and reader ("Useless Concentration" 173). In this way, Hammer notes the "collaborative structure" not only of Bishop's correspondence but of her poetry as well (173).<sup>11</sup>

This "potential space" in Bishop's work also might be productively considered in terms of Mary Russo's discussion of such a space in her study of carnival theory and the female grotesque. Russo argues that female pilots such as Amelia Earhart created a kind of "provisional space" for taking risks through the "practice of stunting," which came to be defined as an "abnormal and increasingly liminal activity with regard to official flying" (22). In a theoretical sense, Russo argues, stunting is "a tactic for groups or individuals in a certain risky situation in which a strategy is not possible.... As a temporal category, the tactic, or in Earhart's terms, the practice of stunting, belongs to the improvisational, to the realm of what is possible in the moment" (22). The space created by such a practice is not, Russo is quick to point out, that boundless and "transcendent space associated with the Kantian sublime" (11). It is rather a space that "emerges within the very constrained spaces of normalization." This practice of stunting strikes me as very much an aspect of the "improvisational" nature of *Con Spirito's* formation, a practice as I have already suggested that emerged out of the normalizing discourse of the period that closely aligned literary ambition with sexual perversion. Such stunting can be heard in the language Bishop and McCarthy used to describe *Con Spirito's* formation. For example, both of them tell of going to Signor Bruno's, a speakeasy in Poughkeepsie, in order to discuss the magazine. They drank "dreadful" red wine out of white coffee cups

and got “slightly high” (McCarthy 258; “Interview” 293). Such descriptions underscore the improvisational as well as the risky behavior (drinking during Prohibition) that marked so much of the discourse surrounding *Con Spirito*. The dialogue of improvisation continued even after Bishop graduated. In a letter to Bishop from co-conspirator Frani Blough, with whom Bishop corresponded until her death, Blough discusses the possibilities of an opera that she and Bishop were planning to write together. Blough was in graduate school studying music in New York and Bishop was traveling in France. In this letter, Blough imagines an improvisational community of artists who might transform the world of opera with their innovative ideas:

Opera needs to start all over again, it seems to me, and the best thing to do is sweep away the Wagnerian debris and start as though the whole thing were quite a new idea, had by a few select people sitting around after dinner, then polished up.... I think satire could work very well in this sort of medium.... Something really funny and amusing and not heavy.... Also it would be a thing that a group of people could do with very little more preparation than an evening of quartet playing. Do come home and lend your able advice.<sup>12</sup>

Blough’s description sounds very much like what *Con Spirito* had turned out to be – “quite a new idea, had by a few select people sitting around after dinner, then polished up.”

Bishop reproduced this improvisational space in her poetry. The boarding house, for instance, appears as an isolated space of community where a “grotesque” assortment of creatures assemble under the landlady’s roof in “A Summer’s Dream,” a later poem that Bishop published in *A Cold Spring* (1955):

To the sagging wharf  
few ships could come.  
The population numbered  
two giants, an idiot, a dwarf,  
  
a gentle storekeeper  
asleep behind his counter,  
and our kind landlady –  
the dwarf was her dressmaker.

*(Complete Poems 62)*

Bishop’s assemblage of a community of grotesques not only suggests the discourse that labeled lesbians as outside and therefore perverse in relation to “normal,” heterosexual womanhood but also echoes the theme of difference and outsiderhood shared by the women of *Con Spirito*. At the end of “Seven-Days Monologue,” the narrator identifies and brings together her community of outsiders. Describing herself in terms similar to the landlady in the passage about St. Paul, she aligns herself with that subject position:

Damn it all – I’m the Bird-Catcher, that’s it. I must start going around balancing innumerable small silver-gilt bird-cages on my head and arms, to catch them in, and keep them all singing in the closet.

The image contains elements that have distinguished Bishop’s poetry and prose throughout her career: the collection of a “little society” within an enclosed space, a

sense of the absurd, and what Jeredith Merrin has called Bishop's "obsession with transmogrification" (154). In Bishop's work, Merrin argues, "everything is always turning into something else" (153). This pleasure in changeability is inseparable from Bishop's "gayness," which Merrin defines as "her questioning of gender boundaries" in her work, "and the exploration (however oblique and shrouded) of the pleasures and anxieties of same-sex love" (154).

As the Bird-Catcher, the narrator takes on the role of the landlady, entrapping her prey, and so she lives the role assigned her by the sexologists, the role of a grotesque who can lure others into the closet with her. Like the color lavender, "birds" (or sometimes "queer birds") was a code word for lesbians in the 1930s (Faderman 106), and its use here intensifies the sense that Bishop is identifying and establishing a community of society's deviants. At the end of the story this sense of a possible lesbian community becomes closely associated with the idea of literary community. "The Bird-Catcher" not only attempts to lure others to her but distributes phallic symbols, among other objects, to all her friends, each of whom is identified by an initial letter that corresponds to the first letters of the names of the *Con Spirito* women:

One box of various articles to hand around, for conversational purposes only. The fans and tweezers and an occasional hat-pin for M. The anvil and hammer and the beautiful knives and forks for F. And a couple of genuine phallic symbols for E., nothing else. A new box of tricks.<sup>13</sup>

The Bird-Catcher distributes the props and designates the players in this theater of the absurd in a parody of the way that Bishop, according to Eleanor Clark, might have "gather[ed] her little society" at Vassar (Fountain and Brazeau 37).

Bishop's *Con Spirito* story "Then Came the Poor" also creates a kind of provisional space for community, but this time through a discourse of class politics, which would have been familiar to the *Con Spirito* writers. At the time, a number of the co-conspirators, including Bishop, were interested in socialist politics. However, Bishop found their commitment to real change shallow, for, as Blough recalled later, their theories "weren't grounded firmly enough in any action for them to last very long," and they would have been horrified at the idea of revolution, although that was "the bottom line" (Fountain and Brazeau 50). "Then Came the Poor," according to Blough, was Bishop's response to this lack of commitment. But Bishop's story is more than just a send-up of what Blough calls a "childish" view of politics bandied about at Vassar. In the 1930s, when radical politics became the acceptable form of protest in intellectual circles, it served Bishop, at least in part, not as an answer for what was wrong with the world but as a narrative "cover" for a different story, the story of same-sex love.

In "Then Came the Poor," the narrator's aristocratic family abandons their home after a communist takeover, forgetting the narrator, who had wanted to stay behind anyway, in their rush to get away. As the mob takes over and "ransacks" the house, they dress up in the clothing of the departed aristocrats, while the narrator dresses down in some old clothes he finds in the barn. Now dressed as a stableboy, the narrator successfully passes as one of the crowd and enters the house. In her recent article on Bishop and the left, Betsy Erkkila identifies the narrator in "Then Came the Poor" as female ("Elizabeth Bishop" 286). But there is very little in the story to indicate that this is the case, since the narrator is never named. There is no clear designation of gender in the story until the narrator dresses up as a stableboy. At that point, he is perceived as male by the other

characters. It is this gender ambiguity and the ability to put on and take off gender identity that is important to Bishop and key to this story. This is consistent with Bishop's reluctance to align herself with fixed positions.<sup>14</sup>

Once inside the house, the narrator encounters a series of "scenes." Because of their erotic charge, their connection to parental objects and rooms, and the positioning of the narrator as voyeur in relationship to each of the scenes, they can be read as "primal" scenes that stage a reverse of what Freud has described as a family romance fantasy. The family romance, which is both a class fantasy and a sexual one, is a wish-fulfillment fantasy with two principal aims – erotic and ambitious (Freud 299). In the typical romance fantasy, the child imagines that in getting rid of his own parents who are of low birth, he is free to replace them with those who occupy a higher social station. He does this by imagining a series of primal scenes in order to alter the conditions of his birth. In keeping with the socialist leanings of *Con Spirito*, Bishop's fantasy works in reverse.

In the first "scene" described in Bishop's story, the narrator sees two women in the hall, "fighting over the remains of a roasted chicken, both pulling" (4). On the "greasy and muddy" marble floor, the women are trampling red roses underfoot, the same red roses that the narrator had observed earlier in the story in association with objects belonging to the mother. The narrator explains that "people were coming and going in excited groups, pointing and grabbing and exclaiming, some of them dressed in fantastic costumes put together from the wardrobes of my departed family." Here, a scene that seems meant to portray the workings of greed becomes erotically charged by the roses, a metaphor for the female body and sometimes for the female genitals themselves.<sup>15</sup> The representation of women as petty, squabbling over the "remains" of some meager food, brings to mind the squabbling animals in "A Word with You" and could perhaps be read in terms of Bishop's disdain for *The Vassar Review*.

The chicken scene, with its disturbing representations of women, can be connected to two later "scenes" viewed by the narrator as he makes his way through the house. In a later scene, an old woman sits on the drawing-room floor "in a ring of dirty petticoats..., carefully unhooking the cut glass pendants from the chandelier.... She was bedecked and a'dazzle from top to toe" (4). Finally, the narrator arrives at the mother's bedroom, where he sees that "[i]n mother's French bed, canopied with lime-colored satin, someone had put two filthy babies to sleep." Female sexuality in these scenes is associated with something not quite clean, something, in fact, sordid. The two women, fighting over the chicken on a "greasy and muddy floor," trample the roses underfoot, while the old woman in her dirty petticoat greedily ransacks the chandelier. Two "filthy" babies fall asleep amid the lime-colored drapery of the mother's French bed.

A very different but related scene interrupts this wallowing femininity. Here is how the narrator describes it:

From father's large bathroom came loud laughter, splashings and slappings. I looked in and discovered two naked men jumping in and out of the shower and bath, throwing powder and bathsalts at each other, spitting shining spouts of water out the window into the sunlight and onto their amused friends below. (4)

This decidedly campy scene, which is unmistakably homoerotic, gains meaning only retroactively, during the lottery at the end of the story. During the lottery, the men are drawing lots to see who will live in the narrator's house. As they do so, they call out the name of a man, Jacob Kaffir. Bishop's description of him at once labels him as

other: he is dark, "the color of a well used penny," and wears a fez. The narrator describes him as "an amazing little man," similar to the character in "A Flight of Fancy," a short story Bishop published in her high school literary magazine. He represents the elflike creatures in Bishop's earlier stories that seem to signal some entrance into a kind of parallel universe, a fantasy world where some expression of same-sex desire becomes possible. Jacob acts as a similar bridge figure in "Then Came the Poor." He has no family, and so in order to get a room in the house, he must choose someone with whom to live. Like two men cruising each other in a bar, Jacob and the narrator exchange suggestive signals:

I caught Jacob's eye and smiled as hard as I could, raising my forefinger like a man saying "One, next the wall," in a restaurant.

"Him?" Jacob shouted. "He live with me. O.K. to you?"

"You bet," I said. "Well it may be sort of fun for a while," I thought.

Apparently Jacob had the same idea. "We'll have fun, huh?" he said, waving an empty bottle at me, and he gave me a wink I could almost hear.

"Seems like home already, don't it."

Although the narrator's attitude toward the situation is ironic, the "sexual undertones" in this passage, as James Longenbach has pointed out, are unmistakable, especially given the earlier bath scene (470).

The scenes in this story that involve women, like the chicken scene discussed above, have the same erotic power but are much more fraught with dangers and difficulties, while in the father's bathroom the men are having good, clean fun and ejaculating out the window. The presence of the maternal hovering over the three scenes that involve women – or, in the cases of the chicken fight and the French bed, the absent mother – seems to disturb the representation of these scenes, so that it is only with two men and the space they occupy that Bishop can effectively distance herself from the taint of "femininity" and come briefly to some sort of space of "pure" pleasure, represented by their joyful "masculinity."

Bishop's fantasy of female community (expressed throughout her *Con Spirito* writing in terms of literary ambition, fear of a feminine taint, sexual perversion, and cross-dressing) continued to be part of her work throughout her career, attesting to the persistence of the discourse of perversion surrounding literary ambition and lesbian sexuality. Bishop's 1938 story "In Prison," for example, brings together ideas of gender ambiguity, literary influence, female community, and lesbian sexuality. Langdon Hammer has suggested that "In Prison" is a metaphor for life in the closet ("New Elizabeth Bishop" 144).

Provisional spaces such as these can be found in Bishop's work throughout her career, but they are strikingly present in her well-known "Crusoe in England," published at the end of her career, although it is important to note that notebook entries from 1934 demonstrate that ideas for this poem are connected to the Vassar years and the discourse of the 1930s. Immediately following graduation from Vassar in 1934, Bishop stayed on Cuttyhunk Island in Massachusetts for several weeks. The landlord of her temporary home by the sea was Mr. Wuthenaur, a man who wanted to "simplify life" all the time, and his behavior led Bishop to consider writing a poem about "making things in a pinch – & how it looks sad when the emergency is over."<sup>16</sup> The idea was finally published in 1972 as "Crusoe in England." David Kalstone has written that the poems in *Geography III*, of which "Crusoe in England" is one, "revisit her earlier poems as Bishop herself once visited tropical and polar zones, and ... they refigure her work in wonderful ways" (252). Bishop's "Crusoe in England" refigures the ideas of female community found in the *Con Spirito* work.

“Crusoe in England,” like “In Prison,” narrates the fantasy of a community both found and lost during the course of the poem. Alone on the island and oppressed by solitude, Crusoe has

nightmares of other islands  
stretching away from mine, infinites  
of islands, islands spawning islands,  
like frogs’ eggs turning into polliwogs  
of islands....

(Complete Poems 165)

The images Bishop uses here are reminiscent of those I have already discussed that describe the lesbian who was supposed to be simultaneously sterile – the “desiccated old maid” – and associated with a “breeding ground” for producing more of her kind.

This is an island that repeats in one sense the representations of lesbian community that Gabriele Griffith has argued were common to the early part of the twentieth century (11). These representations create an image of lesbians “as the only one in their community, as isolated individuals ... intended to arouse pity rather than condemnation.” This isolated figure is precisely the one we see as Crusoe sits dangling his legs over the edge of a volcano: “I often gave way to self-pity,” he tells us:

“Do I deserve this? I suppose I must.  
I wouldn’t be here otherwise. Was there  
a moment when I actually chose this?

If Crusoe is one of a kind, so is everything else on this island:

The sun set in the sea; the same odd sun  
rose from the sea,  
and there was one of it and one of me.  
The island had one kind of everything....  
(163)

Crusoe’s loneliness is alleviated temporarily, just as it is in Defoe’s *Robinson Crusoe*, by the arrival of Friday. But while Crusoe in Defoe’s colonial account is only able to construct Friday, the “savage,” as a slave, even though he is clearly fond of him, Bishop’s Crusoe calls Friday a “friend”:

Just when I thought I couldn’t stand it  
another minute longer, Friday came.  
(Accounts of that have everything all wrong.)  
Friday was nice.  
Friday was nice, and we were friends.  
If only he had been a woman!  
I wanted to propagate my kind,  
and so did he, I think, poor boy.  
He’d pet the baby goats sometimes,  
and race with them, or carry one around.  
– Pretty to watch; he had a pretty body.  
(165–66)

The narrator's elusiveness about the nature of his relationship with Friday and the cryptic phrase "(Accounts of that have everything all wrong)" suggest that the relationship between the two men was one of mutual desire. Immediately following this parenthetical comment, however, Crusoe utters what must be the most banal sentence in the world: "Friday was nice." He then repeats it in the next line and adds, "and we were friends," as if this would somehow explain the confusion.

Bishop wrote the poem long after she had read *Robinson Crusoe* and only reread the novel after she had written the poem, so she relies on a hazy memory of the book to re-create her Crusoe. It was the idea of the desert island and making things do in an emergency that appealed to her. But it is clearly also the relationship between Friday and Crusoe that fascinated Bishop. In Defoe's account, Crusoe "civilizes" Friday and teaches him English. In Bishop's poem, Crusoe does not try to convert Friday. They are friends, on equal terms with each other. But immediately following these lines, Crusoe cries out, "If only he had been a woman! / I wanted to propagate my kind, / and so did he, I think, poor boy." Bishop thereby adds a new factor to this story of Crusoe and Friday, a marriage plot that legitimizes Crusoe's feelings for Friday. As in "Seven-Days Monologue," however, Crusoe ultimately rejects the heterosexual narrative. Lorrie Goldensohn suggests in her reading of this passage that it is important to pay attention to "the pressure of [Bishop's] particular experience behind and within the poem," the suicide of her Brazilian lover Lota de Macedo Soares, and the desire she expressed in numerous letters to have children that she and Soares could raise together (*Elizabeth Bishop* 78). I would agree with this reading in part. But this stanza, with its qualifying and hedging, also suggests other ways of reading the phrase "I wanted to propagate my kind." What Crusoe dwells on at the end of the stanza is Friday's body. Friday was, after all, "Pretty to watch; he had a pretty body." Immediately following these lines, Crusoe and Friday are taken off the island and returned to England. In the last two stanzas of the poem, Crusoe – surrounded by his island possessions – is living on what he describes as "another island," England. There is no reason why he should not have found a woman in England, but the poem makes clear that he has stayed with Friday. The poem ends with the weight of loss: "And Friday, my dear Friday, died of measles / seventeen years ago come March" (166).

Loss is registered in the person of Friday. Crusoe took Friday "home" to England, and he died there. Certainly a tenuous connection can be made here, as Goldensohn does, between Friday's death and Soares's suicide, but leaving it there would ignore some of the complexity of the idea of "home." Her "home" in Brazil with Soares was perhaps the closest Bishop ever got to a sense of real belonging, and yet when she and Soares broke up, she found it more and more difficult to make a life there. Soares was her "home" in Brazil, not the country itself or the house she had bought, however much she tried to make it so. Much like Crusoe in Defoe's account, Crusoe in Bishop's finds a sense of purpose, of "home," when Friday arrives. The original title of the poem was "Crusoe at Home" (Millier 366), which suggests that Bishop had initially thought of the poem in terms of an investigation of Crusoe's relationship to the idea of "home," or at least an ironic commentary on ideas of "home." In this sense Crusoe finds a home with Friday much in the same way that the narrator in "Then Came the Poor" finds a home with Jacob. Here again, as in that early story, an ambiguous but erotically charged relationship is represented through an investigation of the complex connections between two male personae. Joanne Feit Diehl has argued that "Crusoe in England" is "Bishop's most extreme poetic instance of gender-crossing fused with eroticism" (20). It is here within this space that the desire to "propagate my kind" is most strongly expressed.

In “Crusoe in England,” as in many of Bishop’s stories and poems, we are presented with a circumscribed world in which a lonely individual or a societal misfit contacts another like himself and for a brief period finds a home. The circumscribed world of the island, like the prison, the boarding house, or the communal house in “Then Came the Poor,” represents a landscape in which the poet, the woman, the orphan, or the lesbian can contact others like herself and form a community. It may represent that limited but also “capacious” space of the closet that Timothy Morris has suggested “resonates throughout [Bishop’s] work” (125). Hence Bishop’s sense of community and influence cannot be thought of apart from the desire to “propagate [her] kind,” to create a language that would begin to speak of lesbian desire. Crusoe’s phrase “I wanted to propagate my kind” cannot be interpreted simply as an expression of the biological urge of a childless poet to have children. Spoken by a character created by a lesbian poet wise to the homoeroticism of Defoe’s original text, Crusoe’s statement becomes a challenge to the biological determinism that hindered the careers of literary women of Bishop’s generation. Crusoe’s statement refers not simply to reproductive power but to productive power – the power to write, to influence future generations, and to build community.

Bishop’s ideas of community and her own place in it might be productively considered in light of an essay she published at Vassar. Interested in the workings of time in the novel, Bishop offers us yet another spatial metaphor. Disturbed from her studies by a sound outside, she writes that she looked out her window and noticed the birds “going South” (“Time’s Andromedas” 102). They were “spread across a wide swath of sky, each rather alone” and yet connected by an “invisible thread.” It was “within this fragile network,” Bishop writes, that “they possessed the sky.” As I have suggested throughout this essay, Bishop built this fragile network at Vassar and maintained it in suggestive ways in the poetry and prose she published throughout her life. It is by establishing this connection that I have attempted to momentarily catch hold of the “invisible thread” that connected Bishop to a larger community of writers and artists who attempted, however briefly, to “possess the sky.”

## Notes

I would like to thank the Susan B. Anthony Center at the University of Rochester for a grant that enabled me to travel to Vassar College to work with the Elizabeth Bishop Papers. I would also like to thank Nancy MacKechnie, Curator of Rare Books and Manuscripts, Special Collections of Vassar College Libraries, for providing access to the papers and for her help when I was researching this article, and Frani Blough Muser for permission to quote from her letter to Bishop.

- 1 Rukeyser’s participation in the group is uncertain. McCarthy wrote in her memoir that she thought Rukeyser was part of the group but was unable to identify anything she wrote for the magazine, except perhaps for a verse account of T. S. Eliot’s visit to campus in May 1933 entitled “Lecture by Mr. Eliot.” This verse account does look stylistically like Rukeyser’s work.
- 2 *The Spectator* printed an article by the leading sexologist in British and American circles, Havelock Ellis, on the front page of the same issue. Although Ellis’s article (“The Physician and Sex”) was not specifically about “inversion,” its presence here would seem not only to confirm the popularity of Ellis within the literary community but to authenticate *The Spectator*’s views on educated women. Nathan’s familiarity with the theories of the sexologists is also evident in a play he wrote in 1933 that parodied Noel Coward’s *Design for Living*. Called *Design for Loving*, Nathan’s play featured a hermaphrodite, an onanist, a flagellant, a transvestite, a male homosexual, a lesbian, and another woman with “tribade tendencies” among its cast of characters (Faderman 104).

- 3 Smith-Rosenberg notes that “articles complaining of lesbianism in women’s colleges, clubs, prisons, and reformatories – wherever women gathered – became common” after World War I as progressive women reformers gained more power (280).
- 4 See also Andreas Huyssen’s “Mass Culture as Woman,” in which Huyssen argues that in modernist discourse “mass culture is somehow associated with woman while real, authentic culture remains the prerogative of men” (47), and Sandra Gilbert and Susan Gubar’s massive study of male modernist rage against women writers, *No Man’s Land*.
- 5 In “The Eye of the Outsider,” Rich reads this poem as one that illustrates Bishop’s divided sense of self at this time. The poem, she argues, is “a tense, panicky, one-sided conversation during which a whole menagerie gets out of control” (128).
- 6 I quote here from the *Con Spirito* version of “A Word with You,” which was reprinted in *The Complete Poems* (218–19).
- 7 Novels of the 1920s reflected the fear that intimacy between women could carry severe consequences. In Wanda Fraiken Neff’s 1928 roman à clef *We Sing Diana*, the protagonist says of women’s colleges: “Intimacies between two girls were watched with keen, distrustful eyes. Among one’s classmates, one looked for the bisexual type, the masculine girl searching for a feminine counterpart, and one ridiculed their devotions” (199).
- 8 It is possible that the landlady is also a parody of the “aging Lady in Lavender,” a persona for the independent woman that appeared in male literature of the 1920s, who “preyed upon the innocence of young girls, teaching them to fear men and their own sexual impulses” (Smith-Rosenberg 282).
- 9 As Carole Vance argues, “Sexuality is simultaneously a domain of restriction, repression, and danger as well as a domain of exploration, pleasure, and agency” (1).
- 10 Thomas Travisano, one of the first critics to LABEL 11 aspect of Bishop’s work, refers to these spaces as “fables of enclosure” (18).
- 11 David Bromwich also notes the conversational nature of Bishop’s work and the risks she is willing to take to communicate with the “readers she cares for” (160).
- 12 Letter from Frani Blough Muser to Elizabeth Bishop, 7 Oct. 1935 (Elizabeth Bishop Papers, Vassar College Box 16, 1935–47).
- 13 Bishop’s story complements a brief play by Frani Blough in the same issue, “The Bacchae, or Revelling Women.” The play is a satire of D. H. Lawrence (called Dionysius H. Lawrence here) and his “colony” of followers, including Katherine Mansfield, Mabel Dodge Luhan, Lady Ottoline Morrel, Aldous Huxley, and Richard Aldington. Lawrence enters carrying the “sweetly Phallic symbol” aloft, while the chorus of women sings his praises: “You are good. You are beautiful. You are tortured. We claim you as our own” (2). Later Aldington and Huxley enter in drag.
- 14 For another reading of this story in relationship to Bishop and the politics of the left, see Palatella.
- 15 For excellent discussions of the rose metaphor in Bishop, see Costello and Goldensohn, “Body’s Roses.”
- 16 Entry dated July 1934, Notebooks: 1934–37 (Elizabeth Bishop Papers, Vassar College Folder 72A.3).

# CHAPTER 1

## Introduction

### *English Without Shadows: Literature on a World Scale*

*Julie Rivkin and Michael Ryan*

“English,” the name given to the literary tradition of a body of work produced in the dialect of the southeastern region of an island off the west coast of Europe, supplanted the “Classics,” the literature of two Mediterranean peninsulas dating back to over two thousand years ago, as the body of texts used in the cultural training of young professional men in Great Britain in the late nineteenth century. Instead of Homer, Aeschylus, Pindar, Seneca, and Cicero, men in training now read Shakespeare, Milton, Pope, Wordsworth, and Eliot. This change might have been inconsequential enough had Great Britain not been the center of a global empire. But because of that imperial status, “English” soon became a very powerful global cultural institution. Most of you reading this book will be doing so in the context of an “English Department” at an institution of higher learning. Those of you not doing so in such a context will probably be doing so for related reasons: either because you are in a literature department where the language in use is English even if the literature in question is not (is Australian or Canadian, say) or because the largest publishing market for literary discussions of any kind is in English even though your native language is something else.

While during the age of empire English the language was providing large parts of the world with a cultural, political, and economic *lingua franca* (as also French and Spanish) and English the cultural institution providing a supposedly universal set of ideals for proper living, people’s lives were being changed and people’s bodies moved in ways that made for painful and brutal contrasts to the benign values the English literary tradition supposedly fostered. The enslavement and displacement of large numbers of Africans to the Caribbean and North America is only the most powerful and violent example of such a counter-reality. The violence done by empire (with the US slave system being considered here a kind of internal imperialism) generated the negative energies that would eventually end empire and which have been the seeds out of which alternatives to “English” have grown.

That English the language and English the cultural institution are inseparable from the experience of empire does not mean that English is or was in itself an imperial undertaking. It was indeed used to help create a more “literate” and, one might argue, docile class of colonized subjects capable of co-administering empire, and English (the literary tradition and the conjoined academic institution) has for a long time and for reasons of

empire occupied a central place in literature departments in many parts of the world. The cultural misconstrual of the local for the universal could only endure for so long, however, and English's status for some time has also been changing, as indigenous literatures, from Australia to Africa to North America, have emerged to assume equal standing with or to displace entirely the English tradition. Those changes are bound up with the end of official empire and the transfer of political, if not always economic power, to formerly colonialized peoples in the latter half of the twentieth century.

These historical developments wrought great changes in literature and in the discussion and teaching of literature. Entire bodies of writing emerged out of the imperial front, that line of contact between colonizer and colonized which is characterized as much by reciprocal envy and adulation as by reciprocal fear and resentment. On the one side of that front stand works like Forster's *Passage to India* or Kipling's *Kim*, while on the other stand such works as Rhys's *Wide Sargasso Sea* or Kincaid's *A Small Place*. Each colonized nation also produced its own body of literature that dealt with the imperial experience or attempted to define a post-imperial sense of national and cultural identity, with the works of African writers such as Wole Soyinka and Ngugi wa Thiong'o being exemplary in this regard. In places like the United States, the former slave population of displaced Africans has given rise to a literary tradition of its own, many works of which, from the poetry of Langston Hughes to the novels of Toni Morrison, seek to make sense of their history and their continuing experience of racism. And throughout the world, peoples in diasporic situations of dispersal sought to establish a sense of cultural and ethnic identity within locales like England itself, where the majority ethnic group tended to control the production of mainstream culture.

The 1960s are once again a time of enormous transformation. English in England expanded to include the literature of the Commonwealth, while in the former colonies like the Caribbean it began to be displaced by indigenous traditions. In the US, it came to embrace the long-ignored tradition of African-American writing in the form of Afro-American programs. Such changes in institutional shape and disciplinary self-definition both fostered and were brought about by new developments in literary criticism. Scholars emerged who were less interested in the European tradition and more interested in post-colonial writers like V. S. Naipaul or Nadine Gordimer.

If English was losing some of its institutional power, it was also being cast in a new light as a result of these developments. No longer could it present itself as a repository of good values or of appropriate style if those values were connected, albeit metonymically rather than metaphorically, to imperial violence or if that style could be shown to be the result of a history of the forced displacement of other linguistic forms which had the misfortune alone of being practiced by people with smaller or no guns. Scholars began to take note of the fact that many great works of English literature promoted beliefs and assumptions regarding other geographic regions and other ethnic groups – from Shakespeare's Caliban to Brontë's Mrs. Rochester – that created the cultural preconditions for and no doubt enabled the work of empire. The promotion of such beliefs and assumptions in literature, Edward Said noted in his pathbreaking *Orientalism* (1978), was just one part of larger processes of discursive construction in a variety of forms of writing, from novels to scholarly treatises on geography and philology, that represented other peoples (in Said's example, the people of "the Orient") as less civilized or less capable and as needing Western paternalist assistance. Any attention to processes of domination usually spurs an interest in counter-processes of resistance, and as interest in colonial and post-colonial literature increased in the 1980s, attention turned, especially

in the work of Homi Bhabha and in the collective volume *The Empire Writes Back* (1989), to the complex interface between colonizer and colonized, an interface that Bhabha found characterized as much by a subversive work of parody and mimicry as by straightforward domination. Later work along these lines, especially Paul Gilroy's *The Black Atlantic* (1993), has moved away from inter-national or inter-ethnic demarcations and towards an understanding of the para-national and trans-regional flows of culture. From the Caribbean to New York to London, black cultural influences and migrations tend not to heed traditional literary boundary lines, and these new realities demand new modes of non-national critical thinking.

Much of the early work in this rather large and diverse area of ethnic, post-colonial, and international studies was shaped by categories that have since been rethought by scholars in the field whose critical perspective is shaped by Structuralism, Feminism, and Post-Structuralism. While early anti-imperialist thinkers like DuBois and Fanon resorted to unproblematic notions of ethnic identity or to ideals of a traditional "people's culture," later thinkers have pointed out the isomorphism of racist and racialist ideologies as well as the mistake of assuming the unproblematic existence of such things as ethnic identities where fluctuation, change, and temporary blood-line settlements are more likely to be the case. Others have contended that recourse to a supposedly more authentic traditional culture as a counterpoint to imperial or neocolonial domination merely reduces the complex history of cultural change to an inaccurate folkloric myth and selectively privileges quaint "tribal" practices which are misconstrued as original and without history. Feminists have noted that there would be no ethnic identity without the forced containment and channeling of women's reproductive capacities along consanguine family and clan lines and that the privileging of ideals of ethnic or national cultural identity conceals internal fissures of gender and sexual domination. And Post-Structuralists in the field suggest that other concepts of identity, from the nation or the ethnic group to the national culture, are no longer relevant to a transnational, migratory, and diasporic world culture. What the experience of geographic displacement teaches is that all the supposedly stable equations of place, ethnos, and national political institution are imaginary constructs which displace displacement by substituting for the history of permanent migratory dislocation an ontologizing image of home or of a homeland, a proper place where a spuriously pure ethnos can authenticate itself.

The recent critical attention to such concepts as exile, home, and diaspora as much reflects the influence of Post-Structuralism's reexamination of taken-for-granted notions of identity as it does the experience of writers and theorists of African, Asian, or Caribbean descent who live in former imperial centers like Britain. DuBois first formulated the problematic nature of such experience when he spoke of "twoness," the twin experience of being both American and black, loyal to a nation while yet a victim of its prejudice against the minority ethnic group. For Fanon, the problem of twoness reappeared in a different guise, that of travelers to the imperial center from the colonized periphery who adopted the imperial culture as their own out of a sense of the inferiority of their own native culture. Since they wrote and since the emergence of new generations of people whose immigrant ethnic roots do not conflict with a sense of at-homeness in an imperial center like England, twoness gives way to a bilateral sense of parallel cultures and to a sense of multiple belongings, plural identities with no one more standard or normal or appropriate than another. And with that change of experience comes, of course, the possibility of multiple languages – not Creole or English, as Fanon noticed, but Creole and English.

What does all of this mean for English, for English as an academic institution that still in many places consists of the teaching of the national tradition century by century? It has meant the creation of new slots for an African-American specialist or a post-colonial specialist. And it has meant the reconceptualization of at least twentieth-century English literature to include Commonwealth literature and the emergence of new ways of organizing the American literary canon so that it includes more African and other voices (the much praised Heath Anthology). But if one source of empire was the national parochialism embodied in the ideal of the teaching of one's national literature alone and one result of the new ethnic, post-colonial, and international criticism is a sense of how all national literatures, especially those with global connections or with apparently singular ethnic roots, always cast shadows and are therefore always shadowed by their others, from Caliban to Mrs. Rochester to Beloved, then perhaps English itself should be reconsidered as a project of knowledge limited by national and linguistic boundaries. The national parochialism of empire continues as the national parochialism of "international competition," with each nation or ethnic group's imaginary sanctity and identity upheld by just the kind of national literary traditions and academic literary institutions that made English English. But by piercing its others and walking with its shadows, English also generated a migratory and cultural reciprocity that means that the future of English in England at least is necessarily multicultural and multiethic (if not polylingual). It is also, Paul Gilroy would argue, transgeographical, a culture without national boundaries that thrives on lateral connections and syncretisms, a culture where in-betweenness replaces identity as the defining trope of cultural production. And such a new English is in some respects a model (shades of empire) for a new kind of Literature Department, one that would be at once national, international, and non-national or non-ethnic, one in which students might become as familiar with African as with English literature and learn thereby, not falsely universal values or accurately parochial national traditions, but the complex reality of difference.

Ethnicity and race emerged as an important new approach to literary study in the late 1960s and early 1970s in the Anglophone academy. Writers from a diverse range of ethnic minority perspectives – African American, Asian American, Hispanic American, Native American, etcetera – had been actively engaged with the problem of representing the experiences and the lives of the Anglo-American majority's "others." Writers such as Langston Hughes, Frank Chin, John Joseph Mathews, and Américo Paredes reflected in prose and in fiction on the conditions of minority ethnic life in a society dominated by another ethnic group's cultural vision and social interests. But it was not until the 1970s that courses and programs began to appear that consolidated a sense of the importance of representing the literatures of minority populations in the academy.

African-American literature was the first to achieve widespread representation in the academy. The Civil Rights Movement and the Black Arts Movement created a new cultural impetus that led to new courses and programs in African-American literature in the 1970s. Such courses and programs constituted in their mere presence a theoretical statement; as Henry Louis Gates observes, "Unlike almost every other literary tradition, the Afro-American literary tradition was generated as a response to eighteenth- and nineteenth-century allegations that persons of African descent did not, and could not, create literature" (*Figures in Black*, 25).

Among the first wave of African-American literary scholars in the US were Charles Davis, Mary Helen Washington, Barbara Christian, Darwin Turner, and Alan Ramperstad. Their work was soon followed by the work of scholars trained in the new

critical approaches and literary theories of the 1970s and 1980s, critics such as Henry Louis Gates, Hortense Spillers, Hazel Carby, Valerie Smith, and Houston Baker. These critics developed a widely ranging body of scholarship, with some of its projects of revision and cultural recovery paralleling the projects of feminist criticism. Some critics concentrated on historical African-American literary movements such as the Harlem Renaissance; others studied the interface of white racism and black literary and cultural response throughout American history; others blended analyses of African-American musical culture with literary study. In some sense their work on culture is inseparable from that of the African-American writers whose work extended the very literary tradition now receiving such attention. The emergence of writers such as Amiri Baraka, Ishmael Reed, Toni Morrison, Edgar Wideman, and Alice Walker helped to further the new school of African-American literary criticism.

The Civil Rights Movement resulted as well in the emergence of movements for equal rights and equal status by other ethnic groups, such as Native Americans and Hispanic Americans, and academic departments or programs devoted to the cultures of these groups quickly took shape. By the 1980s, a recognizable body of scholarship on Asian-American writing had also developed. Each of these new approaches was aided by the emergence of important new writers within each of their fields of study – Gerald Vizenor, Leslie Silko, and Louise Erdrich in Native American, Rudolfo Anaya and Sandra Cisneros in Chicano, and Maxine Hong Kingston and Amy Tan in Asian American.

The emergence of Native-American literary studies coincides roughly with the renaissance in Native-American literature initiated in 1968 with the publication of M. Scott Momaday's *House Made of Dawn*. The American Indian Movement in the late 1960s and early 1970s also drew attention to long-suppressed issues relating to the Native-American presence in the mainstream culture defined and shaped by Anglo-American needs and concerns. Much of the early critical work by Kimberley Blaeser and Paula Gunn Allen on indigenous literature was concerned with preserving the religious, mythic, and oral dimensions of Native culture. The success and popularity of Leslie Marmon Silko's work, especially her novel *Ceremony*, worked to maintain that folkloric focus. Scholars such as Arnold Krupat drew on contemporary critical models in studying Native literature, but it was not until the 1990s that younger scholars versed in newer critical approaches, such as Robert Dale Parker and Carlton Smith, began to frame an understanding of such literature in contemporary theoretical terms. Their efforts are aided by the fact that more recent writers, such as Louise Erdrich and Thomas King, are more concerned with realist depictions of contemporary indigenous American life or with Postmodern filterings of Native experience. Gerald Vizenor has been especially instrumental in merging a sensitive appreciation for Native tradition with impressive meditations on the relevance of Post-Structuralist theories to an accurate description of the complex cultural mediations through which Native life must be seen. Indeed, it is fair to say that Vizenor, like his counterpart Gómez-Peña, is one of the most brilliant theoreticians of contemporary American culture.

Latino and Chicano critics have also moved beyond the early folkloric emphasis of critics such as Paredes, whose *With His Pistol in His Hand* (1958) was one of the first works of Chicano cultural studies, and they have come to incorporate into their work the most advanced critical theories. The work of Latino and Chicano scholarship has focused extensively on the concept of the border, given the locus of Chicano life along the vexed border between the US and Mexico. In its bilingualism, its invocation of a new geography, its attention to (im)migration, Chicano studies has its own particular contributions to

ethnic studies. Post-Structuralist concepts of territoriality and hybridity were well suited to the work of Chicano theorists, and those concepts were incorporated into a critical vocabulary specific to Chicano studies. “Border theory,” as it came to be called, drew on Post-Structuralist theories of contingency, hybridity, and territoriality in analyzing literary works by such writers as Helena María Viramontes and Ana Castillo. In addition, Chicana cultural theorists allied themselves very early on with African-American feminists to create a practically hybrid cultural movement. The collection by Chicana feminists and African-American writers and critics – *This Bridge Called My Back* (1981) – was one of the most famous early texts of the feminist movement. One of its participants – Gloria Anzaldúa – went on to write an important text of border theory – *Borderlands/La Frontera* (1987), a multilingual account of growing up along the border. Contemporary Chicano critics and theorists include such names as Guillermo Bómez-Peña, Renato Rosaldo, Hector Calderón, Ramón Saldívar, José David Saldívar, Juan Bruce-Novoa, and Norma Alarcón.

The successful emergence of popular Asian-American writers such as Maxine Hong Kingston and Amy Tan in the 1980s was predicated in part on the efforts of the Combined Asian Resources Project in the 1970s and on the publication of *Aiiieeeee! An Anthology of Asian-American Writers* in 1974. What these efforts exposed was the tremendous multiplicity within the term “Asian American,” which encompasses Chinese (themselves a diverse group), Japanese, Korean, Pacific, South Asian, Vietnamese, and other Asian Americans. This enormous diversity also drew attention to the fact that while the category of ethnic studies takes a domestic location in the US, its existence is a product of transnational processes like colonialism, slavery, and immigration that have produced ethnic and racial diversities. It is perhaps not surprising that questions of cultural pluralism and ethnic identity-within-difference often come to the foreground as important concerns of writers from these Asian ethnic traditions. A not uncommon title of a critical essay on Asian-American literature as a result is “The Ambivalent American.” With the erosion of segregation in the US in the post-Civil Rights Movement era, more and more Asian Americans have been assimilating into the Anglo-dominated cultural “mainstream.” Indeed, many works of fiction such as, perhaps most famously, *The Joy Luck Club* (1976) make this change its principal focus. Perhaps because their own life experiences, like those of Chicanos and Native peoples, have been fissured by the recent experience of immigration, exclusion, linguistic difference, and the ongoing experience of living on the fault-line between an unself-consciously dominant ethnic culture and their own marginalized culture, many Asian-American critics find Post-Structuralist theories of hybridity, difference, and ambivalence to be helpful in their work. Critics such as Shirley Geok-Lin Lim have also challenged the ideal of ethnic homogeneity that the dominant Anglo group fosters in order to dilute and, ultimately, destroy singular and different ethnic cultures.

Critics like Geok-Lin have not been content to affirm the necessity of identity-within-difference in an ethnically plural society. Many ethnic studies scholars have begun to question the implicit assumptions that allow a white-dominated ethnic culture to present “color-blindness” as a norm for non-whites. The norm of whiteness became an object of critical study by the 1990s. Historian Theodore Allen in *The Invention of the White Race* (1994) and sociologist David Roediger in *The Wages of Whiteness* (1999) argued that the cultural category of whiteness came into being as a response to the presence of feared ethnic others such as African Americans in the United States. The category allowed for both self-identification and communal collusion against the feared “others.”

These scholarly findings gave rise to a new body of literary and cultural scholarship on whiteness by such scholars as Dana Nelson and Ruth Frankenburg.

The last two decades have seen the rise of an explicitly theoretical body of writing on race. In the 1990s, scholars such as Anthony Appiah (in *In My Father's House* (1992)) drew attention to scientific evidence to the effect that biological genetic differences did not sort themselves out into evenly distinguishable "races." Race is more a cultural and social category than a natural, genetic, or biological one. Different external traits such as skin color are not indices of separate racial identities. They are more akin to differences in hair color. Nevertheless, race does, as Cornell West argued, "matter." African Americans are, according to Toni Morrison, the "pariahs" of US society. The dominant US white group's culture is marked by traces of those whose violation has been a precondition of that group's cohesiveness both economically and culturally. As a result, there is, as Morrison, argues, an "Africanist" presence, unacknowledged but palpable, in American literature. Many in the reparations movement argued that the same is true of the US economy, which grew and expanded in the early nineteenth century as a result of the unpaid labor of African slaves.

Looking backward as well as forward, the new scholarship on race has also focused critical attention on some of the early theorists of race. Pre-eminent among them is W. E. B. DuBois, whose work on a "racial concept" constituted the first real critique of a scientific racism inherited from the nineteenth century. That is, until DuBois, race was understood as a biological category, and in keeping with a social Darwinist perspective, this biological and essentialist view was also a justification for white supremacy. DuBois's movement towards a cultural understanding of race coincided with his sense of the historical sources of racial domination, and his work would be extremely important for a number of contemporary theorists, most notably Appiah and Henry Louis Gates.

One strand of the critical work on race came not out of the field of literary study, but rather out of the field of law. Critical race theory, adopted now by cultural critics as well as legal theorists, was an outgrowth of the critical legal studies movement and an important contribution to the new thinking about race. The founders of the movement are Derrick Bell, Richard Delgado, and Alan Freeman, and their work, which dates back to the mid-seventies, has been followed by that of a number of other legal scholars, including Kimberlé Crenshaw, Angela Harris, Charles Lawrence, Mari Matsuda, and Patricia Williams. Critical race theorists emphasize the ways in which racism is normalized in US culture, such that the principles of liberalism are not adequate to address its distortions. In particular, critical race theorists question the view that color-blind or "formal" conceptions of equality can actually remedy the effects of a pervasive and deeply rooted social racism. Critical race theorists extend the early work of DuBois on a social rather than biological concept of race. Among the theorists working on the cultural construction of race are the sociologists Michael Omi and Howard Winant, and their concept of racial formation shows how conceptions of race are invariably linked to political projects, political projects which change across time and which work to change racial formations. For example, the current discourse of color-blindness, which might seem to echo the civil rights language of Martin Luther King, is in fact used today to justify an anti-affirmative action conservative agenda. The concept of racial formation thus has a pragmatist dimension, linked as it is to the political effects of a particular discourse of race.

Ethnic literary scholars face tasks similar to those that faced feminists – the constitution of a history or tradition and the examination, using the best methodological tools available, of the works of writers operating within the cultural framework of an ethnic

group whose existence is defined by internal exclusion. Not surprisingly, these critics tend to focus on questions of identity and of representation. What does it mean to hold national citizenship and to belong to an ethnic group whose features and whose culture exist to one side of a mainstream that seems blissfully unaware of its own hegemony? How can any one person represent “their” ethnic culture? What is the identity of a culture torn between traditional values and contemporary changes that could be represented? And for whom and for what reason does such representation, generally in the mainstream culture, occur? As the size of non-Anglo ethnic populations in the US grows and as the culture becomes less hegemonically white and Anglo, a different set of concerns will no doubt begin to emerge. That change is greatly aided by the work of the various ethnic scholars whose work we present in this section.

# CHAPTER 2

## Orientalism

*Edward Said*

In 1977, Palestinian scholar Edward Said published *Orientalism* and helped launch a new field of "Post-Colonial" studies. Influenced by the French historian Michel Foucault, Said set out to describe the discourse that arose in colonialist countries to account for the worlds they colonized. The study of the "Orient" was, according to Said, a way of not only legitimizing imperialism but also assisting its supervision and management. Scholarly knowledge had an imperial purpose. From the perspective of the metropole, colonized subjects became stereotypes whose absorption into discursive tropes made them more readily available to an imperial gaze that deprived them of a point of view of their own, of agency in the management of their own lives, and of human rights.

### Introduction

#### I

On a visit to Beirut during the terrible civil war of 1975–1976 a French journalist wrote regretfully of the gutted downtown area that "it had once seemed to belong to ... the Orient of Chateaubriand and Nerval."<sup>1</sup> He was right about the place, of course especially so far as a European was concerned. The Orient was almost a European invention, and had been since antiquity a place of romance, exotic beings, haunting memories and landscapes, remarkable experiences. Now it was disappearing; in a sense it had happened, its time was over. Perhaps it seemed irrelevant that Orientals themselves had something at stake in the process, that even in the time of Chateaubriand and Nerval Orientals had lived there, and that now it was they who were suffering; the main thing for the European visitor was a European representation of the Orient and its contemporary fate, both of which had a privileged communal significance for the journalist and his French readers.

*Original publication details:* Edward Said, from *Orientalism*, pp. 1–45. Pantheon, 1978. Reproduced with permission from Knopf Doubleday Publishing Group, a division of Penguin Random House LLC.

Americans will not feel quite the same about the Orient, which for them is much more likely to be associated very differently with the Far East (China and Japan, mainly). Unlike the Americans, the French and the British – less so the Germans, Russians, Spanish, Portuguese, Italians, and Swiss – have had a long tradition of what I shall be calling *Orientalism*, a way of coming to terms with the Orient that is based on the Orient's special place in European Western experience. The Orient is not only adjacent to Europe; it is also the place of Europe's greatest and richest and oldest colonies, the source of its civilizations and languages, its cultural contestant, and one of its deepest and most recurring images of the Other. In addition, the Orient has helped to define Europe (or the West) as its contrasting image, idea, personality, experience. Yet none of this Orient is merely imaginative. The Orient is an integral part of European *material* civilization and culture. Orientalism expresses and represents that part culturally and even ideologically as a mode of discourse with supporting institutions, vocabulary, scholarship, imagery, doctrines, even colonial bureaucracies and colonial styles. In contrast, the American understanding of the Orient will seem considerably less dense, although our recent Japanese, Korean, and Indochinese adventures ought now to be creating a more sober, more realistic "Oriental" awareness. Moreover, the vastly expanded American political and economic role in the Near East (the Middle East) makes great claims on our understanding of that Orient.

It will be clear to the reader (and will become clearer still throughout the many pages that follow) that by Orientalism I mean several things, all of them, in my opinion, interdependent. The most readily accepted designation for Orientalism is an academic one, and indeed the label still serves in a number of academic institutions. Anyone who teaches, writes about, or researches the Orient – and this applies whether the person is an anthropologist, sociologist, historian, or philologist – either in its specific or its general aspects, is an Orientalist, and what he or she does is Orientalism. Compared with *Oriental studies* or *area studies*, it is true that the term *Orientalism* is less preferred by specialists today, both because it is too vague and general and because it connotes the high-handed executive attitude of nineteenth-century and early-twentieth-century European colonialism. Nevertheless books are written and congresses held with "the Orient" as their main focus, with the Orientalist in his new or old guise as their main authority. The point is that even if it does not survive as it once did, Orientalism lives on academically through its doctrines and theses about the Orient and the Oriental.

Related to this academic tradition, whose fortunes, transmigrations, specializations, and transmissions are in part the subject of this study, is a more general meaning for Orientalism. Orientalism is a style of thought based upon an ontological and epistemological distinction made between "the Orient" and (most of the time) "the Occident." Thus a very large mass of writers, among whom are poets, novelists, philosophers, political theorists, economists, and imperial administrators, have accepted the basic distinction between East and West as the starting point for elaborate theories, epics, novels, social descriptions, and political accounts concerning the Orient, its people, customs, "mind," destiny, and so on. This Orientalism can accommodate Aeschylus, say, and Victor Hugo, Dante and Karl Marx. A little later in this introduction I shall deal with the methodological problems one encounters in so broadly construed a "field" as this.

The interchange between the academic and the more or less imaginative meanings of Orientalism is a constant one, and since the late eighteenth century there has been a considerable, quite disciplined – perhaps even regulated – traffic between the two. Here I come to the third meaning of Orientalism, which is something more historically and

materially defined than either of the other two. Taking the late eighteenth century as a very roughly defined starting point Orientalism can be discussed and analyzed as the corporate institution for dealing with the Orient – dealing with it by making statements about it, authorizing views of it, describing it, by teaching it, settling it, ruling over it: in short, Orientalism as a Western style for dominating, restructuring, and having authority over the Orient. I have found it useful here to employ Michel Foucault's notion of a discourse, as described by him in *The Archaeology of Knowledge* and in *Discipline and Punish*, to identify Orientalism. My contention is that without examining Orientalism as a discourse one cannot possibly understand the enormously systematic discipline by which European culture was able to manage – and even produce – the Orient politically, sociologically, militarily, ideologically, scientifically, and imaginatively during the post-Enlightenment period. Moreover, so authoritative a position did Orientalism have that I believe no one writing, thinking, or acting on the Orient could do so without taking account of the limitations on thought and action imposed by Orientalism. In brief, because of Orientalism the Orient was not (and is not) a free subject of thought or action. This is not to say that Orientalism unilaterally determines what can be said about the Orient, but that it is the whole network of interests inevitably brought to bear on (and therefore always involved in) any occasion when that peculiar entity "the Orient" is in question. How this happens is what this book tries to demonstrate. It also tries to show that European culture gained in strength and identity by setting itself off against the Orient as a sort of surrogate and even underground self.

Historically and culturally there is a quantitative as well as a qualitative difference between the Franco-British involvement in the Orient and – until the period of American ascendancy after World War II – the involvement of every other European and Atlantic power. To speak of Orientalism therefore is to speak mainly, although not exclusively, of a British and French cultural enterprise, a project whose dimensions take in such disparate realms as the imagination itself, the whole of India and the Levant, the Biblical texts and the Biblical lands, the spice trade, colonial armies and a long tradition of colonial administrators, a formidable scholarly corpus, innumerable Oriental "experts" and "hands," an Oriental professorate, a complex array of "Oriental" ideas (Oriental despotism, Oriental splendor, cruelty, sensuality), many Eastern sects, philosophies, and wisdoms domesticated for local European use – the list can be extended more or less indefinitely. My point is that Orientalism derives from a particular closeness experienced between Britain and France and the Orient, which until the early nineteenth century had really meant only India and the Bible lands. From the beginning of the nineteenth century until the end of World War II France and Britain dominated the Orient and Orientalism; since World War II America has dominated the Orient, and approaches it as France and Britain once did. Out of that closeness, whose dynamic is enormously productive even if it always demonstrates the comparatively greater strength of the Occident (British, French, or American), comes the large body of texts I call Orientalist.

It should be said at once that even with the generous number of books and authors that I examine, there is a much larger number that I simply have had to leave out. My argument, however, depends neither upon an exhaustive catalogue of texts dealing with the Orient nor upon a clearly delimited set of texts, authors, and ideas that together make up the Orientalist canon. I have depended instead upon a different methodological alternative – whose backbone in a sense is the set of historical generalizations I have so far been making in this Introduction – and it is these I want now to discuss in more analytical detail.

## II

I have begun with the assumption that the Orient is not an inert fact of nature. It is not merely *there*, just as the Occident itself is not just *there* either. We must take seriously Vico's great observation that men make their own history, that what they can know is what they have made, and extend it to geography: as both geographical and cultural entities – to say nothing of historical entities – such locales, regions, geographical sectors as “Orient” and “Occident” are man-made. Therefore as much as the West itself, the Orient is an idea that has a history and a tradition of thought, imagery, and vocabulary that have given it reality and presence in and for the West. The two geographical entities thus support and to an extent reflect each other.

Having said that, one must go on to state a number of reasonable qualifications. In the first place, it would be wrong to conclude that the Orient was *essentially* an idea, or a creation with no corresponding reality. When Disraeli said in his novel *Tancred* that the East was a career, he meant that to be interested in the East was something bright young Westerners would find to be an all-consuming passion; he should not be interpreted as saying that the East was *only* a career for Westerners. There were – and are – cultures and nations whose location is in the East, and their lives, histories, and customs have a brute reality obviously greater than anything that could be said about them in the West. About that fact this study of Orientalism has very little to contribute, except to acknowledge it tacitly. But the phenomenon of Orientalism as I study it here deals principally, not with a correspondence between Orientalism and Orient, but with the internal consistency of Orientalism and its ideas about the Orient (the East as career) despite or beyond any correspondence, or lack thereof, with a “real” Orient. My point is that Disraeli's statement about the East refers mainly to that created consistency, that regular constellation of ideas as the pre-eminent thing about the Orient, and not to its mere being, as Wallace Stevens's phrase has it.

A second qualification is that ideas, cultures, and histories cannot seriously be understood or studied without their force, or more precisely their configurations of power, also being studied. To believe that the Orient was created – or, as I call it, “Orientalized” – and to believe that such things happen simply as a necessity of the imagination, is to be disingenuous. The relationship between Occident and Orient is a relationship of power, of domination, of varying degrees of a complex hegemony, and is quite accurately indicated in the title of K. M. Panikkar's classic *Asia and Western Dominance*.<sup>2</sup> The Orient was Orientalized not only because it was discovered to be “Oriental” in all those ways considered commonplace by an average nineteenth-century European, but also because it *could be* – that is, submitted to being – *made* Oriental. There is very little consent to be found, for example, in the fact that Flaubert's encounter with an Egyptian courtesan produced a widely influential model of the Oriental woman; she never spoke of herself, she never represented her emotions, presence, or history. *He* spoke for and represented her. He was foreign, comparatively wealthy, male, and these were historical facts of domination that allowed him not only to possess Kuchuk Hanem physically but to speak for her and tell his readers in what way she was “typically Oriental.” My argument is that Flaubert's situation of strength in relation to Kuchuk Hanem was not an isolated instance. It fairly stands for the pattern of relative strength between East and West, and the discourse about the Orient that it enabled.

This brings us to a third qualification. One ought never to assume that the structure of Orientalism is nothing more than a structure of lies or of myths which, were the truth

about them to be told, would simply blow away. I myself believe that Orientalism is more particularly valuable as a sign of European-Atlantic power over the Orient than it is as a veridic discourse about the Orient (which is what, in its academic or scholarly form, it claims to be). Nevertheless, what we must respect and try to grasp is the sheer knitted-together strength of Orientalist discourse, its very close ties to the enabling socio-economic and political institutions, and its redoubtable durability. After all, any system of ideas that can remain unchanged as teachable wisdom (in academies, books, congresses, universities, foreign-service institutes) from the period of Ernest Renan in the late 1840s until the present in the United States must be something more formidable than a mere collection of lies. Orientalism, therefore, is not an airy European fantasy about the Orient, but a created body of theory and practice in which, for many generations, there has been a considerable material investment. Continued investment made Orientalism, as a system of knowledge about the Orient, an accepted grid for filtering through the Orient into Western consciousness, just as that same investment multiplied – indeed, made truly productive – the statements proliferating out from Orientalism into the general culture.

Gramsci has made the useful analytic distinction between civil and political society in which the former is made up of voluntary (or at least rational and noncoercive) affiliations like schools, families, and unions, the latter of state institutions (the army, the police, the central bureaucracy) whose role in the polity is direct domination. Culture, of course, is to be found operating within civil society, where the influence of ideas, of institutions, and of other persons works not through domination but by what Gramsci calls consent. In any society not totalitarian, then, certain cultural forms predominate over others, just as certain ideas are more influential than others; the form of this cultural leadership is what Gramsci has identified as *hegemony*, an indispensable concept for any understanding of cultural life in the industrial West. It is hegemony, or rather the result of cultural hegemony at work, that gives Orientalism the durability and the strength I have been speaking about so far. Orientalism is never far from what Denys Hay has called the idea of Europe,<sup>3</sup> a collective notion identifying “us” Europeans as against all “those” non-Europeans, and indeed it can be argued that the major component in European culture is precisely what made that culture hegemonic both in and outside Europe: the idea of European identity as a superior one in comparison with all the non-European peoples and cultures. There is in addition the hegemony of European ideas about the Orient, themselves reiterating European superiority over Oriental backwardness, usually overriding the possibility that a more independent, or more skeptical, thinker might have had different views on the matter.

In a quite constant way, Orientalism depends for its strategy on this flexible *positional* superiority, which puts the Westerner in a whole series of possible relationships with the Orient without ever losing him the relative upper hand. And why should it have been otherwise, especially during the period of extraordinary European ascendancy from the late Renaissance to the present? The scientist, the scholar, the missionary, the trader, or the soldier was in, or thought about, the Orient because he *could be there*, or could think about it, with very little resistance on the Orient’s part. Under the general heading of knowledge of the Orient, and within the umbrella of Western hegemony over the Orient during the period from the end of the eighteenth century, there emerged a complex Orient suitable for study in the academy, for display in the museum, for reconstruction in the colonial office, for theoretical illustration in anthropological, biological, linguistic, racial, and historical theses about mankind and the universe, for instances of economic

and sociological theories of development, revolution, cultural personality, national or religious character. Additionally, the imaginative examination of things Oriental was based more or less exclusively upon a sovereign Western consciousness out of whose unchallenged centrality an Oriental world emerged, first according to general ideas about who or what was an Oriental, then according to a detailed logic governed not simply by empirical reality but by a battery of desires, repressions, investments, and projections. If we can point to great Orientalist works of genuine scholarship like Silvestre de Sacy's *Chrestomathie arabe* or Edward William Lane's *Account of the Manners and Customs of the Modern Egyptians*, we need also to note that Renan's and Gobineau's racial ideas came out of the same impulse, as did a great many Victorian pornographic novels (see the analysis by Steven Marcus of "The Lustful Turk"<sup>4</sup>).

And yet, one must repeatedly ask oneself whether what matters in Orientalism is the general group of ideas overriding the mass of material – about which who could deny that they were shot through with doctrines of European superiority, various kinds of racism, imperialism, and the like, dogmatic views of "the Oriental" as a kind of ideal and unchanging abstraction? – or the much more varied work produced by almost uncountable individual writers, whom one would take up as individual instances of authors dealing with the Orient. In a sense the two alternatives, general and particular, are really two perspectives on the same material: in both instances one would have to deal with pioneers in the field like William Jones, with great artists like Nerval or Flaubert. And why would it not be possible to employ both perspectives together, or one after the other? Isn't there an obvious danger of distortion (of precisely the kind that academic Orientalism has always been prone to) if either too general or too specific a level of description is maintained systematically?

My two fears are distortion and inaccuracy, or rather the kind of inaccuracy produced by too dogmatic a generality and too positivistic a localized focus. In trying to deal with these problems I have tried to deal with three main aspects of my own contemporary reality that seem to me to point the way out of the methodological or perspectival difficulties I have been discussing, difficulties that might force one, in the first instance, into writing a coarse polemic on so unacceptably general a level of description as not to be worth the effort, or in the second instance, into writing so detailed and atomistic a series of analyses as to lose all track of the general lines of force informing the field, giving it its special cogency. How then to recognize individuality and to reconcile it with its intelligent, and by no means passive or merely dictatorial, general and hegemonic context?

### III

I mentioned three aspects of my contemporary reality: I must explain and briefly discuss them now, so that it can be seen how I was led to a particular course of research and writing.

1. *The distinction between pure and political knowledge.* It is very easy to argue that knowledge about Shakespeare or Wordsworth is not political whereas knowledge about contemporary China or the Soviet Union is. My own formal and professional designation is that of "humanist," a title which indicates the humanities as my field and therefore the unlikely eventuality that there might be anything political about what I do in that field. Of course, all these labels and terms are quite unnuanced as I use them here, but the general truth of what I am pointing to is, I think, widely held. One reason for saying that

a humanist who writes about Wordsworth, or an editor whose specialty is Keats, is not involved in anything political is that what he does seems to have no direct political effect upon reality in the everyday sense. A scholar whose field is Soviet economics works in a highly charged area where there is much government interest, and what he might produce in the way of studies or proposals will be taken up by policymakers, government officials, institutional economists, intelligence experts. The distinction between “humanists” and persons whose work has policy implications, or political significance can be broadened further by saying that the former’s ideological color is a matter of incidental importance to politics (although possibly of great moment to his colleagues in the field, who may object to his Stalinism or fascism or too easy liberalism), whereas the ideology of the latter is woven directly into his material indeed, economics, politics, and sociology in the modern academy are ideological sciences – and therefore taken for granted as being “political.”

Nevertheless the determining impingement on most knowledge produced in the contemporary West (and here I speak mainly about the United States) is that it be nonpolitical, that is, scholarly, academic, impartial, above partisan or small-minded doctrinal belief. One can have no quarrel with such an ambition in theory, perhaps, but in practice the reality is much more problematic. No one has ever devised a method for detaching the scholar from the circumstances of life, from the fact of his involvement (conscious or unconscious) with a class, a set of beliefs, a social position, or from the mere activity of being a member of a society. These continue to bear on what he does professionally, even though naturally enough his research and its fruits do attempt to reach a level of relative freedom from the inhibitions and the restrictions of brute, everyday reality. For there is such a thing as knowledge that is less, rather than more, partial than the individual (with his entangling and distracting life circumstances) who produces it. Yet this knowledge is not therefore automatically nonpolitical.

Whether discussions of literature or of classical philology are fraught with – or have unmediated – political significance is a very large question that I have tried to treat in some detail elsewhere.<sup>5</sup> What I am interested in doing now is suggesting how the general liberal consensus that “true” knowledge is fundamentally nonpolitical (and conversely, that overtly political knowledge is not “true” knowledge) obscures the highly if obscurely organized political circumstances obtaining when knowledge is produced. No one is helped in understanding this today when the adjective “political” is used as a label to discredit any work for daring to violate the protocol of pretended suprapolitical objectivity. We may say, first, that civil society recognizes a gradation of political importance in the various fields of knowledge. To some extent the political importance given a field comes from the possibility of its direct translation into economic terms; but to a greater extent political importance comes from the closeness of a field to ascertainable sources of power in political society. Thus an economic study of long-term Soviet energy potential and its effect on military capability is likely to be commissioned by the Defense Department, and thereafter to acquire a kind of political status impossible for a study of Tolstoi’s early fiction financed in part by a foundation. Yet both works belong in what civil society acknowledges to be a similar field, Russian studies, even though one work may be done by a very conservative economist, the other by a radical literary historian. My point here is that “Russia” as a general subject matter has political priority over nicer distinctions such as “economics” and “literary history,” because political society in Gramsci’s sense reaches into such realms of civil society as the academy and saturates them with significance of direct concern to it.

I do not want to press all this any further on general theoretical grounds: it seems to me that the value and credibility of my case can be demonstrated by being much more specific, in the way, for example, Noam Chomsky has studied the instrumental connection between the Vietnam War and the notion of objective scholarship as it was applied to cover state-sponsored military research.<sup>6</sup> Now because Britain, France, and recently the United States are imperial powers, their political societies impart to their civil societies a sense of urgency, a direct political infusion as it were, where and whenever matters pertaining to their imperial interests abroad are concerned. I doubt that it is controversial, for example, to say that an Englishman in India or Egypt in the later nineteenth century took an interest in those countries that was never far from their status in his mind as British colonies. To say this may seem quite different from saying that all academic knowledge about India and Egypt is somehow tinged and impressed with, violated by, the gross political fact – and yet *that is what I am saying* in this study of Orientalism. For if it is true that no production of knowledge in the human sciences can ever ignore or disclaim its author's involvement as a human subject in his own circumstances, then it must also be true that for a European or American studying the Orient there can be no disclaiming the main circumstances of *his* actuality: that he comes up against the Orient as a European or American first, as an individual second. And to be a European or an American in such a situation is by no means an inert fact. It meant and means being aware, however dimly, that one belongs to a power with definite interests in the Orient, and more important, that one belongs to a part of the earth with a definite history of involvement in the Orient almost since the time of Homer.

Put in this way, these political actualities are still too undefined and general to be really interesting. Anyone would agree to them without necessarily agreeing also that they mattered very much, for instance, to Flaubert as he wrote *Salammbô*, or to H. A. R. Gibb as he wrote *Modern Trends in Islam*. The trouble is that there is too great a distance between the big dominating fact, as I have described it, and the details of everyday life that govern the minute discipline of a novel or a scholarly text as each is being written. Yet if we eliminate from the start any notion that “big” facts like imperial domination can be applied mechanically and deterministically to such complex matters as culture and ideas, then we will begin to approach an interesting kind of study. My idea is that European and then American interest in the Orient was political according to some of the obvious historical accounts of it that I have given here, but that it was the culture that created that interest, that acted dynamically along with brute political, economic, and military rationales to make the Orient the varied and complicated place that it obviously was in the field I call Orientalism.

Therefore, Orientalism is not a mere political subject matter or field that is reflected passively by culture, scholarship, or institutions; nor is it a large and diffuse collection of texts about the Orient; nor is it representative and expressive of some nefarious “Western” imperialist plot to hold down the “Oriental” world. It is rather a *distribution* of geopolitical awareness into aesthetic, scholarly, economic, sociological, historical, and philological texts; it is an *elaboration* not only of a basic geographical distinction (the world is made up of two unequal halves, Orient and Occident) but also of a whole series of “interests” which, by such means as scholarly discovery, philological reconstruction, psychological analysis, landscape and sociological description, it not only creates but also maintains; it *is*, rather than expresses, a certain *will* or *intention* to understand, in some cases to control, manipulate, even to incorporate, what is a manifestly different (or alternative and novel) world; it is, above all, a discourse that is by no means in direct,

corresponding relationship with political power in the raw, but rather is produced and exists in an uneven exchange with various kinds of power, shaped to a degree by the exchange with power political (as with a colonial or imperial establishment), power intellectual (as with reigning sciences like comparative linguistics or anatomy, or any of the modern policy sciences), power cultural (as with orthodoxies and canons of taste, texts, values), power moral (as with ideas about what “we” do and what “they” cannot do or understand as “we” do). Indeed, my real argument is that Orientalism is – and does not simply represent – a considerable dimension of modern political-intellectual culture, and as such has less to do with the Orient than it does with “our” world.

Because Orientalism is a cultural and a political fact, then, it does not exist in some archival vacuum; quite the contrary, I think it can be shown that what is thought, said, or even done about the Orient follows (perhaps occurs within) certain distinct and intellectually knowable lines. Here too a considerable degree of nuance and elaboration can be seen working as between the broad superstructural pressures and the details of composition, the facts of textuality. Most humanistic scholars are, I think, perfectly happy with the notion that texts exist in contexts, that there is such a thing as intertextuality, that the pressures of conventions, predecessors, and rhetorical styles limit what Walter Benjamin once called the “overtaxing of the productive person in the name of … the principle of ‘creativity,’” in which the poet is believed on his own, and out of his pure mind, to have brought forth his work.<sup>7</sup> Yet there is a reluctance to allow that political, institutional, and ideological constraints act in the same manner on the individual author. A humanist will believe it to be an interesting fact to any interpreter of Balzac that he was influenced in the *Comédie humaine* by the conflict between Geoffroy Saint-Hilaire and Cuvier, but the same sort of pressure on Balzac of deeply reactionary monarchism is felt in some vague way to demean his literary “genius” and therefore to be less worth serious study. Similarly – as Harry Bracken has been tirelessly showing – philosophers will conduct their discussions of Locke, Hume, and empiricism without ever taking into account that there is an explicit connection in these classic writers between their “philosophic” doctrines and racial theory, justifications of slavery, or arguments for colonial exploitation.<sup>8</sup> These are common enough ways by which contemporary scholarship keeps itself pure.

Perhaps it is true that most attempts to rub culture’s nose in the mud of politics have been crudely iconoclastic; perhaps also the social interpretation of literature in my own field has simply not kept up with the enormous technical advances in detailed textual analysis. But there is no getting away from the fact that literary studies in general, and American Marxist theorists in particular, have avoided the effort of seriously bridging the gap between the superstructural and the base levels in textual, historical scholarship; on another occasion I have gone so far as to say that the literary-cultural establishment as a whole has declared the serious study of imperialism and culture off limits.<sup>9</sup> For Orientalism brings one up directly against that question – that is, to realizing that political imperialism governs an entire field of study, imagination, and scholarly institutions – in such a way as to make its avoidance an intellectual and historical impossibility. Yet there will always remain the perennial escape mechanism of saying that a literary scholar and a philosopher, for example, are trained in literature and philosophy respectively, not in politics or ideological analysis. In other words, the specialist argument can work quite effectively to block the larger and, in my opinion, the more intellectually serious perspective.

Here it seems to me there is a simple two-part answer to be given, at least so far as the study of imperialism and culture (or Orientalism) is concerned. In the first place, nearly

every nineteenth-century writer (and the same is true enough of writers in earlier periods) was extraordinarily well aware of the fact of empire: this is a subject not very well studied, but it will not take a modern Victorian specialist long to admit that liberal cultural heroes like John Stuart Mill, Arnold, Carlyle, Newman, Macaulay, Ruskin, George Eliot, and even Dickens had definite views on race and imperialism, which are quite easily to be found at work in their writing. So even a specialist must deal with the knowledge that Mill, for example, made it clear in *On Liberty* and *Representative Government* that his views there could not be applied to India (he was an India Office functionary for a good deal of his life, after all) because the Indians were civilizationally, if not racially, inferior. The same kind of paradox is to be found in Marx, as I try to show in this book. In the second place, to believe that politics in the form of imperialism bears upon the production of literature, scholarship, social theory, and history writing is by no means equivalent to saying that culture is therefore a demeaned or denigrated thing. Quite the contrary: my whole point is to say that we can better understand the persistence and the durability of saturating hegemonic systems like culture when we realize that their internal constraints upon writers and thinkers were *productive*, not unilaterally inhibiting. It is this idea that Gramsci, certainly, and Foucault and Raymond Williams in their very different ways have been trying to illustrate. Even one or two pages by Williams on “the uses of the Empire” in *The Long Revolution* tell us more about nineteenth-century cultural richness than many volumes of hermetic textual analyses.<sup>10</sup>

Therefore I study Orientalism as a dynamic exchange between individual authors and the large political concerns shaped by the three great empires – British, French, American – in whose intellectual and imaginative territory the writing was produced. What interests me most as a scholar is not the gross political verity but the detail, as indeed what interests us in someone like Lane or Flaubert or Renan is not the (to him) indisputable truth that Occidentals are superior to Orientals, but the profoundly worked over and modulated evidence of his detailed work within the very wide space opened up by that truth. One need only remember that Lane’s *Manners and Customs of the Modern Egyptians* is a classic of historical and anthropological observation because of its style, its enormously intelligent and brilliant details, not because of its simple reflection of racial superiority, to understand what I am saying here.

The kind of political questions raised by Orientalism, then, are as follows: What other sorts of intellectual, aesthetic, scholarly, and cultural energies went into the making of an imperialist tradition like the Orientalist one? How did philology, lexicography, history, biology, political and economic theory, novel-writing, and lyric poetry come to the service of Orientalism’s broadly imperialist view of the world? What changes, modulations, refinements, even revolutions take place within Orientalism? What is the meaning of originality, of continuity, of individuality, in this context? How does Orientalism transmit or reproduce itself from one epoch to another? In fine, how can we treat the cultural, historical phenomenon of Orientalism as a kind of *willed human work* – not of mere unconditioned ratiocination – in all its historical complexity, detail, and worth without at the same time losing sight of the alliance between cultural work, political tendencies, the state, and the specific realities of domination? Governed by such concerns a humanistic study can responsibly address itself to politics *and* culture. But this is not to say that such a study establishes a hard-and-fast rule about the relationship between knowledge and politics. My argument is that each humanistic investigation must formulate the nature of that connection in the specific context of the study, the subject matter, and its historical circumstances.

2. *The methodological question.* In a previous book I gave a good deal of thought and analysis to the methodological importance for work in the human sciences of finding and formulating a first step, a point of departure, a beginning principle.<sup>11</sup> A major lesson I learned and tried to present was that there is no such thing as a merely given, or simply available, starting point: beginnings have to be made for each project in such a way as to enable what follows from them. Nowhere in my experience has the difficulty of this lesson been more consciously lived (with what success – or failure – I cannot really say) than in this study of Orientalism. The idea of beginning, indeed the act of beginning, necessarily involves an act of delimitation by which something is cut out of a great mass of material, separated from the mass, and made to stand for, as well as be, a starting point, a beginning; for the student of texts one such notion of inaugural delimitation is Louis Althusser's idea of the *problematic*, a specific determinate unity of a text, or group of texts, which is something given rise to by analysis.<sup>12</sup> Yet in the case of Orientalism (as opposed to the case of Marx's texts, which is what Althusser studies) there is not simply the problem of finding a point of departure, or problematic, but also the question of designating which texts, authors, and periods are the ones best suited for study.

It has seemed to me foolish to attempt an encyclopedic narrative history of Orientalism, first of all because if my guiding principle was to be “the European idea of the Orient” there would be virtually no limit to the material I would have had to deal with; second because the narrative model itself did not suit my descriptive and political interests; third, because in such books as Raymond Schwab's *La Renaissance orientale*, Johann Fück's *Die Arabischen Studien in Europa bis in den Anfang des 20. Jahrhunderts*, and more recently, Dorothee Metlitzki's *The Matter of Araby in Medieval England*<sup>13</sup> there already exist encyclopedic works on certain aspects of the European-Oriental encounter such as make the critic's job, in the general political and intellectual context I sketched above, a different one.

There still remained the problem of cutting down a very fat archive to manageable dimensions, and more important, outlining something in the nature of an intellectual order within that group of texts without at the same time following a mindlessly chronological order. My starting point therefore has been the British, French, and American experience of the Orient taken as a unit, what made that experience possible by way of historical and intellectual background, what the quality and character of the experience has been. For reasons I shall discuss presently I limited that already limited (but still inordinately large) set of questions to the Anglo-French-American experience of the Arabs and Islam, which for almost a thousand years together stood for the Orient. Immediately upon doing that, a large part of the Orient seemed to have been eliminated – India, Japan, China, and other sections of the Far East – not because these regions were not important (they obviously have been) but because one could discuss Europe's experience of the Near Orient, or of Islam, apart from its experience of the Far Orient. Yet at certain moments of that general European history of interest in the East, particular parts of the Orient like Egypt, Syria, and Arabia cannot be discussed without also studying Europe's involvement in the more distant parts, of which Persia and India are the most important; a notable case in point is the connection between Egypt and India so far as eighteenth- and nineteenth-century Britain was concerned. Similarly the French role in deciphering the Zend-Avesta, the pre-eminence of Paris as a center of Sanskrit studies during the first decade of the nineteenth century, the fact that Napoleon's interest in the Orient was contingent upon his sense of the British role in India: all these Far Eastern interests directly influenced French interest in the Near East, Islam, and the Arabs.
